195. As to the sufficient construction of the carriages; do you think the Board of Trade ought to have any power as to that?—I am doubtful how far that would be of use, lest they should interfere with the mode and style of construction, and that would be going beyond what is useful; if "safe construction" were specifically put down, I am not aware that the Companies would object.

196. Sir J. Guest—Do you think it possible, if a discretionary power is to be given to the Board of Trade, that is to have any efficiency; do you think it possible to enumerate in a Bill all the particular points to which that power should extend?—I am quite aware of the difficulty of doing it, but we think the case has not been made out; we think the whole proceeding is in the nature of a *non sequitur*. It is allowed on all hands that railway travelling is safer by far than any mode of transit ever before known to the public; why therefore come to Parliament for unusual indefinite powers to regulate that mode of travelling?

197. Mr. Labouchere—Is it to be taken, then, that the Companies object to giving the Board of Trade any discretionary powers on this subject?—Not entirely; I will state my reasons why I think no central Board is competent. We admit the ability of the officers, we admit their high character; we admit that if any Board is competent to exercise any such control, this Board would be so. Our objection is not at all to them.

198. Lord Stanley—You have been asked whether you would object to give to the Board of Trade a discretionary power of enforcing the upholding of fences; is not the upholding of fences already required by the existing law, and has not the inspector, under the present law, the power of enforcing it?—No, I think not; I may be wrong.

199. Mr. Easthope—Does not your Act of Parliament enjoin you to uphold the fences?—Yes.

200. If so, has not the Board of Trade now power to enforce attention to the provisions of the Act of Parliament?—Yes, they have, under Lord Seymour's Act.

201. Mr. Labouchere—Have the goodness to state to the Committee generally the objections you entertain to any discretionary power on these subjects being conferred on the Board of Trade?—I will so far as I am able. By Mr. Labouchere's Bill, as it now stands, we cannot gather at all what would be the nature of the regulations (or at least to a very small extent) which would be adopted by the Board of Trade or their officers; but, by referring to the report of their officers, we do gather, in a great measure, the nature of the regulations they propose as being desirable to be carried into effect; and it is upon the nature of such regulations that is founded the alarm of the Companies. In the first place, the officers who made that Report to the Board of Trade have said that it is impossible to mention every regulation that would be necessary in the varying circumstances of the operation of railways; but they say that there are certain regulations which "experience has shown to be necessary," and which would "obviously be conducive to the public safety;" they then go on to instance those regulations as to which, in their opinion, there could be no question. Now as to those, I think I shall be able to show they are not of that character which is necessary to carry out the object intended; I think there are many objections to them; they can only be partially carried into operation: if they are intended to be applied to railways of great traffic, like the Liverpool and Manchester, the effect, in a great measure, would be the contrary of what is intended. First, as to the time-table, it says that "all trains employed in the public traffic, whether passengers or goods, should be worked by time-tables properly constructed with reference to the gradients, &c. of the line, and specifying the time of arrival and departure of each station." Now, on a railway like the Liverpool and Manchester, to carry out such a resolution would produce great interruption to the public traffic. We cannot go so mechanically to work as to say at what time the goods train, for example, shall arrive at each particular station, and for this reason, that the traffic varies so much, that it is almost impossible to regulate the loads, or the number of journies those trains have to make in a day; frequently the demands of the commerce of the town require an extra number of trains to set out at irregular hours when they are not expected, and which would make it, therefore, quite impossible that they should be regulated by these time-tables. If any general law were enforced by penalties, we should find it extremely inconvenient to comply with it. We have a considerable quantity of live stock going from Liverpool to Manchester, it is sent off as soon as it is loaded; if we were under the control of time-tables, it would be extremely inconvenient. The live stock is principally pigs. Very lately, during the frost, owing to the peculiar weather, there was no arrival from Dublin for several days, of this kind of traffic; the market of Manchester was remarkably bare; parties came to us requesting extra trains. In a case of that kind we exerted ourselves, got engines and waggons, and sent off one train after another. All this was quite out of the power of regulation by time-tables; in fact, the general traffic of our line is such that we cannot tell when it will come in; it sometimes comes all in the morning; generally, not till the evening; sometimes not till night: we cannot tell till the day is advanced what the traffic will be; and we cannot, without great interruption, deprive the mercantile community of these facilities; these regulations, therefore, it is conceived, could not be efficiently carried into effect.

202. Under the Railway Bill now before the House of Commons, all powers to be given to the Board of Trade are permissive only, and not obligatory, are they not?—Exactly so.

Digitized by Google

202*. Are not time-tables more strictly observed on some of the railways than on the Liverpool and Manchester?—Very probably; for on some it would admit of it more.

203. Do you mean to express an opinion that it is not generally desirable, as far as circumstances will allow, that the traffic upon any railway should be regulated according to time-tables?—In many cases I think it would not be practicable, therefore I should fear inconvenience from a power to order it.

204. Lord G. Somerset—Have the goodness to state what ordinary trains start from Manchester to Liverpool, and at what times?—We have 10 coach trains.

205. Which is the earliest train in the morning, whether for luggage, goods, or passengers?—The luggage train from Manchester to Liverpool generally starts at three in the morning.

206. What is your first train which leaves Manchester for Liverpool, beginning after 12 o'clock at night?—Three o'clock in the morning.

207. What is your next?—The coach train, at half-past seven.

208. What is the next?—The luggage train, about eight, probably.

209. Which is your next?—Nine, the coach train; the next is 10 o'clock; then there is the quarter-past eleven, coach train; then the luggage train about noon; there is a passenger train comes at twelve, or a quarter before twelve; the luggage train follows it a quarter of an hour afterwards; the next will be the coach train at two; about a quarter to three there is another coach train; then there is a luggage train comes about four; I am not perfectly competent to speak to all, but I think I am right; then there is a coach train at five, another at half-past five, a luggage train about six, a coach train at a quarter-past seven; nothing after that, I think.

210. Is there no mail train later than seven?—A quarter-past seven.

211. These trains are from Manchester to Liverpool?—Yes.

212. Are the times of departure calculated with reference to the Grand Junction Railway going southward, or the trains of the Preston and Lancaster, which are to cross yours?—Certainly they have reference to the Grand Junction, for they start from Liverpool and Manchester.

213. What are the times of their starting, the Grand Junction?—The first is at six in the morning.

214. Have they a goods train likewise?—They have.

215. At what o'clock does that run?—I am not quite sure; they have one at night.

216. They have one at eight o'clock at night?—Yes.

217. Have they not the mail train at night?—They have at seven, the mail-coach train.

218. I thought you said one started between Manchester and Liverpool?—At a quarter past seven we start.

219. Have you mentioned all the trains starting from Manchester, whether going to Liverpool or elsewhere?—Yes.

220. Are there any going from Manchester straight to the north?—They are included in this; we join in at Park-side.

221. Is there any train which has a less interval than 15 minutes between that train and another, either for passengers or luggage, starting from Manchester?—No, none.

222. And there are but two passenger trains which start so near together as 15 minutes?—Only two.

223. There are some baggage trains which start 15 minutes after the passengers?—Ten minutes, if necessary.

224. Your principle is, that a train which is going slower may start with more security after a passenger train which is going fast, than *vice versa*?—Yes.

225. Though the extra live stock has to be sent from Liverpool to Manchester, or the extra luggage has to be sent from Manchester to Liverpool, what interval is there between starting those extra trains, and those which have gone previously?—If we get 10 minutes after the coach train, that is enough.

226. What will be the inconvenience if, instead of having 10 minutes, you had 15 minutes in general?—Generally speaking, it would not make much difference; we value every minute, but five minutes are not much.

227. Can you state any practical inconvenience as to goods, whether they go five minutes later or not?—No.

228. Does or does not this clause, as it stands, interfere with you under these circumstances?—Yes, I think it would.

229. How does it interfere, beyond the difference between 10 minutes and 15?—I put that away altogether. If it is meant to be a strict clause, providing that we are to have time tables, stating the arrival of each train at particular stations, when we have extra trains, which are of frequent occurrence, we could not provide for those.

230. Are those extra trains to go at more than an average rate of speed?—No.

231. Then the whole difficulty would be, would it not, that you must send those trains out after an interval of 15 minutes, instead of 10 minutes? I do not see how you could fix beforehand what would be the most convenient time for sending them out.

232. Would you propose to exercise the power you have of sending them out within five or ten minutes of each other?—We do not wish to send them within ten minutes: but we wish to be at liberty to send them out either between eight and nine, or nine and ten, or ten and eleven, so as not to have any specific time.

233. What is there in the recommendation of the commissioners which induces you to suppose, that if they carried out that recommendation, they would force you to start a train at a particular time?—The principal objection to this power is, that we do not know what regulations they will prescribe, but we do know that they could not be carried out strictly and literally.

234. Suppose you felt assured that you would not be obliged to start at a particular time, but that all you would have to do would be, not to start within a certain interval of 15 minutes, would your objection to that clause be abated?—It would be abated, but it would not be removed; we are obliged to send trains to Manchester and Liverpool almost empty; we think it judicious that those trains should go quicker, as practically they are enabled to go, than heavy trains. If we were bound to go at particular rates or times for each stage, it would be exceedingly inconvenient, and would tend to impede the general traffic. Our general plan is, to make the best of our way, according to the load and the wind and weather, and the various circumstances which are constantly occurring to modify particular regulations.

235. Do you think you should make arrangements by which any train on any part of the line would be closer than 15 minutes from the preceding train?—Yes, clearly; it would be exceedingly inconvenient if we were limited to 10 minutes.

236. Do you think it perfectly safe the passengers' train should follow another passengers' train at a less period than that?—Clearly.

237. Is it your habit to do it now?—Yes; continually.

238. Upon what part of the line?—On every part except from the terminal station.

239. You do not consider it necessary for the safety of the passengers that the preceding train should have 15 minutes' start on the average, of a succeeding one?—Clearly not; it would create great discontent on the part of the public if it were so.

240. Why?—If a second class train starts from Manchester they may have a heavy load, or in the event of a high wind, or some defect of the engine preventing it getting on so well as it ought to do, a first class train would pass it; if that second class train, after being passed, were obliged to wait fifteen minutes, there would be almost an insurrection in the train.

241. There would not in that case be the slightest difficulty in passing it on a siding, leaving it to go on at its own pace?—No.

242. You think that is consistent with safety?—Yes.

243. Mr. Labouchere—The suggestion of 15 minutes in this clause is merely given by way of putting a limit to the powers of the Board of Trade, is it not; it does not oblige the Board of Trade to prohibit trains from following each other at a smaller interval, when it may be thought safe to do so?—I hardly see how a general regulation could be made giving that discretionary power.

244. I see in the regulations suggested at the general conference of the Railway Companies, the following regulation with reference to the prevention of accident:—"If a policeman, owing to accident or some extraordinary cause, has to stop an engine when approaching, he must show his red light, and wave his hand-lamp up and down to the height of his head, until the other engine comes up." Do you consider it safe for one engine to follow another, with an interval of only one minute?—In the day time, I think it is.

245. You think this regulation would fully provide for the safety of the public?—Yes, I think experience has shown that regulations of that kind do provide for the safety of the public.

246. You think this would be applicable to all railways?—I think they might; I am not quite sure; I should be sorry to take on myself the responsibility of making regulations for all.

247. Do you think it would be necessary for the Board of Trade, if a general discretionary power of this sort was given, to exercise those powers in a more stringent manner on a railway on which it was obvious that the general arrangements were not very good, from what would be necessary on a railroad obviously and manifestly well conducted?—We think the Board of Trade, or any central Board, has not that experience which is necessary to make them capable of issuing regulations; at least from the specimens of regulations put down here. I should not have confidence in their general discretion in issuing regulations.

248. Lord Stanley—Have you stated all the trains which are in the habit of passing along the line of railroad from Manchester to Liverpool?—No.

249. Are there not a considerable number of other trains, the property of private individuals, which come on at the sidings and pass along the line?—Yes, there are several coal trains, and also the Grand Junction trains, which come on rather irregularly; there are half a dozen coach trains of the Grand Junction.

250. I understood you to state the Grand Junction trains to be going at six in the morning and seven in the evening?—There is one at a quarter past eight, half-past 10, and at four.

251. How many Grand Junction trains are there in the course of the day altogether?—Three o'clock in the morning, one at six, one at a quarter past eight, half-past 10, four, and seven; that is six trains.

252. Besides those, are there not a number of coal trains entering on the line at various parts?—Yes.

253. What regulations are there as to the period which is to elapse between permitting a coal train to enter from the sidings after the passing of any of your other trains, or within a certain time of one of your trains being expected?—We oblige the coal train, if it is anywhere near the time of a coach train, to wait till it has passed; after it has got half a mile, we think it may come out and make the best of its way.

254. Have the goodness to say what you do if a coach train is expected?—That depends on the distance the coal train has to go; if it has to go six miles it may start off the siding, and it will get to Liverpool perhaps 20 minutes]before a coach train has time to come up. If they have to go double the distance, it would be better to wait a quarter of an hour or 20 minutes, till the coach train has passed it; it depends on the distance and locality.

255. Sir J. Guest—How soon does it follow the other train, then?—In about a minute afterwards.

256. Lord Stanley—Within how short a time, or how shortly before a coach train was expected, would you allow the same thing to take place?—The interval between the time a train shall start when a coach train is expected, depends on the locality, on how far they have to go, and on the nature of the train, whether it is a first or second class train; they could go quicker after a first class than a second class train; we are very particular as to our first class trains; the second class is in the nature of a luggage train.

257. Are any regulations issued by the Company, giving directions as to the time at which those trains should be permitted to start, or stating who is responsible for permitting them to come on the line?—It is in the department of the Resident Engineers, who constantly keep a supervision of those matters; the principal regulation is to keep out of the way of the quick trains; it has got into a practice in general to follow the quick trains in almost all cases.

258. Is it not a fact that, so far as concerns the risk in railway traffic to passengers, it is much increased by the number of extra trains travelling at uncertain hours?—I should think the risk must be in some measure increased, but I think it is small and could not be easily avoided; I do not see how on a large line, like the Liverpool and Manchester, you can avoid extra trains; they follow the coach trains.

259. Your examination has been carried on upon two propositions which relate very much the one to the other; the limit of 15 minutes is the second proposition; you have mentioned your objection to both propositions in your general statement?—Yes.

260. Should you object to giving to the Board of Trade the power of prohibiting the passing of one train within 15 minutes of another of the same class, or is your objection confined to giving to them the power of prohibiting a heavy train, for example, from following a fast train within 15 minutes?—My objection extends to both; it is stronger, of course, to prohibiting second class trains from following first class trains.

Digitized by Google

261. You consider the interval of 15 minutes is not more than sufficient for two trains of the same class to follow each other, which you calculate at the same rate of speed?—I do not think it necessary.

262. Then you think an interval of 15 minutes is more than is necessary!—I do.

263. Mr. Thornely—What distance on the railway is equal to a difference of 15 minutes in the time of starting?—Seven miles.

264. If the Board of Trade were to order the trains not to start in an interval of less than 15 minutes, it would keep each train seven miles apart!—Yes.

265. Sir J. Guest—Would it not be safer that the coal trains should follow the other immediately?—Yes; because if there is a delay it would not be so well after a first class train.

266. The shorter the period of following, the safer, you think!—Yes; if the first gets half a mile distant, the sooner they follow the better; they are less likely to impede the subsequent traffic.

267. Lord Stanley—As you make an objection to the power of regulating by the time-table, do you understand that the clause, as it is framed, would give to the Board of Trade the power of prohibiting any train from passing particular stations, except at the time specified in that document!—Yes; I understand that power is clearly intended to be given and exercised.

268. Supposing it to be understood that the Board of Trade had power to require the time-tables to be kept at the stations, regulating the time of the passage of all ordinary trains throughout the day, but that they had no power of making any regulation as to the extra trains, except that they should not start within 15 minutes of the time of the starting of another train of the same class and description, would you see any objection to the supervision of the Board of Trade for carrying that principle into effect strictly?—The objection would be less, but it would be frequently inconvenient, from the circumstance of the traffic varying so much; it would oblige us to go at the same speed with a heavy load as with a light one, which would be inconvenient. On a busy day, with a light load, they are glad to make the best of their way, and it is the safest; with a heavy load they would of course go slower.

269. As you understand the clause, the introduction of this clause as to a time-table would prohibit the starting of any extra trains at all?—It might if the Board of Trade issued a strict regulation.

270. Mr. Labouchere—Is it not the case, that the 11th clause provides that such regulations shall not prescribe anything of an experimental nature, nor interfere with the number of trains, nor with the times of starting, nor with the stoppage of trains, nor with the speed of travelling on any railway, further than may be necessary for the purpose of preserving an interval of not more than 15 minutes between succeeding trains!—That interval must be secured.

271. Lord G. Somerset—Your great apprehension is, that you would be obliged to keep an equal distance in point of time, between the different trains?—Yes, with a different class of trains, and with heavy and light loads.

272. What are the precautions by which you prevent the accident of a quick train succeeding a slow one, and in regard to passing that slow one and then proceeding at its own pace?—We never allow them to go within half a mile of each other; the general regulation is, not to come nearer than within half a mile of each other; but then, if a second class train is before a first class, the first class whistles to make known its approach, and keeps at about half a mile distance; and the first opportunity that comes within their scope, the second class goes into a siding, and the first passes on.

273. That provides for the safety of that quick train; but what is the regulation with regard to those trains crossing your line, by which the slow trains shall not either run into them, or they shall not run into the slow ones, if they do not keep their time!—We have the same regulation to keep within half a mile.

274. Take foggy weather for example, how do you manage then?—We have the policemen on the road.

275. How could he give a signal half a mile off; have you any particular fog signal, which allows you to give notice so as to produce a proper result at half a mile distance?—No; we are liable to those difficulties.

276. Do you not conceive that there is considerable risk in foggy weather?—There is, no doubt, more risk in foggy than in clear weather.

277. But I mean, by not causing your trains to keep their time, do you not conceive there is more risk!—Yes, but we should consider the inconvenience to the general traffic of the line.

278. You have to consider the general traffic on the one hand, and the risk on the other, and you think the risk the least important!—We think the risk is really so small, as not to be set against the interruption of the traffic.

279. Yours being the oldest railroad of any importance, your system you conceive to be as good as possible?—No, by no means; I should be sorry to say so; we have got on practically very well; we have been fortunate, and have escaped accidents very well, and I attribute it, in some measure, to the very great traffic; we have obliged every engineman to be constantly on the alert. Very few accidents occur in crossing Cheapside, for example; everybody is obliged to be on the alert and to look about him; that is the principle we inculcate at all times.

280. You think the principles having been so successfully applied to your railroad, could be universally applied!—I think so, gradually.

281. Are they universally applied!—They are getting to be; but I am not able to speak to other lines minutely.

282. Do you not think it desirable that the same system should prevail throughout which has been so successful in your case!—I think what is good in our system ought to be adopted on other lines, and what is good in others ought to be adopted upon ours.

283. Have you the means at this moment of communicating with, or of acquiring from, other parties that which is good passing from the one to the other!—No; on that account I think a Board of supervision, to inquire and ascertain what is going on on all railways, and when it found an improvement on one, to communicate it to the others, would be very useful. I think the parties would be very loath indeed not to follow such recommendations as came from so high a quarter as the Board of Trade. Our apprehension is, that if they have the actual power to order regulations, they might make such as would not be adapted to particular lines of railway, and so do mischief.

284. Mr. Labouchere—Are you aware that by the 11th clause any Company should be at liberty to memorialise the Lords of the said Committee against any such intended regulation, which memorial shall be filed by the said Lords in their proper office for such purpose, and submitted to Parliament, if they object?—Yes.

285. Do you not think that is a considerable security against any ill-advised regulation being enforced on a Company by the Board of Trade!—I certainly think it is a security; but after all, it becomes a question between the officers of the Board of Trade, and the officers of that particular directory.

286. Sir J. Guest—Do you think, if any rule was to be laid down by the Board of Trade, applicable to all sorts of lines, whether long or short, and affecting all sorts of traffic, it would be as effectual for preventing accidents as those given by the officers of such railways!—It is almost impossible to make such a rule in the present state of knowledge; from the present state of railway experience.

287. Lord G. Somerset—That would be a very good reason for not laying down in an Act of Parliament precisely what they should or should not require; but is it an equally good reason against having a discretionary power, assuming, in the first instance, that that would be properly and discreetly exercised?—The question is, whether the experience of railways so far shows the necessity for the discretionary powers, or the evils attending them make them desirable.

288. You are aware, that following the 11th clause, which we are discussing, there is the 12th clause, which enacts a penalty in case of a Railroad Company disobeying the orders of the Committee of the Privy Council, and it says that that penalty may be recovered in any of her Majesty's Courts of Record; that of course would subject all penalties to the discretion of a jury, but the jury would only have to consider whether not they had exceeded their powers, that is to say, whether the orders of the Privy Council were according to the powers entrusted to them in the Act of Parliament and no further; but suppose, in addition to that, the jury were to decide whether or not the orders were such as ought, in the exercise of a sound discretion, to have been given by the Privy Council, would that modify your objection in any degree to such large powers being given!—It might modify it; but it would be giving to the jury a power and province which they are not very competent to fulfil.

289. Mr. Easthope—Do you not think such a power given to juries, as juries are generally selected, would be very likely to be exercised with great irregularity?—I think they are not a competent tribunal.

290. Lord George Somerset—You would have two safeguards, first, the discretionary powers of the Board of Trade, then the discretionary control of the jury; do you think under such circumstances it is probable that the Board of Trade would exercise its powers in an improper manner?—I would rather have this Committee than a jury to settle the matter.

291. Mr. Easthope—Upon the whole, would you not much rather that the entire power should be with the Board of Trade than with a fluctuating body like a jury?—Yes; I hardly know what would be the result.

292. Lord Stanley—As to the time; how many trains have you known of one kind or another which come into Manchester in an evening, in the course of an hour, in practice!—Not above half a dozen.

293. You have known half a dozen trains come into Manchester in the course of an hour?—I think six in an hour.

294. The average interval then does not exceed 10 minutes?—No, and sometimes five.

295. The interval between many is not more than five?—Not more than five.

296. Do you conceive that if it were provided that no train should pass the station at Parkside on its way to Manchester, within a quarter of a hour of another train, the traffic you have on the Liverpool and Manchester, including the Grand Junction, could be carried on?—I think it could not; we should have quite an accumulation of trains at that point.

297. Suppose each train had to wait at Parkside, where six trains arrive in course of an hour, and each stopped till the train before it had gone on a quarter of an hour, do you conceive the traffic could be carried on?—I do not think it could.

298. Sir J. Guest—And it would make it more dangerous?—Yes.

299. Lord Stanley—Do you conceive that greater or less danger would arise from that regulation being enforced, as compared with the present system?—I am not quite sure, as to the point of danger, that there would be much difference: the inconvenience and delay would be great.

300. Mr. Labouchere—If your statements are correct, would it not obviously be the duty of the Board of Trade not to exercise this power to its full extent in the peculiar case of your railway?—I think it would, decidedly.

301. You think it would be preferable to fix the limit of 15 minutes in the clause than to leave an unlimited discretion to the Board of Trade!—I think it is worse, for by naming 15 minutes you seem to sanction the interval.

302. Are you aware that the Board of Trade, on on that objection being made, offered to omit mentioning any time, if that was preferred; but that, on the part of the Railway Companies, the limit of 15 minutes was insisted on, and that importance was attached to it?—I am not, aware of that, unless there was coupled with that "from the terminal station." I should not so much object to that, confining it to passengers starting from the terminal station; but that would not do on short lines.

303. Lord G. Somerset—Do you not think a fast extra train is much more dangerous, both to the public and to passengers by railroads, when they have to pass permanent trains?—No, I do not think, on a well-regulated railway, fast extra trains are dangerous.

304. Not when put on suddenly, without previous communication!—We avoid that if we can possibly help it. I should say there is very little danger on a clear day, almost none; on a foggy day it might be dangerous.

305. Are there not many railroads where there is much more probability of there being impediments, such as from workmen doing repairs, or from those coal trains, and so forth; and if you put on an extra fast train, is not the danger much increased?—Yes; but it would be the duty of the engineer not to have a fast train; in this particular case he must look out, and if he sees repairs going on, he must make a signal and they will stop. We are obliged to act according to emergencies.

306. Have you any mode of giving immediate signals along the Liverpool and Manchester railroad during clear weather?—We have people along the whole line with flags. We have no mechanical signals, no telegraph, or anything of that kind.

307. Mr. Easthope—As to the 15 minutes, whether the control be with the Board of Trade, or whether it be with the respective Companies, should you not consider it to be more expedient that no numbers should be fixed, but that discretion should be used according to the respective circumstances; and do you think that setting up as a general rule a distance or time of 15 minutes, would be likely to conduce to safety!—No, I think not; I think it could not be carried out; I think naming 15 minutes is objectionable.

Digitized by Google

308. Mr. Labouchere—Would you prefer a general discretionary power on the subject of time being given to the Board of Trade, to a power being given with a limit of 15 minutes?—I think I would.

309. Mr. Easthope—Admitting that it were determined that the Board of Trade had to control this, would you then prefer that it should be left to their unlimited discretion, without any mention of numbers?—I should prefer it individually; I do not know the feeling of others.

310. But do you think it would conduce more to public safety that they should be made responsible for the exercise of their discretion than that they should in any degree be relieved from responsibility by adhering to those numbers?—Yes, I think it would be preferable.

311. Chairman—You stated you frequently sent many extra trains in the course of the day from Liverpool to Manchester; do you adopt any means of giving notice along the line that such additional train is to be expected?—No, we do not think it necessary.

312. Mr. Greene—Have you a policeman or an officer at the entrance of every side railroad?—Yes, we have a policeman stationed there.

313. It is with him the discretion rests of allowing that train to enter on the main line or not?—Yes; under the regulations of the Resident Engineers, who are moving about superintending the operations of the railway.

314. Lord Sandon—Do you think it possible, practically, in the business of railways, to prescribe any certain interval between the passage of trains at every station?—I think not, particularly on such a line as ours, it would be almost impossible; for instance, starting from the terminal station, it is very useful occasionally to wait a little for the accommodation of the traffic: we may wish to start at 12, but we have a dispatch at the bottom of the tunnel that half a dozen loads of live stock are coming, which it is very important to get to Manchester before the next three or four o'clock train; we would rather wait 10 minutes than disappoint the people, and we do not practically find any inconvenience in waiting, that would be put an end to by these regulations.

315. Lord G. Somerset—Who is the officer who decides on the propriety or impropriety of acceding to such a delay?—He is the man in command of that particular station.

316. Has he any written instructions given to him?—I do not think he has, bearing on that; the Resident Engineers are moving about continually.

317. Who is the man who may say at this moment, "this may be done," or "this may not be done?" the safety or danger of such a delay must depend on a knowledge of the general traffic, and unless the individual has the power of giving orders, and is acquainted with all the traffic of the railroad, you admit, I presume, he cannot cause delay without very considerable risk?—No, I cannot admit there is much danger in the case, not at the terminal stations.

318. But do you not admit that it is necessary the party who determines on the delay should be aware of all the traffic, not merely that which leaves Liverpool and Manchester, but of that which crossed your railroad?—There is very little traffic crosses the railway.

319. Do you conceive a person who is to authorise that delay, or change of time, or whatever you call it, ought not to be fully informed of all the traffic?—He knows of all that starts from Liverpool, which is all that is necessary.

320. You think the cross traffic at Parkside is not of the least importance?—It is not of the least importance as regards the time of starting from Liverpool.

321. Mr. Thornely—Those are all slow trains?—Yes; luggage trains, and cattle, and coals.

322. Therefore the person to regulate this department makes his arrangements according to the travelling on the line?—He takes care not to intertere with the coach train; he will not delay a train if it is likely to intertere with the coach train, he would wait till it has started.

323. Is not the person who conducts a train on a railroad acquainted with the traffic on the line?—Practically he is, but those on the middle of the line cannot be acquainted with the extra trains that may come; but those are exceptions.

324. Mr. Labouchere—Is it not the case that almost all Railroad Companies are in the habit of giving notice of the extra trains that may be expected?—We may not have time.

325. There are no such regulations on your line?—No, we have not found it necessary to have them.

326. Lord Sandon—Who is practically the person who gives directions about the starting?—The man who has the superintendence of the arrangement of the line at the top of the goods tunnel.

327. At every station?—The intermediate stations are of so little importance on our line we have there few but policemen.

328. Mr. Labouchere—Go on, and take the next point?—It is No. 3, "That no engine, waggon, truck, or any description of carriage whatever, not forming part of the regular trains, should be allowed to enter on the line of rails devoted to the public traffic, without a pass ticket issued by a responsible officer of the Company." I do not see any objection to that. No. 4 is, "That it should be a general rule not to allow any ballast train or waggon to remain on the line within half an hour of the time when a train is due, nor to allow return engines to approach within 15 minutes of a train;" here it is made absolute, as to the ballast train it is suggested, as a regulation which experience has proved desirable and obviously conducive to the public safety, that it should be a general rule not to allow any ballast train or waggon to remain on the line within half an hour of the time when a train is due, if that was the case we could hardly have a balast train on the line from one end of the day to the other, for the trains are due within half an hour of each other; if they are near a terminal station, from which we know a coach train will start, we should think 10 minutes quite ample to get out of the way; if it is a clear day, and a straight line, it is quite sufficient to wait till we know them coming, we could not get the work of the line done if we were to be bound by this specific regulation, we have 24 trains, and each is due always in about half an hour, but not at equal intervals—we cannot do it; such a regulation on our line would be absolutely impracticable.

329. Mr. Labouchere—Ballast trains have been the cause of some serious accidents, have they not?—They have, they require to be under some regulation, but that one would not do.

330. Mr. Easthope—Do you think that if that regulation were enforced it would rather increase the liability to accidents than diminish it, by not allowing sufficient time for the maintenance of the road?—I hardly know what the effect would be, we could not comply with it; they are not aware of the effect of their own regulations in this case.

331. Mr. Labouchere—Go on to the next point, if you please?—"That every engine-driver and guard should be furnished with time tables, and also with printed instructions, specifying, among other things, the maximum speed upon different portions of the line, and the rules as to signals, &c. which are to be invariably adopted." With regard to specifying the maximum speed, that would be very inconvenient with a mixed traffic like ours; we are obliged to regulate the speed according to the circumstances of the case, according to the load, whether heavy or light.

332. Have not some of the late accidents happened in consequence of the extreme speed at which the engine-drivers have improperly driven the engines?—I am not aware that that has been the case.

333. Mr. Thornely—Your railway being the length of 30 miles, do you think a time table is necessary for the guards of your coaches?—No, we have not found it to be so; it would be very inconvenient for the guards of coaches to have time tables: we have 20 stopping places, and power to make more if the Directors like, and it should be found convenient to the public; we do not stop at all places, but we stop sometimes at six or eight on half the line, and we have scarcely any stoppages on the other half, on that half we make up for the delay on the other; but if we are to be limited by a time table we must be stopping at every one of the 20 stations, which would delay us a quarter of an hour; we do not know at which end of the line the stops may take place.

334. Lord Stanley—In your second class train, is it not a fact, that in a journey occupying on an average under two hours, the number of places at which you have to stop makes a difference of no less than half an hour or three quarters of an hour?—Yes, between the two.

335. Is it not the fact, that with places to stop at, the second-class train performs a less distance in an hour and a half, and in many cases they are two hours and a half?—It is much easier to perform the journey with a first-class train in an hour and a half, than with a second-class train in two hours.

336. Sir J. Guest—The stopping causes a loss of time?—Considerable.

337. Mr. Greene—Do you not understand the words "the maximum speed" to mean, while the engine is going, not including the stoppages?—I hardly know the advantage of putting down a speed not likely to be exceeded, it would mean nothing, it would be a very varying speed; we could not rely on it as to the stations; it would vary with the load.

338. Mr. Labouchere—Is there no rate of speed which ought not to be exceeded on a railway with safety to the public?—Yes, there is.

339. What should you state it to be?—Perhaps 40 miles an hour.

340. Sir J. Guest—Would not that be a great deal too much on some lines?—Yes, it would, perhaps.

341. Lord G. Somerset—Do you expect much increase of the traffic, as between the north and south, on your railroad, taking Lancaster on the north and Birmingham on the south, from the northern railroads passing on to the south?—Not a great deal; there will be a little increase.

342. Do you think there is a maximum of trade on it now?—I think we have got to something like a settled traffic; I cannot call it a maximum; any very great increase is not anticipated.

343. Lord Sandon—Is not the fact of the case this, that no precautions which can be taken against the want of vigilance on the part of the persons employed on the railroads can be prescribed, without being practically so inconvenient to the general service of the public, as to make it impossible to enforce them?—I think it is hardly possible but that it should be so.

344. You would say, on the whole, it is not desirable to impose such precautions as would appear to be necessary, supposing the parties do not exercise the vigilance they ought, and generally do exercise?—Yes, clearly so.

345. Mr. Labouchere—You think there is no simple general regulation it would be desirable to enforce on all railroads?—I think very possibly there might, and we should have no possible objection to any defined regulation that might be chosen.

346. Do you think it is easy to define what they might put in an Act of Parliament?—I think it is not very easy; I think the time has hardly come for that.

347. Lord Sandon—Are there any simple points on which you could found regulations which could be generally acquiesced in as protecting the public safety?—Very possibly there might; I do not know how far it would be satisfactory.

348. Mr. Loch—Your observations are confined principally to the Liverpool and Manchester?—Yes; I must be understood as speaking to that line.

349. Lord Sandon—Would you prefer giving to the Board of Trade the discretionary power, on certain points specified in the enactment, rather than give them discretionary powers with regard to all points, except those which are especially excepted?—I would rather name the points on which they should have a discretionary power.

350. But on certain points you think there would not be much difference of opinion with reference to the discretionary powers which might be entrusted to the officers of the Board of Trade?—I think there might be some.

351. You wish to see them specified in the Bill, not giving a general power?—Yes.

352. Mr. Easthope—Is it because you think there is great difficulty in specifying those points now, with general advantage to the public safety, that you state you wish the Board of Trade to be limited to supervision, and to wait the result of better knowledge before they go to anything beyond supervision?—Yes, clearly; and their recommendations would have great weight; I am quite sure any Company would be put very much in the wrong if there was any accident, if they did not follow their recommendations.

353. Mr. Labouchere—Do you know how the powers of the Board of Trade as to Railway Companies have been exercised; whether in general they have been exercised in concurrence with the Railway Companies, and whether there has been a good understanding between them?—There has been a very good understanding between the officers of the Board of Trade and the Companies.

354. In general, they have moved on harmoniously together?—With one exception; the Board of Trade have issued communications to the Grand Junction Company.

355. What do you mean?—There has been an application on the part of the carriers, for the Board of Trade to exercise the powers given to them under Lord Seymour's Act, of prosecution by the Attorney-General; we have evidence we shall be happy to give to the Committee on that point.

356. Lord Stanley—Could you state to the Committee how far you think it would be safe, or meet with the general concurrence, to name the points on which to entrust discretionary powers to the Board of Trade?—I think it would be difficult; I disclaim the ability to do it

357. Lord G. Somerset—You state, you conceive

Digitized by Google

the limit of safety to be 40 miles an hour on your railroad?—About that.

358. As a general proposition, you think that any speed much beyond 40 miles an hour would tend to increase the danger considerably?—Yes, at present.

359. Your railroad is peculiarly well formed in point of gradients and curves?—It is.

360. Lord Stanley—In point of gradients, you have one of the most objectionable inclined planes, have you not?—We have only one inclined plane each way; the rest of the road is very good.

361. Lord G. Somerset—You have certain gradients by no means favourable?—We have an inclined plane in each direction.

362. Do you think it safe to go 40 miles an hour down that inclined plane?—No; we have strict regulations that the trains are not to exceed from 20 to 25 miles an hour.

363. It would not do to say no train should go more than 40 miles an hour?—No.

364. It would not secure the safety of the passengers?—No.

365. What rate of speed are the engineers desired to adopt on this gradient?—Not to exceed from 20 to 25 miles per hour.

366. Consequently, as to the maximum rate of speed, there ought to be orders given adapted to each part of the railroad, or at all events to each railroad?—It would require a very complex order to adapt itself to all.

367. Is there not another point, as to curves, which would also require consideration in laying down the maximum speed?—Curves in cuttings are objectionable; it depends on the circumstance of the particular journey; if you are aware that there is nothing before you, there can be no objection to going pretty quick round them.

368. But they are to be considered?—Yes.

369. How would you manage as to any clause defining the powers of the Privy Council to lay down what is right and what is wrong?—I should be very sorry to undertake to write a clause of that kind.

370. You think it consistent with the safety of the public there should be no power to prevent 50 or 60 miles being adopted as the speed?—I think, of all other things, the one in which the interest of the Companies coincides with the public interest is that of safety; as to fares and things of that sort, there is a collision, but as to public safety, they are so anxious to make proper regulations themselves that other regulations are not necessary.

371. Mr. Labouchere—Have you read an account of the circumstances attending the late accidents on railways?—I have read most of them, I think.

372. Are you not of opinion that it is plain that, in many instances, those accidents did result from the want of proper regulations on the part of the Companies to secure the public safety?—I think it is possible, in some instances, they may; but I think in the infancy of railways it is hardly to be wondered at; gradually they will find their own interest in making regulations: they have paid every attention to Sir Frederic Smith, on the part of the Board of Trade, in doing that which you propose to get power to compel them to do.

373. Sir J. Guest—How could the powers with regard to the rate of speed be enforced; how could you prove the excess of speed?—It is difficult to do it minutely.

374. Suppose a Company exceeded the prescribed limits, how would it practically work, so as to prove the excess of it, to bring it to the knowledge of the Board of Trade; how would you get evidence of it?—I see a difficulty there; I do not know.

375. How could a person prove, that on a given part of the road a train went 20 miles, and on another part that they went 21 miles an hour?—It would be very difficult.

376. Chairman — Have you ever on your road punished an engineer for going beyond the prescribed speed?—Yes.

377. How did you prove it?—I have been in the train myself, and I trusted to my own estimate of the speed. It is what you cannot measure accurately; but in going down an inclined plane I can tell whether I am going 20 or 30 miles an hour.

378. Lord G. Somerset—You do not think it impossible?—It can be proved in this way; it is capable of proof, within limits.

379. You were so certain of the fact, that the man was punished in consequence of your knowledge?—Yes.

380. Mr. Greene—You have marked the distance?—Yes, we could prove it by the watch; but I would not trust to the proof of it from a casual passenger; they have looked at their watches and said, "We are going 50 miles an hour," when they have mistaken a quarter of a mile for a half mile post.

381. Sir J. Guest—Suppose it occurred at night, how would you detect it then?—At night it is not very easy.

382. And there is more danger at night than in the day-time?—Yes; I am afraid we must submit to some danger under the best regulations.

383. Chairman—What is the next point?—"That the guard should keep a journal." That might perhaps do on large lines with first-class trains; but on ours, where we have 20 stoppages in 30 miles, for a man to pull out his book and put down the time would lead to no practical good.

384. Mr. Thornely—Might not that be done by your agents at the stations?—It might if it was thought necessary. It is very undesirable to multiply business of that kind; and, when done, it is done in a loose and slovenly way.

385. Lord Stanley—Does not a clerk at each of your stations keep the time at which each train comes in and goes out?—At the termini.

386. Not at the intervening stations?—No; it is hardly desirable with the number of stations on our line. The man merely has to open and shut the gate; the train stops, takes up the passengers, and goes on. They do not keep a record there.

387. Mr. Thornely—At Newton and Parkside they do, do they not?—No, I think not.

388. Mr. Labouchere—Is it not a fact that a great majority of the Companies have some code of regulations for the guidance of their servants?—Yes, we have.

389. In the event of any Company opening without any code of regulations at all, do you not think it would be desirable to oblige them to form a code of regulations before they opened?—They certainly ought to have a code. I do not know the best way of compelling them.

390. Sir J. Guest—Is there not a code for every railroad?—I cannot speak to any railroad that has not. Ours having been the first, I think our code has been the basis, adapted to the circumstances of other railways.

391. For their own security do not the railroads adopt one?—Yes, they must be most anxious to have it.

392. Lord G. Somerset—By a code of regulations, you mean one that is written?—Yes, and printed.

393. Sir J. Guest. And they are given to the engineers, are they not?—Yes, and the gatesmen and clerks; we make them generally known.

394. Lord G. Somerset—If it turned out that a very serious accident had happened on a railroad, and no regulations at all had been written out or delivered to the engineer, what would you say to that?—I think it would go hard with the Company if it came before a jury.

395. Do you think that it is consistent with your general principle that the interests of the Directors and the interests of the public are so entirely one and the same, that such a case is not likely to occur?—I think it not likely to occur.

396. The fact of its having occurred would perhaps induce you not to rely quite so much on the interests of the Directors as being the only thing to insure the safety of the public?—It might.

397. Sir J. Guest—Is it not a heavy loss to the Company in such cases?—Very heavy, with regard to their own interests.

398. It is a positive loss, independently of the sum given against the railway?—Yes.

399. Mr. Labouchere—Will you proceed to the next point, if you please?—"That every description of passengers' carriage shall be provided with buffer springs." I have no objection to that.

400. You think it would be desirable?—I ought to mention, in fairness to other lines, we have no third class trains; we have as good buffers on the one as the other.

401. Do you think it would be desirable that all Railway Companies should be obliged to provide buffer springs for passenger carriages?—I think they are very good things for the public safety. We have no third class carriages. I do not like to presume to legislate for others.

402. Lord G. Somerset—Do you think there is any reason why third class passengers should be exposed to greater danger than others?—No.

403. Lord Sandon—When troops are carried do you put on buffer springs?—No; we occasionally put them in second class carriages.

404. To the second class carriages are there buffer springs?—Yes, unless the number is so large that we are not able.

405. They generally go in that class?—Yes.

406. Mr. Labouchere—Do these springs cause much additional expense?—About 30*l.* each carriage.

407. Lord G. Somerset—Suppose any accident happened to soldiers having these baggage trucks, in consequence of the absence of buffer springs, how would you justify such a course?—Our justification would be, that the soldiers came unexpectedly, and in such large numbers that we had not carriages sufficient for them. They must take their chance; the risk is very small. I should not object to going in a waggon on an emergency.

408. Sir J. Guest—Is there any increase of positive safety to third class carriages by buffer springs?—I think there is additional safety in a buffer spring.

409. To any extent?—I hardly know to what extent.

410. Lord G. Somerset—You contract with Government for the carriage of soldiers at a very low rate?—Yes.

411. Mr. Labouchere—Are there buffer springs to those trucks in which private carriages are placed?—Yes; there ought always to be, and to the horse boxes too.

412. Mr. Easthope—Should you not say it was very dangerous and very inexpedient to have first class carriages without buffer springs?—Very inexpedient.

413. Why so?—The ease of the passengers is very much consulted in it.

414. Why is it your opinion that there is more ease?—You are less liable to jolting.

415. If so, are you not more secure?—Yes; I think so.

416. If you are more secure in a first class carriage, should you not be more secure in a third class carriage?—Yes.

417. And must there not be danger without them in proportion, if the security is increased by having them?—Yes; I think they are more likely to keep on the line of road with the springs.

418. Lord Sandon—The passenger outside a coach incurs more danger than those who are inside?—Certainly; he is willing to incur it for a cheaper fare, and third-class passengers might rather be carried cheaper than have the buffer springs.

419. Sir J. Guest—As those buffer springs increase the expense, you charge more for them?—Yes, you ought to do so.

420. In point of fact those carriages which are without them are not more dangerous in regard to keeping the road than the others?—There is not much difference, there is very little difference as to keeping the road.

421. Lord G. Somerset—Is not one of the dangers of collision the way in which the passengers are tossed, sometimes against the sides, sometimes against the top?—Yes.

422. Do not the buffer springs, or something of that kind, go far to prevent that danger?—Clearly.

423. Are not third class carriages more liable to serious accidents than the first class carriages?—I do not know that they are more liable.

424. But in that way?—If they had not the springs they would be.

425. But suppose they have springs, is there not more liability to accidents in that particular, is not their construction less easy in other respects?—I apprehend the bearing springs are pretty much the same.

426. But does not the padding which a first class carriage has go far to resist the effect of collision?—Certainly, to some extent.

427. Mr. Labouchere—Do you happen to know if buffer springs are generally employed on other railways besides your own?—I do not know; they are employed between London and Liverpool. There are a great many railroads I have not been on.

428. Sir J. Guest—Would not the effect be, that if Railway Companies were obliged to have buffer springs to third class carriages, a larger charge would be made?—As it constitutes a more expensive carriage they would be entitled to a higher fare; it is a question whether a man would rather take the higher risk and pay a less fare, or pay more and have less risk.

429. Are you aware that a very small difference in the fare would make the man go by some other mode, such as walking?—I think it would be very likely; we have no third-class carriages.

430. Chairman—Now, as to the next point, the number of breaks; would you look at the next suggestion?—"The last carriage, and at least every fourth carriage, in trains in which passengers are conveyed, to be provided with a proper break." We insist on a greater number of breaks than that, for we have inclined planes.

(To be Continued.)

DUNDEE AND ARBROATH RAILWAY COMPANY.

REPORT by the Committee of Management to the Annual General Meeting of the Company, held the 2nd day of June, 1841.

(For Report of the Proceedings, see Railway Times of the 12th June.)

YOUR Committee will now state to this meeting the present position of the Company's affairs, which they think is cheering, and calculated to satisfy every reasonable anticipation of the shareholders.

The line is in full and efficient working order, and all that is now necessary for enabling the Directors to accommodate every description of the traffic of the district is to have additional space for a loading bank and depot near to the Dundee terminus. Upon this point there is no difficulty in the way of the Directors. There are many suitable situations, any one of which could be obtained on fair and reasonable terms; and it will be the duty of the gentlemen in the management for the ensuing year, to decide upon the best and most advantageous piece of ground for the objects in view.

It will be necessary for the Directors to open a communication with the Trustees of the Harbour of Dundee, in regard to the construction of rooms at Trades-lane, in connexion with the present shed for the accommodation of passengers, and for the transaction of the in-door department of the business of the Company: also to arrange the sum, under the submission entered into between the trustees and the Company, to be paid to the latter for the railway works within the precincts of the harbour. From the disposition hitherto shown by the trustees to meet the wishes of the Directors, they have every reason to think that both of these subjects will be amicably considered and adjusted.

The books of the Company have been balanced up to the end of the financial year, and gone over by the Directors with the greatest care, and the statements and abstracts required by the statute have been prepared, and are now laid upon the table for the information of the shareholders.

From these statements it will be seen that the total sum which has been expended upon the works, and comprehended in the Parliamentary estimates, amounts to	£107,271	13	1½
The sum expended upon stations, locomotive engines, &c., amounts to.....	36,280	12	7
Making the total expenditure, up to the present time	£143,552	5	8½

In the above sum is included the expense of the great bulk of the embankment from Carolina Port to Trades-lane; also of the rails, chairs, and blocks, which will fall to be repaid to the Company under the submission before mentioned, but in the meantime they must be included in the amount of the expenditure.

It will been seen that the expenditure exceeds the sum of 140,000*l.*, which is the maximum amount contemplated under the statute. In addition to the above sum, it will be necessary still to expend a considerable amount in fitting-up the depot in Dundee and at other places upon the line. The sum to be received from the Harbour trustees will, it is believed, nearly clear off the excess in the expenditure; but, as it is not exigible until they come to acquire the portion of the railway within the precincts of the harbour, provision must be made for raising the necessary funds in the meantime. There are only two ways of doing this—either by going to Parliament for additional powers to borrow or convert the debt into stock, which has been found very advantageous on many lines; or by the Directors for the ensuing year interposing their personal guarantee for the sum until additional powers shall have been obtained and the sum received from the Harbour Trustees. The Directors think that at present the latter is the preferable course, and full power and authority ought to be given to borrow on the personal security of the Board such additional sums as may be required for the purposes of the Company; and, farther, power should be given to the Directors to go to Parliament, and to obtain powers for converting the debt into stock and dividing it amongst the shareholders according to the amount of the original stock held by them, or to obtain such other and additional powers as may be best calculated to promote the interests of the Company.

The Directors may here state, that, even after the expenditure of the additional sum contemplated, the expense of the works is very small indeed when compared with the large sums which are daily being expended in similar undertakings. The sum of 150,000*l.* will include the whole expenses of forming the line, stations, engines, carriages, and other furniture of the Company.

REVENUE.

An account of the revenue has been made up, from which it appears that the sum earned during the past year amounts to....	£12,874	18	3½
Add to this the balance of last year's account, set aside and undivided, and interest upon it.....	577	11	0
	£13,452	9	3½
From this there falls to be deducted the expense of working the line, maintaining the engines, carriages, and way, in efficient order, and the expense of management ..	7,395	8	1½
Leaving a surplus of.....	£6,057	1	2

Out of this sum the Directors would recommend you to declare a dividend of 5 per cent. (which is equal to 5,000*l.*), payable on and after Friday, the 2nd day of July next, and to reserve the balance of 1,057*l.* 1s. 2d. to form the surplus fund.

The Directors are aware that there is a difference of opinion in regard to having a reserved fund, and that some entertain the idea that a dividend of 6 per cent. might have been declared; but the Directors feel that it is the more prudent course to divide 5 per cent., and to leave the sum of 1,057*l.* 1s. 2d. to meet any extraordinary contingency which may arise. It is proper to remark on this branch of the subject, that all the engines, carriages, and waggons, have been kept in the best state of repair, and the principle of the management has been to keep the whole in the most efficient working order.

The revenue of the former year 1839-40 was 9,285*l.* 3s. 11d.; and it was only by adding the sum of 1,334*l.* 17s. 4½d. earned in 1838, that the Directors were enabled last year to divide 4 per cent., whereas in the present year the revenue amounts for that year alone to 12,874*l.* 18s. 3½d. which gives an increase on the former year of 3,589*l.* 14s. 4½d., which cannot fail to be gratifying to you as clearly demonstrative of the rapid increase upon the trade of the line.

The Company was deprived of the valuable services of the Manager, Mr. Symon, in the month of October last, by his resigning his situation. After fully considering the subject, the Directors appointed Mr. Marshall, the Accountant of the Company, to the office of Manager, at a salary of 150*l.* per annum. This appointment, the Directors are happy to say, has fully realised all their expectations, and they think it due to Mr. Marshall to make you aware of the able, efficient, and prompt manner in which he discharges the various duties of his office. He not only acts as Manager, but as Accountant, and has the sole management of both departments of the Company's business. The Directors recommend to this meeting to fix his salary for the present year at two hundred guineas.

The passenger tax upon railways has occupied much of the attention of the Directors. Through the medium of Sir Henry Parnell, they were enabled to compound with the Government for these duties, by which a very considerable saving was effected to you. More recently, all the Railway Companies in Scotland joined and concerted one common measure for obtaining a more equal and fair application of this tax. Each of the Companies was represented in London; and, at the request of the Directors, Sir Henry Parnell most readily and kindly agreed to act as the deputy or representative of this Company, and attended a conference with the Chancellor of the Exchequer, when he announced his intention of bringing in a measure to fix the duty by a percentage upon the gross revenue, which will be much in favour of the Scottish lines of railway. To Sir Henry Parnell, therefore, the Directors feel that the Company is under deep obligations, which they consider it their duty thus publicly to acknowledge.

The only other subject remaining to be noticed relates to carrying the mail upon the Sabbath Day. As the Directors consider it to be a question upon which the sense of the shareholders ought to be obtained, they will refrain from any expression of opinion, leaving it to the meeting to determine upon the course to be pursued. It is proper, however, to state that they have forwarded to each of the shareholders the following excerpt from their Minutes:—

> Excerpt from the Minutes of a Meeting of the Committee of Management of the Dundee and Arbroath Railway Company, held within the Company's Office, upon Saturday, the 24th day of May, 1841, at 10 o'clock forenoon.
>
> The Directors, having taken into consideration the various representations which have been made to them by the Synod of Angus and Mearns, the Kirk Session of Dundee, and others, against carrying passengers upon the railway on the Sabbath Day, and having assured these bodies that the question would be left for the decision of the General Meeting of the shareholders to be held on the 2nd proximo, the Directors think that it is their duty to state shortly to the shareholders what has occurred upon this subject, that they may resolve upon the course which they would prefer to be adopted under existing circumstances.
>
> The Postmaster-General, under the authority of the Act of Parliament thereanent, has required the Directors to carry "the Edinburgh and Aberdeen day mail coaches, with the mails and post letter bags," between Dundee and Arbroath, "*once each way in each day of every week.*
>
> The Directors, after some negociations, fixed 300*l.* per annum to be paid by the Postmaster-General for carrying the mail-bags and the guard; and they are carried by the railway at present every day in the week, including Sunday.
>
> The Directors have, however, confined the mail trains on Sunday to carrying passengers travelling by the mail only, until the sentiments of the shareholders shall be known.
>
> The Directors have resolved to run only first and second class carriages by the mail train, and to charge increased fares. The trains leave Dundee at a quarter past 11 o'clock *a.m.*, and Arbroath at 1 o'clock *p.m.*
>
> The Directors are of opinion that it would be inexpedient to open the railway for promiscuous passenger traffic upon the Sabbath Day; but they think that a difference of opinion may fairly exist as to carrying passengers by the mail train, or confining that train alone to the carrying of passengers travelling by the mail.
>
> The Directors are aware that many individuals are of opinion, that were the former course adopted, it would be a great public convenience; while, from the hours of arrival and departure, and from the increased fares of the mail train, the passengers by it would be limited to those actually requiring to travel, and that no crowding or unseemingly proceedings would take place.
>
> On the other hand, they are aware that many individuals hold the opinion that it is decidedly objectionable to open the line to any extent upon the Lord's day. It is in these circumstances that the Directors have resolved to request the Secretaries to forward to each shareholder a copy of this Minute, with a proxy, which shareholders are respectfully requested to return, in course of post, to Messrs. Shiell and Small, Dundee, the Secretaries of the Company, stating how they wish to vote on this subject.
>
> The Directors would particularly request the shareholders either to be present at the meeting, or to forward their proxies, as they are anxious to have the question fairly decided by the opinion of the proprietary.

ROBERT MARSHALL, Manager.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Your spirit of fairness, of candour, and your habitual courtesy to correspondents, is gratefully acknowledged. You are satisfied that only good can be elicited by open discussion, and warfare of opinion—that truth is sure to be purified from error, and what is even worse, sophistry, by the war of conflicting and antagonist views and principles. But it must be confessed, Sir, this candour and neutrality on your part, gives an opening for many communications of an erroneous kind, and permits an enemy or wolf to get sometimes into the fold. I have no fault to find with *any opinions* differing from my own, so that they have some reasons to justify them, however unfounded they may be; but I cannot say the same of statements sent forth under the cloak of facts, which are manifestly given with a biased intention of damaging railway property.

You have two classes of correspondents—those who are foolishly sanguine, and those who have so mean an opinion of the greatest and most prosperous concerns that they do all they can to inculcate the same views on others. The sanguine man will in all probability be a shareholder in the railway he applauds, and we allow for his exaggerated opinions; but the other, on the contrary, is not so likely to be a shareholder, and we are justified in suspecting *he wants to be one*, at a discount; for how can we account for him railing against a very popular railway if he is interested in its future success and prosperity? The former may go too far in his praises—that I do not deny; but the latter is as intemperate in his objections.

After this long preface, Sir, I would call your attention, and that of your readers, to a letter in your last number, signed "Ignotus." I am far from imputing any motives to this writer, as he may be sincerely convinced of the statements advanced by him; but I hope to show that a calm revision of his opinion as regards the future prosperity of the Great Western Railway, may be of some use to him. He has, I am satisfied, adopted those opinions without adequate reflection, and no doubt, upon reasons being given, he will be the first to acknowledge his error.

The first very conspicuous error he has fallen into, is that one in the first paragraph of his letter, of calling surmises, or bare conjectures, by the name of "facts." He sets out as you may see, with the very praiseworthy intention of opening our *now* sealed eyes to some most important disclosures, called facts, that ought to interest every shareholder in this concern—facts "but few of which have been elicited by the *increasing* partizans on each side," and which no doubt, he as a third impartial party, is about to support by a very powerful train of his own reasoning. The first fact, Sir, is as to the cost of the railway. "This important item may now be set down at 7¼ millions." "This will be denied by the whole host of officials, and sanguine shareholders, but it is *true*." This is all the reason he has condescended to give us, in support of the fact. The guard of the coach running at that time between Wootton Basset and Bath, assured me, as a *fact*, that the railway I had just left would cost two millions and a-half more than the Birmingham. What worse authority was his *ipse dixit* than that of your (no doubt better educated and more reflecting) correspondent? I would as soon pin my faith to the one as the other; nevertheless, a conjecture made by one without sufficient reasons given to direct us, is just of the same value as the conjecture of another. The Directors have said no more capital would be required, and officials may hold by the same opinion, and yet after all more capital may be wanted, as on the Birmingham Railway, to build a new station at Paddington, and to introduce other necessary improvements, not contemplated before; but notwithstanding this very candid admission, I cannot allow naked assertions to go, or have the same weight, as facts. "Ignotus" may have fixed his *minimum* at ten millions, just as easily as seven and a quarter, for any evidence he has given to the shareholders. The station near London may be called a series of sheds, if "Ignotus" so pleases, but it is a very substantial erection, and as useful as if built of the finest stone. This perhaps, by and by, may be rebuilt; but it is the only case I know where a new station will be required, as the minor ones are as good, if not superior, to those on any other line. At the Bristol terminus we have already a very elegant and substantial structure, demonstrating much more taste in the Great Western Directors than in the Birmingham ones. What is the million and a half over and above the present capital to be spent on? "Ignotus" points out to us the enormous expense on several portions of the line, which may be correct enough; but surely he would not have us again pay the contractors, for the sake of making his statement assimilate to the facts! The charges are surely long ago defrayed.

Again, "Ignotus" impresses upon us the fact, that the total annual expenses, if frankly stated, will not *be less* than 250,000*l.*, or somewhat more than 2,000*l.* per mile per annum. This may be true, but where are your reasons, your proofs, your evidence? The absolute expense of a railway is a minor consideration. The question is whether the traffic justifies it, or renders it necessary. If the traffic do not exceed the prophetic conjectures of "Ignotus," then indeed so enormous an annual expense would swallow up all our profits. I can only say in reply to this, that the Directors have hitherto been able to work the railway at an expenditure under 48 per cent., with all the disadvantages of an imperfect and unfinished line, which is saying (*this is a fact*) a good deal on the score of economy. "Ignotus" must know that an absolute sum is fallacious; for a railway with a prodigious traffic, as the Great Western, can be worked for a less per centage on the revenue, than another equally long with less traffic. It is a question of relativeness, or rather proportion, between the revenue and the current expenses.

The object of "Ignotus" in fixing a specific sum for expense of working, is indirectly to show us that upon his assumed traffic, we have no chance for a long time to come, (he says not how long) even of a dividend of 3 per cent. Granted he is correct in his conjectural capital, his expenses and all other things, he is most decidedly wrong in his

* Anglice, ground rents.

Digitized by Google

assumed traffic. This I can grapple with; the other figments of his brain, or his too melancholy imagination, are yet dreams *in future*, not yet tangible or reducible to analysis. He says, "The line having been so long opened to Steventon, the portion of the line of the greatest value, leaves but little traffic doubtful—and it may be stated, with great approach to accuracy, at an average of 10,000 pounds to guineas (how precise!) per week, for the first two years, from the period of its completion." Against this assertion I can place another of more weight—namely, that the Directors have said, they have solid grounds for believing the revenue on an average will amount to 14,000*l.* a week, and that for the period mentioned by "Ignotus." And this statement is in reality much more rational than the other, which allows no more than an increase of 555*l.* a week during the winter months, for the whole distance of 118 miles! During February and March this year, with the line opened 92 miles, the receipts amounted on an average to 5,445*l.*—while "Ignotus" in his unbounded liberality, offers us, miserable shareholders, only 6,000*l.* next year, with the whole line, and every chance of a great increase of traffic? Is this not preposterous? 6,000*l.* a week, on the Great Western for half a year, and 14,000*l.* for the other half!—making an average of only 10,000*l.* a week. I am sanguine as to the future prosperity of this great undertaking, but I hope I am not foolishly so; in fact, I have made every calculation possible, to bring to mathematical demonstration (as far only as can be done by the facts presented to our view) the future revenue of this line, and I have no doubt it will far exceed the amount put forth by "Ignotus." The *through* traffic has scarcely been developed yet, as is the case with every unfinished railway. The local traffic is a feature peculiar to this line (with one exception) and is truly as wonderful, as it is unexpected. In dividing the passenger revenue of last week by the number of passengers carried, it yields only 5*s.* 8*d.* per passenger, whereas on the Birmingham, with most of its *through* traffic developed, it amounts to between 15*s.* and 20*s.* This I say from recollection of the last meeting. The Birmingham revenue has doubled, and why should not the same be expected on the Great Western? Comparing these two railways at their last meetings, the number of miles travelled on an average by each passenger, came out nearly as much on the latter as on the former. And next year we shall find it much higher—as the revenue and passengers are increasing every week. "Ignotus" passes over, or perhaps despises all comparison of these two rival undertakings. We will find on every occasion, under similar circumstances, the contrast comes out favourably for the Great Western line. And I see no reason why the per centage for expenses of working should not be as low on the one as the other. The hope is in favour of the Great Western; otherwise the great outlay and labour to obtain better gradients, have been spent in vain.

"Ignotus" makes some severe strictures on the Directors for allowing the rest of the line to be opened, amid great haste and confusion. Is their past success not a better guarantee, than the opinion of your correspondent? He may have been deceived into this belief of incompleteness by the mere appearance and outward show; for you know, Sir, that a line on being first opened for traffic, has all the *appearance* of being unfinished, whereas a few days work may be sufficient to cover up the eye-sore that offends the inexperienced. The critical eye of "Ignotus," was perhaps attracted by the space between the rails not being filled up; but in reality this is not essential to the perfect safety of the road, much less on the Great Western.

He complains of the Directors mixing up the traffic of the two tributary lines with the Great Western, with the view of deceiving the proprietors. Why impute such an absurd and foolish motive? Give the Directors time to make their arrangements, which cannot be done in a day, and I have no doubt "Ignotus" will be satisfied on this point. The Directors can have nothing to conceal. Their past candour is a proof of this. He is not correct in saying that the receipts are given without any indication that this includes the weekly receipts from the other lines; at all events, your note at the bottom of the traffic table (which is my only authority) states the contrary.

I am, your obedient servant,

R. M.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Pray grant me space to answer promptly an attack on this railway by "Ignotus" [Ignoscens?], in your last number.

It is easy to demonstrate that the information of your correspondent on the affairs of this Company is very scanty. He asserts that it will cost 7¼ millions, anticipates that this will be denied, but still avers that it is "*true*."

Now for facts. It was unequivocally declared by the Chairman only about four months since, that it would not exceed 5¾ millions. This consequent excess of 1½ millions would not be merely on the latter sum, but on about ½ a million! (as 4 to 1) because only about that sum then remained unexpended for its completion. Another position that may be taken is, that as the whole line is now open, and the Company have not raised beyond the 5¾ millions, had the cost been 7¼ millions, they would have become indebted to their contractors no less a sum than the whole of such excess of 1½ million!

Need another word be said to demonstrate the inconsistency and impossibility of such an assertion?

Whatever may now be required for perfecting any parts not quite in a finished state, will be amply covered by the re-sale of surplus land and other residue, which may now be realised.

All this will doubtless be explicitly shown at the approaching half-yearly meeting, by which time all claims will either be liquidated or in a state to admit of accurate calculation: thus will all speculation and vague opinion on this point be best silenced for ever.

For reasons not rendered very intelligible, your correspondent assumes 10,000 pounds or guineas as the probable traffic per week. He would have been nearer the probable truth by assuming double that amount, according to experience obtained from partial openings, and to the usual effect on receipts consequent on bringing an entire railway into operation.*

It will be seen, however, by the subjoined calculation, that a much more moderate receipt, viz., 120*l.* per mile per week, or 14,190*l.* per week, would produce a dividend of 10 per cent. per annum, independently of the profit on the two leases. There is no reason to doubt that this or more will be realised in the year 1842.

Last week the return for the "London and Birmingham" (5 miles less) was 19,550*l.*, and for the "Liverpool and Manchester" (little more than one-fourth of the length) was 5,740*l.*

As regards results from partial openings the contrast in favour of this railway over all others is most striking.

With respect to working expenses the mode adopted by him of calculating at a rate per mile instead of a rate per cent., is too accurate a method for argument. My assumption of 40 per cent. is justified by the precedent of the "London and Birmingham," and this will diminish as time increases the traffic, whilst improvements favourable to economy are continually effected in respect to engines, and the consumption and cost of fuel.

* See the intelligent speech of the Chairman of the Manchester and Leeds Company touching this point, in *Railway Times* of 12th inst.

On the assumption that high speed is calculated to increase the risk of accidents, he also exaggerates by stating the average on this line to be 35 to 40 miles per hour. The allowed time in no case exceeds 30 miles per hour. The Bristol mail time is fixed at 27 $\frac{11}{100}$ and 28 $\frac{85}{100}$ miles per hour.

There is one part of his letter on which, however, I am painfully obliged to coincide with him. He says, very truly, it is unworthy a great Company not to specify the amount produced by the Great Western, Bristol and Exeter, and Cheltenham lines respectively. Their best friends have hopes that this will shortly be remedied by their causing you to be furnished weekly with the returns of traffic properly separated.

The train bills for the whole line are now issued, and it is seen with great regret that the injudicious and unreasonable plan of enhancing the fares westward of Farringdon is persisted in. If anything will check the prosperity of this Company it will be excessive fares: they discourage travelling, and enable rival coaches still to maintain their ground. The advertised fare from London to Exeter *via* Basingstoke is 2*l.* 10*s.*; by the Great Western lines it is 3*l.*

From Cheltenham it has been shown that the fares to London *via* Oxford are much lower than *via* Cirencester, and several coaches between Bristol, Bath and London, are confident of continuing to run at fares lower than those of this Company.

What good motive can your correspondent assign for this unjustifiable attack on the property of others? It is clearly to be inferred that he is no shareholder himself or he would adopt a different course.

It is very extraordinary that this concern should have been so frequently assailed in the same way. Beyond all question it is the best conducted line in the kingdom, and in point of traffic it promises to rank amongst the first, if not the first, in this or any other country.

Some reflections having been cast upon the expenditure for architectural ornament, it is fair to consider that, as respects the works in Bath and its vicinity, much as they add to the beauty of this beautiful city, they are by no means of an expensive nature—a consequence of the fine stone of which they are constructed being quarried within so short a distance of the railway, as well as of its being so cheaply workable into shape.

Yours, respectfully,

F.

Bath, June 30, 1841.

P.S. I have the pleasure to add, that contrary to the forebodings of your correspondent the entire opening to-day of the railway throughout has been unattended with any accident or impediment.

Calculation for Dividend.

F.

Bath, June 24, 1841.

THE GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—However much I may differ from your correspondent "Ignotus" in other respects, I feel obliged to his letter for having called my attention to your note No. 12, which explains that the receipts of the Cheltenham and Great Western branch had been included in some of the latter returns from which I quoted. I find, however, by reference to your journal of the 5th of June, that previous to the opening of that branch, the week's receipts of the Great Western line to the 30th of May, were at the rate of 93*l.* 16s. per mile, which being at more than double the rate of the London and Birmingham receipts under similar circumstances, in May, 1838, will still sufficiently illustrate the comparison I made between them.

In order to prove the progressive nature of railway income, it will be sufficient to state that while the receipts of the London and Birmingham line in the first week of, January, 1839 were only 7,700*l.*, those for the corresponding week of 1840 were 10,800*l.*, while those for the first week of January, 1841, amounted to 14,900*l.*

Further it is well known that the receipts for the half year, which terminated yesterday, exceed those of the corresponding half year of 1840 by about 40,000*l.*

From all this there certainly appears no reason why "Ignotus" should despond in regard to either the immediate, or the future receipts of the Great Western line, for the principle of progressive encrease is as applicable to it, as to the London and Birmingham.

Indeed it seems too evident, to admit of any doubt, that the receipts of the Great Western Company for the first six months after its through opening, will, after deduction of the rent payable for the two branches, exceed those of the London and Birmingham line for the first six months after it was opened—the decision being of course in favour of the former.

I am, Sir, yours, &c.

ONE OF THE SANGUINE.

London, July 1st, 1841.

THEORY OF RAILWAY FARES.—GEOMETRICAL DEMONSTRATION.

To the Editor of the Railway Times.

SIR,—Pressure of indispensible engagements must be my apology, if you require one, for not sending to you in time for your last week's paper my promised attempt to exhibit in plane figures the fares, cost, and profit of railway travel. The following is much at your service, and I hope is not the worse for the strengthened conviction of the importance of the subject, which I have derived from further reflection.

I am much obliged to Mr. Townsend for his complimentary notice of my former effort: when he favours us with his further remarks upon it, he will doubtless be so good as to remember that my object was, and still is, to popularize the subject—to make it matter of useful observation and intelligent discussion to many, who will probably never acquire, or attempt to acquire, a knowledge of any algebraic mode of argument. Directors, shareholders, accountants, clerks, superintendents, anybody, may understand, I hope, the necessary figures, and will be fitted by a knowledge of the argument they exhibit, to watch for the facts which are necessary to a true solution of this great question. Mr. Townsend will expect from me, therefore—at least at present—only what is required by this purpose.

The business now in hand is to construct a figure which shall show all the circumstances of railway receipt, cost, and profit, and the fares which will yield the greatest profit. To this end let us, as in the former instance set off numbers of passengers on the line A B, fig. 2, at the rate, say, of 1,000 for each division; and cost or receipt per mile on the perpendicular A F, at the rate of one penny for each division, always beginning at the angle A.

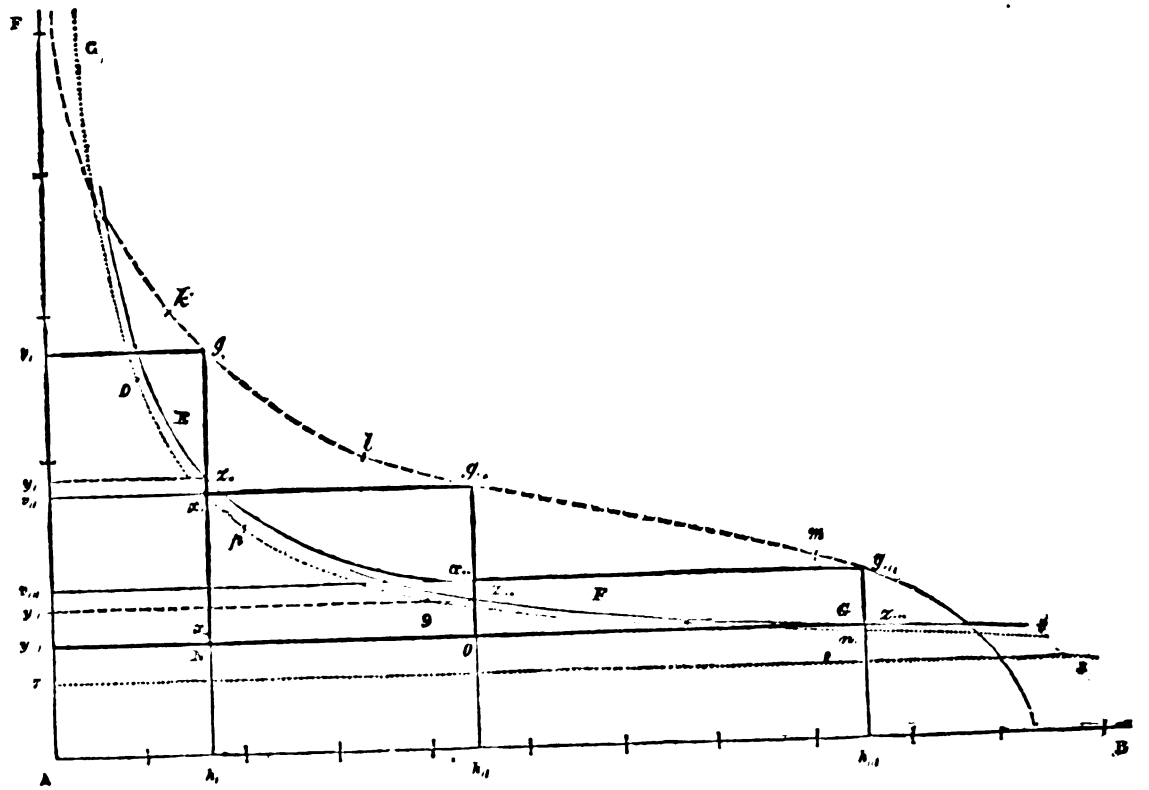
Suppose now, that in the different classes of carriages on the same line and in a given time, 1,250 persons travel at a fare of 3d. per mile, 2,000 at 2d. per mile, and 4,750 at 1½d. per mile—in the whole 8,000 passengers; the three points, *k l m*, found according to the above-mentioned understanding, will determine so many points in the curve of fares, which here replaces the straight line *f b* in the former figure (See *Railway Times*, June 19, p. 648). It is true that three points only will determine no curve but a circle, and therefore we can only get a probable curve without more points; but we shall be near enough to the truth to learn useful lessons in the business, though perhaps not near enough to attain great satisfaction and exactness. Draw through these points, therefore, a curve, and correct it if you can at intermediate points by other observations. It will, however, be necessary to take care that these other observations be made in circumstances as like as possible to those of the first, and ascertained or probable allowance be made for any known difference.

We will suppose the curve known by these means as far as each way as the extreme fares which have been tried. We must make a remark about its extreme ends. Now in all probability a fare still higher than the highest yet charged, would not entirely deprive the railway of first class passengers, and even under most exorbitant charges there might be a few persons who would indulge in the ostentatious extravagance of having the railway almost to themselves. This state of things is indicated by the rapid rise of the curve as it approaches to the line A F, the excessive fare corresponding to the great height of any point above the point A and the small number of passengers to the small space between the curve and the line A F. It is obvious that it is of little importance to know this point of the curve very exactly for it never could be used.

The other extremity of the curve will evidently continue to approach the line A B for some distance: that is, lower fares would attract more riders. But there is a limit here also beyond which it is not necessary to know the curve exactly. In all probability, after approaching the line A B for some distance, it turns downwards somewhat suddenly; for since other considerations, besides amount of fare enter into the inducement to abstain from travelling, it is probable that extreme lowness of fares and great reductions within those *very* low limits, would not greatly influence the number of passengers.

Cost of working, you have lately shown, *Railway Times*, June 12, page 629, is divisible into three or four kinds. I will mention each, and lay down its line.

It will be most convenient to begin with that which is proportionate to the number of passengers. For if taken first, it will be represented by a straight line. Suppose that of this kind, the cost per passenger is one halfpenny per mile: indicate that fact by drawing from the proper point in A F the straight line *r s*, parallel to A B.



Now let us show the expenses which are constant, whatever the number of passengers may be. We will suppose, that so long as the railway continues to carry the 8,000 passengers in the time assumed for the calculation, these expenses divided by the number of passengers and number of miles travelled over, come to one farthing per mile for each passenger. Then, if only 4,000 be carried, they will amount to one halfpenny; if only 2,000, they will come to a penny, and in like manner of all numbers of passengers beyond and between these; that is, the constant sum is always to be divided by the number of miles and of passengers, and then if the points *o p q n* be found, according to the previous understanding (reckoning, however, now as to cost from the line *r s*, because this cost is to be added to that which is proportionate to the number of passengers), the curve passing through them and continued by the same rule each way towards *c* and *t*, will supply the means of showing the cost of carrying any proposed number of passengers.

We come now to expense peculiar to each class of carriages. This will in each class be nearly

Digitized by Google

proportionate to the number of passengers, but will vary greatly in the classes. Let us suppose it is found to amount to one farthing per mile for first, one-eighth of a penny for second, and one-sixteenth for third-class passengers. Draw the three short curves E F G at those distances from the curve $o\ p\ q\ n$, extending each somewhat beyond the probable limits of first, second, and third-class fares, and remembering that their distance at each point from the lower curve is to be measured perpendicularly.

The figure now exhibits the fares which will be

paid by any proposed number of passengers, and the cost of conveying them, according to the suppositions with which we set out. We have now to ascertain what are the fares, and the numbers of passengers which, under these circumstances, will bring us the greatest profit. Let us see how the profits will be represented. For example's sake let us fix the first-class fares at 2½d. per mile, the second-class at 1¼d., and the third at ¼d.; the lines $v'g'$, $v''g''$, $v'''g'''$, drawn from their respective points on A F, and meeting the curve of fares, will give by their length on the scale of A B the number of passengers of each class, except that in so reckoning each lower class includes the class or classes above it, the real numbers of each class being shown by $A\ h_{,}$, $h_{,}h_{,,}$, $h_{,,}h_{,,,}$, respectively. Draw now the perpendicular $g_{,}\ h_{,}$ and the rectangle $v_{,}g_{,}$ $h_{,}A$ will show the entire receipts from first-class passengers. The length $z_{,}h_{,}$ on the scale of A F, ($z_{,}$ being the point where $g_{,}h_{,}$ cuts E the curve of costs), gives the cost of carrying the first-class passengers, supposing they were carried without the other classes, and the rectangle $v_{,}g_{,}$ Y, Z, ascertains the profit on this class in the like case.

Again, the lines $x_{,}g_{,,}$ (equal to $h_{,}h_{,,}$) and $g_{,,}h_{,,}$ respectively ascertain the numbers and fares of the second class. The cost of each passenger is represented by $z_{,,}h_{,,}$, and the profit by $g_{,,}z_{,,}$. The total receipts of the class are proportionate to the rectangle $g_{,,}x_{,}h_{,}h_{,,}$, and the profits to $x\ g_{,,}z_{,,}x_{,,}$. This assumes that the first and second classes are carried together—another result of which addition of passengers is, that the profit on the first class is extended from $g\ z_{,}$ nearly to $g\ x_{,,}$. I say nearly, because there is to be taken into account the small difference between the costs peculiar to each class, that is, of between the distances of the short curves $E_{,}$ and F, from the curve $o\ p\ q$: this I omit to show in the figure, to prevent confusion.

Finally, the lines $x_{,,}y_{,,,}$ and $y_{,,,}h_{,,,}$ give us numbers and fares of the third class, the rectangles which show the receipts and profits being obvious from what has gone before. These costs and profits are, however, on the supposition that the third class is carried along with the others, and the effect of associating the three kinds is to extend the profit of the first and second classes, nearly down to the line $y_{,,,}z_{,,,}$ drawn to the point where $y_{,,,}h_{,,,}$ cuts the curve of cost.

The entire profit consists, therefore, of the three rectangles $v_{,}\ g_{,}$ N $y_{,,,}\ x_{,}$ $g_{,,}$ O N, $x_{,,}\ g_{,,,}z_{,,,}$ O, and the question really is to ascertain the fares or the points $v_{,}\ v_{,,}\ v_{,,,}$ which with given curves of cost and fares will occasion the entire sum of these rectangles to be the largest possible.

It will be seen that in writing these remarks I have supposed the reader to have made himself acquainted with the principle of the former diagram; and that I have only exhibited the general principle and effects of this mode of representation without noticing particulars which would be interesting to the mathematician. In this as in the former case a few trials will show whereabouts the truth lies, and perhaps at present little more can be done at least if there be not in existence much more complete accounts than any to which I have access.

It will easily be seen that to discuss and lay down accurately all these lines would be to examine the whole question of railway management. We should have to take into account the influence of season, locality, and accommodation on the curve of fares and that of order, economy, and skill on the curve of cost; it would be necessary to collect data from every quarter, and view the subject under every aspect. When once these curves were settled, it would not be difficult to ascertain for those curves the best fares.

There cannot be a more improving exercise to a person engaged in railway business than to draw a number of these curves according to various practical data, or probable suppositions. He would obtain a clearer insight into the proportionate effect of the different points and modes of railway management, than by any other device. Directors I think would do well to have them drawn on a large scale, and hung up in the board room; and even engineers, well qualified as they may be, might occasionally derive useful hints from them.

I have already extended this letter too far, or I should have remarked on the effects on profits which the figure shows to result from admitting large numbers of passengers at low fares; this and other points of the subject must be discussed, if at all, at another opportunity.

I am, Sir, your's, very respectfully,

HENRY EUSTACE.

July 1, 1841.

THE RAILWAY WHISTLE.—Few sounds are more astounding than this whistle as heard during the still hours of the night, particularly if you are suffering under a nervous affection. The thrill which vibrates through your whole frame, has scarcely ceased before there comes a rumbling as of distant thunder, increasing every moment in loudness, the ground trembles, and you hear a hissing and a rushing as of ten thousand serpents released from their subterraneous abode by an earthquake. You look through the darkness, and behold two figures by a kind of balefire, standing like statues on a pedestal, yet shooting past you with the velocity of the whirlwind. In the twinkling of an eye they are gone; the rumbling, and the rushing, and the hissing are heard no more, the hurly burly has sped onwards as if impelled by fate, and knowing neither stop nor hindrance. Careering thus through darkness and tempest, how awful appears the situation of the mysterious voyagers, for voyagers there are in that fiery and far-sounding vehicle, recklessly hurrying on as if commissioned by the powers which brave men quail to mention, to sweep over this our dim, diurnal sphere on a message of mighty import, but whither bound defies conjecture. 'Tis passing strange.—*Hull Rockingham.*

2. Toll to London and Birmingham 156*l.* 13*s.* 10*d.*, to be deducted from gross receipts.

3. The receipts are exclusive of those for the mails; on Sunday mails only are carried.

7. Receipts include the Northern and Eastern toll, &c.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 111 (83×31.)

12. The 5,231,527*l.* 9*s.* 10*d.* is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 155½ (104½×18×33.)

14. The 26*l.* 4*s.* 7*d.* from goods, &c. is for toll only.

15. Ten per cent. is the maximum dividend allowed by the Company's Act.

16. Deduct from receipts 48*l.* 1*s.* 6*d.* for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station.

20. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed.

21. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.

23. Canal cost, 100,000*l.*; railway, 672,165*l.* 16*s.* 1*d.* The receipts given are however those from the railway only.

24. The 4,013*l.* 6*s.* 9*d.* are the receipts after deducting the toll to the North Midland Company, and exclusive of receipts from carriage of mails.

25. The receipts for goods, &c. include, carriages, 267*l.* 0*s.* 6*d.*; horses, 17*l.* 16*s.* 6*d.*; dogs, 0*l.* 15*s.* 6*d.*; parcels, 202*l.* 0*s.* 7*d.*; cattle, 17*l.* 0*s.* 0*d.*; corn, 33*l.* 9*s.* 0*d.*; heavy goods, 401*l.* 0*s.* 8*d.*; coal, 69*l.* 12*s.* 9*d.*—Total, 767*l.* 15*s.* 6*d.*

27. Including the traffic of the Manchester and Leeds Railway, 133*l.* 15*s.* 8*d.*

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4*l.* on such portion of the passengers as pass over their railway.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

We have received the letter of Mr. C. T. *of Chesterfield with the documents enclosed, but have not had leisure this week to go into the matter.*

A Railway Shareholder *(Chapter Coffee-house) will find that his object has been partly, sufficiently perhaps, accomplished by another correspondent in our present number.*

The "Officer of Many Years Standing" gives neither his name nor address, and cannot expect under such circumstances, that we should pay any attention to his statement.

Au bon droit.—*We think we could fully justify our strictures, but at this distance of time it would serve no good purpose to renew the subject.*

An Old Contractor.—*Enough has been said by the parties themselves.*

Eastern Counties' Railway.—Honestas *is right in his supposition that the sole thing the Directors have attempted to make the subject of prosecution only, however, to be very signally defeated, is the charge which the Railway Times brought against them of misrepresenting the results of their carrying business; and equally right, in our judgment, in inferring "from THE LITTLE they complain of how much they must needs admit to be true." Whether there is enough within the latter category to justify the "astonishment" he expresses at their continuing "a day longer in office," is another question on which opinions may differ. What ours is no person can be at a loss to conjecture.*

The particulars about the Box Tunnel arrived too late, but shall be made proper use of hereafter.

The Free Ticket System.—T. D.'s *letter in our next. If he could furnish us with a few well authenticated cases, with names and dates, he would be rendering a useful service.*

Mr. Bernard's *reply to Mr. Townshend came to hand too late for a place this week.*

Phavo.—*Delayed till our next, for reasons good.*

Which is the Greatest Railway Slip Ever known?—*We refer* Eugenius *for an answer to his inquiry to any of the twenty affidavit makers, High street, Shoreditch.*

Mr. Rettie—G. L. D.—Cosmopolite—Mr. Arnot—Viator—Fair Play—*received.*

Erratum in our last number, page 684, column 3, line 5—*for* $\left(\frac{T-3t}{4t}\right)^2$ *read* $\frac{(T-3t)^2}{4t}$

THE RAILWAY TIMES.

SATURDAY, JULY 3, 1841.

THE present week has been distinguished by one of the great events of railway history—we refer to the opening of the Great Western line throughout its entire length on Wednesday last. The completion of this magnificent undertaking promises at length a fair reward to the energy and unyielding determination, with which it has been prosecuted. We readily sink all differences of opinion on points of construction or management, while we cordially congratulate the executive and shareholders of the Company on the successful completion and general results of their enterprise.

Of the talents of the Engineer whose name is indissolubly associated with the work, it is impossible to form a low or doubtful estimate. We have, indeed, felt it to be our duty more than once, to point out the hazardous wilfulness with which he has departed from safe and tested practices; but we are not sure that we have always duly kept in mind, how hard it is to be original without sometimes being rash, or to attempt great improvements without sometimes encountering failure. As far as the Great Western line is concerned, Mr. BRUNEL, at the bar of public opinion, may safely plead the "general issue."

The very important division of the kingdom through which this new and important channel of traffic runs, will soon feel the beneficial effects of this great addition to its means of improvement; while international intercourse, and thereby we trust the kindliness of international feelings, will be simultaneously most materially promoted.

Some fears were expressed as to the apparently incomplete state of some parts of the line; and a correspondent who came up to London on Thursday by the morning train from Bristol, informs us that the passage through the Box tunnel was made with a degree of slowness and caution which is unusual in the case of perfectly finished works; but we are happy to say that the opening passed off without any accident whatever.

IN several recent articles we have pointed out the facts in railway business which appear to us to require special notice in the accounts, and great care in their classification. In so doing, we have purposely omitted any detailed mention of matters common to all well-digested accounts, in order that the peculiarities of railway business, might stand out with their due and necessary prominence.

Before we go on to comment on existing railway accounts, we wish to pay a passing tribute of praise to the excellent spirit shown in the conduct of the Arbroath and Forfar Directors, whose Annual Report to their constituents we gave in our last week's number. If the reader would desire to see how faithful stewards may best manifest a disposition to render a faithful account of their stewardship, he has but to consult that Report:—

"In the statements," they say, "of receipt and expenditure which have been printed and circulated, the proprietors have already in their hands a full abstract of the accounts of the Company for the past year. *The Committee of Management, while they refer to that abstract, beg to express their readiness to give whatever explanations may be wished for in regard to the revenue and expenditure, or the details of the accounts; and* IF ANY FURTHER INFORMATION RESPECTING THE COMPANY'S AFFAIRS AND THE MODE IN WHICH THEY HAVE BEEN MANAGED SHOULD BE DEEMED NECESSARY AFTER THE READING OF THIS REPORT, SUCH INFORMATION SHALL BE COMMUNICATED AS FAR AS THE COMMITTEE HAVE IT IN THEIR POWER TO DO SO. The books of the Company, regularly balanced and docqueted in terms of the Act of Parliament, are laid on the table for examination."

The "abstract" referred to as previously in the hands of the shareholders, is clear and very well divided; it has but one "&c." and though that in our view is one too many, still it is one of such a nature that it can only cover a mere trifle.

With such explicit information of a general kind first given, and then a cordial invitation to the shareholders to examine into all details, it is impossible anything in any railway concern should long go amiss. The frankness with which the Managers thus expose their doings, will be heartily repaid by renewed and increased confidence, while a hundred friendly eyes will be watchful for the prosperity of the undertaking, and a hundred willing hands ready to promote it. We may rest satisfied that what in the nature of the case can be done will be done; and that if improved opportunities of profit should occur, or clearer views of management should present themselves, neither one nor the other will be neglected. It is to railways cared for in this spirit, that the whole railway interest will have eventually to look, for the data by which each railway proprietor is to judge of his own. Already the question is asked, why do the Scotch railways pay better than the English in similar circumstances? Do not Reports like these furnish the answer?

We are happy to be able to extend our commendation to the Directors of the neighbouring line—the Dundee and Arbroath, whose last Report with the annexed accounts we give in our present number. There is the same explicitness of account (marred, indeed, with a few "&c.'s"), and the same evident desire, though not expressed, that the shareholders should fully inform themselves of the state and working of the concern. It requires no spirit of prophecy to predict for these lines whatever possible success their location can be made to produce.

To revert to the subject of railway accounts:—our present remarks will be chiefly confined to the Returns made by the different Companies, *first* to the Committee of the House of Commons, which sat in 1839-40, to enquire into the subject of railways; and *second*, to the Board of Trade under Lord Seymour's Act.

Nothing, we think, can show more clearly the importance of a probable theory as a guide to inquiry and experiment, than the incompleteness of the requisitions upon which the returns of 1839-40 were made, and the evident imperfection and want of system of the accounts from which they were furnished. We are not speaking of this as matter of blame, but as matter of fact; as one of the imperfections, incident, perhaps unavoidably, to the early stages of all new and great undertakings.

The Committee who required these returns, seem rather to have desired to know what the powers of the several Companies were, and how those powers had been used, than to collect data for the improvement of Railway Management. Concurrent, however, as to a great extent the two objects are, we cannot but think that if the Committee had understood more clearly, the relation which each department of railway business bears to the final issue, their questions would have been such as to produce much more valuable returns than these are, notwithstanding any unwillingness on the part of the Companies to furnish them. We believe too, that if the Companies really knew *their own interest* they would meet not only with openness, but with grateful readiness, the requisitions of any central authority, which would take the trouble of collecting the experience of each, for the benefit of all.

The particulars of which the Committee of 1839-40 required returns, so far as they relate to passengers were, the number of miles of railway open to the public—the fare per mile in each class of carriages—the number of passengers in each class—the number of miles travelled—the amount of gross receipts for passengers—the average receipt for each passenger and average fare per mile received for each passenger—the variations of fare which

Digitized by Google

had taken place, and the effect of each variation on the number of passengers—and finally the amount of the outgoings of each railway.

Now, these are some but not all of the elements, from which the best mode of management is to be deduced, and the returns under several heads are far from complete. For example, we have in almost every instance a monthly account of the number of passengers by each class of carriage; but in consequence of the uncertainty attending the meaning of the terms *first, second,* and *third* class carriages, the information supplied is almost valueless. No comparison can be instituted between the results of different railroads, except we know that their different classes of carriages are equal in comfort, each to each. The designation by classes affords no evidence to neutralize the belief arising from other notorious facts, that carriages passing by the same name are on different lines, very different things.

Again; the number of passengers of each class, and of the miles they have travelled over, are given in these first returns with great particularity and on one uniform plan: there is scarcely an instance of deviation from the general understanding of the meaning of the questions put. Nor could there have been any difficulty, other than that of the labour required in furnishing this information; it is founded on accounts necessary to the daily business of the concern. But in the subsequent returns to the Board of Trade (for the latter half of the year 1841), the very same queries are either not answered at all, or answered in the lump, or it is said no such accounts have been kept.

Now, if there be one piece of knowledge of greater importance than another to successful railway management, it is that of the effect of fares upon the number of passengers, and no means at present exist which are so likely to supply this knowledge as a careful comparison of the numbers travelling at different fares, at different times, on different lines. From the actual result, indeed, will have to be eliminated the effects of local circumstances or diversity of accommodation; but if this is an abatement from the value of the naked facts, it largely adds to the necessity for accumulated observation. By what pride of infallibility or jealousy of independence were the Railway Companies induced to obstruct measures the most likely to obtain for them this vital knowledge?

As the returns are, however, they are not entirely without value, although for want of system, and of correlative facts, their utility is sadly limited. As one instance, however, of their use, we may remark that it is important to know whether the same law governs long and short fares in each class. If we are not mistaken it will be found that great care is required in regulating the short fares for the cheaper carriages. It helps us in this inquiry to know what is the average distance travelled by each class. Let us take the Birmingham and Derby for an example. There the average distance travelled by the first class is 33½, by the second 27¼, and by the third 17 miles. We learn, however, from the evidence of Mr. Birkinshaw, that it is only by the first and last train each day in each direction that third class passengers are conveyed.

As to the effect of variations of fare we need only remark at present that the balance of experience so far as it can be gathered from these imperfect returns, is altogether on the side of low fares.

The remaining kind of information important to our present purpose, is that of cost of maintenance of way and working. The returns are here as various as the different notions of the parties from whom they emanated could well make them. In some they are given in one undistinguished amount; in others some classification is attempted; while in a third class there is considerable exactness and detail. And then, though those of the third class might have been valuable to each other had they been on a uniform plan, yet as they stand, scarcely anything can be inferred from them. Especially we would note that not the slightest indication appears in any of them, of a sense of the importance of distinguishing between those expenses which are constant under nearly all circumstances, and those which are proportionate to the number of trains or of passengers. The absence of this distinction is to us decisive evidence that the true principles of management in reference to railways are yet very imperfectly understood.

The Returns to the Board of Trade are not on the same plan as those to the House of Commons. In many respects they are of improved design, but are so imperfecly made out by the Companies as to furnish few points of comparison with the latter: they report the No. of trains and their speed—the No. of passengers—the fares—the total amount received for each class—the mileage of each class, and the total mileage—with particulars of the same general character respecting the conveyance of cattle and goods. It might have been thought that affairs of this kind could be made sufficiently simple and intelligible, to be beyond the risk of misapprehension on the part of the dullest, but it does so happen that there is scarcely a shape in which these particulars could be understoood or misunderstood, which is not here exemplified. Not only, therefore, does it happen that the Returns themselves are of small value, in comparison with what they might, and we may say ought, to have been, but a decisive proof is supplied, that almost every possible diversity exists in the modes and objects of railway accounts. Diligence and careful analysis may perhaps extract useful truths from this heterogeneous heap; but if railway proprietaries know their own interest, they will not suffer a state of things to remain which seems to have for its sole object to involve in obscurity the truths on which that interest depends.

The limits of this article forbid further comment; but we cannot conclude without expressing our regret that a careful examination of these Returns has forced on us the observation that, among the Companies who have unwisely or carelessly withheld much of the information required of them, and mystified the little they have furnished, the greatest are by no means among the least offending. In their "pride of place," they may perhaps deem themselves above the necessity of conforming to requisitions addressed to other Companies, or of learning anything from the experience of the common run of railways; but whatever may be the temporary splendour they may derive from the immense capital they have had to expend, the day may come when, in respect of current management, they may be glad to follow out principles, established by humbler and less conspicuous, though perhaps not less able, administrators.

The challenge which we threw out a fortnight ago to the Anti-Sunday Transitarian party, to *prove* the existence of that "Divine Commandment" on which they profess to take their stand, in calling for the closing entirely of all railways on the Sunday, having remained to this hour unanswered, we think we are fairly entitled to take it now for granted that no such proof can be adduced. We have the less hesitation in doing so, that we feel the strongest possible conviction, that it is utterly beyond their power to impeach the soundness of the argument by which we have endeavoured to show, that the "Commandment" to which our opponents allude, applied exclusively to the Jewish Sabbath, or seventh day of the week (our Saturday), and is of no force as applied to Sunday, or the first day, under the Christian dispensation. We might say much on the serious impropriety, of any set of men pleading the authority of the Word of God, for striving to force their neighbours into a compliance with their own particular views of religious duty, and then failing to give the least evidence of their pretended authority, when called upon to do so; but without dwelling on this view of the subject, we shall proceed to the second branch of our inquiry, which—taking for its basis the principle that it is altogether a matter of human or civil regulation, to what extent men should rest on Sunday from their ordinary avocations—has for its object to ascertain the existing state of the law of England on the subject, and how far it is affected for good or evil, by the new system of railway travelling.

Christianity has been held by the Judges to be part and parcel of the common law of the land. It follows that were entire cessation from labour on the Sunday one of the essential attributes of Christianity, there could never have been any need of human legislation on the subject. It would have been necessary only to put in force the law with its incorporated Christianity as it stands. Working on the Sunday would have been indictable and punishable, like any other offence against the common law, as a misdemeanour. It is remarkable, however, that in all the English statutes on the subject—and they are neither few nor unstudied in composition—the *previous* existence of any universal Christian obligation to abstain entirely from labour on the Sunday is never once recognised or assumed. The legislature has uniformly—down even to a very recent period—dealt with the question as if it possessed *ab origine* the absolute and exclusive power of determining in what manner and to what extent the Sunday shall be observed. It has not simply *declared* what the law on the subject is (after the manner of Fox's Declaratory Bill on the Rights of Juries), but it has *enacted* what the law shall be. It has ordained that certain classes of persons shall not follow their ordinary callings on the Sunday, while it has given free licence to others to do as they please in that respect; it has specified particular things which it may be lawful to do, and others which it shall not be lawful to do on a Sunday; and it has fixed, moreover, certain hours of the day which shall be kept more holy than others; all things which it would never have done, and which it would have been impious to attempt to do, had it been an understood matter among our legislators and rulers, that there already existed a Divine Command, incorporated into the laws of the land by which persons of all classes, without exception, are prohibited from labour of all sorts on the Sunday.

The leading statute on the subject is the 29 Charles 2, c. 7. By section 7 it is enacted, that "no tradesman, artificer, workman, la-

Digitized by Google

bourer, *or other person* whatever, shall do or exercise any worldly labour, business, or work of their *ordinary callings* on the Lord's Day, or any part thereof (works of necessity and mercy only excepted)." The words of this clause would seem at first sight to embrace *everybody*; but it is a rule of law that where a statute contains a particular enumeration of classes of persons, with any such addition as "or other person whatever," the particular enumeration must be considered as so far controulling the subsequent general words, that they can only include persons *ejusdem generis*, with those previously named in the Act.—(Justice Holroyd *in re* Whitmarsh.) The *only* persons prohibited, therefore, by the law of England, from following their *ordinary callings* on Sunday are *tradesmen, artificers, workmen, labourers*, and other persons of *like rank and degree*. Merchants, bankers, physicians, lawyers, and others—all persons in short *above* the grade of *a tradesman*, are left free to exercise their ordinary callings on the Sunday or not, according as their own sense of propriety may dictate. Again, it is only their "ordinary callings" that the persons indicated by the statute are prohibited from exercising on the Sunday; whence it follows (for the statute being of a penal nature is one to be rigorously interpreted) that they may lawfully do any sort of work on Sunday which they are not in the daily practice of doing during the rest of the week. It has accordingly been decided (*re* Whitmarsh) that the hiring of a servant by a farmer on a Sunday, does not come within the words of the statute, for although hiring servants may be necessary for carrying on the farmer's "ordinary calling," it is not a part of it; and in another case (1 Taunton, 13,) a *private* sale of a horse on a Sunday, by a person keeping a place for the *public* sale by auction of horses on commission, was held to be good, for the *ordinary* business of the seller was to sell by public auction, not by private bargain.

The only clause in the Act expressly relating to *travelling* on the Sunday, is one which enacts that "no driver, horse courser, waggoner, butcher, higler, or any of their servants, shall *travel*, or come into his or their inn or lodging, upon the Lord's Day, or any part thereof." Everybody else, therefore, except drivers, horse coursers (jockies?), waggoners, butchers, higlers, and their respective servants, (for, in this instance, even tradesmen, artificers, and other persons of that class, are not excepted,) are as free by law to travel on Sunday as on any other day.

But practically speaking, while the law remained on the footing of the Act, the provisions of which we have just cited, there could be no lawful travelling by persons on the Sunday, in any vehicle driven or carried by any person whose "ordinary calling" it was to drive or carry. And therefore it was enacted, by the 9 Anne, c. 23, s. 20, amended and explained by the 1 and 2 Wm. 4, c. 22, s. 37, that it should "be lawful for any hackney coachman or his driver, or any chairman, to ply and stand with their coaches and chairs, and to drive and carry the same respectively, on the Lord's Day, within the limits of the Bills of Mortality." A still more recent statute (3 and 4 Wm. 4, c. 19, s. 26) empowered the "Court of Aldermen within the City, or any two police justices *without the City*, on the application of the Minister or Churchwardens of any church, chapel, or other place of public worship, to make rules for regulating the route and conduct of drivers, *of stage carriages*, cattle, sheep, or other animals, *during* the hours of Divine service on Sunday, Christmas Day, Good Friday, or other day of public fast or thanksgiving, and annex penalties not exceeding 40s., with costs for the breach of such rules." And it has been decided (Sandiman *v.* Broach) that, under the last statute, stage coaches may lawfully travel *anywhere* on the Sunday, subject only to the power of the magistrates to cause them to *deviate* from their ordinary route during the hours of divine service on Sundays, *and other days of public worship*.

According, however, to the law as it now stands, we feel bound to confess that travelling *by railway* on Sunday, so far as concerns all employed in the working of the engines and trains, appears to us to be illegal. The exception which has been established by statute in favour of stage coachmen, hackney coachmen, and chairmen, does not extend to railway engine-drivers, stokers, guards, porters, &c. who act therefore unlawfully in pursuing their ordinary callings on the Sunday. No doubt they are *ejusdem generis*, but the letter of the law is against them. By 2 & 3 Will. 4, c. 120, s. 5, a *stage carriage* is defined to be "every carriage without regard to the form, or construction used for conveying passengers for hire to or from any place in Great Britain, and which travels at the rate of three miles or more in the hour, provided each passenger is charged a *separate* fare:" and it is expressly declared, that that definition is "*not to apply to carriages used on a railway or impelled by steam, or otherwise than by animal power.*"

The practice of Sunday travelling, therefore, as now regulated by the law of England, may be stated generally to stand thus:—

1. All persons are free to travel on Sundays, except drovers, horse coursers, waggoners, butchers, higlers, and their respective servants.

2. All persons are free to employ themselves in driving and carrying on Sunday, whose ordinary calling it is to drive and carry, with the exception only of engine-drivers and other operatives employed on railways.

3. All persons without any exception whatever, may travel on Sunday, and drive or carry on Sunday in cases of "necessity and mercy."

And 4. Magistrates may cause stage-coaches to deviate from their usual course during the hours of divine service on Sunday, in order that such service may not be disturbed, *but during these hours only*.

Whether the law is in all these respects what it ought to be, is not a matter which comes within the scope of our inquiry. We have to do with it only as it affects railways; and here the question which at once obtrudes itself on our consideration is—Why it should be lawful to the whole equestrian train, of every rank and degree, to work at their ordinary callings on the Sunday, and not lawful to railway servants to do the like, when the business in which both are engaged is precisely the same?

Clearly there is no reason whatever for any such distinction; on the contrary, there are many strong reasons why both classes of operatives should be placed on the same footing. The principle of the exception established in favour of persons engaged in the conveyance of passengers by animal power, we take to be this—that it is better a few of the community should have their weekly day of rest abridged, than that the whole should be deprived on that day of the usual facilities of intercourse, or any work of "necessity and mercy" be in the least obstructed or hindered. Now, any diminution in the number of the "few," thus sacrificed—if we may so speak—for the sake of the many—must be a clear gain to the cause of Sunday observance and Sunday rest—of religion and humanity. And certain it is that the railway system does effect, or is capable (if allowed due freedom of expansion) of effecting a very extraordinary diminution in the number of such needful Sunday workers. Two or three men will suffice to convey by railway as many travellers as it would take fifty and more to convey by any other known means (steam vessels only excepted). Again, the two or three railway servants can enable hundreds to perform in a single hour the common road journey of an entire day; so that people may travel to and fro on the Sunday to an extent heretofore unknown, and yet attend their respective places of worship with as much regularity and constancy as ever. A visit which it would formerly have taken a whole day to accomplish—and which in some cases could not be accomplished at all unless on the Sunday, may now be the affair only of a Sunday morning or evening. All works, moreover, of "necessity and mercy," may by a free use of railways, be aided and promoted to an extent unexampled in the former history of mankind. Strong as the law of "necessity" is, it could never before prevail over time and space to the extraordinary degree, which it can with the help of steam and iron do now; and "mercy" though gifted from of old with angels wings, can by means of the same beneficent agents, be swifter to succour and to save, than it has ever yet been, even in poet's dream.

Let railway proprietors, therefore—instead of giving way to the wild and senseless clamour which has been raised against Sunday travelling on railways—bethink them how much real service railways are calculated to render to every interest involved in the observance of the Sunday, and, taking courage from the contemplation of the vast good they are capable of achieving, let them turn the tables on their opponents, and insist, with Parliament, on their servants being placed on the same footing of exemption as the servants of all other persons engaged in the travelling business. We do not mean to say that that free use of railways on the Sunday which we advocate, might not with advantage to all interests, be placed under some regulations, and, in a future article, we shall state what our views on that head are; but we do most unreservedly maintain that they ought to be subjected to no greater restraints, than the most favoured of other modes of travelling are now subject to. A well-regulated freedom is a very different thing from absolute prohibition; and the former is all we desire to see established.

A CORRESPONDENT, calling himself "A Country Subscriber," calls our attention to the commendation bestowed by Sir F. SMITH on the improved punctuality of the South-Western Railway, and appeals to our impartiality to give it publicity, equal to that we afforded to the censures, with which we have thought it necessary to notice their past irregularity. The praise he speaks of is contained in the answer of the Inspector-General to the 150th question proposed to him by the Committee, which is in these words:—

"150. There is one line to which I can speak, the South Western, on which there appears to be a very great increase of regularity. I had an opportunity the other day of ascertaining that,

Digitized by Google

and the punctuality was something not to be expected on any line; the extent of it was a difference of only five minutes between the time they actually arrived and the time they were expected."

For the sake of the South-Western Company, we regret that the answer is so worded as to leave it doubtful whether the praise applies to their habitual performances, or only to those of one day. The Company, however, and their defender, our present correspondent, may rest assured, that we shall be quite as ready to publish their good deeds, when we know them, as we have been to expose their misdoings. We have neither partialities nor antipathies: where the interests of the shareholders, and those of the public, are diligently, faithfully, and judiciously cared for, our praise, be it worth little or much, is gladly given; when a contrary course appears to us to be taken, whether through corruption, carelessness, or incompetence, we shall not spare the exposure which the case may seem to require.

The "Country Subscriber" taunts us with not animadverting on certain irregularities on the Great Western, on the days of the Eton Montem and Ascot Races. It will probably be considered a sufficient apology to state, that we never heard of them before; but surely no occasional irregularities such as these, can be considered of parallel faultiness, with the habitual want of punctuality of the South-Western on days of ordinary traffic. We are, however, no partizans of the Great Western, neither are we its enemies; the same rule of impartiality applies with us, in respect to that as to all other lines.

Punctuality is one of the indispensible elements of railway reputation, and therefore of railway success. Our country friend must himself have felt the annoyance, and perhaps the positive loss, too frequently occasioned by the want of it in railway practice. If, however, either the South-Western, or the Great Western, or any other Company, think that their habitual performances entitle them to the confidence of the public, we are ready to do our best to make their merits known, provided only, every statement on the subject is properly authenticated.

THE Directors of the Brighton Railway made an experimental excursion on the line on Monday last, as far as Hayward's-heath, preparatory to an early opening to the public. The result is stated to have been all that could be desired—the working and general action of the engines being perfect. Another similar trip is announced for Tuesday next, in which all shareholders desirous of inspecting for themselves the state of the line, are invited to join.

—o—

RAILWAYS ruin Postmasters, say all the world. Somerset House tells a different story. The authorities there have made a Return to Parliament, from which we learn that the post-horse duty for the year ending 5th January, 1839, was 237,452*l.*, while that for the year ending on the same day in 1841 was 212,635, or but 25,000*l.* less. Again, the stage carriage duty for 1838 was 462,000*l.*, while that for 1840, under a reduced duty, amounted to 407,040*l.* This is not the first instance by many in which the popular first-sight estimate of the effect of improvement, has been proved by experience and figures to be unfounded. In Brussels, previous to the establishment of the Belgic railways, there were but 60 hackney carriages—there are now 300.

THE NORTH MIDLAND RAILWAY—HANDSOME CONDUCT OF MR. ROBERT STEPHENSON.

To the Editor of the Railway Times.

SIR,—In your paper of last Saturday I observe, from a letter of one of your correspondents, that the labours of the Committee appointed by the Directors of the North Midland Railway Company to examine and inquire into the various expenses of their establishment with a view to their reduction, has given him satisfaction, as it must do, I should conceive, all others who have a stake in that great undertaking. There is, however, a circumstance connected with that inquiry which ought to be recorded to the credit of the individual to whom it refers, and which I have the best authority for knowing to be true.

When Mr. Robert Stephenson retired from the general management of the North Midland Railway it was considered desirable that his services should be retained as superintendent of the locomotive department, and his professional knowledge, together with the privilege of using the various patents taken out by him, and the probable improvements which he might be able to suggest for the more economical working of that most expensive item in railway expenditure, were valued at 1,000*l.* per annum. Mr. Stephenson not only gave his personal attention to the Committee during their investigation, and explained to them where it would be prudent to economise, and where it would not, but unknown to the Committee, he wrote a note to the worthy Chairman of the Directors, expressing his great regret that the receipts of the railway had not come up to his expectations, and requested that one-half of the balance (a considerable one) due to him should be cancelled, and that 400*l.* per annum should be deducted from his salary, which was secured to him by agreement.

To those who know the losses that Mr. Stephenson has lately been subject to, and over which he had no control, estimated at the least at 10,000*l.* this munificent act of liberality cannot possibly be sufficiently appreciated. I know it will not be satisfactory to him to have this subject alluded to so publicly, but I imagine you will think with me that so noble an act should not be allowed to pass unnoticed.

I understand the first part of his offer was declined, but the latter accepted.

I am, your's, &c.

Z.

July 1, 1841.

ANOTHER RAILWAY EXCURSION TO THE DERBY ARBORETUM.—On Tuesday last, a party of 250 persons connected with the Baptist Church and congregation, George-street, Nottingham, visited the Derby Arboretum. Arrangements had been made with the Directors of the Midland Counties' Railway for the conveyance of the party at less than the usual rate: this, with the assistance of a few individuals, enabled so many to enjoy the excursion. The party left Nottingham a little after two o'clock, and reached the magnificent station at Derby, about three. Many observed that it was worth all they had given to behold so large and splendid a structure. The Arboretum is situated on the same side of the town as the station, and is about ten minutes walk from it. The very first glance of this beautiful and picturesque plot of ground elicited the admiration of all present. The managers, having been apprised of the intended visit, had prepared tea, but, the number being much larger than was anticipated, a little inconvenience was experienced by some. Previous to their return the party assembled in the large room at the lodge, when short addresses were delivered by the Revds. J. Edwards and W. Hawkins, John Heard, Esq., and Messrs. Lomax, Vickers, Felkin, and Lock. Resolutions were passed, expressive of their admiration and gratitude to Joseph Strutt, Esq., for his most munificent donation of the Arboretum to the public, setting an example worthy the imitation of men of wealth throughout the country. Resolutions of thanks were also passed to the Directors of the Arboretum and the Midland Counties' Railway, for the generous manner with which the wishes of the visitors were met. Mr. Strutt and Mr. Loudon* were both present, and interested themselves in contributing to the information and pleasure of the visitors.—*Sheffield Patriot.*

—o—

WEST DURHAM RAILWAY.—This railway, which was partially opened last year, from the Willington and Hunwick pits, to its junction with the Byer's-green branch of the Clarence Railway, was, on the 15th instant, finally opened to the parliamentary terminus at Billy-row, near Crook; and a quantity of coal-waggons, laden with coals of a very superior quality, from the White Lee and Roddymoor collieries, were that day passed down the line, on their way to Hartlepool. These coals are the property of the Northern Coal Mining Company, and fully equal to the quality so long anticipated; and there exists every probability that the hopes entertained of the success of this coalfield, and the praiseworthy undertaking of the West Durham Railway, will soon be realised. A select party of gentlemen, the friends of the Directors, from Darlington, Stockton, and Bishop Auckland, attended to witness the transit of the coals, and were highly interested by the excursion.—*Northern Times.*

* Mr. L. is the distinguished landscape gardener by whom the Arboretum was laid out.

EASTERN COUNTIES' RAILWAY DIRECTORS—THE LIVERPOOL DECLARATION OF CONFIDENCE OF FEB. 1841.

To the Editor of the Railway Times.

SIR,—Permit me to bring to the recollection of your readers that at the last general meeting of the Eastern Counties' Railway Company the Liverpool clique, dictators and botchers exulted much in a certain address of confidence in the eight Liverpool Directors, which was stated to have been signed by 53 magistrates, bankers and merchants of Liverpool holding 10,975 shares of the Company's stock, and that subsequent to the meeting you did me the favour of inserting a letter from me (*Railway Times*, 6th March), in which I observed:—

"In order to show how little value deserves to be attached to this address, it is only necessary to state that the number of shares held in Liverpool and its vicinity is upwards of *forty thousand*, and the number of holders above *five hundred*.

"From the fact that only one-tenth of the proprietors in this neighbourhood, and the holders of but one fourth of the shares, have subscribed the document, the proper inference to be drawn is, that the majority both in number and value, *do not* approve of the conduct of the eight Directors in question."

The purpose of my now addressing you, Sir, is to point out the strong confirmation which these statements of mine have received from the affidavits filed by these Directors themselves in support of their deservedly defeated application for a criminal information against the truth-speaking *Railway Times*. From the extracts given in your last number they appear to have sworn, "that their constituents are a large body of persons amounting to about *one thousand one hundred and ninety in number*." Now, assuming that two-thirds of the shareholders belong to this part of the country, which I believe will be found pretty near the mark, this would give 796 for the number, out of whom all that could be prevailed upon to sign the address of thanks and confidence was 53 ! ! !

I wonder how many could now be prevailed upon to sign such an address after the last frightful exposure in the Court of Queen's Bench.

I am, Sir, your constant reader,

NESTOR.

Liverpool, June 2d, 1841.

EASTERN COUNTIES' RAILWAY COMPANY—APOLOGY FOR SOME OF THE AFFIDAVIT MAKERS.

To the Editor of the Railway Times.

SIR,—I am surprised, that whilst making the liberal allowances you have done for the conduct of several of the Directors of the Eastern Counties' Railway, in subscribing the astounding affidavits in the case of the Queen, at the instance of these Directors, against the *Railway Times*, commented upon in your last, you should have overlooked this striking circumstance, that there are two or three of them who made oath to facts of *which they could not have had any personal knowledge*. The twenty swearing Directors are stated by you to include only all those who "were Directors, or claiming to be Directors of the Company, *at the date of the publication* complained of;" but all those who were Directors, or claiming to be so, *at that date*, were not all Directors at the dates of the different representations about the traffic, which you represented in that publication as being "grossly and wilfully false." For instance, Mr. Samuel Anderson was *not* a Director on the 28th of August, 1839, when the Directors reported that "the *expenditure*, ACCORDING TO THE BEST CALCULATION THAT CAN BE MADE, DOES NOT AMOUNT TO FIFTY PER CENT. OF THE GROSS RECEIPTS;" and of course it must have been from mere oversight, that Mr. Samuel Anderson has denied on oath "that the said Directors HAVE EVER OR AT ANY TIME pretended that they were working the said railway at a considerable profit." He might depose correctly enough as to what the Board did when he was a member of it, but he could have no such knowledge of his own of what they did and intended *previously*, as to warrant him in joining in any such general and sweeping denial. He must have been one of those to whom you handsomely accord the benefit of having signed and executed the affidavits prepared for them, "without examining for themselves into the truth of their contents." Indeed, no one who has any knowledge of Mr. Samuel Anderson would suppose for one moment that he would "wilfully" subscribe his name to any thing which was not true. A more honourable or better intentioned man does not exist. Trusting you will give a place to these remarks, from one who takes pride in avowing himself a friend of that gentleman.

I remain, Sir, your most obedient servant,

A MERCHANT.

Broad-street, 28th June, 1841.

[Be it so; but what are we to think of the fitness of men for public trust, who execute affidavits without examining into the truth of their contents? "Honourable and well-intentioned" as Mr. A. may be, he subscribed his name to that which, if the Judges had believed it, might have inflicted on this journal a grievous injury.—ED. R. T.]

THE GRAND JUNCTION GOODS' TRAFFIC.

To the Editor of the Railway Times.

SIR,—It is not long since this Company advertised their appointment of a person as their agent here, and stated that arrangements were made to facilitate the transmission of goods during the stoppage of the canals; yet notwithstanding this, I believe that goods were actually left at the station the very day that this advertisement was published, showing that no different arrangements had been made so far as Liverpool was concerned.

It is much to be regretted that this Company should drive so many goods off their line by the monopolising system they have adopted in not allowing any carrier to convey goods along the line. It is true that Messrs. Pickford and Co. remain as carriers on the line, in spite of all the impediments that the Company put in their way; and were it not for the steadiness of this old and respectable firm in opposing the Company, there is no doubt but the Grand Junction Railway Company would soon advance the rate of freight as they did the rate of passengers. To accomplish this, they have succeeded in getting rid of all smaller carriers, who were not able to compete with them. It is therefore very evident, if the rates of freight are to be kept down, the brokers and tradesmen of Liverpool must support the carriers that oppose such monopoly. Let the Grand Junction Railway Company open their line to fair competition; I do not recommend favour being shown to any particular carrier, but give all an equal opportunity of carrying goods, and then they will insure a good share of the trade much more effectually than by puffing their new-appointed agent, who, although he may be stimulated by a commission on what he does, cannot much exceed what has been done by their old and practically-experienced agent.

It is time for the Directors and shareholders to look to their own interest, and at once adopt such steps as will insure the greatest traffic on their line; their past supineness in adopting the proper remedy has actually been the means of driving many tons of goods off the line, which are now sent to or from London through Manchester instead of Birmingham; and I have had goods both to and from London, through Manchester, at the same charge and delivered on the second day. Will the Directors, in spite of thus losing their trade, still withhold to the carrier that privilege which other railways afford?

I am informed that in Manchester the tradesmen support the carrier in preference to the Company to a greater extent than Liverpool, as they are determined to oppose monopoly.

There will soon be a re-action in favour of *canal* conveyance, unless such evils in railway conveyance be put a stop to.—I am, Sir, yours, &c.,

A BROKER.

Liverpool, June, 1841.

* This is my estimate, from all I have been able to pick up here and there on the subject, and I believe it to be rather under than over the mark. What the *actual* expenditure is to a shilling or so, the Directors can tell—*if they please*, and no doubt will do so—*if they think it will be to their advantage*.—T. C.

LAW AND PRACTICE OF JOINT-STOCK COMPANIES—RAILWAY BOARD REFORM.

To the Editor of the Railway Times.

SIR,—Liberally granting to others that which you claim for yourself—the free expression of opinion—you will want no apology from me for differing from you as to the attention the publication you extract from, "on the Law and Practice of Joint-Stock Companies," deserves from shareholders.

Judging of the *brochure* by your transcript of some sentences, for I have not seen the pamphlet, I am forced to guard shareholders against acquiescence in some propositions put forth by Mr. Boult. His are the old arguments of the Secretaries and Directors of the old Companies, with which from 1833 to the present time the officers of railway projects have successfully inoculated themselves, and from which all the errors and most of the vices of management under which we groan, have had their birth and giant growth.

Some years' attention to the subject—which by many would be denominated "railway experience"—has raised strong doubts in my mind whether, from the nature of such extensive partnerships, it is possible to lay down any rule by which equal ability and integrity can be brought to bear upon such concerns, as we daily see in practice in private and smaller associations. But however this may be, it is beyond dispute, that in following, as has hitherto been done in forming Boards, "the good old plan"—the plan recommended in the pamphlet, we have been woefully singed, and that no time should be lost in reforming it.

The first principle laid down by the author in your extract—that shareholders should bestow confidence, blind confidence—for he tells them that they must give it with no niggard hand, that they must betray no disposition to suspect, that half confidence is worse than none at all, paves the way to every species of deception and fraud; it is tantamount to requiring of us what formerly kings demanded from their subjects, an acknowledgment of their divine right, obedience to the powers that be, whatever be their conduct; it is taking from us the right to form a judgment upon our own affairs; it is saying, "be quiet, we know what is best for you; raise no questions, *believe*"—it is asking us for a surrender of the reason of 500 people into the hands of 24, whose interest, it is possible, is often at variance with that of the persons they would, in effect, disfranchise. I do not blame a Secretary comfortably tiled in and reposing in his library chair, who seeks to cram his constituency with this doctrine. I blame those who, failing to do justice to Nature, by using, as it was intended they should do, the power of self-protection which, in her bounty, she has distributed to all, in no very unequal proportions, timidly, unmanfully, culpably, fail to question, inquire into, probe, watch, investigate, demand explanation upon, and sift with unceasing vigilance, the conduct of Directors, all of whom are open to temptations to violate their duty from the very circumstances of their position. No man has a right to ask for such confidence. No man who properly values himself *will* ask for it. Acts and conduct speak for themselves, and he who wants the confidence of his electors may obtain it, if he likes, without solicitation; *requesting* it is cause for hesitation in continuing it; anger at its withdrawal or suspension, full proof that it has been improperly bestowed, at least as *I* view the matter.

The pamphlet goes on to recommend some of the most exceptionable practices of the present system. The insisting that Directors should hold a considerable stake, is good only to a limited extent; if all were chosen for large holding, it would perpetuate an evil now extremely active, that of throwing concerns into the hands of a wealthy few, who would be uncontrouled and irresponsible, from the power they would derive from patronage—from playing into each others hands—from combination for their private views and interests—from mutual support—and from securing amongst themselves the perpetual management instead of there being a healthy periodical change of persons and of interests—the best, nay, the *only* means of obtaining a well working Board.

Who are the penurious Mr. Boult denounces? Perchance I might call them the prudent, or the economical. I object to Directors being immediately re-eligible: in practice it makes the first election of each person a *life* election. The legislature seems to entertain the same objection, in fact, or why has it fixed a period of capability unless re-elected? Three years suspension from office is not too little. I object to seats, vacated by death or resignation, being filled up by Boards; when a member of the House of Commons dies, do the House elect his successor? The author, in *his* position, is quite right in advocating handsome salaries, and "still harping on my daughter," hinting once more at the inefficiency of cheaply paid service; and shareholders will be *as wrong* if they do not take care—and it can only be done by frequent and sharp inspection of accounts—that they pay only fairly *for work actually performed.*

The exhortation to patience and to waiting for the ripening of the fruit, are very well, and shareholders will benefit by the advice to the extent they deem necessary; but it is my impression, that patience has done much—though idleness and indifference have done more—towards sealing the ruin of thousands of shareholders. If the proprietors of the British Iron Company had looked into the conduct of their Directors instead of bestowing "confidence;" if they had inquired at the time whether the estates proposed to be purchased were worth the sums given (and a very little inquiry would have blown the whole scheme and have saved their capital)—if when the unfortunate thing was first worked on their account, instead of being "patient" they had clamoured, and had insisted on closing a concern, slight attention to it would have shown it to be ruinous; if, instead of leaning for years upon their elbows waiting "the ripening of the fruit," they had individually inspected the concern, and seeing its complexion, had put up the shutters and closed, as they should have done, in place of relying on Directors and their Reports and assertions, something of their two millions—now a shadow—might have been saved. Confidence in Directors is a broken reed to lean upon, and in my ear the very word is become hateful, from its being associated long since, in my mind, with misrepresentation, disappointment, and loss.

The publication of accounts should be, as it is in railways, half-yearly, not annual. I do not adopt the proposition of "concentrated power," if it mean a *very small* number of Directors—they may be too few, as they may be too many; not that I want, as one of your correspondents accused me of doing, one rogue to look after another; but I *do* want one honest man to see that another is right, instead of leaving the whole routine to two or three.

Your extract says nothing of Auditors. I could not get on without them, and they must be taken from the share-lists by alphabetical rotation, to serve for one year and then go out.

Mixed Boards, taken for different reasons or qualifications, and to serve only for a limited time, are the only ones that will ever be found to work for the general benefit, and I therefore beg to restate a proposal to this end, which I have before now suggested, that Directors shall be taken from the share-lists *in alphabetical order, for largest holding and for residence near the lines*, until eight persons for each Company have accepted office.

I am, Sir, yours, &c.,
A RAILWAY SHAREHOLDER.

AMERICAN LOCOMOTIVE ENGINES.

To the Editor of the Railway Times.

SIR,—It may probably interest some of your readers to compare the statement below with that given in your journal of the 26th inst. According to my notions the pull of the engine *Philadelphia* seems to have been a little beyond that of the *Hitchins* and *Harrison*, while the speed of the latter was probably a little more than that which the former would have attained if the length of way had permitted such attainment.

The engine *Philadelphia*, built by Mr. Norris of Philadelphia, started immediately at the foot of a plane rising 1 in 37 4-10ths, for one mile in length, and took the following loads at the speeds here stated, for the last quarter mile of the ascent—

On the 16th June, 1840—	Tons.
Seven new waggons loaded with iron, each to four tons	28
Weight of waggons, each 2¼ tons	17¼
Thirteen men	1
Weight of engine	12¼
Weight of tender	6¼
Tons	65¼

Speed during the last quarter mile, 9 18-100th miles per hour.

On the 19th June 1840—	Tons.
Seven new waggons loaded with iron, as before	45½
Thirty men	2
Weight of engine and tender	19
Tons	66½

Speed during the last quarter mile, 10 4-10th miles per hour.

On the 20th June, 1840—(Fine dry day)—	Tons.
2nd Trip—Eight new waggons, loaded as before	52
Twenty men	1¼
Engine and tender	19
Tons	72¼

Speed during the last quarter mile 9 4-10th miles per hour.

	Tons.
3rd Trip—Eight new waggons loaded as before, Twenty men, engine and tender	72¼

Speed during the last quarter mile 9 miles per hour.

On the 14th July, 1840—	Tons.
First Trip—Seven new waggons loaded with sand each to four tons	28
Weight of waggons, each 2½ tons	17½
Sixteen men	1
Weight of engine	12¼
Weight of tender	6¼
Tons	65¼

Speed during the last quarter mile 10 2 10th miles per hour.

	Tons.
2nd Trip—Same load (except 12 men instead of 16)	65¼

Speed during the last quarter mile 9 7-10th miles per hour.

	Tons.
3rd Trip—Same load (except 15 men instead of 16)	65¼

Speed during the last quarter mile 8 5-10th miles per hour.

On the 16th July, 1840—(Rails very dirty)—	Tons.
7 new waggons with sand	28
Weight of waggons	17½
Nineteen men	1¼
Weight of engine and tender	19
Tons	65¼

Speed during the last quarter mile 8 6 10th miles per hour.

On the 18th July, 1840 (rails wet and dirty)—

	Tons.
Same waggons and loads as on 16th	45½
Twenty-one men	1¼
Weight of engine and tender	19
Tons	65¼

Speed during the last quarter mile, 10 2-10th miles per hour.

I am, Sir, your faithful servant,
W. S. MOORSOM, Engineer.

THE BAPTISTS AND SUNDAY TRAVELLING.

To the Editor of the Railway Times.

SIR,—In your remarks on the Sunday travelling question you make a statement which implies that all the Baptists, both General and Particular, keep the seventh day Sabbath. So far is this from being the case, that it is questionable whether one in fifty of the members of Baptist churches know that there are any Baptists at all who do so. I believe, indeed, that the very few Sabbatarians who exist in England are also Baptists, and I suppose it is from that circumstance your error has originated.

I cannot but think this a somewhat singular in-

Digitized by Google

stance of the obscurity, I will say the undeserved obscurity, of the Baptist denomination. I should have thought that greater general publicity had been acquired by a body with which Milton was intimately connected, whose sentiments Sir Isaac Newton is known to have approved, who have exhibited to the world in our own day the learning and devotedness of Carey, Marshman, Ward, Yates, Chamberlain, Lacey, Sutton, and many others in the East, and the nation-stirring rectitude and energy of Burchell, Knibb, and their coadjutors in the West, and who can claim at home the credit due to the sterling though unpolished genius of Bunyan, the erudition of Dr. Gale and Robert Robinson, the eloquence of Hall, and the scientific eminence of Olinthus Gregory, to say nothing of hosts of minor stars. I hope, Sir, I am not overrating the honours of the body to which it is my pride to belong, when I say that the general movements of philanthropy and science are rarely made without the assistance of some or more of them, although they may not be very solicitous to obtrude their peculiarities on the notice of other persons.

I really think it singular that the common, everyday, public practices of such a body should be so little known as to have escaped the extensive and acute observation of the Editor of the *Railway Times*. And such being the fact, what is the real value of the representations given now or heretofore by prejudiced opponents of each others religious peculiarities, or what that of the testimony on such points of an antiquity in which the means of communication were few, and the safe and fair rules of investigation little understood and still less practised. For my part I am confirmed by your slip, in the fundamental principles which made me, while your very obedient servant,

A GENERAL BAPTIST.

June 30, 1841.

RAILWAY PASSENGER TAX—THE CROYDON AND GREENWICH DISPUTE.

To the Editor of the Railway Times.

SIR,—I freely admit that a personal toll of either 3d. or 4½d. levied indifferently on passengers of every class, bears very unequally on the lowest, and is indeed a striking picture of the inequality of the present Government tax. To a short line like the Croydon, this must be peculiarly injurious, as restraining the Directors from adopting the scale of fares calculated to be most productive: and though to a longer line, like the Brighton, it may be comparatively harmless, I think there are two other modes of settling the compensation due to the owners of a *terminal trunk* railway, either of which might be rendered at the same time equitable, and consistent with the interest of all parties, if they could only agree about the details.

The *first* mode is by a *per centage* on the gross traffic receipts. I do not remember to have seen any conclusive argument against this mode of levying the Government tax upon passengers, which appears to be at once the simplest and fairest, and I believe that something not exceeding 5 per cent. on the gross receipts from passengers would be mutually beneficial to the Companies and to the Exchequer. It would also have the advantage of leaving the Directors of each railway at liberty to accommodate their charges to the peculiarities of different localities.

In the case of one railway running into another, the *per centage* ought to be in something like a *compound ratio of the length of the part run upon to the length of the whole line, and of the comparative cost of this portion to the cost of the whole.* I am not sufficiently master of figures and facts to enter upon the calculation; and if it should turn out (as I suspect it would) on this principle, that the Greenwich Company would be entitled to claim from the Croydon about 20 *per cent.* of their gross receipts, perhaps the Directors of the latter might be as little pleased as they are now.

The *second* mode proposed for consideration is, that each Company using a *terminal trunk* shall pay a fixed annual rent for such use; and, in addition, a *small* sum for every person and every ton of goods carried over the line.* This might in some respects be thought the preferable mode; but I have not now time to discuss the question: and perhaps these suggestions have been already debated and rejected.

MODUS.

* This is the sort of arrangement made between the Eastern Counties' and Northern and Eastern Companies.—Ed. R. T.

MANCHESTER AND LEEDS RAILWAY

To the Editor of the Railway Times.

SIR,—I have read with attention the long statement given by the Chairman of the Leeds and Manchester line at the late meeting regarding the state and prospects of that railway. As an individual shareholder, I feel indebted to Mr. Houldsworth for the open and candid manner in which he stated his views, but I am far from agreeing with him in his sanguine anticipations or in the correctness of the premises on which his conclusions are founded. He infers from the great and gradual increase in the traffic receipts of the London and Birmingham, North Midland, Grand Junction, and other lines, that a similar increase may fairly be anticipated on the Leeds line. Now, Sir, I hold that the cases are in no respect parallel. The vast increase on the Grand Junction was caused by the opening of the London and Birmingham line 15 months after the Grand Junction opened throughout. Again, the increase on the London and Birmingham has been caused by the successive openings of the Aylesbury, Derby, and Midland Counties' Railways. The increase on the North Midland has been owing to the opening of the Manchester and Leeds and Great North of England lines. But, Sir, the "Leeds and Manchester" has nothing of that sort to look to except its two short branches, which will probably hardly pay the expense of working them! Such being the case, Mr. Houldsworth's whole train of argument falls to the ground.

I do not mean to assert that there will be no increase in the receipts on our line, but it will be trifling compared with that on some other lines. The fact is, the sooner the shareholders dismiss those golden dreams the better. Our weekly receipts are not likely to exceed 4,000*l.* on the average for 1841. This will afford a dividend of 2½ per cent. I take the working expenses at 50 per cent. (on 104,000*l.*) and we have 70,000*l.* of interest on loans to pay; this leaves 34,000*l.* for a dividend. We cannot possibly work the line under 50 per cent. on the receipts, while our revenue does not exceed 4,000*l.* weekly, for a large proportion of our revenue is derived from goods' traffic, and our trains are but small; this will tend to neutralise any saving in the item of coke. For a year or two our revenue will probably gradually increase, but I see little prospect of the Leeds line turning out more than a 5 per cent. job for many years to come.

Under these circumstances, Mr. Editor, I am of opinion that the shares are at present at their full value, and I beg to enter my protest against the proposed appropriation of the net profits towards the construction of the branch lines. For several years I have held, and I now begin to long to pocket a dividend, however small, and such is the feeling I doubt not of most of the shareholders. Let the Directors therefore either issue the new shares at once, or defer the formation of the branch lines for the present, and give us a dividend in September. They may rest assured that the shares will not rise so long as 13,000 quarter shares remain unissued.

I commend the candour by which our Board has recently been distinguished; but it has come a little too late. Had they not kept us so long in the dark, we should not have had our expectations raised so high in 1840 to be only succeeded by the bitter disappointment of the realities of 1841. It would also have prevented the heavy losses (probably the ruin) incurred by those who bought in at the high premiums of 1840.

I feel surprised at the tenacity with which our Directors adhere to the 15s. fare from Manchester to Leeds, and I fearlessly assert that we have made no reduction whatever in the fares, taking the average of the last five or six years, as during that period the inside fare by coach has usually been 15s. Let the Directors look to such matters more carefully, and then they will command a large traffic without those desperate attempts to grasp at it by paying the post-boys and turnpikes to Harrowgate, &c., attempts that only make them a laughing stock. If our line is properly managed, there is no fear of the result.

I remain, Sir, yours respectfully,

A MANCHESTER AND LEEDS SHAREHOLDER.

26th June, 1841.

RAILWAY COMMUNICATION WITH SCOTLAND.

To the Editor of the Railway Times.

SIR,—With reference to that part of the letter dated from Kendall, and signed "N.," which appeared in your last number, relative to the eastern and western line of railway into Scotland, where it is said, "so strong is the opposition of the Duke of Buccleugh to the eastern line, that the noble Duke absolutely forbade the surveyors going upon his ground to make the preliminary surveys," I beg to say, that this statement is quite at variance with the truth. That noble Duke would not seek to prevent the surveys of the eastern line being made, which I know well does *not touch* one ridge of his Grace's property. But had it been otherwise, I feel satisfied that he would not have done so, as that line is the only one towards which it is understood his grace, as well as the great majority of the inhabitants of Scotland, are favourably disposed—the only one which they are likely now to promote, and to which the proprietors upon the line are generally more favourably disposed. It was the Nithsdale and western line which, it is said, passes about 20 miles through the Duke of Buccleugh's estates, to which, it is understood, he refused to give his assent to the preliminary survey, and *not to the eastern* line, upon which his Grace does not own or possess one yard of property of any kind.

VERITAS.

28th June, 1841.

[We have received a letter to a similar effect from "D." of Edinburgh, who adds, "With reference to some remarks of your own, in your publication of the 19th instant, I think it right to inform you, that the parties interested in the east coast line are not allowing that undertaking to become dormant, and I mistake much if it will not be brought forward at no very distant period, and under the most favourable auspices."]

THE RAILWAY INTO SCOTLAND.

To the Editor of the Railway Times.

SIR,—Your journal having taken notice of the *movement* in favour of the railway communication between England and Scotland, as recommended by the Government Commissioners (from Lancaster, *via* Carlisle and Lockerby, to Glasgow and Edinburgh), it is proper that your subscribers should be made aware of the intention to hold a public meeting on the subject at Liverpool, during one of the days of the approaching great Agricultural Show.

Of *time* and *place* due notice will be given, and the meeting, it is expected, will be both numerous and influential.

I am, Sir, your obedient servant,

G.

RAILWAY FROM LANCASTER TO GLASGOW.

To the Editor of the Railway Times.

SIR,—Seeing an editorial article in your last number but one, stating that a movement is now making in favour of the establishment of the line of Railway from Lancaster to Glasgow, as recommended by the Railway Commissioners, I am induced to offer the following remarks, which I will thank you to insert in your valuable journal, in order to bring into more general notice a suggestion that has been made to alter or divert that part of the line which extends from Penrith to Carlisle. To enter into a full and minute illustration of the question would occupy too large a space, and I will therefore confine myself to a detail of the principal features in the proposed alteration, and the objects which it is thought will be attained by it.

After leaving Penrith and proceeding towards Carlisle for about 2 to 3 miles upon the Commissioners' line, it is suggested that the line now proposed should branch off to the westward, and after traversing a country favourable to the formation of a railway, and abounding with materials of good description, that it should join the Maryport and Carlisle Railway, at a point near Dalston, from which place this railway will be taken to Carlisle, where a junction will again be made with the Commissioners' line on the south-west side of the town. The whole length of this line, that is, from Penrith to Carlisle, is about 19 miles—the line recommended by the Commissioners' between the same termini isvery nearly 18 miles; but of the former there is now 3½ miles in progress of formation and there will therefore be only 15½ miles of new road to be made instead of 18 miles. It will be seen that the distance for Scotch passengers will be increased one mile, but as the scheme across Morecambe Bay has been rejected, the distance, now to be travelled by passengers to and from the North of Ireland and the Western parts of Scotland and Cumberland, will be lessened, by the proposed route, about six miles, which will balance the disadvantage to Scotch passengers. But even the interests of the latter passengers will not be prejudiced, for there are good grounds for supposing that the fare will not be materially increased.

Upon the Commissioners' line there are some extensive excavations—one three quarters of a mile in length, averaging 20 feet in depth in clay and sand, and another a mile in length, averaging 30 feet in depth, and in some parts 50 feet. It will cut up many gentlemen's private grounds, and the opposition of landowners who might be expected to throw difficulties in the way, might have to be bought off at immense compensation prices. The land is generally of good quality, and near to Carlisle very valuable. It is said that the saving of 2 to 3 miles in length at the Carlisle end, will not be less than from 40,000*l.* to 50,000*l.* Upon the line now proposed, it is believed that no engineering difficulties will be met with. No gentlemen's seats are in the way; the land is of inferior quality. The saving in constructing 2½ miles of road will be very great, and there will be a considerable saving in avoiding the erection of a separate station at Carlisle. Under all the circumstances it is estimated that if the line here proposed be adopted, that the saving in the first cost will not be less than from 50,000*l.* to 60,000*l.* A much cheaper supply of fuel may also be obtained—not less than from 20 to 30 per cent.; in consequence of which, and the saving in the first cost of the line, is not too much to say, that passengers may be taken the 19 miles by the line here proposed, at a cheaper rate than the 18 miles by the other line.

The towns of Penrith and Kendal, and other places along the line, are also likely to receive more benefit from the undertaking, if the line here proposed be adopted, as both East and West Cumberland coal would then be brought into the market, and the necessary consequences of the competition that would be introduced would be a certain reduction in the prices; but if the other line be retained, then these towns will be supplied, almost exclusively, by the East Cumberland coal owners at their own prices.

There is another serious objection to the Commissioners' line—the gradient for six miles at the Carlisle end being 1 in 160, a rise by far too steep for such a distance. Instead of 1 in 160, the corresponding gradient upon the other line will be 1 in 329. Upon the Commissioners' line the population is thin and purely agricultural. Upon the line now proposed, the population is more dense, and there are several extensive manufactories and corn mills, and an iron forge upon it, which will add considerably to the traffic.

These are certainly points worthy of investigation, and it will rest with those who are responsible for obtaining the best and cheapest mode of communication, to take them into consideration.

Z.

June 29, 1841.

OBSERVANCE OF THE SUNDAY.

[WE quote the following notice from the *Newcastle Courier*, not because of any direct connection which it has with railways, but to show the absurd lengths to which the Sunday Anti-Transitarians would go, if they could only have their way. We need not say that we greatly rejoice in the signal triumph achieved by common sense on the present occasion. —ED. R. T.]

"CENTRAL EXCHANGE NEWS ROOM.—On Friday last the Annual General Meeting of the subscribers to this institution was held in the Exchange, Sir John Fife in the chair; and as it was generally understood by a notice on the books, that another attempt would be made to close the rooms on the Sunday, the attendance was very numerous. After a few remarks from the Chairman,

Mr. W. C. MARSHALL moved that the following addition be made to the third rule of the institution, viz. "Excepting on Sundays throughout the year, upon which days the Exchange and News Rooms shall be closed." Mr. M. in introducing it spoke at some length, contending that the due observance of the Sabbath was as binding as any of the other laws of God, and was therefore a duty as essential to be performed as those which interdict stealing or the committal of other offences, &c.

The Rev. Mr. SAWER having seconded the motion, Dr. DE MEY and Mr. JOHN BRANDLING opposed it, and repudiated the idea entertained by the advocates of the Sabbath question that members attending the rooms on that day were desecrating it. The former gentleman argued that those who were so anxious for the closing of the rooms on the Sabbath, were instrumental in forcing many to pass it in a less respectful manner; besides the due observance of it was a thing of conscience, the same as a man worshipping his God as he chooses, and he really thought it was too much to interfere with that, which alone rested between a man and his Maker; while Mr. Brandling showed that the rooms were private, the hotel being entirely closed during divine service, and therefore they were strictly a place of retirement where friends might resort, and see each other and hold friendly intercourse.

Mr. HAGGIE then, amidst cries of "Divide, divide," spoke in favour of the motion, and Mr. H. Turner against it, after which the meeting divided, when there appeared against the motion an overwhelming majority of 353 against 26.

The Rev. Mr. CAMPBELL then moved on the part of the minority, that a protest be entered on the minute book, but this being loudly objected to by many, a show of hands was taken, and this motion was also rejected by a large majority.

EDINBURGH AND GLASGOW RAILWAY.

GLASGOW TUNNEL.—The arching at the south end of the tunnel being all thrown, the Directors, on Tuesday last, 22nd June, went through the ceremony of keying the portion of the arch immediately adjoining to the station. The Chairman, having gone through the usual forms, complimented Mr. Marshall, the contractor, on the manner in which he had executed this portion of the work, and assured him that the Directors regarded it as an earnest of what may be expected of him in the completion of the remainder of his contract,—that from the report of the Engineer, and the assurance given by Mr. Marshall, he expected that the Glasgow Tunnel, which forms one of the most important works of the line, would be completed by August. Mr. Marshall, in reply, expressed the gratification which he felt on the present occasion. He was making every exertion to meet the wishes of the Directors as to the completion and opening of the line, and he hoped that, in the course of four weeks from this date, he would be able to say that the arching of the whole Tunnel was completed. The party present, including a large body of the workmen, then drank success to the great undertaking amidst hearty cheers.

The masonry at the mouth or south entrance to the Tunnel constitutes an object of interest. The general breadth and height of the Tunnel is 27 feet by 20; but to facilitate the distribution of the trains of carriages and waggons over the station, the Engineer has contrived a gradual enlargement of the end of the Tunnel, by constructing six successive arches of increased dimensions, the last of which forms the entrance into the station, and the keying of which occasioned the meeting. It is 62 feet wide by 25 feet high, resting on two piers, and surmounted by a ballustrade, which forms the south wall of a new street to be called Cathedral Street an eastern extension of Bath Street to Stirling's Road.

It is gratifying to observe the rapid progress making in every part of the work about the station. The roofing of the booking-offices is now nearly completed—the warehouses for goods are rapidly springing up—and the erection of the passengers' shed is commenced. Along the line, too, the most spirited exertions are making. The last arch of the great viaduct at the Almond Valley was keyed by Messrs. Gibb and Son; and that at the Avon Valley by Mr. Lorimer, a fortnight ago; and there is little doubt, if the weather continue favourable that five-sixths of the line will be completed in August, and the remainder by the 1st of September; and it is confidently expected that the whole, from end to end, will be opened to the public early in September.—*Glasgow Herald.*

SECOND CLASS CARRIAGES.

SIR,—I wish to lay a complaint through your very useful paper, before the managers of the railways, which, if they were aware of the importance of, they would, I am persuaded, not delay to apply the remedy. It is, namely, against the very dangerous construction of the second train carriages. In the present state of them, the thorough draft which now passes through them gives every person, more or less, cold, if they have a long journey to take. There are some of them with glass, enclosed for night passengers, and these are exactly as they all ought to be made. The unenclosed ones are most dangerous, and especially to those who are delicate or unwell. I cannot suppose that the managers would hesitate to remedy this great evil, and especially as the expense would be a mere trifle, as they have shown every wish to give all accommodation to the public. Your insertion of this in your paper will greatly oblige a sufferer by this neglect.

VIATOR.

Derby Mercury.—June 19th, 1841.

TRESPASSING ON RAILWAYS.—At the County Petty Sessions on Tuesday week, an individual was fined in the penalty of 10*l.* for a trespass on the Birmingham and Gloucester Railway at Spetchley, by riding a horse along the line. It appears that the offender was intoxicated, and it was a most fortunate and providential circumstance that at the time when he was upon the line no train was in the neighbourhood, or dreadful consequences must have ensued both to the individual and the passengers in the train. The magistrates are determined to enforce heavy penalties in every case of this description.—*Worcestershire Chronicle.*

RAILWAY ADJUDICATIONS.

BRADLEY v. DUNCUFT.

(Tried before Lord Abinger and a Special Jury.)

Court of Exchequer, Guildhall, June 30.—Mr. CROMPTON opened the pleadings;

Mr. ANDREWS stated the case on the part of the plaintiff, as follows—May it please your Lordship; Gentlemen of the Jury,—This is an action brought to recover the sum of 100*l*., the amount of 50 shares of the Stafford and Rugby Railway Company. The intended line of railway has been altered, owing to the Company not being able to get their Bill passed for the line they intended. What I am seeking to recover at your hands is, 100*l*. for shares that were sold in this railway the deposit money—with a view to going to Parliament for making of this alteration. It appears, on the 18th of March the plaintiff, who is a sharebroker, sold to the defendant, who is also a sharebroker, fifty of these shares, at the sum of 2*l*. a share, and delivered, when he had sold them, the scrip certificates to the defendant. The certificates were in this form—"Stafford and Rugby Railway: 10 shares, 7*l*. each, number so and so to so and so, inclusive; signed by two of the Provisional Directors of the Company."—These certificates are sold in the market, transferred from hand to hand. When the money comes ultimately to be divided—supposing the railway is never formed—the person who holds these certificates will of course obtain his share from the persons who have been appointed as the Provisional Directors on the production of the certificates. It appears, that soon after the bargain had been made between the plaintiff and defendant, these shares fell in price, and then the defendant became rather unwilling to complete his bargain. The bargain had been made, as I have stated, but as he had not paid the money, he bethought himself of the different defences he might make to avoid the payment of the money. He first wanted to have the name of the principal for whom it was alleged the plaintiff had sold the shares. But that bargain was made between the plaintiff and the defendant, and the plaintiff was the person to receive the money. In the next place, the defendant said he was not satisfied to pay the money on the mere delivery of the certificates; but he wanted an order of the original shareholder on the Railway Company to pay to him his share of the deposits when it should become due. Now such order could not be given to every person to whom these certificates had been delivered, for they were deliverable from hand to hand; the original shareholder could only give it to the person to whom he first sold his shares, and when he had so given it to him, if that person sold the shares to a second he delivered it to the second, and so on. The mere delivering over of that order would no more convey to the party who had entered into the bargain, the legal interest in the money, than the delivery of the certificates; it was merely an equitable interest, which passed to the purchaser of these shares; and if any contest was entered into—if any proceedings at law were to take place—why they would be brought in the name of the original shareholder.—However, it appears the bargain between the parties was for a sale of these certificates of shares; they were to be sold by the plaintiff to the defendant at the sum of 2*l*. a share; he delivered the shares, which were all they were dealing about at the time, and all that was in our intention at the time the contract was made. The plaintiff has performed his part; the defendant refuses to perform his, and therefore we are obliged to come to recover the 100*l*., the price of the shares, at his hand.

Mr. Joseph Fernie sworn; examined by Mr. CROMPTON—Are you a sharebroker at Manchester?—Yes.

Now, do you remember on the 18th of March last meeting the plaintiff, Mr. Bradley?—Yes.

Had you any bargain with him for shares?—I had.

(By Mr. PLATT)—Was the bargain in writing?—Not in writing.

Did you purchase some from him?—Yes.

How many did you purchase?—Forty.

What were they?—Stafford and Rugby Railway scrip.

What was the price?—2*l*. per share.

Did you get the certificates from him?—I got scrip.

(By Mr. PLATT)—Have you got it here?—No.

Had he any more to dispose of?—Fifty more.

Did you mention the defendant to him?—Yes, I did.

In what way did you mention him?—I told him that he was a buyer of that stock.

What is the defendant?—He is a sharebroker.

What is Mr. Bradley?—A sharebroker.

(By Lord ABINGER)—You purchased these of Mr. Bradley, the plaintiff?—Yes.

Shortly after this conversation between you and Bradley, did you see Bradley and the defendant together?—I did.

How soon afterwards?—Immediately afterwards.

Where was that?—On the Manchester Exchange.

Did you hear what Bradley and Duncuft said to each other?—I did not; I was a few yards from them.

After their conversation did Duncuft come to you?—He did.

Did Duncuft tell you anything?—He did; that he had bought 50 shares in the Stockton and Rugby Railway.

Did he mention the price?—Yes, at 2*l*. a share.

Do you know whether they had been delivered or not—the certificates?—I understood they had been delivered.

Have you had conversation with him since?—Yes.

What has he told you as to the certificates being delivered?—He told me that he wanted an order from Mr. Bradley.

Did he ever complain about the certificates?—He wanted an order from Mr. Bradley; through Mr. Bradley from his principal.

What kind of order did he mention?—To receive his share of the deposits from the Directors.

Were these scrip, or shares, or whatever they are, usually sold at that time in the market?—Yes.

Had it been usual at that time to require such an order?—Not so.

Mr. PLATT—You will put in the deed, I suppose, to show the right of these parties to any of these shares; we are talking about pieces of paper at present. My friend will show the constitution of the Company.

Lord ABINGER—There is no Act of Parliament.

Mr. PLATT—They have a deed.

Lord ABINGER—What is it but assigning the right of another man to a portion of the subscription.

Mr. PLATT—It is a piece of paper, your lordship will find by and by.

Lord ABINGER—That is not assignable at all is it?—It is a *chose* in action.

Mr. CROMPTON—He buys anything he can make under it.

Mr. ANDREWS—He buys this piece of paper.

Lord ABINGER—Or what these pieces of paper represent—are they *choses* in action?

Mr. CROMPTON—It is impossible to say what they represent.

Mr. PLATT—I submit my friend must show some constitution of the Company.

Lord ABINGER—He states this: there is no Company; Mr. Andrews' statement is very perspicuous; he says the Company was intended to be formed—a sum of money subscribed; they failed in their first measure, but still intended to go on with it while the money was subscribing; the parties who had originally subscribed parted with their shares, which they call *scrip*, to different persons; the question is whether they could by law make such a transfer.

Mr. PLATT—Before a measure of this kind could be brought into Parliament it is necessary that there should be a certain subscription; there should be a subscription agreement that constitutes and shows what the interest of the several parties was in that particular project. I say my friend ought to produce that.

Lord ABINGER—They must pay into the Court of Exchequer a certain sum of money before they are allowed to bring their Bill into Parliament.

Mr. PLATT—And sign the agreement, my Lord. My friend has the agreement here, I dare say.

Lord ABINGER—Is it an instrument assignable at law.

Mr. ANDREWS—I apprehend a person may very well bargain for equity by an equitable claim to anything—an equitable claim to an estate—that would want a conveyance. I would put it in this way.

Lord ABINGER—A man may buy a bond.

Mr. ANDREWS—It passes; it does not give him a right to sue at law; he has got the equity; that I apprehend is what has been bought here.

Had you had any conversation about returning the shares—the certificates?—No.

Had you a conversation with him this morning; I believe you are a friend of Mr. Duncuft, the defendant, are you?—I am acquainted with them both. I am not friend to one more than the other.

Do you know anything from him about any certificates?—Nothing, but what has passed in discourse.

What do you know about any certificates from him?—I do not know anything of them, more than being cognizant of the bargain that was made; that he bought them from Mr. Bradley, and refused paying him for them without a memorandum.

That, you have learnt from him, have you?—That, I learnt from them both.

Lord ABINGER—Suppose a man buys a bond, and the person who sells it him does not give him a power of attorney from the original obligee, he says, "I wont pay until I get the power of attorney."

Mr. CROMPTON—There is a sale of this document whatever it is; they may take their chance of what they can get upon it.

Lord ABINGER—Oh! that is selling nothing.

Mr. CROMPTON—I believe they would by the scrip have been able to get the money.

What was your conversation with him this morning?—With Mr. Duncuft; Mr. Bradley told me Mr. Duncuft intended to set up the point here.

I want you to tell us what Mr. Duncuft and you talked about this morning?—Certainly; I told him that Mr. Bradley understood he was setting up a point in this Court, denying the delivery of the shares; that if Mr. Duncuft did gain this suit, Mr. Bradley's principal would sue Mr. Duncuft in another Court, and prove Mr. Bradley to be the agent or witness to the delivery of the shares—that is all.

What did Duncuft say to that?—He did not make any reply.

Did he say anything about the shares being delivered?—He did not.

Lord ABINGER—Have you not pumped him sufficiently?

Cross-examined by Mr. PLATT—He told you he had refused to pay for these shares because he could not get from Mr. Bradley the memorandum?—Yes.

Did he not tell you at the same time he discovered by the deed, that the shares could not be assignable or transferable otherwise than to the executors or administrators of the original subscribers, except with the consent in writing of the provisional Directors?—He told me that was contained in the ——

(By Mr. ANDREWS)—When was this?—Sometime since.

Mr. ANDREWS—Do not——

Did he not tell you at the same time, that he refused to pay for them, because he could not get a memorandum?—I do not remember he told me that at the same time.

Mr. ANDREWS—Fix the time.

Lord ABINGER—You have asked him as to all times; Mr. Crompton has not pinned him down to any particular time.

Mr. ANDREWS—His memory was so very vague.

Did he not tell you at the same time, that he

Digitized by Google

would not pay without having a memorandum from Mr. Bradley—did he not tell you that, at the same time he made that communication, that the consent of the Provisional Directors was also necessary?—He did.

That he had learnt that from the deed?—He did.

Lord ABINGER—Is not that enough?—Mr. PLATT—Quite!

Did he not tell you that Mr. Bradley would not tell him who his principal was?—Certainly.

And did he not tell you at the same time also that the person in whose name these shares stood was not the owner of them?—Mr. Bradley told Mr. Duncuft in my presence that the person who had signed the deed might be a man of straw. Mr. Duncuft said he should require a memorandum from the person who had signed the deed, indorsed by his principal, ordering the Directors to pay him the division.

To pay him the division which he was to have from the scrip?—Yes.

Did Mr. Bradley give him that memorandum?—Mr. Bradley refused giving up the name of his principal.

Do you not remember he said at the same time the person whose name was down was not the owner of the shares?—He said the man who had signed the deed might be a man of straw; the man who had signed the deed was not his principal; was not the owner of the shares.

Re-examined by Mr. ANDREWS—When was it he said this; how long after the time when the bargain had been made?—A very few days.

After the bargain had been made?—Yes.

Lord ABINGER—Can you carry the case any further?—Mr. ANDREWS—No, my Lord.

Lord ABINGER—No written contract; if these are saleable chattels, they ought to be the subject of a contract in writing—No delivery proved.

Mr. ANDREWS—As to these certificates, such as they are, does not your Lordship think they may be sold without any written contract?—Lord ABINGER—And *delivered*—yes! subject to the other exceptions; but there is no proof that they were delivered; no proof of any payment. You want a contract in writing therefore to bind the party.

Mr. ANDREWS—Does not your Lordship think there is evidence they were delivered at the time?—Lord ABINGER—No, I think not; he says he never admitted they were delivered to him. Mr. Crompton pumped him a long time, but could not get out of him that he admitted anything was delivered.

Mr. CROMPTON—The Courts have held a contract in writing is not necessary under the Statute of Frauds as to shares of this kind in these Companies; they are not goods, wares, and merchandize, under the Statute of Frauds.

Lord ABINGER—I do not know what they are.

Mr. CROMPTON—They are not goods, wares and merchandize under the Statute of Frauds—they are not things that could easily pass.

Lord ABINGER—What are they?

Mr. CROMPTON—It is a ticket—something like a pawn-ticket by which he is to have a chance of getting something.

Mr. PLATT — Stated in the declaration to be "sold, tranferred and delivered!"

Mr. ANDREWS—We need not prove the whole of that.

Mr. CROMPTON—He put this defence merely on one ground; he does not complain they are not delivered.

Lord ABINGER—I do not think upon the evidence that he is bound to pay at all. It does not appear you have given him any thing—it appears you have refused that to him by which alone he could make any thing of his bargain, namely, the name of the original proprietor, that he might get from him the order.

Mr. ANDREWS—If your Lordship think we have not proved here the delivery and *that* is necessary I will be called.

Lord ABINGER—I say you have not proved the delivery of any thing, but you have proved the refusal of that which he ought to have had to make that worth any thing.

Mr. ANDREWS—We will be called.

The Plaintiff was accordingly nonsuite.

THE EDINBURGH, LEITH, AND NEWHAVEN RAILWAY COMPANY *v.* THE MAGISTRATES OF EDINBURGH, THE TRUSTEES FOR THE CITY AND THE TRUSTEES FOR THE MIDDLE DISTRICT OF ROADS.

This case came on for trial before Mr. Sheriff Speirs and a jury, on Monday last, in the Court-room of the Second Division of the Court of Session, and occupied seventeen hours. The case excited great interest, and the court was crowded all day. It embraced the valuation and damages due for several lots of ground, and for the great tunnel being carried under the streets from the bottom of Scotland-street to Market-street, all within the Royalty. The ground at the foot of Scotland-street required for a station and depot, embracing rather more than an imperial acre, and interfered with the feuing plan of the city to the extent of about 250 feet of frontage. For this portion and damages to the adjoining feuing ground, the jury gave a verdict for 2,150*l.*; for the ground occupied by the tunnel, 1s.; and for several pieces of ground lying at and near the shambles, extending to an acre and a half, including the Weigh-house, part of the Fruit-market, the sloping banks presently used as bleaching-greens, and two small portions of Princes-street Gardens, and including damages to the fruit-market, 2,200*l.*; and, of consent of parties, 100*l.* to the Road Trustees, for part of the roads taken; total, 4,350*l.* 1s.

The witnesses for the respective parties differed very much in their estimates of the value of the ground and damages due; those for the Railway Company averaging about 3,000*l.*, and those for the magistrates about 7,000*l.* The jury retired for two hours before agreeing in their verdict.

Counsel for the Railway Company, Patrick Robertson and E. D. Sandford, Esqs. Agent, J. R. Stodart, W. S. Solicitors, M. and J. Lothian.

Counsel for the Magistrates and others, Duncan M'Neill, and John Marshall, Esqs. Agents, Messrs. Graham and Anderson, W. S. Solicitor, R. L. Dymock.—*The Scotsman.*

DICKMAN *v.* THE BLACKWALL RAILWAY COMPANY.

Court of Queen's Bench, June 29 (*Sittings at Nisi Prius before Lord Denman and Special Juries.*)—This was an action to recover compensation for the injury which the defendants had done to two cottages, by building one of the arches of the railway in such a manner as that a cornice, projecting over the ground upon which the cottages were built, obstructed the light and air to some extent, and also prevented the possibility of the owner of the land raising his boundary wall to a greater height than the arch if he should be at all minded to do so.

Several witnesses were called, who proved the substance of the declaration, and as the action had been brought for the purpose of merely deciding the question of right, the jury found for the plaintiff—damages 40s.

Mr. Platt and Mr. Butt appeared for the plaintiff, and M. D. Hill and Mr. Alexander for the defence.

GOODFELLOW *v.* THE BLACKWALL RAILWAY COMPANY.

This was an action exactly similar to the former, only brought in respect of premises a little way distant from those which furnished the grounds of the former action. As the evidence was to be the same, and the actions would be almost identical,

Mr. PLATT proposed that the defendants should submit to a verdict for the same damages as had been given in the former action.

Lord DENMAN thought such a course desirable, and said that it was scarcely possible to anticipate any different result; upon which suggestion of his Lordship,

Mr. M. D. HILL consented on the part of the defendants to a verdict for the plaintiff—damages 40s.

IMPORTANT CASE—FRAUD ON RAILWAY.—On Monday, the 14th inst., a passenger by the Greenock Railway was brought before the magistrates of Gorbals, for having fraudulently evaded the guard of a railway *down* train from Glasgow to Greenock, by not giving up his ticket, and for having attempted on the following day to cheat the guard of an *up* train from Greenock to Glasgow, by delivering to him as a proper ticket the one which he had withheld on the preceding day. The magistrates considered this to be a clear case of fraud and wilful imposition, and fined him in half a guinea. The passenger then raised an action of damages against the Railway Company before the Sheriff of Lanarkshire, but the Sheriff considered that the Railway Company had full power to seize the passenger and bring him before a magistrate,—that the passenger had committed a serious offence and had been rightly punished, and therefore dismissed the action. —*Scotch Reformers' Gazette.*—Both most righteous decisions.

—o—

TEMPERANCE EXCURSION BY RAILWAY.—On Monday morning the members and friends of the Birmingham Temperance Society, to the number of about 800, made an excursion to Cheltenham, in order to be present at and take part in the grand Gloucestershire temperance demonstration, which was appointed to be held there on the above day. At five o'clock in the morning the members assembled in the Old Square, where having formed in procession, they proceeded to the railway station accompanied by a band of music, and at six o'clock they started for their destination in a special train provided for the occasion. The party arrived at Cheltenham about nine o'clock, and proceeded to the Pittville Gardens, where an excellent breakfast was provided. The afternoon was spent in visiting the public buildings and other objects of interest in the town, after which the company again assembled in the Gardens, where dinner was provided for them and a large number of visitors from other quarters of the country. After dinner the party, which now amounted to some thousands, assembled in different booths to hear addresses upon the subject of temperance. Amongt the speakers were Samuel Bowly, Esq., R. Mimpriss, Esq., the Rev. G. Holt, Messrs. Barlow, Hockings, and other well known friends of the cause. The party set out on their return trip at eight o'clock, and arrived in Birmingham about twelve, after a day of much enjoyment.—*Midland Counties' Herald.*

—o—

ACCIDENT ON THE GARNKIRK AND GLASGOW RAILWAY.—We regret to learn that a fatal accident occurred yesterday afternoon on this railway. Two of the labourers upon the line, named John Kelly and William Haggarty, had been employed in shifting the rails at the moment that a waggon train of coals was upon its way to Glasgow, and whether from inadvertence, or from having miscalculated the distance, we cannot tell, but the moving mass was upon them before they could get out of its way. Kelly was killed on the spot, and his companion severely, if not desperately, injured. The catastrophe occurred at that portion of the line immediately adjoining the Glasgow station-house, and we are not aware that any one was to blame but the unfortunate men themselves.—*Glasgow Herald.*

—o—

ACCIDENT ON THE MANCHESTER AND SHEFFIELD.—On Monday last, a person named George Colley, was thrown on the railway by a horse which he was leading off the line near Glossop. A waggon came up at the time, and, before he could rise, went over him. He was instantly taken to the infirmary, where he died the next day of a compound fracture of the leg. An inquest was held on the body before W. S. Rutter, Esq. Verdict—Accidental death.—*Manchester Chronicle.*

Digitized by Google

EASTERN COUNTIES RAILWAY.—The part of the line at Kelvedon recently commenced, is steadily progressing, Mr. Wythes being the contractor for the earth works, and Mr. Mathews for the brick work. The Watering farm house and buildings have been rased to the ground, and the Coggeshall road will shortly be diverted in order that a bridge may be erected on which the line will pass over it. Feering Park has been invaded, and the course of the line through it set out, but we regret most to observe the devastation of the allotments on Lord Western's estate, which were appropriated to the poor by his lordship, and which by dint of the industry of the occupiers, had been brought into a fine state of cultivation. His lordship had frequently visited them, having a carriage drive completely round them; the present intruders will destroy the compact arrangement of the gardens, but we trust another spot will be found whereon the same beneficial system may be carried out. The line will cross the road leading to Lord Western's mansion within about 20 rods of the church.—*Chelmsford Chro.*

PROSPECTUS OF THE MEERBROOK SOUGH COMPANY, Incorporated under an Act of Parliament passed in the 4th Victoria.

CAPITAL—£20,000, in 400 Shares of £50 each. Deposit of £2 10s. 0d. per Share.

DIRECTORS.

Francis Hurt, Esq., M. P.	Richard Hurt, Esq.
The Rev. Philip Gell.	The Rev John Wolley.
Charles Hurt, Esq.	J. H. Pidcock, Esq.

BANKERS.

Messrs. Arkwright and Co., Wirksworth.

The object of the present Company is to carry forward the Meer Brook Sough, a work which commenced in the year 1772, for the purpose of draining the extensive and rich mineral field of Wirksworth, in the county of Derby; and also for working the several mines connected therewith. The Sough has already been driven a distance of two miles, or thereabouts, from the river Derwent to within a short distance of the ancient mineral field. When it shall have been driven a short distance further, there is every expectation of affording relief to the mines within the valley, which are known to contain large and valuable quantities of lead ore. In these works have already been expended £50,000 by the present Proprietors, and those they represent, to whom, under the provisions of the Act, 240 shares have been allotted, leaving 160 shares to be now disposed of.

By the Act, the Company are empowered to receive as compensation a certain portion of the Ore obtained from every mine relieved from water by aid of the Sough, not exceeding one-sixth, a proportion which leads to the expectation of affording a large and ample remuneration to the Company for their capital employed. In addition to this, it is also confidently expected the Company in the progress of the Sough will meet with valuable veins of Lead Ore, which they will be entitled to work, and which, according to the report of experienced miners, will be a considerable, if not the most important, portion of their revenue.

To those who are unacquainted with the local situation of Wirksworth and its neighbourhood, it may be proper to mention that the mines are numerous, and were profitably worked down to their present level about sixty years ago They have since that period been lying dormant, in consequence of being inundated with water, and without the possibility of relief, except by aid of this Sough, the progress of which has been for many years impeded by legal objections, now entirely removed.

The works are by the Act required to be conducted under a Directorship of six proprietors, to be chosen annually by the proprietors at large; no person who is not possessed of five shares can be a Director. The Company being incorporated, no Shareholder can be held responsible beyond the extent of his share in the capital not paid up; the calls per Share are not to exceed £5, and to be made at intervals at not less than three months, of which twenty-one days' notice is to be given.

Applications for shares to be made to Messrs. Simpson and Frear, Solicitors, Derby; or P. Hubberety, Esq., Solicitor, Wirksworth, on or before the 12th day of July next, after which the Directors will proceed to allot them.

RESIDENCE AND SHOOTING, SUSSEX.—TO BE LET, with immediate possession, for a term of three years, an excellent GENTLEMAN'S RESIDENCE, called Balcombe House, partly furnished, with suitable garden, green-house, and offices, also the sporting over the surrounding estate, comprising near two thousand acres of land. The estate is situated on the Brighton road, and the residence is within half a mile of an intended, and partly constructed station on the Brighton Railway which is about to open beyond this point. It is distant from London 32 miles, and 18 from Brighton. The situation is dry and healthy, and the scenery exceedingly beautiful. The angling in the lake on the estate will be included in the letting. Grass land may be had, if required, and the residence may be had without the sporting. For further particulars apply to Messrs. Clutton, Hartswood, Reigate, and at No. 8, Parliament-street, Westminster.

LONDON AND BRIGHTON RAILWAY COMPANY.—A TRAIN will leave the London Station at Tooley-street, for Hayward's Heath and back, on Tuesday next, the 6th July, at Eleven o'Clock, to convey such shareholders who may apply for Tickets on or before Monday, 5th instant.

By Order,
THOMAS WOOD, Secretary.

10, Angel-court, Throgmorton-street,
1st July, 1841.

THE BRIGHTON RAILWAY.—The Official Map and Section of this line is now published price 3s. on a large sheet coloured: folded in a cover 4s.: on linen for the pocket 6s.; and on rollers 5s. 6d. The extent of country, with all the railways shown in depth on this map, is from 30 miles north of the Thames to the English Channel, and it embraces in width a district of 54 miles.

Published by J. R. Jobbins, 3, Warwick Court, Holborn; R. Tyas, 8, Paternoster-row. Sold by J. Weale, and J. Cross, Holborn; Letts, Royal Exchange, and at the Office of the Railway Times

GLASGOW, PAISLEY, KILMARNOCK, and AYR RAILWAY.—SUMMER ARRANGEMENTS and REDUCTION OF FARES.—The Public are respectfully informed, that on and after Monday, the 14th June, the Mid-day Passenger Trains will leave Glasgow at half-past one, and Ayr at 2 afternoon in place of half-past two and three, as formerly; the half-past twelve o'clock Luggage Trains from each end will be discontinued, and Passengers will be conveyed at a considerable reduction of Fares. The arrangements will now be as under, viz.:—

TRAINS START

FROM GLASGOW.	FROM AYR.
At *Half-past 7 morning.	At *8 Morning.
*Half-past 10 forenoon.	*11 Forenoon.
Half past 1 afternoon.	2 Afternoon.
*Half-past 4 "	*5 "
Half-past 6 "	7 Evening.

FARES BETWEEN GLASGOW AND

	1st Class.	2d Class.	3d Class.
Paisley (see Joint Line Advertisements).			
Johnstone	1s. 6d.	1s. 0d.	0s. 8d.
Lochwinnoch	2s. 6d.	1s. 8d.	1s. 2d.
Beith	2s. 9d.	2s. 0d.	1s. 3d.
Kilbirnie	3s. 0d.	2s. 2d.	1s. 6d.
Dalry	3s. 6d.	2s. 3d.	1s. 8d.
Kilwinning	4s. 0d.	2s. 6d.	2s. 0d.
Irvine	4s. 6d.	3s. 0d.	2s. 2d.
Troon	5s. 0d.	3s. 6d.	2s. 6d.
Monkton & Prestwick	5s. 6d.	3s. 9d.	2s. 9d.
Ayr	6s. 0d.	4s. 0d.	3s. 0d.

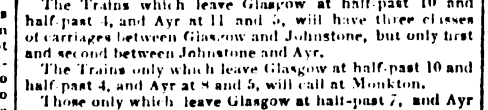
The Trains which leave Glasgow at half-past 7, half-past 1, and half-past 6, and Ayr, at 8, 2, and 7, will have first, second, and third class carriages.

The Trains which leave Glasgow at half-past 10 and half-past 4, and Ayr at 11 and 5, will have three classes of carriages between Glasgow and Johnstone, but only first and second between Johnstone and Ayr.

The Trains only which leave Glasgow at half-past 10 and half-past 4, and Ayr at 8 and 5, will call at Monkton.

Those only which leave Glasgow at half-past 7, and Ayr at 2, will call at Prestwick.

Those only which leave Glasgow at half-past 1, and Ayr at 2, will call at Kilbirnie.



Those which leave Glasgow at half past 1, and Ayr at 2, will take Goods going the whole distance; and any quantity not less than 2 tons, to or from any of the road stations.

A Luggage Train will leave Glasgow on Tuesdays, Thursdays, and Saturdays, at half-past 7 morning, and Ayr on Mondays, Wednesdays, and Fridays, at 8 morning, carrying goods in any quantity to or from any Station.

Coach Parcels will be conveyed by all the Trains.

The Trains marked thus * have each Ardrossan carriages; but Passengers can be conveyed to or from that place with any of the other Trains by changing their carriages at Kilwinning.

On Wednesdays and Fridays an extra Train will leave Glasgow for Ardrossan, at a quarter-past 3 afternoon, with the Passengers for the FIRE KING Steam-packet.

T. H. RYLAND AND CO., OZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high pressure engine, metallic piston, with or without boiler.

Two boilers, quite new, 18 feet by 4 feet.

Planing machine, works by hand, will plane 5 feet by 18 inches.

BIRMINGHAM CANAL NAVIGATIONS.—BENTLEY CANAL.—To CONTRACTORS.—The Committee of Proprietors of the Birmingham Canal Navigations will meet at the Company's Office, in Paradise-street, Birmingham, on Friday, 29th July, at 11 o'Clock in the forenoon, to receive Tenders for the formation and completion of that portion of the Bentley Canal between Wyrley and Essington Canal and Little London, near Willenhall, being a distance of about 2 miles, with Locks, Bridges, Culverts, and other Works. The designs, specifications, and draft of contract, may be seen at the office of Messrs. Walker and Burgess, 23, Great George-street, Westminster, for inspection ONLY, from the 1st to 3rd July, inclusive; and at the Company's Office at Birmingham, from the 5th to 27th July.

Sealed Tenders, addressed to Mr. John Freeth, with the words, "Tender for Bentley Canal," to be delivered in on or before Eleven o'Clock on Friday, the 29th of July. The Committee do not pledge themselves to accept the lowest Tender.

GREAT WESTERN RAILWAY.—Alteration of Trains this day.—In consequence of the OPENING of the RAILWAY THROUGHOUT from Paddington to Bristol and Bridgewater the trains will run as follow.—

DOWN TRAINS leave Paddington Station for

Bridgewater.	Bath and Bristol.	Cirencester.
8 0 a.m.	8 0 a.m.	8 0 a.m.
10 0 a.m.	10 0 a.m.	10 0 a.m.
12 0 noon.	11 0 a.m.	12 0 noon.
8 55 p.m. (mail)	12 0 noon.	2 0 p.m.
	2 0 p.m.	5 0 p.m.
	5 0 p.m.	8 55 (mail)

Mail Train, 8 55 p.m.
Swindon to Cirencester, 8 45 a.m.

SHORT TRAINS leave Paddington station.

9 0 a.m. to Maidenhead	4 0 p.m. to Reading
10 30 a.m. to Slough	4 30 p.m. to Slough
1 30 p.m. to Slough	5 30 p.m. to Maidenhead
7 30 p.m. to Swindon, calling at every intermediate station.	

UP TRAINS.

From Bridgewater

To Bristol	8 0 a.m.	To London	3 30 p.m.
Ditto	10 0 a.m.	Bath	5 0 p.m.

To London	10 40 a.m.	To London	5 45 p.m.

From Swindon to London, calling at every intermediate station, 7h 30m. a.m.

30th June, 1841.

LONDON AND GREENWICH RAILWAY OFFICE.—Notice is hereby given, That the Half-yearly General Meeting of this Company, will be held at the London Tavern, Bishopsgate-street, on Friday the 16th day of July next, at 12 for 1 o'clock precisely. The Transfer Books will shut on Wednesday, the 30th of June instant, and re open on Monday, the 19th of July following.

By order of the Board,
J. Y. AKERMAN, Secretary.

London Terminus, 23rd June, 1841.

TO RAILWAY CONTRACTORS AND OTHERS.—FOR SALE.—Two Capital Locomotive Engines, one nearly new, and quite perfect, the other in good working order, both 4 feet 8½ inches gauge; also, from 400 to 500 tons of Flange and Chair Rails, from 30lbs to 42lbs per yard; from 200 to 300 Waggons, with a great variety of other Railway Materials.

Application to be made to Mr. Bedborough, Stratton Green, near Swindon, and Wootton Bassett, Wilts.

HAMBRO' WHARF, near SOUTHWARK BRIDGE, THAMES STREET.—Goods conveyed by Railway to and from Manchester and Liverpool, including Cartage and Delivery in London, at the following reduced rates:—

	Per Ton.
Grain, Timber, &c.	55s.
Beer, Hides, Soap, Sugar, &c.	60s.
Raw Coffee, Rice, Earthenware in Crates, &c.	62s.
Bales, Grocery, Oils, Tea in Chests, Wool, Paper, &c.	65s.
Drapery, Drugs, Eggs, Glass in Crates, Indigo, &c.	70s.
Cochineal, Ripe Fruit, Raw Silk, Toys, &c.	80s.
Feathers, Millinery, Furniture, Hats, and similar Articles	100s.

Warrington, Whitmore, Stafford, and Wolverhampton in proportion.

CHAPLIN & HORNE,
Agents to the Grand Junction Railway Company.

Digitized by Google

CROYDON RAILWAY—SUNDAY TRAINS.—On and after the 4th of July, the SUNDAY TRAINS will start as under:—

From London, in the Morning.
5 minutes past 9 o'clock.
5 minutes past 10 o'clock.

From Croydon in the Morning.
5 minutes past 8 o'clock.
5 minutes past 9 o'clock.
5 minutes past 10 o'clock.

In the Afternoon, from both London and Croydon, at 10 minutes before 2, 20 minutes after 2; and 10 minutes before and 20 minutes after every succeeding hour, until 20 minutes past 9 o'clock.

FARES FROM NEW CROSS TO CROYDON.

First Class	1s. 0d.
Second Class	0 9
Third Class	0 6

Omnibuses leave the British Booking-office, Cockspur-street, Charing-cross, proceeding over Westminster Bridge to the Elephant and Castle, by the Kent Road, to the New Cross Station daily (including Sundays)—morning at 25 minutes past 8 and 25 minutes past 9, afternoon at 20 minutes before 4 and 20 minutes before 5 o'clock, to meet the trains from London to Croydon; and start from New Cross Station for Charing-cross, in the morning on the arrival of the 5 minutes past 9 and 5 minutes past 10 o'clock trains, and in the afternoon on the arrival of the 20 minutes past 4 and 20 minutes past 5 o'clock trains, from Croydon. Fares—inside 9d., outside 6d.

MANCHESTER AND LEEDS RAILWAY. OLDHAM BRANCH LINE.—EXTENSION OF TIME.—TO CONTRACTORS.—The Directors will meet at their Office, Clowes's Building's, Hunt's Bank, Manchester, on Monday, 5th July next, for the purpose of receiving Tenders for the formation of a branch line from near Mills Hill, in the township of Chadderton, to the town of Oldham, being a distance of about two miles, including all the necessary excavations and embankments, bridges, culverts, formation of roads, fences, laying of permanent way, and all other works appertaining thereto, as described in the plans and specifications, which may be seen at the Engineer's Office, Hunt's Bank, Manchester, on and after the 24th June next.

Printed forms of Tender will be supplied to Contractors on application at the Engineer's Office, which must be delivered at the Office of the Secretary, Clowes's Buildings, by 10 o'clock in the forenoon of the 5th July next, and the parties tendering will be required personally to attend at the same place at the hour of 1 o'clock in the afternoon of the same day.

June 15, 1841.

FLEETWOOD DOCKS.—PRESTON AND WYRE RAILWAY, HARBOUR, AND DOCK COMPANY.—Incorporated by Act of Parliament.—Issue of Shares (bearing £5 per Cent. Interest) for making Docks, &c.

The Railway having now established itself as a good Investment, with profitable and daily increasing returns, and the Harbour Works being in a state of great forwardness, the Directors have determined at once to issue a portion of the remaining 4,000 £50 Shares for the formation of Docks and other Works, which the daily-increasing commercial traffic of the port shows will not only be a lucrative investment in itself, but must materially enhance the returns both of the Railway and Harbour.

The mode the Directors propose to pursue in the issue of new Shares will be to require only a payment of £5 per Share on each of these new £50 Shares on their first appropriation, with a further call of £5 per Share every three months, till the whole £50 is paid; such calls to carry interest at the rate of £5 per cent. per annum payable half-yearly, until the whole of the calls are paid, the holders of such new Shares having the privilege at any time by paying up their Shares in full, to come in and participate in the dividends with the old shareholders in lieu of such interest, and as soon as they shall have paid up all their calls, to elect whether they will take such dividends, or continue to receive a priority of interest at £5 per cent. per annum out of the profits of the Company.

As the Railway is now paying a fair profit, which profit it may be confidently expected will be steadily and regularly increased, and the calls on such new shares are spread over a space of two years and a quarter, the present arrangement offers an unusual and most important mode of investment, at once securing to the holders £5 per cent. on their money, with an opportunity of receiving the dividends in lieu thereof, whenever those dividends shall exceed the amount of the interest.

Applications for Shares, to be made at the Company's Offices at Fleetwood on Wyre, Lancashire, and No. 11, King William-street, London, on or before the 20th day of July next.

By order of the Directors,
JOHN POWER, Secretary.

23rd June, 1841.

COMPRESSED RAILWAY KEYS OR WEDGES—Engineers and Railway Contractors can be supplied with any number of compressed Oak or Fir Railway Keys or Wedges, on the shortest possible notice, and on very reasonable terms.

Orders or Applications with Drawings sent to Mr. Frederick Braithwaite, Commercial Saw Mills, 32, Commercial Road, Lambeth, will meet with immediate attention.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841

LONDON AND BIRMINGHAM, GRAND JUNCTION, LANCASTER, MIDLAND COUNTIES', NORTH MIDLAND, YORK AND DARLINGTON RAILWAYS.—In connection with the above lines of railway, places can be secured by Mails to

Edinburgh,	Stratford-on-Avon,	Shrewsbury,
Holyhead,	Carlisle,	Lichfield,
Newcastle-on-Tyne,	Bangor,	Brackley,
Banbury,	Leamington,	Warwick.

Also by Coaches to

Ashby-de-la-Zouch,	Newcastle-on-Tyne
Atherstone,	Northampton
Bangor,	Newark
Buckingham	Newport Pagnel
Bourne	Oxford
Brackley	Oundle
Boston	Olney
Banbury	Oswestry
Carlisle	Peterborough
Deeping	Stamford
Edinburgh	Sleaford
Folkingham	Shrewsbury
Grantham	Spalding,
Harborough	Stratford-on Avon,
Holyhead	Thame,
Kettering	Wellingborough,
Lincoln	Weldon,
Leamington	Winslow.
Lichfield	

From the
Spread Eagle, Gracechurch-street.
Swan with Two Necks, Lad-lane.
Cross Keys, Wood street.
Spread Eagle, Regent's-circus.
Golden Cross, Charing-cross.
George and Blue Boar, Holborn.
Griffin's Green Man and Still, and
The Euston Station.

HORNE AND CHAPLIN, Agents.

Parcels for 8½ p.m. Mail Train, viz. Boxes, Trusses and General Merchandise, received at the above Offices until 7 p.m.; Solicitors' and light Parcels until 7½ p.m.

Omnibuses to and from every Train, Fare 6d.

Post Horses for hire may be had on application at the above Offices, to convey Carriages to or from the Railway and any part of London (within 5 miles) including the driver, 10s. 6d. each pair.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.—TENDER FOR LOANS ON DEBENTURES.—The Directors of this Company are ready to receive Tenders of Loans of Money on Debentures to be issued under the provisions in the Act of Parliament, and secured on their undertaking, in sums of not less than £200 for terms of four, six, or ten years, on interest at the rate of five per cent. per annum, payable half yearly.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's-street, Bank, London, or Cirencester. A limited sum only is required.

By order of the Board of Directors,
A. MERRICK, Secretary.

Cirencester, 5th May, 1841.

There is a net revenue of £17,000 per annum, payable half yearly, from the Great Western Railway Company, for the use of the line from Swindon to Cirencester, applicable to the payment of the interest on the debentures issued by this Company.

TO GAS COMPANIES.—A Person aged 30, who has been for several years practically engaged in the Gas Manufacture, has erected and superintended Gas Works, both at home and abroad, and is now Manager of a considerable Gas establishment in an English country town, is desirous of removal to a similar situation in any of the larger towns, as Liverpool, Manchester, Bristol, Bath, &c. Satisfactory testimonials and references. Apply by letter, addressed to P. B., care of Mr. Robertson, *Mechanics' Magazine* Office, 166, Fleet-street.

TO THE CONTRACTORS' FOR PUBLIC WORKS.—Harbour of St. Helier, Isle of Jersey.—TENDERS for the execution of the Works for the Improvement and Enlargement of the Harbour of St. Helier, Isle of Jersey, according to the design of Messrs. Walker and Burges, Civil Engineers, will be received on or before the 10th day of August next, at the Office of Frances Godfray, Esq., Greffier of the Royal Court of that Island, No. 16, Hill Street, St. Helier, where the plans, conditions, and specifications of the proposed works may, after the 24th instant, be seen daily, and other information obtained from 10 in the morning till 5 in the afternoon.

NORTH KENT RAILWAY.—LINE FROM GRAVESEND TO ROCHESTER.—Office, 42, Lombard Street.

CAPITAL, £300,000. In 15,000 SHARES, of £20. each.
DEPOSIT, £2 10s. per Share.

Provisional Committee.

John Humphery, Esq. Ald. M. P.	George Carter, Esq.
John Edward Puddick, Esq.	Miles Brathwaite, Esq.
Aldborough B. Henniker, Esq.	George E. Britten, Esq.

Chief Superintendent.—George Walter, Esq.

Bankers.

Messrs. Spooner, Atwoods, and Co., London.
Dartford: Messrs. Hills, M'Rae and Co.
Gravesend: Messrs. Hills, M'Rae and Co., London and County Bank.
Rochester: Messrs. Day and Co., London and Count Bank.

Engineers.—Colonel Landmann: Joseph Gibbs, Esq
Surveyors.—Messrs. Smith and Barnes.
Solicitors.—Messrs. Sweet, Sutton, Ewens, and Ommanney.

The object of this undertaking is to connect Gravesend with Stroud, Rochester, and Chatham, by means of a railway, taking the whole line of the Thames and Medway Canal, for which purpose the Committee have provisionally agreed for the purchase of the Canal and Works.

The level of the Canal is nearly the same as that of the proposed railway, which will save much expense and time in its completion.

By the arrangements made, the Act of Parliament for carrying the same into effect may be obtained forthwith, and the Canal drained and converted into a railway, and opened to the public in the course of one year from the date of the Royal Assent; leaving the docks at each end for the reception of coals, stone, lime, and merchandise.

There is at present a large transit of passengers between the populous towns of Gravesend, Stroud, Chatham, Maidstone, the city of Rochester, and the adjacent parts, averaging daily about 1,000, who now travel between those places by omnibuses, or other conveyances, at a charge varying from 1s. to 2s. each.

The average number of passengers annually landed at the piers at Gravesend, is about 850,000; and when the additional number of iron steam boats, now preparing to run from Blackwall to Gravesend, are in operation (at low fares), the amount will be greatly increased, and very many of those persons will avail themselves of the railway as a cheap and expeditious mode of transit into Kent; in addition to which there will be a very considerable income derived from the traffic in coals, stone, lime, and merchandise, which will insure an ample return to the Proprietors, besides the immediate income to be derived from the docks and ground-rents, &c. at each end of the line.

The Property of the Thames and Medway Company comprises, besides the Canal,—At Gravesend, entrance lock from the Thames, for the admission of Colliers; a Basin of considerable dimensions, in which Yachts and other Vessels are laid up during the winter; extensive Coal Yards; Timber Yards; Lime-Kiln; Dock Master's Cottage; many Cottages for Workmen; and valuable Ground Rents; besides many acres of unoccupied land; and a Cottage at every Bridge over the Canal.

At Rochester, valuable Building Ground, consisting of upwards of twenty acres of Freehold Land; Lock and large Basin, capable of containing ships of upwards of 300 tons burthen; Steam Engine and Engine House; Dock Master's House, and Cottages; Stabling, Warehouses, &c.

Applications for Shares to be made at the Company's Office, 42, Lombard-street, prepaid.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.

Published at the *Railway Times* Office, 122, Fleet-street, and sold by all booksellers.

Just published, a new Edition of ROBINSON'S

RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Maps, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

Published at the *Railway Times* Office, 122, Fleet-street.

Just published, price 6d.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London, and correct Railway Time Tables.

Also by the same person, price 6d.,
TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, with a Map, &c.

Published at the *Railway Times* Office, 122, Fleet-street, Bell, Fleet-street, and sold by all Booksellers.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet street, Middlesex.—Saturday, July 3rd, 1841.

Office, 30, Broad-street, Bristol, 5th Feb., 1841

NORTH MIDLAND RAILWAY.—THIRD SHARES.—SECOND CALL OF £5 PER SHARE.

Notice is hereby given, That in pursuance of a resolution of the Board of Directors, the Proprietors of Shares in this Company are hereby required to pay a Second Instalment of £5 on each of their respective Shares, on or before Friday, the 30th day of July, to any of the undermentioned Bankers.

Interest at £5 per cent. per annum will be charged on all such sums as remain unpaid after the day above appointed.

London—Messrs. Glyn and Co.; or at the office of the Railway Company, 6, Warnford-court, Throgmorton-street.
Leeds—Messrs. Becket and Co.
Derby—Messrs. Crompton, Newton, and Co.
Liverpool—The Bank of Liverpool.
Manchester—The Union Bank of Manchester.

By order,

G. C. GLYN, Chairman.
H. PATTESON, Secretary.

Offices, 6, Warnford-court, Throgmorton-street, London, July 5, 1841.

CROYDON RAILWAY—SUNDAY TRAINS.—On and after the 4th of July, the SUNDAY TRAINS will start as under:—

From London, in the Morning.
5 minutes past 9 o'clock.
5 minutes past 10 o'clock.

From Croydon in the Morning.
5 minutes past 8 o'clock.
5 minutes past 9 o'clock
5 minutes past 10 o'clock.

In the Afternoon, from both London and Croydon, at 10 minutes before 2, 20 minutes after 2, and 10 minutes before and 20 minutes after every succeeding hour, until 20 minutes past 9 o'clock.

Fares from New Cross to Croydon.

First Class	1s. 0d.
Second Class	0 9
Third Class	0 6

Omnibuses leave the British Booking-office, Cockspur-street, Charing-cross, proceeding over Westminster Bridge to the Elephant and Castle, by the Kent Road, to the New Cross Station daily (including Sundays)—morning at 25 minutes past 8 and 25 minutes past 9, afternoon at 20 minutes before 4 and 20 minutes before 5 o'clock, to meet the trains from London to Croydon; and start from New Cross Station for Charing-cross, in the morning on the arrival of the 5 minutes past 9 and 5 minutes past 10 o'clock trains, and in the afternoon on the arrival of the 20 minutes past 4 and 20 minutes past 5 o'clock trains, from Croydon. Fares—inside 9d., outside 6d.

RIBBLE NAVIGATION.—Notice is hereby gives, That the Half-yearly General Meeting of the Ribble Navigation Company will be held at their Office, Chapel Walks, in Preston, in the county of Lancaster, on Thursday, the 22d day of July instant, at 11 o'clock in the forenoon.

RICH. PILKINGTON, Sec. to the said Company.

Preston, Ribble Navigation Office, 17th June, 1841.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

In one handsome 4to volume, with 17 splendidly-executed Engravings, including a Railway Map of the United Kingdom; Price £1 11s. 6d.;

THE RAILWAYS OF GREAT BRITAIN AND IRELAND, practically described and Illustrated by FRANCIS WHISHAW, Civil Engineer, M. Inst. C.E.

"This is one of the most striking and valuable works that have lately issued from the Press; the author handles his subject in that masterly style which proves his perfect acquaintance with the matters upon which he treats."—*Bath Chronicle.*

"Mr. Whishaw is a discriminating statistician, and has a thorough acquaintance with his subject."—*Athenæum.*

"No railway capitalist who studies his own interest will remain long without it; it is a work of immense labour and research, rich in original and authentic information, and embellished to profusion with splendid Engravings."—*Railway Times.*

"A faithful record of the rise and progress of the greatest modern result of the genius of man."—*Polytechnic Journal.*

"The completest view of railway statistics yet produced."—*Morning Chronicle.*

"A complete history of all the railways in the United Kingdom."—*Liverpool Mercury.*

"Full of sound practical information, derived from the fountain head itself."—*Observer.*

"A more complete and satisfactory account of the Railway System of Great Britain could scarcely be devised."—*Courier.*

"Here the practised engineering skill of the author manifests itself"—*Manchester Courier.*

"It may be looked upon as a rare and precious acquisition to the practically scientific literature of the country."—*Manchester Times.*

"It is not the mere opinion of a theoretic man, but the result of a practical and talented engineer."—*Plymouth Herald.*

"Such a work, the product of a practical man, is clearly entitled to the distinctive term 'national.'"—*Hereford Journal.*

"A text-book on railways for the next half century."—*Maidstone Gazette.*

"We know of no work which ought to be so favourably received in Scotland at present."—*Perth Courier.*

"Developing a depth of principle, and a breadth and variety of details of well-digested facts, which nothing in the history of railways at home or abroad can possibly rival, far less surpass."—*Dumfries Times.*

London: Simpkin, Marshall, and Co.

ROYAL SANTIAGO MINING COMPANY.—Notice is hereby given, That the GENERAL ANNUAL MEETING of the Shareholders will be held at the Office of the Company, on Wednesday, the 14th July next, at 1 o'Clock precisely, when the Directors will make their Report and declare a Dividend.

At this meeting one Director, Mr. Alderman Thompson, and one Auditor, Mr. Alderman Copeland, go out by lot but are re eligible.

A General Meeting will be then fixed for the Election of a Director and Auditor.

38, Broad-street Buildings, June 28, 1841.

TAFF-VALE RAILWAY.—CALL OF £2 10s. PER SHARE ON QUARTER SHARES.—The Directors of the Taff Vale Railway Company acting under the provisions of their Acts of Parliament, hereby give notice, that the Proprietors of Quarter Shares are requested to pay on or before the 26th day of July, 1841, to any of the undermentioned Bankers, the sum of £2 10s. on each of their respective Shares.

London—Messrs. Glyn, Hallifax, Mills, and Co.
Bristol—West of England and South Wales District Bank.
Cardiff—Ditto ditto.
Merthyr—Ditto ditto; Messrs. Wilkins and Co.

By order of the Board of Directors,

JOSEPH BALL, Secretary.

Railway Office, Cardiff, July 2nd, 1841.

GENUINE and IMPORTANT SALE of WAGGON and VAN HORSES, WAGGONS, VANS, and HARNESS.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on TUESDAY, July 13, 1841, commencing at Eleven for Twelve o'Clock precisely, the genuine, entire, and valuable Stock of Mr. Stanbury, in consequence of his retiring from business, comprising about Forty-four known good, seasoned Horses, 20 of which have been working the Portsmouth Vans, 14 the Portsmouth Waggons, and 10 the Brighton Royal Blue Vans.

Also, 2 excellent 9-inch Waggons; one 6-inch Waggon; 16 Sets of Waggon Harness, and 5 Sets of Van Harness; sundry Jacks, Ladders, Tarpaulings, Ropes, Stable Utensils, &c.

On view in their work until one day before the Sale, when they may be seen as above, and catalogues had.

A great variety of New and Second-hand Carriages, of every description, always on private Sale at this Establishment, remarkably cheap.

TO WHARFINGERS, BREWERS, DISTILLERS, CORN AND COAL MERCHANTS, CONTRACTORS, and OTHERS.—SIXTY-TWO very superior CART HORSES, TWO capital HACKS, HARNESS, &c.—To be Sold by AUCTION, by Mr. DIXON, at his Repository, Barbican, on Friday, July 16, 1841, commencing at One o'Clock precisely, about 20 remarkably fine-shaped, fresh, young, powerful CART HORSES, being the last portion of Mr. George Burge's well-known valuable Stock, that have been employed on the Box Tunnel, Great Western Railway, and sold in consequence of that stupendous work being now completed. Also, an excellent fast, fine shaped Bay Chaise Horse, and an elegant Chesnut Mare, that rides and goes well in single harness—a really splendid goer, and remarkably fast; 20 valuable, powerful, well-known excellent Cart Horses, with their Harness, the genuine stock of Messrs. Hillier and May, that have been employed on their old established well-conducted Marlborough Waggons, sold in consequence of the goods being now forwarded *via* Great Western Railway: 22 very useful, young, active Cart Horses, that have been employed on the Repairs of the London and Birmingham Railway works, near Penny Stratford, sold in consequence of having now completed them.

Colours—Bays, Blacks, Browns, Roans, and Greys.

On view and catalogues had two days previous to the Sale.

A great variety of New and Secondhand Carriages, of every description, always on private sale at this Establishment remarkably cheap.

NORTH KENT RAILWAY, FROM GRAVESEND TO ROCHESTER.—Capital, £300,000 in 15,000 Shares of £20 each; deposit, £2 10s. per Share.

Prospectuses may be obtained and applications for Shares made at the Company's Office, 42, Lombard-street, until the 4th of August next.

GEORGE WALTER, Chief Superintendent.

TO ENGINEERS, DISTILLERS, AND OTHERS.—TO BE SOLD, a Strong New Wrought Iron Boiler, 20 feet long, 6 feet diameter, with tube through 3 feet diameter, is made of best Iron and Workmanship.

Apply, if by letter, post paid, to Mr. Francis Waples, 19, Mortimer-street, Cavendish-square.

REPORT OF THE SELECT COMMITTEE OF THE HOUSE OF COMMONS ON 11TH CLAUSE OF THE RAILWAY REGULATION BILL.

MINUTES OF EVIDENCE.

(*Continued from page* 694).

431. Chairman—You see no objection to that recommendation?—Not the least to that.

432. Mr. Greene—Does it not differ on different lines of railway, according to its gradients?—Yes; a line having inclined planes, has occasion for more breaks to provide for the same safety; then here again, it is put down as a general regulation, although a good one with exceptions, "That the last carriage shall be provided with a proper break:" it would be very inconvenient to put them to horses boxes; we may have horses to send to Newton, from Manchester to Liverpool, and the horse-box would go behind the other carriages; there is no danger in that carriage going with the general train, though there is no break upon it. This resolution could not be carried out absolutely; as a general rule it is the case, not always. You cannot put a break on the mail which goes last.

433. Lord G. Somerset—Why not?—You may have a carriage to be let off.

434. Merely as "the mails," you have no objection to putting it on the mail?—It has not been our practice; we have not found the want of it.

435. The other breaks are sufficient?—It is a differently constructed carriage; it would make an alteration and irregularity in regard to the system of breaks.

436. Chairman—You have a truck with a break for private carriages?—No.

437. Mr. H. Baring—Did you ever start a train without a break.—No.

438. Do you put breaks on the trucks?—With private carriages?—No.

439. Chairman—Go on with the next suggestion as to the establishment?—The Report states "Under this head it is impossible to state beforehand the precise nature of the regulations which it might become necessary to make from time to time, as the power vested in the Board of Trade ought to be considered merely as a check upon the possible circumstance of any Railway Company reducing its establishment below that found necessary by experience upon well-regulated lines. It may be sufficient to state, that the general principle of enforcing nothing of an experimental nature ought to be strictly adhered to, and that Companies ought not to be called upon to increase their establishment, unless clearly insufficient for conducting the public traffic in safety, according to the practice of other railways similarly circumstanced." As to the establishments, I have not any observations to make.

440. Mr. Labouchere—You think that if any discretionary powers are to be exercised by the Board of Trade, that in the event of any Railway Company notoriously and manifestly reducing their establishment below that which is necessary for the public safety, it would be desirable that the Board of Trade should interfere to prevent such unwarrantable reduction?—I think under such circumstances there ought to be power to oblige them.

441. In extreme cases?—In extreme cases.

442. Lord Stanley—The station at Liverpool is at the bottom of an inclined plane, is it not?—Yes.

443. Is there any particular precaution taken in the station to guard against accidents beyond the break, in coming down the inclined plane?—Yes, we have a mechanical buffer.

444. What is the nature of it?—At the end of the down line from the tunnel we have a mechanical buffer, about the length of the breadth of this room, and it consists of a series of very long, and strong, and broad springs, with a couple of large buffers at the end; a dozen of them perhaps, six inches broad and five feet long are put in succession, with beams between them; the effect is, if a carriage train comes against it, it gradually goes up, and eases the shock.

445. Instead of the carriage coming against the dead wall, it comes against a succession of buffer springs?—Yes.

446. Do you find it of use?—Yes, but we are very angry when it is used.

447. In this case, if you had not had some contrivance of this kind where the station is at the bottom of an inclined plane, the consequence would be, the train would have come with its own increased velocity against a dead wall at the end of the station, and very serious consequences would have followed?—Yes, I think so.

448. On one or two occasions you have found this useful in lessening the shock?—It has lessened the collision of the carriages.

449. Lord G. Somerset—Did any accident happen where this was of use?—There has been no serious damage, only from the passengers jolting against one another, though the springs were driven up; we have since increased the power of the springs.

450. Lord Sandon—It would have been very useful at the opening of the London and Birmingham Railway, if that had been so?—Yes.

451. Mr. Greene—Would not an increase in the expense of the third class carriage be a very serious inconvenience to the persons who ordinarily travel by that description of coach?—It is very possible; some men would rather run the risk than pay another penny for their passage.

452. A very small rise in the fare turns the scale?—Yes, it does.

453. Sir J. Guest—Does the difference of 2d. determine a man to walk six or eight miles?—I understand that is the effect on some lines.

454. Mr. Easthope—Do you not think, if the safety of the people is perilled that that ought not to be?—Safety is a relative term; we always peril our safety; we would not rather go 10 miles an hour than 20 miles, though one is safer than the other.

455. Lord Sandon—For two years you worked the Liverpool and Manchester line without buffers?—Yes.

456. And without any serious injury or inconvenience?—With great inconvenience; the jolting was exceedingly unpleasant; I do not know whether we had any serious accident.

457. There were unpleasant jars from the carriages coming in contact, of course?—Yes.

458. Would you think it advisable that the goods train, or trucks with horses should have buffers or not?—It would make it very expensive for the goods train to have buffers.

459. With horses?—I think the horse boxes ought to have a buffer at one end.

460. Mr. Greene—Suppose the last carriage in a luggage train had buffers, would there not be an increased degree of security to the carriages that might be running in the train?—There would be some.

461. Sir J. Guest—You have buffers on the coal waggons, have you not?—No.

462. Mr. Easthope—You never mix your luggage train with the passenger train?—It is not our practice.

463. If any railway did so, would you not consider it equally or more important to put them to the luggage trains?—It would be more important the more you bring them into contact with the passenger trains, whether the danger is sufficient to warrant such a regulation, I am not prepared to say.

464. Chairman—Have you any suggestion to make as to the mention of discipline?—I have no particular remark to make on that subject.

465. Will you come to the head of signals?—Yes, we come to that next.

466. Do you think it an advantage that all railways should adopt as nearly as circumstances will permit an uniform system with regard to signals?—I think that very desirable; but here there is a rule, the 3rd, which I consider to be exceedingly objectionable; it says, "It should be an invariable rule to exhibit a red signal when a train stops at a station, and for a period of not less than ten minutes after it has left or passed a station or entered a tunnel, and a green signal for five minutes longer." If that were carried out on our line we should have a red or green signal up for hours together, and it would be disregarded; it would lose its power and effect as a signal, the engineman would never know, when he saw a red light a-head, whether anything was before him for four or five miles, he might go all the way from Manchester to Liverpool, without seeing any danger, and therefore it would become nugatory.

467. Mr. Labouchere—You think it would be desirable that on all railways red should indicate danger?—Yes, I think it would; therefore, the more seldom you hoist that the better.

468. Though a red light indicates danger on most railways, yet, are you not aware that on some railways some other colour has been adopted?—I think that is a pity.

469. Do you not think that variation is likely to be a cause of great danger in the event of one engineman having left a railway where red meant danger, and going to a railway where green meant it; he might get confused, and serious accidents might occur?—I think so; I think the objection you state is strong.

470. Lord G. Somerset—Do you think the regulation of the Board of Trade, that on different railroads it should be established that red means danger and green means caution, or any other colour that might be fixed upon, would not that be attended to by all Railway Companies, without a specific power being given to the Board of Trade to enforce such a regulation?—I think it would; I cannot conceive that any Company could object to it.

471. You think the general convenience of having one code of signals would be admitted by all Railway Companies; and it being a matter of indifference what particular signals were indicated, all would concur in the recommendation coming from the Board of Trade?—Yes.

472. Lord Sandon—Just as the recommendation from the Trinity House, to all sailing vessels to adopt a particular rule of the road, is pretty likely to become the general law of the land in the course of time?—Yes.

473. Lord G. Somerset—Though it may be absurd to keep up the signal for 10 minutes, do you not think some signal should be adopted after the departure of a train?—Yes, it is among the regulations recommended at the conference held at Birmingham, that there should be a signal up for one or two minutes.

474. You object not to the proposition, but to the way in which it is proposed to be carried out?—Yes.

475. Mr. Labouchere—As to the details of a question of this kind, do you not think the month's notice would go a great way to obviate the chance of inexpedient interference, or any improper regulations being enforced by the Board of Trade on any Company, as to time?—It would.

476. It would give time for discussion and explanation?—Yes.

477. Lord G. Somerset—Would not the position of the station be an element in the consideration of how long the signal was to be exhibited?—Clearly.

478. Chairman—Have you any further observation to make on the subject of the 11th clause?—It is stated here that, "if the legislature is afraid to entrust discretionary powers to public and responsible officers who have no conceivable motive for abusing them, this is an argument, not for tying up their hands so as to deprive them of the power of doing good, but for dispensing with supervision altogether." Now, as to that passage, I wish it to be understood distinctly, we never thought for a moment of charging any officer with improper motives in this business, but merely that they had not that experience that was necessary; for we do not think it necessarily follows they should dispense with supervision, but that it should be confined to supervision, collecting facts for examination, if circumstances should make it proper to legislate another session.

479. By supervision you mean they should have no power of enforcing such rules as they think fit?—Yes, moral power. I think they have very great power; no railway would be found to disobey it.

480. You mean no direct or legal power?—No legal power.

481. Lord Sandon—There is, I have understood, such a rule as this, that no train be propelled by an engine in the rear; no doubt that would generally be much the best and safest practice, would it not?—That is one of the strictest rules we have: I do not see it mentioned here.

482. That would be just a rule of such a nature as the Board of Trade might naturally issue to all Companies without the least objection?—It would be one.

483. If it came in the shape of a general rule, should you feel ever entitled to depart from it under any circumstances, or are there not circumstances when even a rule so generally advisable, as being the best rule for public safety, would be exceedingly inconvenient to the public service, and might produce more mischief than advantage?—Clearly you suggest there a very serious difficulty.

484. Mr. Labouchere—Would there be any difficulty in the Board of Trade laying down a general principle that engines should not be applied behind a train, but at the same time leaving some discretion to the Companies under special circumstances to do so?—If you admit this discretion, I cannot object to the rule; otherwise, if we are bound down by an absolutely proscribed rule, we should be obliged to give positive orders.

485. A case has occurred lately in which you were compelled, very much against your general principles, to use an engine for propelling, rather than prevent the mail from arriving in a given time?—Yes, during the late frost; we object to propelling as much as we can help it, but the mails could not be got to London without it; we infringed the law, and got the mail in without great difficulty.

486. Lord Stanley—Not on an inclined plane?—No, not an an inclined plane.

Digitized by Google

487. Lord Sandon—You approve of the general order by the Board of Trade, that propulsion should not be admitted, yet you would have felt at liberty to use it?—The servants we employ would have had strict orders on no account to do so, and if they did so, they would be subject to a heavy penalty.

488. Whenever a general order was issued by a Board of Trade, you would give strict orders to your servants that that direction should be obeyed in every case?—I should apprehend that would be the order of the Directors, to avoid the penalty.

489. Mr. Labouchere—Do you think there would be any practical difficulty in the Board of Trade laying down general rules on which railways should be conducted, leaving a latitude to the Directors, under special circumstances, to depart from the rule, on stating the circumstances to the Board of Trade?—On that understanding the difficulty would in a great measure be removed.

490. Would not that be the rational way of carrying into effect the powers given to the Board of Trade?—I think it would, in reference to the difficulties which have been stated.

John Swift, Esq., called in; and examined.

491. Chairman—With what railways are you connected?—The Grand Junction, and Liverpool and Manchester.

492. What office do you hold?—My partner and I are solicitors of those Companies.

493. Are you acquainted practically with the working of the regulations which those Companies enforce on their servants?—I do not come to speak to that as to which I have only some general knowledge; but I have come to speak to one abstract point, to show the way in which discretionary powers may be used.

494. Perhaps you will proceed to state at once your opinion on that particular point?—What I have to state is with reference to the Bill of last session, bearing indirectly on this; there is a clause about the prosecution of Railway Companies, which, with the permission of the Committee, I will read; it is the 3rd and 4th Vict. c. 97. s. 11: "That whenever it shall appear to the Lords of the said Committee, that any of the provisions of the several Acts of Parliament regulating any of the said Companies, or the provisions of this Act, have not been complied with on the part of any of the said Companies, or any of their officers, and that it would be for the public advantage that the due performance of the same should be enforced, the Lords of the said Committee shall certify the same to Her Majesty's Attorney-General for England or Ireland, or for the Lord Advocate for Scotland, as the case may require; and thereupon the said Attorney-General or Lord Advocate shall, by information or by action, bill, plaint, suit at law or in equity, or other legal proceeding, as the case may require, proceed to recover such penalties and forfeitures, or otherwise to enforce the due performance of the said provisions, by such means as any person aggrieved by such non-compliance, or otherwise authorised to sue for such penalties, might employ under the provisions of the said Act; provided always, that no such certificate as aforesaid shall be given by the Lords of the said Committee until 21 days after they shall have given notice of their intention to give the same, to the Company against, or in relation to whom, they shall intend to give the same." Within the last few days, we have received a letter from the Board of Trade, calling on the Directors for "an answer" to certain charges made against them by Messrs. Pickford and Co., the carriers, which relate to four points; one of which is that we have not acted fairly by them (it comes to that, I believe), in not providing accommodation, which they say we provide for other people, and not dealing with them on equal terms; and another is, that we undertake a description of business which the Act of Parliament does not authorize; these are two of the complaints brought forward, to which we are called upon to answer. To the first the answer is, that the matter is pending in a court of law; the other I need not enter on, as it was before the Committee of last session sitting here: it involves the whole carrying question. Our objection as to the first matter is, that it is under litigation, therefore for many reasons it must be considered inexpedient that we should be called on to answer beforehand; at all events, whilst it is doubtful whether the Board of Trade wish to take the matter out of Messrs. Pickford's hands, at the same time I am ordered by the Directors to give the information, though against my own advice, certainly. The second question involves this, whether or not it is meant by the Act of Parliament, passed "for the public safety," that the Board of Trade should have power to prosecute us, supposing they could show technically by a very nice construction of the Act of Parliament, that a corporation had not power to do anything not specifically stated in the Act, namely, to "deliver" goods and collect them, being admittedly authorised to be carriers of them.

495. Mr. Labouchere—Will you read the letter of the Board of Trade?—(The witness read the following letter)—

"Railway Department, Board of Trade,
Whitehall, 4th March, 1841.

"Sir,—I am directed by the Lords of the Committee of Privy Council for Trade, to enclose a copy of a memorial which has been addressed to them by Mr. Baxendale, complaining of certain alleged infractions of the provisions of their Acts on the part of the Grand Junction Railway towards the firm of Pickford & Co., and praying for the interposition of their Lordships, under the 11th section of 3 & 4 Vict. c. 97. In calling upon the Directors of the Grand Junction Railway for an answer to the charges contained in this memorial, their Lordships conceive that it will save trouble and misapprehension to state shortly the principles by which they will be guided in deciding upon the course to be subsequently adopted, and the points upon which they conceive that explanation is called for from the Company.

"The only point at which the Board of Trade can look is whether the Grand Junction have directly or indirectly infringed the provisions of their Acts. The general question of carrying on railway is one upon which the Board of Trade is not called upon to enter, with reference to the present dispute between the Grand Junction Company and Pickford and Co. off their line, and secure a monopoly of the carrying trade between Lancashire and London by *bona fide* competition, that is to say, by affording better accommodation to the public at a cheaper rate, without any infringement, direct or indirect, of the provisions of the Acts; the Board of Trade will not interfere, because it is alleged that the Company having once obtained a monopoly may make an improper use of it.

"If, on the other hand, Pickford and Co. can establish the fact that the Company are acting in a manner not conformable to the provisions of their Acts, the Board of Trade cannot accept as a sufficient answer, that the effect of such infringement has been to lower the rate of charge to the public.

"The question is thus reduced to a narrow compass. It is admitted that the Grand Junction Company are empowered by their Act to act as carriers upon their own and any other railway; it is also clear that the Legislature, in giving this power to the Company, intended to place all other parties carrying goods over the line on a footing of perfect equality, and that the Company, acting as proprietors, are bound to treat the Company, acting as carriers, as if they were third parties. The question is, whether they have done so. The following are the points on which the Grand Junction Company is alleged, by Messrs. Pickford and Company have infringed the provisions of their Acts—

"1. In undertaking by themselves and their agents a branch of business not authorised by their Acts, which only empower them to carry over their own and other railways, viz., the collection and distribution of goods at the termini of Manchester, Liverpool, Birmingham, and Camden Town.

"2. In refusing to carry goods for Pickford and Co., from termini to termini, unless they pay the same rate as is charged to other parties, including cartage and distribution, and thereby charging unequal rates to different parties.

"3. In refusing to Pickford and Co. the accommodation enjoyed by themselves as carriers, of permitting London and Birmingham trucks, loaded in London, to go on to their line at Birmingham, and proceed to Liverpool or Manchester, without unloading.

"4. In refusing to allow Grand Junction trucks, loaded with Pickford's and Co.'s goods, to go on to London, unless paid by Pickford and Co., for their use, although under their agreement with the London and Birmingham Company they receive a consideration for the hire of all trucks which go upon the line of that Company, and although they give the advantage of the use of their trucks to London to themselves, or their agents, acting as competing carriers.

"The above appear to their Lordships the principle points upon which the memorial of Messrs. Pickford and Co. makes out a *prima facie* case against the Grand Junction Company for explanation.

"Their Lordships reserve their opinion upon these points until the statements of both parties are fully before them, and they direct me to say, that their future proceedings will depend mainly upon whether after a fair consideration of the statements and evidence which may be submitted to them, they arrive at the conclusion that Messrs. Pickford and Co. have substantiated their case upon all or any of the above points.

"In conclusion I am requested to direct that you will lose no time in submitting this letter and its enclosure to the Directors of the Grand Junction Company, and in informing their Lordships what steps the Company are prepared to take.—I am, &c.,

"(Signed) S. LAING.

"J. R. Chorley, Esq.,
"Grand Junction Railway Company."

496. What is your complaint as to the conduct of the Board of Trade?—I do not wish to put it as a matter of "complaint;" we are going to give the information asked; we intend to answer this demand; we instance this case to show that if the Board of Trade whether they have or have not a right to ask for it, chose to insist on it, we might be in the position either to refuse what they ask, or to give what might be prejudicial to ourselves in a matter pending in a court of law.

497. Have you ever stated to the Board of Trade what you have stated to the Committee, namely, that the circumstance of being engaged in a lawsuit on this point, rendered it inexpedient you should give that information at present to the Board of Trade?—We have given no answer at all, except that the letter will be laid before the Directors.

498. If you think that is a fair ground for declining at present to give this information to the Board of Trade, why did you not make the statement which you have now made to the Committee, and wait and see if that statement was not considered by the Board of Trade as a sufficient answer to their letter?—For two reasons: first of all, that the letter of the Board itself states that the matter is in dispute, the Board of Trade was aware of it; and secondly, that we had no object in declining to give the answer, feeling that we have a perfect case.

499. Lord G. Somerset—The Board of Trade was aware that it was before a court of law?—Yes, nevertheless we mean to give the answer; but we wish the Board of Trade and the Committee to understand, that the discretionary powers, if pressed, might be used to our prejudice on other occasions.

500. Mr. Labouchere—Is it not the case, that the Messrs. Pickford, so far from allowing that it is a question before a court of law, state that it is not, but that it has been disposed of, and is not before them?—No; they say that they cannot move till next April, and they have already, some weeks past, taken the necessary preliminary steps, and there is an action actually now pending as to some of the points.

501. Do you conceive, that under an Act of Parliament which obliges the Board of Trade to see that all Acts of Parliament relating to Railways are carried into effect, on complaint being made to them by any party that a particular provision of the Act has not been carried into effect; do you think the Board of Trade could have followed any other course than to refer such complaint to the Company so complained against, and to ask them for an explanation on the subject before taking any further proceedings?—I think it is very probable the Board did what they thought quite right under the circumstances. What we desire to show is, that it is not desirable to clothe the Board with powers which would be prejudicial to the Company, if used.

502. Then your objection is not to any provision in the Bill now before the Parliament, but to a Bill passed last session, commonly called Lord Seymour's Act?—I wish to show, that the power thereby given might be used inconveniently or injuriously, and that the Board of Trade having discretionary powers, might feel themseves compelled to use them, whether in the one Bill or the other, injuriously to Companies.

503. Was the power given to the Board of Trade, of enforcing Acts of Parliament relating to railways, a discretionary or a posive power?—I think it is absolute, whenever they think it desirable for the public advantage; and I mean to say, that the Railway Companies (and certainly I myself have) never understood that clause to authorise the Board of Trade to try the question with us, whether we had a right, for instance, to carry goods; for that is one of the questions now raised, practically speaking.

504. Does the Board of Trade express an opinion in that letter which you have just read, that it ought to oblige the Grand Junction Company to take the course recommended by Messrs. Pickford, without further inquiry?—No; but it puts us in this awkward position; it states that they will interfere, unless we show that we are specifically authorized by our Act of Parliament to "collect and deliver goods," we being admitted to be carriers. I have not considered the question so closely as to be able to say whether we have that power given us expressly by the Act.

505. Does it not come to this: that the Board of

Digitized by Google

Trade states to the Railway Company, that if they can show that they have not infringed an Act of Parliament, the Board of Trade will not think it to be their duty, or indeed will not consider themselves justified, in instituting any proceedings?—No; I think it is assumed in that letter, that unless the Act of Parliament authorizes us, in so many words, to "collect and deliver" goods, though we are admitted to be carriers, the Board would interfere; and I do not know that the Act of Parliament does so authorize us expressly.

506. Does the Board of Trade express a decided opinion, or does it merely state, for the convenience of the Company, what their views are, with their present means of information, and ask the Company to give them additional information, so as to enable them finally to decide how they ought to act in the discharge of their own duty to the public?—I think it puts the case in these words, that unless we show that the Act of Parliament authorizes us to collect and deliver goods, they will interfere.

507. Does not the Board say distinctly that they will not consider themselves pledged to the adoption of any particular line of conduct in this case until they have afforded the Company the fullest opportunity of stating facts, and of giving every information to the Board of Trade?—No; I understand the letter to say that we are to show the Board that we are expressly, by the Act, authorized to be the collectors and deliverers of goods. I am not prepared to say that we can show that, at this moment; though whether we ought to do it or not, was the very question which engaged the attention of this Committee for the last two sessions.

508. Lord Sandon—You conceive that the Board of Trade is assuming a jurisdiction over a question which is not one of those which the Act of Parliament has entrusted to the discretion of that Board, and which they ought not to put into their hands?—Yes.

509. Mr. Labouchere—Do you think it is a clear or doubtful point whether the Act of Parliament did or did not contemplate what Lord Sandon has just mentioned?—I have no hesitation in stating, that there would have been a very different feeling as to Lord Seymour's Bill, if any such point had been thought doubtful at all.

510. Does the Board of Trade express a decided opinion?—The Board say, if we do not show that we are authorized by the Acts to receive and deliver goods, the Board is to use the powers of that clause: now I do not know that we can show that, though we clearly, as I think, have the right nevertheless.

511. Do they say that positively, or call for an explanation?—They state the charge is that we have exceeded our powers, for that we collect and deliver goods. The statement at the end is, "their Lordships direct me to say that their future proceedings will depend mainly upon whether, after a fair consideration of the statements and evidence which may be submitted to them, they arrive at the conclusion that Messrs. Pickford and Co. have substantiated their case upon all or any of the above points;" and one of those points is, that we are not entitled to "collect and deliver" goods.

512. Does not that expressly state that the Board of Trade have not arrived at that question, and that before they arrive at it they are willing to give you all the opportunity they can of fully stating any reasons you may have for supposing that they ought not to arrive at that question?—I admit that to the fullest extent; I cannot suppose that the Board of Trade has made up its mind without hearing both parties.

513. What other course do you think the Board of Trade could have pursued on receiving a complaint of this description from Messrs. Pickford, claiming from them that they, the Board of Trade, should carry into effect the powers given them by the Act of Parliament for the public protection?—It is not for me to say what they could have done. If they had stated that it was not a matter that they could properly entertain under the Act, they would have stated what the Railroad Companies believed to be the case.

514. You think then that they ought to have said to Messrs. Pickford, "We will not entertain your complaint, for there is nothing over which we have jurisdiction"?—Yes; it has nothing to do with the public safety.

515. Did Lord Seymour's Act relate to the public safety alone, or to other matters?—The Companies so understood it, and they took great pains that it should be so confined, and the preamble was altered with that [illegible] it is at present.

[illegible] it not one of the main objects of Lord [illegible] Bill to give the Board of Trade both the [illegible] power of seeing that the Railway Com- [illegible] with those Acts of Parliament under which they were constituted, whether the provisions of those Acts related to the public safety or to other purposes?—That was never my apprehension, nor was it the opinion of any person or any Railway Company at the time, so far as I ever heard.

517. Will you read the 11th clause of Lord Seymour's Act?—(*The Witness does so.*)

518. Do you not think that those words "public advantage," imply a much larger construction than merely in order to secure the personal safety of the public travelling on the railway?—I can only state that the impression of all the Companies is decidedly the other way, and was so at the time.

519. Do you mean to say that your impression was that the Board of Trade was not both authorized and required to see that all the provisions of the Railway Acts were enforced, whether those provisions refer to the question of public safety or any other?—Yes; we had no apprehension that they were to be used to settle private disputes between the Company and the carriers.

520. Supposing the carriers, or any other parties, came to the Board of Trade and complained that the provisions of the Railway Act were not carried into effect by any Company, do you not think that, under Lord Seymour's Act, the Board of Trade were both required and authorised to see that justice was done to the parties, and that the Act under which the railway was formed was fully and fairly carried into effect?—That is the construction the Board of Trade might put on it; I can only state what our understanding was.

521. Lord Sandon—You do not so much complain of the mode in which the jurisdiction is exercised, as of the understanding as to the extent of jurisdiction which the Board of Trade seem to entertain?—Yes; and we propose to use it to show how desirable it is to ascertain what their discretionary powers are, before further discretionary powers are taken.

522. You use it in this manner, as showing how powers entrusted originally with one purpose, may, without any misconduct on the part of the department so entrusted, be applied to purposes very inconvenient to private interests, and which were not within the main purview of the Act at the time it passed?—That is so.

523. Lord Seymour—You have read the report of the evidence on which this Act was founded?—Yes.

524. Was it not frequently stated to the Committee that the provisions of the Act of Parliament under which railways were made had not been complied with?—I have no recollection of that evidence myself.

525. Were there not statements made when the Act was obtained, that as to the gradients, for instance, they had not been properly kept in some cases?—I have not a recollection of that fact.

526. Were there not statements as to the bridges, that though the Act of Parliament enforced a certain width, that those points had not been duly observed?—The only point to which my attention was directed in that evidence was as to the carriers; I am not competent to say that there was not the evidence your Lordship mentions. I do not speak of the evidence, but of the Act of Parliament.

527. Lord Sandon—Do you not consider that the interpretation of the general powers of the Board of Trade, as given by the case which you have brought forward, lets in the jurisdiction of the Board of Trade to decide all cases in which private parties consider themselves as having received a pecuniary injury from the management of the railroad?—Yes, of course, if the clause goes to the one extent, it would go to the other.

528. Mr. Labouchere—That is to say, if parties complain that they sustain injury by the company departing from the law of the Railway Act under which they are constituted?—Yes, the Board then go into that private dispute.

529. Sir John Guest—Suppose a question arises between an individual and the company as to the tolls on goods, do you consider that the Board has power to settle that without a court of law?—They may direct prosecutions, but it is clearly not what we intended, certainly.

530. Lord Sandon—Are you acquainted with the laws which govern canals?—I know a great many of them.

531. Is there a similar provision as to canals, that is, as to the exercise of such a power under those Acts, whether they act beyond or short of the power so entrusted to them, where questions of property only are concerned; do you know that there is any provision for a public body to interfere by way of prosecution, and to support the private interests which have been injured?—I know, on the contrary, that whereas the Liverpool and Manchester Railway might be prosecuted under that clause for collecting and delivering goods, the Mersey Canal Company, which competes with them, could not be prosecuted.

532. Sir John Guest—Or for taking too much toll? Yes, the same inequality.

533. Lord G. Somerset—This clause calls on the Board of Trade to do two things; one is, to ascertain whether or not the company have gone contrary to their statute of incorporation; and the other is, whether or not that which they may be accused of having done, is or not contrary to the public advantage?—Yes.

534. They consider both those things before they put the machinery of the statute into execution?—They ought to consider both.

535. Your complaint is (whether the Grand Junction Company have the law on their side or not) that the Board of Trade ought not to have considered that this was a case in which the public advantage was concerned, and that it was a case in which they ought not to be called on to give an explanation?—We put it that the Board of Trade proposes, that if we cannot show that we were expressly by the Act authorized to collect and deliver goods, we ought to be punished, or prohibited from doing so, although this Committee, after sitting two years, came to a contrary conclusion; I do not know that we can show that the Act expressly authorizes it, and yet we think it is (admittedly almost) for the public advantage.

536. Your objection is, taking the point of law to be against you, which perhaps you ought not to take, or supposing they have the law with them, the discretion is inconvenient, by enabling them to contest it with you?—It is this, at least, that we ought not to have both jurisdictions at the same time; we ought not to be having Pickfords' going against us at the same time as the Board of Trade, on the same points.

537. Your objection is to the point of law, not to the discretion?—I say, that even supposing it to be quite clear that the law is against us, the mode in which the Board say that they feel called on to exercise a discretion under the Act would compel them to prosecute us for receiving and delivering goods (which we must do as carriers), though this Committee, after considering the matter for two years, could not come to such a conclusion.

538. The Committee have nothing to do with the law of the land; but what you object to is, bringing their discretion into operation under these powers?—I object to both; if we contributed to building a church or erecting a school they might interfere, because not expressly authorised by the Act.

539. The point of building a church is not within your statutory constitution, is it?—Suppose we gave 10*l.* a year to an infirmary, we have no right to do that perhaps by the Act, yet it is competent to the Board of Trade to prosecute us for that, because they might say it is an infraction; this case of collecting and delivering goods is put to us as if it was an infraction, and if proved, we are to be prosecuted. Again, the Liverpool and Manchester Railway Company are competitors with the Mersey and Irwell Canal: neither of them is specifically authorised by the Act to collect and deliver goods; and yet the Railway Company may be prosecuted, and the other may not.

540. What is your complaint; do you complain of the discretion of the Board in instituting an inquiry at all?—No, I do not wish to put it as a complaint at all.

541. No, not offensively, but do you complain?—We say that the Board have certain powers; my statement is not in the way of complaint; the Board of Trade is clothed with a power, and they say that, because they have it they must exercise it, and it is to be exercised unless we can show we have not infringed the Act. Now, we do perhaps infringe it every day, by making presents to charities, &c., and the Board may say that it is not for the public advantage to make these presents.

542. Do you consider carrying on the business of the Railroad Company in a particular manner, and giving 10*l.* to a charity, are at all analogous points?—They are both infractions of the Act of Parliament, I take it, if either is?

543. What has the public advantage to do with the 10*l.* given to a charity?—It is not put so in the letter; it is not put as a question of public advantage, but of infraction of the Act only.

544. I am not talking of the letter, but of this Act of Parliament; answer the question so?—It is quite clear, then, that if the Board of Trade thought it was for the public advantage they might prosecute.

545. Sir J. Guest—Do you not object to giving them a larger discretion?—I merely put the case in that way.

Digitized by Google

546. Mr. Easthope—You adduce it as an illustration of the danger of the powers not being specified?—To show the danger of their having discretionary powers, which they feel they must, if called on, exercise, and it may be prejudicially.

547. Mr. H. Baring—Your objection to the letter is, that the effect of it would be, that the prosecutor is to demand evidence from the defendant which might prove the ground for the prosecution!—That would be another objection, and a grave one.

548. Mr. Labouchere—Have those or any other objections been stated in reply to the letter of the Board of Trade on the part of the Company?—Certainly not. I hope I shall satisfy the Board that they ought not to interfere.

549. Has the Board of Trade done more than, having heard the complaint of the party against the railway, given to the Railway Company the means of affording the most ample explanation on the subject, before pledging itself to taking any steps upon it?—Yes, the Board of Trade have put a construction on the Act thus, that if we cannot show, that in collecting and delivering goods, we have not exceeded the powers the Act expressly gives us, they would prosecute us, as I understand.

550. Have they pledged themselves to do it?—They have stated substantially, that unless Pickford and Co. substantiate all or any of their complaints, the Board will not interfere.

551. Have the Board of Trade merely said their course would be regulated by the statements of the Railway Company on those points, or has the Board distinctly pledged itself to take any course until the arguments of the Railway Company have been considered by the Board?—They go further, and say (these are their words): "They direct me to say, that their future proceedings will depend on, whether, after a fair consideration of the statements and evidence which may be submitted to them, they arrive at the conclusion, that Messrs. Pickford and Co. have substantiated their case upon all or any of the above points;" one of the points is, that we have no right to collect or deliver goods; if it appears that the Acts did not authorize that specific thing, then the plain inference is, the Board will do something else.

552. Chairman—You stated you had read the Reports of the Select Committee, from which the Bill of last session originated?—I stated I had read the evidence, and I have no doubt I have read the Reports.

553. One of the resolutions of the Committee was, "That it is the opinion of this Committee, that it is the especial duty of this department to see that the several provisions contained in all Acts of Parliament having reference to railways are duly observed, so far as the public interest is concerned;" now what went further than the question of safety, did it not?—That was not our impression.

554. "And this department," it goes on to say, shall be authorised to institute legal proceedings at the public expense, in cases where such provisions have not been complied with!"—Referring to the public entirely; but this is a private dispute with a carrier about what we are to do with him.

555. Mr. Labouchere—Your complaint is this, or, rather, you doubt of the propriety of the conduct pursued by the Board of Trade on this occasion; reasoning on the assumption, I believe, that Lord Seymour's Bill was intended solely for the purpose of protecting the public safety, and for no other purpose?—I do not say that at all, I say the Board of Trade are entrusted with powers which they claim to use in cases of private individuals who may conceive that they are aggrieved.

556. Lord G. Somerset—You do not object to the Board of Trade taking up itself the particular question of the carriers, but as to the way in which they do it; suppose there were no action pending, should you have objected?—We should still have thought it hard to try this, having the Government purse against us, and no costs to receive if they lost, we should have objected on that ground.

557. Do you happen to know if the power of the Government prosecution has been exercised in any one instance, since Lord Seymour's Act passed, by the Board of Trade?—I have not heard of one.

558. Mr. Labouchere—Has it not been the case, that in every instance the Board of Trade has taken the course it has done in this case, of pointing out to Railway Companies any infringement of the Acts of which they thought they had been guilty; and has not the result been in all the cases, that the Railway Companies have complied with the requisition of the Board, and no public prosecution has been found necessary?—I never heard of a prosecution, I do not know that there ever was one, we only desire to put it, that the Board of Trade, having discretionary powers, might use them in a mode which might be extremely prejudicial to the Company; without such an use of their powers being expected by anybody.

559. You state this on the authority of an unfinished correspondence, when you are not able to state what will be the ultimate decision of the Board on the question?—That is so; but the correspondence lays down a construction of the Act of Parliament, which, if followed out, would be extremely injurious.

Isambard Kingdom Brunel, Esq., called in, and examined.

560. Chairman—What situation do you hold in connexion with railways?—I am engineer to the Great Western and some other railways in the west of England.

561. Have you had your attention called to the 11th clause of the present Bill?—I have.

562. Have you considered the possibility of substituting, instead of the discretionary power there taken by the Board of Trade, an enumeration in detail, of those points to which the powers of the Board of Trade should be limited?—I think it would be quite possible to enumerate the points to which it could be limited; but I should prefer saying at once, that those points would be so narrowed that it would amount to not giving any power, if they were confined to those to which I think they ought to be confined.

563. Will you state to what points you think that power should be confined?—I do not conceive, myself, that it is to the advantage of the public, in the management of the railway system, that any power should be given to the Board of Trade, or any central body, to issue regulations for the management of the concern.

564. Mr. Labouchere—You are against any control whatever?—Except such control as would be the necessary consequence of supervision and watching the proceedings of the Railway Companies, and suggesting modifications, when opportunities occurred of doing so.

565. You do not think it would be advantageous to give to any central authority the power of enforcing any regulations upon Railway Companies?—I am certain that it would not, generally speaking, be advantageous; a solitary case might arise now and then, where a regulation might be issued that would be advantageous, but I believe the Companies themselves would, long before any central Board could be justified in issuing a regulation, have generally adopted it in their practice.

566. You are probably acquainted with the circumstances of the accidents which occurred some months ago on several of the lines of railway?—I am.

567. If a power had existed in some central Board to make proper regulations, and if those regulations had been in force at that time, do you think any of those accidents would have been prevented?—I do not think they would, but I should explain myself a little in stating that. I do not think that the power to issue proper regulations would at all secure—I hope I shall not be understood as feeling the slightest want of respect to the officers appointed—but I do not think the power of issuing regulations would secure to the parties issuing them the ability to determine what are proper regulations; and I think that there must always be on the part of the officers of the different Companies far more of that knowledge, which would alone enable them to issue regulations; and I am principally led to think so from seeing that there is an entirely erroneous impression existing, both in the minds of the Committee themselves, and of the officers who have up to the present time been engaged in inspecting the railways. I think they are under a completely erroneous impression both of the circumstances which really lead to those accidents, and of the best mode of remedying them, and that they are without, and must always be without, any sufficient knowledge of the practical working of the system with which they propose to interfere; and I think that the accidents and the suggestions arising from those accidents themselves, prove what I assert. They certainly prove it to the minds of those who are familiar with the practical working of railways. I dare say it will be difficult to prove that satisfactorily to the Committee, from the very circumstance I have just mentioned, that they are not acquainted with the practical detail of the working; but still, if the Committee will allow me, I will attempt it. I think that the mere circumstance of which the officers who have been appointed have themselves given very strong evidence, namely, that notwithstanding the tremendous speed at which railway travelling is carried on, notwithstanding the appearance of almost trusting to Providence as we run along the lines, and the apparently great risks that are run, that notwithstanding all this, it is a notorious fact, and one which is admitted by the officers who have inspected railways, that it is a safer mode of travelling than any other adopted up to the present time; and that, notwithstanding all those apparent dangers really there is very little danger comparatively: I think that ought to have led them to consider, that, in all probability, the dangers that still exist do not arise from any glaring prominent defects in the system, which of course those who have brought it to this state of perfection must long since have seen, and that it would hardly be left to those officers to whom the thing must be new, to discover suddenly that we have passed over some of the most prominent and easily removed causes of danger; and I think that, as they become more intimate with the practical working of railways, they will see that the real cause of danger, small as it now is, consists of a multitude of small operating causes, which occasionally and accidentally are all brought to bear, and all operate to produce risk. I will suppose, for instance, that a collision takes place on a railway, in consequence of a train stopping, and another train running into it. Now, in nine cases out of ten, that will arise from a complication of different circumstances, such as these; that perhaps a pair of wheels upon a train is slightly out of gauge, being too narrow, that in passing some guard rail they get strained, and that when they come to a part of the line which is rather wide in gauge, they get off, and the train is delayed. A policeman immediately runs up, and stands right in the way of the tail-lamp of the train, and the next train runs into it. Now the majority of persons would say, that if the policeman had done his duty, and showed a red light, and if the engine-man had seen the red light, there would have been no accident. That is very true; but it is impossible to make the men perfect; the men will always remain the same as they are now; and no legislation will make a man have more presence of mind, or, I believe, make him more cautious: and, besides that, the next time such an accident occurs, the circumstances will be so different, that the instructions given to the men, in consequence of the former accident, will not apply. But the real source of the danger, and the only one which there is any hope of removing, is in a complication of imperfections in a great number of the mechanical parts of the system. We have gradually discovered, that the wheels had better be a little wider in gauge than we made them at first; that they had better not be quite so narrow in the external gauge; that they should be about half an inch wider on the tire; that the guard-rails had better not touch them; that increased care should be given to the gauge of the rail; and that the tail-lamps must be put in a position in which they shall be less likely to be obscured. A number of small things of that sort are gradually discovered, generally speaking, without any serious accident; they are gradually discovered and removed; and thus the original chances of risk are diminished, till, in fact, they do not occur. All those who are familiar with the working of a railway, or with the manufacture of any article, or with the progress of any complicated system of that sort, well know that it is in vain to attempt to make workmen more perfect; it is in vain to attempt to trust to any regulations in such a manner as to expect, that when a new accident occurs, they shall all apply; and that it is still more vain to expect, that they will be all obeyed. It is by gradual and progressive improvements, in all the little details, that the risk of accident is diminished; and it is by that alone that the risk of danger will be removed. This is familiar to us, and to the persons working the railways; but I am sure it cannot have struck the gentlemen who have been sent to inspect the railways; because, first of all, no looking on occasionally will make them acquainted with that which we only learn by seeing it, and feeling it, and feeling the inconvenience of it every day. They also cannot learn it, because we keep progressing so fast, that the knowledge of one day will not apply to the next; and although their own suggestions which they have made after those accidents, and although the reports which have been made by several of them show very great investigation, and a very acute perception of the circumstances, which they happened to be able to lay hold of on the ground after the accidents had occurred, still those suggestions show, that they are aiming simply at that which we know cannot be attained, namely, at perfection in the regulations and in the character of the men that we have to employ, and that it is by attention to the multitude of little details alone, that approximation to perfection can be attained; that that is their view, is evident also, from the suggestions which they have all thrown out after seeing those accidents. I have come to that conclusion from reading the reports of different officers which have been made and printed. I may refer to the re-

Digitized by Google

port of Colonel Thompson. I mention names in order to facilitate reference. I have not the honour of knowing Colonel Thompson; I have no doubt that he is as adequate as a person could be to investigate a thing of which he could not understand the details. Colonel Thompson recommends, that upon new lines we should be limited to a speed of twenty miles an hour. Now it may be difficult to convince the Committee; but, with every respect for Colonel Thompson, the suggestion to us appears absurd.

568. Mr. Labouchere—Was Colonel Thompson's suggestion adopted by the Board of Trade?—No; but I am referring to suggestions which have been made by all those gentlemen, so show, that it is impossible for persons that are sent, or that may be sent to investigate railways, to be sufficiently familiar with all the details, which can only be gradually learned, for them to make useful suggestions.

569. You are aware that Colonel Thompson is not a permanent officer of the Board of Trade?—Yes; but he also suggested a half-hour's interval, which is quite preposterous; and he suggested also stakes to sleepers. By that dash of the pen an expense of 60,000*l.* or 100,000*l.* would be saddled upon the railways, in fact, upon the country, for that which would not answer its purpose.

570. Is it not the fact that none of those suggestions were adopted by the Board of Trade?—I do not know that they may not be adopted; there has been no power to adopt them yet.

571. You are aware that those suggestions of Colonel Thompson are not included in those suggestions which have been made to the Board of Trade by the officers of the railway department, as being cases illustrative of the manner in which, in their opinion, any discretionary power conferred upon the Board of Trade should be exercised?—Then I will pass over a great number of observations which I had to make, and go at once to those which are recommended by Sir Frederic Smith. I should observe, that with respect to the positive recommendations made to be adopted by the Board of Trade, it is fair to assume, that other points which Sir Frederic Smith recommends in other reports, although they may not be included in those which he does recommend in his general report, might probably, in a subsequent general report, be included, because, I may assume that he would be more liberal in his recommendations when he had the power to enforce them, than now, when all the suggestions thrown out are open to attack. Sir Frederic Smith, in one of his reports, states that no work should be carried on after the opening of the railway, with some small exceptions. Now, no doubt that, like a great many other things, is very desirable, but it is unattainable. During the whole of the first twelvemonths after a railway being opened, in many districts, in clay districts especially, the embankments will sink so much, that the quantity of work carried on, will be as great as if we were forming an embankment, and it must be done. True, that may come under the head of maintenance of way; but it is in fact doing that which, if you chose to compel us to keep the line untouched for six months (and there is no reason why we should stop at six months particularly), would be unnecessary; therefore everything is to be sacrificed for what is called public safety. We must be made to keep those embankments for six or twelve months, according to the nature of the soil before we open. Then again with respect to slopes, after a certain time it will happen in railways frequently, as engineers are by no means infallible, that the slopes are found to require enlarging; that must be done after the railway opens. There may be cases to a trifling extent occasionally, where a slope has not been formed before the opening; but the quantity of work done for that sort of purpose, bears but a small proportion to that which must be done after the railway is opened, and which no law or regulation can prevent our doing, unless you shut up railways entirely. Sir Frederic Smith also refers to the accidents on the London and Birmingham Railway, and one of his conclusions amongst others is, that the load of a luggage train should be limited. Of course it is very desirable that you should never overload either a horse or an engine, or anything else; but if you attempt to fix a maximum, the maximum must either be so far beyond what they usually carry as to be perfectly useless, because they hardly ever exceed it, or it will be so low as to be a positive hindrance and cause of danger. Sir Frederic Smith mentions 80 tons gross load on the Birmingham. Now I, of course, with respect to facts, confine myself to the Great Western; but comparing the Birmingham with the Great Western, the Birmingham gradients being 16 feet to the mile, and the Great Western four feet per mile, the difference in the relative loads which the same engine would take upon the two would certainly not be more than as two to three. I dare say one of the Birmingham engineers would say that we could not exceed it so much as that; but take 80 tons on the Birmingham, and convert it into 120 for the Great Western; why, if we were under that restriction we could not carry on our trade. I looked yesterday at the returns of our luggage-trains, and I see that on the 2nd of March, 1841, one of our passenger-engines only, not a goods engine, brought up from Wootton Basset to Paddington a gross load of 256 tons, exclusive of engine and tender. The engine kept its time very well. If we had been obliged to cut that train into two and a half, as would have been the case if our limit were put at 120, we must have had three trains, and of course the chances of accidents, and the difficulty arising from complication of arrangement on the line, would be immensely increased; whereas we brought up this single train of goods without being delayed, or any inconvenience upon the line. On the 12th of March the Elephant engine, a goods engine, took down 216 tons gross. That would have been two trains, and a very large number of them much exceed this proposed maximum; of course, if the rule is made, it must be general; you will never entrust anybody with the power to permit the Great Western to carry 100 tons, and say to the Birmingham, you shall only carry 80. The Birmingham would of course consider that they were unjustly treated. The next recommendation is, that trains should always be made up with single engines; that there should be a regulation that should prevent such a train going out as required two engines.

572. You are speaking of a recommendation made by Sir Frederic Smith, in one of his reports to the Board of Trade?—In one of his reports to the Board of Trade. It is in Sir Frederic Smith's reports upon the accident on the London and Birmingham Railway, at page 35 of the reports and returns relative to railways. I am not supposing that Sir Frederic Smith has laid these down as laws which he suggests should be passed, but I am mentioning them as suggestions which occurred to him, who has evidently taken by far the truest view of all the circumstances of a railway, and who has had a great deal of opportunity, and taken a great deal of trouble, to examine into them; but who nevertheless has, in my opinion, formed erroneous views altogether of the best mode of preventing accidents, and of the rules which could at all be safely carried out. He is aware, of course, that it would not be possible upon all occasions to dispense with assistant engines; but nevertheless, he says, it should be considered as a general rule not to extend the trains beyond the power of a single engine. Now I assert that general rule, if followed by the Companies, would lead to danger instead of avoiding it. A certain quantity of goods has to be sent out from the station in the 24 hours. Suppose a certain quantity has to go out within two or three hours at the latter end of the day. It may, no doubt, be carried to excess, but the general rule would be to send them all together, to put the engines and the trains all together. All chances of collision of course are got rid of between those trains, and the average power of the whole is better obtained; although there again the necessity of understanding exactly the practical operation of the thing is evident, because it is not the case that two engines, when coupled together and drawing a load, will do twice as much as one engine. It is rather a curious circumstance, but I mean to say that the average power of the engines is best obtained by putting them together, if we take into consideration the chances of one engine running a little dry, or of any circumstance occurring to lessen the power of one engine, we do then get the average power of two or three better by sending them together than by sending them separately; and I have no hesitation in saying, that the general rule ought rather to be (though I think it would be bad to have any rule either way) to send them altogether than to send them in trains, each consisting of a single engine. It is also thrown out as a recommendation, that the maximum speed of luggage trains should be fixed, and on no account departed from. With respect to that, all the Railway Companies do fix, for the guidance of their men, a maximum speed, but it must be varied according to a number of circumstances. It will be very different on different railways, and it would be impossible for any third party, unless he took our assertions, and acted solely upon them, to say exactly at what rate each train ought to go, or what each railway should fix as the maximum speed for their goods trains.

573. When you say that you fix a maximum speed, do you mean by that the Great Western or all the railways?—I believe all the railways do so; but I prefer confining myself to the Great Western.

574. Upon the Great Western your regulations are very strict?—I am not aware that they are more strict than those of the other well-managed Companies.

575. Is there not a very great difference on different railways with regard to the strictness of their regulations?—I flatter myself, of course, that the regulations that we make are the best; but the result upon the other railways, which is what we ought to go by, appears to prove that on many other lines there is a great regularity.

576. For instance, with regard to the use of time-tables, have you not upon the Great Western Railway very strict regulations with respect to time-tables?—Not more so than the London and Birmingham, and many others.

577. Are you able to state that there are any other railways that have regulations equally strict with regard to time tables, or that even use time tables at all?—I think all the railways use time tables.

578. Sir John Guest—Do not all passenger railways use them?—All passenger-railways use them; I am referring entirely to passenger railways.

579. Mr. Labouchere—Do you not adopt precautions on the Great Western to enforce the use of time-tables, by obliging the station clerks and the guards to note the times of arrival and departure?—Not the station clerks; the conductors.

580. Do you happen to know whether the same thing is done upon any other railway?—I know that on the London and Birmingham, and the Grand Junction, if they arrive too soon, they wait; and therefore I suppose they use and enforce time tables.

581. Why do you use that precaution on the Great Western Railway?—For the purpose of ensuring punctuality, which is a most important ingredient in safety.

582. In your time tables, have you any interval less than 15 minutes?—I should think not; but I am not sure.

583. Supposing it to be the case, that on some railways a system of the kind which you have just described is not adopted, do not you think that the non-existence of such a system materially contributes to want of safety?—I think all the circumstances should be exactly put before me before I can give a safe answer to the question. I am not aware, at the present moment, of any passenger-railway where they do not endeavour, in that which they consider a good way, to ensure punctuality at the different stations. The times of arrival and departure are obliged to be fixed, for their own interest in getting passengers. Of course, some railways will adopt more rigid and more perfect regulations than others; but it is by that means that improvements will take place, which will be stopped at once if any particular system of regulation is ordered to be adopted by all.

584. Do not you oblige any train to stop upon arriving at a station, unless a signal of safety is shown?—Yes.

585. Is not this signal taken down when the train comes into the station?—The signal "wrong" is put up when the train is in the station.

586. When is the signal of "safety" shown again?—Not till the person has ascertained that the station is clear, and that another train may come in.

587. Why do you adopt that system?—To prevent collision.

588. Do not you think that some such system as this ought to be generally adopted on all railways?—I think an approach to it ought; but it should be modified in each case, according to the circumstances of the railway. I would observe, that the particular instance referred to shows the impossibility of laying down general regulations.

589. Sir R. Peel—Will you explain what that regulation is; is it to prevent two trains on different rails from ever crossing at a station; or is it only to prevent the approach of a second train upon the same rail when a previous train is at the station?—It is a little of both, varying with the different stations, which I will explain, and which will show the impossibility of applying the rule generally even through one railway, still less to several railways. On the Great Western Railway we have two or three different classes of stations; on a small station there is no derangement at all of the rails; the train simply stops, and there is a platform alongside, on which the passengers get out; upon that station, of course, there is no necessity of stopping a train that is coming in an opposite direction, and therefore we have only signals relating to the line upon which the train itself runs. We do require that our trains, on arriving at those stations, should go gently; but that is only a little additional precaution. We have another class of stations, where, to avoid the necessity of passengers crossing both lines of railway, they depart from the general course, and draw up at sidings, out of the main line of railway; the conse-

Digitized by Google

quence is, of course, that they each have to cross the wrong line. That is a system of station, as to which nothing but experience could determine whether it was more safe or more dangerous than an ordinary station; but it is a very convenient arrangement, it gives great accommodation to passengers; we have adopted it at two or three points upon our line; at those stations we have to adopt very stringent signals to prevent collision in crossing the line, and there we give the signal of "all wrong" up; and till it is turned "right," any train approaching the station would be bound to stop. The policeman then ascertains which way the train is coming. If there are two trains, he selects between the two, and he lets in one of them first, and during the whole of that time keeps up the signal "wrong" for the other; and after that train is in, he lets in the other; and so in going out, they are neither of them allowed to go out, unless the signal of "all wrong" is exchanged to "all right." That is a system of signaling which is consequent upon that arrangement of station, and which would be quite unnecessary and mischievous, except for that particular arrangement of station; because, to increase the number of signals at all beyond what is absolutely necessary is very mischievous, as it complicates the systems; therefore, that is an arrangement of signals which exists only at those particular stations. We do not do the same at the smaller stations; and it would be not only useless, but injurious, to enforce the same regulation upon other railways that have not that particular arrangement of stations.

590. The result is, that you have different sets of regulations for different stations upon your own line, and that those depend upon the peculiarity of each station?—Yes.

591. And it requires a local knowledge of those peculiarities to determine whether the regulation is a good one or not for the station?—Decidedly.

592. It is possible that if certain regulations which may be good for one station were prescribed for another, confusion might arise, and what was intended to be a precaution against danger might become a cause of danger?—Decidedly. I was going to observe, that with the best assistance of professional men, and others whose whole time and peculiar capabilities are applied to the system, we find it difficult enough to make our regulations sufficiently general to apply even upon our own line, and that the great difficulty in drawing up any code of regulations always is, to make a good regulation which is sufficiently applicable in all cases even on our own line of railway.

(To be continued.)

APPENDIX TO THE FOURTH REPORT OF THE COMMITTEE APPOINTED BY THE LORDS OF THE TREASURY, RESPECTING RAILWAY COMMUNICATION BETWEEN LONDON, EDINBURGH, AND GLASGOW.

Printed by order of the House of Commons.

[This Appendix contains all the plans, maps, and other documents submitted by different parties to the Commissioners, and referred to by them in this Report. It is a thick and rather costly volume, and we must content ourselves with giving the following classified Abstract of its contents.]

STAFFORD AND RUGBY RAILWAY.

The first document on this subject is a Report by Mr. Bidder in favour of the Stafford and Rugby (or Manchester and Birmingham Extension) Railway. Its length from Stafford to Rugby would have been 48 miles 77 chains, to which is to be added the Alrewas branch of 7 miles 56 chains. The estimated cost was 980,000*l.*, or 17,500*l.* per mile, exclusive of land. Mr. Bidder advocates the execution of this line on the ground that it will shorten the distance between London and Manchester or Liverpool by nine miles and a half, and time of transit by 15 minutes; that this diminished distance is found, by the experience of the Birmingham and Derby compared with that of the Midland Counties', to be equal to 3*s.* per passenger; that the districts through which it passes had formerly the advantage of very good means of communication, of which the construction of the neighbouring railways has deprived them, and which the proposed railway would restore. This Report is followed by detailed estimates of the cost, and is illustrated by a section of the line in two plates.

Mr. Creed, the Secretary of the London and Birmingham Railway, opposes this project in a very able letter. He admits the saving of length, but denies or doubts that of time—since the time necessarily lost at the junctions will counterbalance that gained by the diminished length of the new road. He urges, that in laying down the London and Birmingham Railway great care was taken to select that which should not only be the best line between the termini, but also accommodate the greatest number of intermediate towns, which he affirms has certainly been effected. He says, that experience shows that there is danger at junctions, which not only requires great care, and therefore delay, for its avoidance, but which ought not to be incurred except for an object of adequate value, which object does not exist in the present case. The London and Birmingham line, he maintains, is sufficient for all the traffic which can be expected to require it, and that to add another line would be to increase the expenses and the complexity of the Direction, and to diminish the number of the trains and the general accommodation to the public. He finally points out the danger and injustice to existing railway interests, which would follow from authorising projects recommended chiefly by their shortening of present distances; for since, from the state of the properties to be traversed or the traffic to be secured, it has rarely happened that at the laying down of the existing lines the very shortest possible line could be taken, it follows that there will always remain a possibility that a shorter line may at some future day be attainable; which line, if such views be encouraged, other parties may execute after the projectors of the original one have proved, at great risk and cost, that a railway between those termini may be made to pay.

PROPOSED NEWCASTLE AND EDINBURGH, AND LONDON AND LEICESTER RAILWAYS.

A letter from Mr. Remington after referring to a section of a line of railway from Newcastle to Edinburgh, which he had previously laid before the Commissioners, describes the route and the advantages he supposes it to possess. It commences at the Town Moor of Newcastle, and proceeds by Morpeth, Long Horsley, Long Framlington, Edlingham, Powburn to Wooler; thence along the valley of the Beaumont waters, by Mindrum, Prouston, (east of Kelso), Smailholm, Earlston, Lauder, through Soutra Hill, by Blackshields, Path-head, and Dalkeith, to Edinburgh. Its advantages are presumed to be that it is the shortest line between Edinburgh and Newcastle, that it is available for the greatest population, that it is most available for agriculture, and that it best opens up the resources of the country. Improvements in the line were afterwards found practicable. In the same letter Mr. Remington proposes a line from London to Bedford, as part of a more extensive one from London to Leicester. By this, together with the lines in existence or in progress, the road to Carlisle by Manchester, would be shorter by 25 miles than that by Birmingham; and the road to York would be 10 miles shorter than by the Birmingham line, and 38 miles shorter than by the Northern and Eastern. A section of the proposed line is given in two plates.

Mr. Fulton, in a letter addressed to Messrs. George and John Rennie, suggests a line of railway from the Great North of England Railway to Carlisle. He claims for it the merit of forming a portion of the most direct line from London and other principal towns on the eastern coast, to Edinburgh and Glasgow. He proposes, that beginning at a junction with the Great North of England at North Allerton, it should pass a few miles to the east of Richmond to Barnard Castle, then up the valley of the Tees, through the rich lead and tin districts to the foot of Cross Fell. From the summit level at this point it would proceed along the Great Dale into the valley of Crowdendle Beck, thence along the valley of Eden River to a junction with the Carlisle and Newcastle Railway, near Wetherel, about four miles from Carlisle. The length of new railway would be about 73 miles. The distance of Carlisle from London by this route would be 320 miles; the line proposed by Mr. Remington from London to Leicester, would shorten this distance by ten miles. A tunnel at Cross Fell of a mile and a half long would be necessary, suppose no inclination were allowed of above 20 feet in a mile. Each terminus being 156 feet above high-water mark, and the summit level near the middle of the line, it is concluded that the extreme elevation would be easily attained.

GREAT NORTH OF ENGLAND RAILWAY.

A Memorandum by Mr. Storey, the Engineer of the Great North of England Railway, points out an improved mode of crossing the Tyne, and shows how by that mode the railway of which he is Engineer, may be made to unite continuously with either the Newcastle and Carlisle or the proposed North British line. He notes also that the line has been shortened, and an improved gradient obtained, by the purchase of the property of Mr. Cookson; and points out a considerable saving in cost which may be effected in the Wear and Shincliffe valleys.

In another document (21st Sept., 1840) Mr. S. puts forth the claims of the Great North of England Railway to be adopted as the main line to Scotland. He says, that in laying it out especial attention was given to fitting it for this purpose, and the expense has, for the same reason, been greater than would otherwise have been incurred. He says that the portion of it which stretches from York to Darlington is nearly ready for use, and that 48,000*l.* has been paid for land, and the whole line set out on the remainder. He further says, that considerable improvements have been made on the line, as well as in its junction with other lines at Newcastle. He then objects to the proposed Northern Union Railway, projected by Messrs. Wood and Harrison, as a substitute for this from Darlington to Newcastle—that it is very circuitous, has objectionable curves, and three times crosses, on a level, inclined planes along which coals are worked by stationary engines. Then follows a list of the gradients of the improved line, from which it appears that the steepest is 16.4 feet per mile for 13¼ miles.

NORTH JUNCTION RAILWAY.

This is a railway proposed by Mr. W. A. Brooks, for the purpose of uniting by short lines three existing railways, so as to supply a continuous route from Darlington to Newcastle. He says that by this step, not only will the intercommunication of Newcastle, North and South Shields, Durham, and Newcastle, be greatly improved, but Carlisle and the north-west of England—which are already connected with Newcastle by the Carlisle and Newcastle Railway—will have uninterrupted railway transit by Newcastle to London, and the south of England. It is true this is also the object of that portion of the Great North of England Railway which lies north of Darlington, but he conceives that the great natural difficulties, and consequent expense, of this part of their line, would render the Directors very willing to be released from the parliamentary obligation of constructing it. The line (or rather lines) by which he proposes to supply its place, takes, like the line it supplants, the course of the Stockton and Darlington Railway for the first mile; then, however, instead of curving to the north-west, and back again, it maintains a course nearly north, until it falls into the Clarence Railway near Morden. Mr. B. then uses the last-mentioned line to its northern terminus, passing with its assistance the gorge of the Thrislington valley, the unavoidable pass of the district; from this terminus it proceeds by Sherburne, until it unites with the Durham Junction Railway, along which the traffic will pass to its intersection with the Stanhope and Tyne Railway, by which the portion for Shields will reach its destination, that for Newcastle and the north generally requiring the third section of the projected lines (originally designed by Messrs. Wood and Harrison) which carries it on to the Brandling Junction Railway, through which it arrives at Newcastle. The lengths and cost of the three several new parts of the proposed line are as follows: from Darlington to Mor-

Digitized by Google

den 7¼ miles; and 101,452*l.*; from the northern terminus of the Clarence to the Durham Junction Railway, 8 miles, and 76,498*l.*; from the Stanhope and Tyne to the Brandling Junction Railway, 5 miles, and under 45,000*l.* Total length 20¾ miles,—total cost 222,950*l.* It is affirmed, that the gradients are easy, and that no works of difficulty or magnitude are required.

NORTHERN UNION RAILWAY.

The general object of this railway is similar to that of the last; it is reported on by Messrs. Harrison and Wood. It starts from Thrislington and connects the Clarence and Great North of England Railways with South Shields, by joining to the Durham Junction Railway at its southern terminus. To reach Newcastle it requires the line which has been already described as the third section of the North Junction Railway. It is said on behalf of this plan that it provides communication to the important ports of Sunderland and Shields, and that it increases the distance from Thrislington to Newcastle but three miles and a half, and that the cost of carrying it into effect will be several hundreds of thousands of pounds less than will be required to complete the Great North of England to Newcastle. It is urged that even if the more direct line be eventually executed it would be wise to be content for the present with this much cheaper substitute, especially as it will remain a very important branch after the completion of the original design.

Then follows a table of costs and gradients from which it appears that the sum required will be 295,562*l.*, and the steepest gradient (excepting one of but 154 yards in length) is 20 feet per mile for nearly 5 miles. The total length from Thrislington to Gateshead is 22¾ miles, of which the two new portions amount to 15 miles.

Messrs. Storey, Wood, and Harrison, as the Engineers respectively of the Great North of England, the Brandling Junction, and the Durham Junction Railways, make a Report, dated 15th November, 1837, on the mode of crossing the Tyne at Newcastle, and the propriety of substituting the line since called the Northern Union for the northern section of the Great North of England Railway. It proposes that the Brandling Junction and Great North of England Railways should pass the Tyne by one bridge, which, however, should have two roadways at the heights respectively appropriate to each line, viz. at those of 80 and 104 feet from high water. It speaks favourably of using the North Union line but gives no estimates or plans.

Mr. George Stephenson next reports to the Committee of the proposed North British on the best position for the Newcastle station of that line, (which he suggests should be in Neville-street), and the place and mode of crossing the Tyne, so as to continue the southern lines without interruption.

Then comes a supplementary report by Messrs. Wood and Harrison on the modes by which the various railways made and projected may be united at Newcastle, let the order in which they are executed or the combinations in which they are used be almost what they may. They again urge the importance of adopting their line for the sake of Shields and Sunderland, and of postponing by the use of it the very great outlay which will be required by the nature of the ground between Durham and Newcastle. A proposed deviation of the Great North of England line at Durham towards the east having shortened their proposed line by actually taking its route, and having themselves gone into the subject with greater minuteness than before, they present amended estimates, from which it appears that on the Great North of England Railway being completed to Shincliffe near Durham, a railway communication can be effected with Sunderland and Shields for 123,581*l.*, and to Newcastle for 62,926*l.* more. Estimates also are given of the bridges and roads necessary for crossing the Tyne.

These papers are illustrated by sections of the lines, a plan of different lines and bridges at Newcastle, and a map of the country to be traversed on the scale of one inch to the mile.

(To be continued.)

GLASGOW, PAISLEY, AND GREENOCK RAILWAY COMPANY—GENERAL MEETING.

On the 2nd instant, the half-yearly meeting of proprietors was held in the Sheriff Court Hall, Greenock; Robert Dow Ker, Esq., in the Chair.

Captain Huish read the advertisement calling the meeting, and the following

EIGHTH HALF-YEARLY REPORT.

Greenock, July 2, 1841.

The Directors have much gratification in presenting their present Report. The railway has now been opened for three months; and although this period is insufficient to bring into operation the resources of the line, or to mature those arrangements which are essential to its complete success, yet enough has been accomplished to indicate that the calculations of traffic, on which the railway was first based, are substantially correct, and to satisfy the Directors that the expectations held out will be realised.

Before proceeding to analyze the results of the traffic, the Board beg to lay before the proprietors the following Report of their Engineer:—

"ENGINEER'S HALF-YEARLY REPORT.

"*To Robert D. Ker, Esq.*

"Sir,—The railway having been opened to the public on the 31st March, with both lines complete, I have merely to report that the contractors have upheld the road to my satisfaction, and that the works, without exception, prove to be of the firm and stable character anticipated.

"The embankments, which are generally troublesome on a new work, stand even better than I expected; and, notwithstanding the heavy traffic on your road, I do not doubt that it will be kept in that thoroughly efficient state of repair so essential to the comfort of the public, at an unusually low rate.

"I am carrying out Mr. Locke's plans for the goods' stations as rapidly as possible, and adapting them to the peculiar description of traffic which we have now ascertained we must provide for to a large extent.

"Having, at the request of the Board, undertaken to organize the same system of out-door management on this line that I had established on the Joint Line,* I am glad to state the result has been equally satisfactory, for your trains have now run upwards of 50,000 miles, and carried about 360,000 passengers in perfect safety.

"The trip has generally been run within the hour, and this time may ultimately be reduced; but I do not think a rapid speed advisable on any new line, however perfect the arrangements, and the time-tables remain for the present, therefore, as at the opening.

"The locomotive department has been carefully watched, and especial pains taken in the selection of workmen for that service. It is so vital a part of the railway system, that I am rejoiced to find the Directors wish to hold out every reasonable inducement to their servants for continuing their present exemplary conduct, by placing at my disposal premiums for exactness in time and attention to their duties.

"The system of rewards by premium, and punishment by fine, together with a uniform care for their comfort, has hitherto produced, and will, I believe, best insure respectable and trust worthy enginemen.

"Time is requisite to produce perfect arrangement on a railway, as in every other great work; but I trust a sincere desire to afford every possible convenience to the public will continue to distinguish your servants, while under my management.

"I remain, your obedient servant,

"J. E. ERRINGTON.

"Greenock, 21st June, 1841."

Next to the safety of the public, which it has been the unceasing care of all concerned with the management of the railway to secure, their convenience and comfort have engaged the attention of the Directors and their officers. The Board felt that, by a close regard to these points, added to the speed and regularity of the communication, they might look for public support, in the face of an opposition which they had to encounter, from the greatly reduced fares on the river and canal. It is satisfactory to find that their exertions have been so far successful as already to obtain a large proportion of passengers, and they contemplate a steady and considerable augmentation, by giving those increased facilities, and extending those advantages, which the railway has already partially afforded to all classes of the community.

In order to provide for this, it was necessary to make some sacrifice at the outset; and the Directors, finding that they were unable to complete the arrangements required for the public accommodation, employed several steam-boats to work exclusively with the railway. This measure has produced the effect which the Directors anticipated; and although the boats themselves have entailed a temporary expense on the funds of the proprietors, it has enabled the Board to make satisfactory terms with several Companies, and negociations are now proceeding with others, which the Directors hope will altogether relieve the funds from any further expense. The shareholders will also bear in mind the large proportion of trade brought to the railway by means of these boats. Should, however, it hereafter turn out that these arrangements do not work satisfactorily to the public, several of the large shareholders are willing to assist in establishing an effective Steam Boat Company, and placing at the command of the Railway Company several fast and first-rate boats, in which the discipline and regularity of the railway will be enforced.

* The "Joint line" alluded to is the "Glasgow and Paisley" portion, which is carried to this line and on the Glasgow and Ayr Railway.—Ed. R. T.

In fixing the rates, the Board was not influenced by any desire to injure existing interests, but to settle such a scale of fares, as, when a considerable proportion of the existing traffic should be transferred to the railway, would afford a satisfactory remuneration to the shareholders for the capital they had invested. These fares are unusually low, but the Directors trusted that, as the expenses were in a great degree a fixed quantity, while the receipts fluctuated with the amount of traffic, a sufficient number of passengers might be drawn to the railway at low fares to produce a large aggregate sum. The result already confirms the soundness of this view.

The total sum received for this Company's proportion of six months on the Joint Line, and two months on the Thorough, is £9,708 2s. 7d. It appears from the returns that 2,017,361 passengers have been carried one mile. This gives the average fare per mile, 1.15d. The whole expense incurred in conveying this number, is 5,198*l.* 7d., or by the same process, .61d. per mile; in other words, the cost has been a shade above one halfpenny per passenger per mile. This includes the Government tax, which absorbs nearly one-fourth of it.

In making up these expenses every usual charge has been included, excepting maintenance of way and fund for depreciation. The former of these will not form a burden on the revenue for twelve months, and before that time, there is good reason to believe that the system of taxation will be so changed that the proprietors will be relieved to an extent commensurate with the charge under this head. The Directors have received tenders for the future upholding of the road at a very small cost, but have not yet considered it expedient to close with any one.

When therefore it is remembered, that during four out of six months an expensive establishment had to be kept up for seven miles, which on that portion of it has not been increased by the opening of the whole line—that the traffic is steadily increasing—and that the expenses do not expand in the same ratio—that no goods had been carried—that a considerable part of the existing passenger traffic is still in the hands of the steam-boat proprietors, at a sacrifice of their fares which the Directors believe cannot be continued—that the Edinburgh and Glasgow Railway, about to be opened, will materially increase the revenue by connecting the east and west coasts; and lastly, that the extraordinary depression in every branch of business this season has greatly checked both business and pleasure travelling—the Directors feel confidence in stating, that the ordinary working expenses, even at their low fares, will be considerably under 50 per cent.

The average number of passengers per diem, from the opening to 1st June, including the proportion of the Joint Line, has been 2,158—average number of passengers per train 116.

The expense of locomotive power per mile is 1s. 2¼d., and this includes the cost of repairing one engine used in the construction of the road, and the expense of two spare engines constantly kept with their steam up.

No subject has caused greater anxiety to the Board than the present mode of levying the Government tax, and so important did they consider it, that they felt called upon to send a deputation to London to co-operate with other Railway Companies in their endeavour to obtain a modification. It give the Directors much pleasure to report, that all political parties seem to concur in the necessity for a change, and they are satisfied, from the pledges given, that an alteration may be soon expected.

The Company are not prepared to carry goods, excepting on a limited scale; but the Board are pressing forward the necessary arrangements; and from the promises they have already received, and the power they possess to carry cheaply as well as speedily, there can be no doubt that a very large proportion of this valuable traffic will come to the railway. In the meantime the business is carried on principally through the agency of the passenger trains, and is therefore very economically managed.

The Directors anticipate a considerable trade in coals; and they are negociating with a proprietor who offers to send down 60 tons per day as a minimum, which will afterwards be greatly increased. A saving will be effected in the price at Greenock, which will re-act beneficially on other branches of the Company's business.

The Directors are also preparing to carry timber. The local authorities are alive to the important influence which the railway will exercise on the trade of the port; and they are engaged in preparing to a considerable extent, additional harbour accommodation, in direct connexion with the railway, and by which the railway waggons will be carried alongside the vessels.

The new Bill to empower the Company to raise 100,000*l.* by the issue of fresh stock, received the Royal Assent on the 6th of April last, and in terms of the resolution of the proprietors at their special meeting on the 28th April, half shares to that extent have been created. These have been readily taken by the present proprietors, and now bear a considerable premium in the market.

The works on the railway have been some time out of hand, and are in admirable order.

The stations are still incomplete, but a very short time will finish them. The permanent engine sheds are in use.

The funds which the new Bill has placed at the Company's command have enabled the Directors to push forward all the various permanent erections and conveniences, so important for the conduct of a railway; and little remains now to be done.

The contracts are nearly cleared off. In settling with one contractor a difference has arisen on some items, and these are referred to the arbitration of the Engineer, Mr. Locke. The stock now at work is nearly all paid for.

The cost for construction is also nearly ascertained excepting where final awards on land have not been received, and pending the decision of the claim above referred to, is about the sum expected at last half-yearly meeting. Any further expenditure must depend on circumstances, viz. the

Digitized by Google

amount of trade, and the consequent accommodation required for it, both in stations, engines, waggons and carriages. The latter have already proved inadequate to the necessities of the trade, and there has frequently been a deficiency when most needed. The supply now in course of delivery will, it is hoped, prevent a recurrence of the disappointments sometimes experienced; and the Directors avail themselves of this opportunity of acknowledging the forbearance and consideration of the public generally, and their cheerful acceptance of the best accommodation they could provide for them on crowded days.

A greater supply of waggons will be required than was expected, not only for the general trade—which the Directors believe will be very large—but for the transit of coal. The Company possess considerable station room, but till they see clearly the nature and extent of the trade, they will not expend more than a very small sum in buildings. Whatever it may ultimately prove to be, the proprietors will not object to a corresponding outlay for its proper accommodation; and the Directors are now obtaining that experience which will enable them to provide this, as required, in the most economical manner.

Your Directors considered it advisable, for the protection of your interests, to petition Parliament against a certain clause in the Bill for the regulation of Railways, which they considered as mischievous, and they have to state, that a Committee of the House has reported against the obnoxious clause.

The Directors have now adverted to the matters of leading interest in your concern, and they cannot take leave of the proprietors without congratulating them on the prospects which the railway holds out of realising the high hopes which were entertained of it.

That the first cost should have exceeded the estimates is scarcely to be wondered at when the localities are considered; but the Directors, now when the works are finished, cannot discover that hasty or ill-considered decisions have caused an injudicious expenditure; and they are certain that, as each day developes the immense resources of the line, the proprietors will have fresh cause to be satisfied that the extensions of the original plan are calculated to secure lasting and invaluable advantages to the railway.

MARK HUISH, Secretary.

Balance carried to the credit of next half year's revenue account		£527 9 11

MARK HUISH, Secretary.

The CHAIRMAN remarked that there was a part of the Directors Report which he would read himself. It was as follows:—

The Directors cannot conclude their report without adverting to the retirement of their respected Secretary, Capt. Huish; and, in order to testify the sense which they and the shareholders entertain of his able, faithful, and zealous services in the cause of the railway, the Directors have voted the sum of 100*l.*, subject to the approbation of the general meeting, to be expended in the purchase of a piece of plate, to be presented to him, with a suitable inscription, previous to his departure for the new sphere of his labours.

The CHAIRMAN trusted that the measures of the Directors would be approved by the general body of shareholders. He had little to add, but rose simply to bespeak the favourable reception of the report. Since last half-yearly meeting, an important era had occurred in the history of the railway, by its opening on the 30th March. He congratulated the meeting on that auspicious event, on the highly favourable commencement of the traffic, and the increased value of the shares. The satisfaction of all who had travelled by the railway, the excellence of the road, and the good and efficient working of the trains, had been every where expressed and acknowledged. The number of passengers carried was as great as could fairly be expected, considering the slack period of the year at the opening, and for some time after,—the restraint which was laid upon travelling by the pressure of the times, together with the many disadvantages with which every new undertaking, at the outset, had to contend, but which every day's progress tended to obviate and remove. Should the amount of traffic fall short of the expectations of any, there must be kept in mind the number of competing conveyances which, at greatly reduced fares, are still sharing the traffic with the railway,—the result was amply sufficient to prove the public preference of the railway, and with no wish to undervalue the efforts of our respectable rivals, the river and canal, it was equally obvious that no successful opposition can long be maintained against the great facilities and daily developing resources of the railway. The carriage of goods would, he had no doubt, be very extensive when the arrangements were completed; but at present no more than a limited quantity could be taken. In the course of a month, every thing would be in readiness to prosecute any extent of trade. At this stage it was no small matter of congratulation the unanimity which had characterised the past proceedings of the railway, not only at the Board, but also between the Directors and Shareholders. To that happy circumstance may be attributed much of that prosperity which had marked its past course; and with a continuance of the same

Digitized by Google

harmonious co-operation, the best results might be anticipated for this undertaking, which now more than ever promised to realise the highest hopes of the shareholders, and to prove a permanent good to the country. He could not sit down without adverting to the loss which the Company were about to sustain by the intended resignation of their respected Secretary, Captain Huish, who, in consequence of an offer made to him by the Directors of the Grand Junction Railway, was about to vacate his office here, and transfer his services to the wider field of that great Company. It was well known the high estimation in which Captain Huish was held by the Directors; and, while they regret the prospect of parting with him, a feeling in which he was sure the meeting would participate, they, at the same time, for the regard they felt for Captain Huish's welfare, were pleased that a wider field awaited the exercise of his talents, and consequently a reward more proportioned to his merits than could be afforded here. The completion of the works brought us close to the termination of our engagement with Mr. Locke and his valuable coadjutors in the engineering department. The public had pronounced the most fitting eulogium on these gentlemen by their universal admiration of their handiwork, and it was unnecessary for him to add more than that the several duties were executed with the highest honour to themselves, and to the entire satisfaction of the Board. He was happy to add, that Mr. Locke's services, under a new agreement, would still be given when required as consulting engineer of the line. Mr. Errington was presently in charge of working the line, and Mr. Davidson was engaged in finishing those portions of the work which require completion. With the conduct of the other officers, superior and subordinate of the various departments, the Board are much satisfied; and the servants, with a very few exceptions of fine and dismissal, have also done well. He took this occasion of assuring every individual in the service of the railway that it was the anxious desire of the Directors to reward merit, and their eye would be directed towards those whose deserts entitled them to promotion or other reward, when opportunities occurred, by vacancies or otherwise, of bringing forward deserving individuals, whose conduct and services should render them worthy of the special notice of the Board.

ANDREW DONALDSON CAMPBELL, Esq., of Ashcraig, expressed his approval of the Report and stated that the compliment which was proposed to be given to Captain Huish was well merited by that gentleman. He moved:—"That the Report which had been read be adopted, printed, and circulated among the proprietors, and that the resolution of the Directors regarding a mark of their esteem for the Secretary be confirmed."

DAVID BALDERSTON, Esq., seconded the motion, which was carried unanimously.

The CHAIRMAN stated that Mr. Errington was present to answer any questions that might be put to him, respecting the state of the works, or any other subject connected with the line, upon which information might be desired.

After a short pause,

JAMES BAIRD, Esq., said it might be satisfactory for the meeting to know something regarding other railways, which might be calculated to throw light upon their own prospects. With this view he had looked into the *Railway Times* of Saturday last, and he found that the cost of the Grand Junction Railway was 22,000*l.* per mile, and that the return from the weekly traffic was 89*l.* per mile, and that it paid a dividend of 13 per cent. The cost of the Greenock line was 27,000*l.* per mile, and as the traffic produced 41*l.* per mile per week, it would allow a dividend of 5 per cent. The cost of the London and Birmingham line was 53,560*l.* per mile, and the weekly traffic upon it produced 173*l.* 16*s.* The dividend paid there was 8¾ per cent., or just about the same proportion. The case of the Liverpool and Manchester line also tended to confirm the estimate he had formed. The cost there was 45,484*l.* per mile, and the weekly traffic for the same distance 185*l.* 3*s.*, which produced a dividend of 10¼ per cent. The same journal contained a communication entitled "Railway Prospects," which gave some account of the former and present condition of certain railways, and alluded to the depressing influence of the dullness of trade, and the contracted state of the money market. The circulation of the Bank of England, at the present moment, was a million and a half below what it was in 1839, which of course had a tendency to depress railway shares, and to lessen their traffic. In fact, the Grand Junction stock, upon which an annual dividend of 13 per cent. was paid, did not bring more at this moment than 202*l.*, and other stock of the same description had suffered in proportion. A single good harvest, however, of which there was at present happily every prospect, would soon restore the money market to its former easy condition, and railway shares would probably derive more immediate benefit from such a change, than any other description of stock. The same writer mentioned a circumstance connected with the London and Birmingham line, which was highly encouraging to the proprietors of the Greenock Railway. During the eleven weeks from the 9th April to 30th June, 1838, the receipts were at the rate of 45*l.* per mile weekly, while they now as he formerly stated had increased to 173*l.* per mile. These he thought highly encouraging facts which the meeting would be glad to hear.

Captain HUISH on rising said, Mr. Baird's calculation of the profits of the Greenock line had been taken for a period when their receipts barely averaged 800*l.* per week; but for some time past their receipts had considerably exceeded £900*l.*, which would add more than 1 per cent. to the estimate. (Cheers.) In alluding to the resolution regarding him, he trusted they would allow him to state, that he was quite unaware, when he entered the Hall, that such a public compliment was intended to be paid him, and he felt altogether unable to express his feelings on the occasion. He had already taken an opportunity to convey to the Board the deep sense he entertained of the uniform kindness with which they had treated him ever since he was connected with them. The readiness with which they listened to every suggestion which he made, with a view to the improvement of their great undertaking, made it a pleasure to perform his duties. He felt deeply grateful to the shareholders for the mark of their favour which they had agreed to bestow upon him. Had their undertaking been an unsuccessful one, he would have had some scruples about accepting it; but he felt persuaded that the railway would not only benefit extensively the country through which it traversed, but would be a fruitful source of profit to the shareholders, of whom he was one. (Cheers.) The first remark that he had made at a meeting in this town, before a spade had been put in the ground, was that their line would be a little Liverpool and Manchester one. The only change which his subsequent experience had induced him to make upon that saying was, to change the word *little* into *great*. He saw great prospects of traffic lying before them, which a short time would bring into operation. Some had expressed disappointment at the number of passengers which were still conveyed by the river after all which the railway had taken away, but for his part he regarded the matter with totally different feelings, as showing how many more passengers were yet in store for the railway—for come to it they would at last. The more he investigated the subject, and observed the tendency of all traffic to flow into the best channel, the more convinced he felt that it was utterly impossible for the river long to compete successfully with the railway. (Cheers.) He could not sit down without adverting to the kind courtesy and warm hospitality which he had ever met with from the inhabitants of Greenock generally during the time he had been domiciled among them. He was happy to avail himself of his public opportunity to acknowledge their kindness, and to state, that wherever he should be placed he would regard a Greenock man as a friend. (Cheers.) He again thanked them all for their kindness, which could never be effaced from his mind.

WM. LEITCH, Esq., remarked that he had observed in the *Greenock Advertiser* of that morning a paragraph upon the subject of carrying the mail, which he thought well worthy of being brought under the notice of the meeting. He wished to know if any explanation could be given in regard to the matter.*

Captain HUISH said the Post-office had contracted with the Railway Company to carry the mails four times a day, and the selection of the hours was left to the former. But he could assure the meeting that upon any occasion, when the mail was not forward in time to go by the appointed train, if it were taken to the station-house for the next departure, it would be forwarded as a matter of course. So intense was the anxiety yesterday to receive the London papers, that the Directors would willingly have despatched a special train to bring it on rather than that the delay that had occurred should have taken place. (Cheers.) The railway would convey the mail bags whenever they were brought to it, and he trusted that future delays of the kind, should they occur, would not be blamed on them.

It was agreed to refer the matter to the Chamber of Commerce, to endeavour to have it arranged so, that when any mail arrived too late for the appointed train it should be despatched by the next.

ALLAN FULLARTON, Esq., asked whether the Directors had received any authentic information as to the time when the Edinburgh and Glasgow Railway would be opened.

The CHAIRMAN replied in the negative.

On motion of Andrew Anderson, Esq., thanks were then voted to the Chairman for his conduct in the Chair, and the meeting separated.—*Greenock Advertiser.*

RAILWAYS.—An instance of the amazing rapidity with which communication can now be effected through the medium of railways was afforded on the 30th ult. A special train was despatched from Birmingham to London on election business at 12 p.m. (calling in its course at seven intermediate stations, and suffering delay to the amount altogether of 14 minutes) and arrived at Euston station at 11 minutes past 3 a.m.; performing the distance of 112¾ miles exclusive of stoppages, in two hours and 57 minutes. There needs no further evidence of the excellent state of the arrangements on this railway, the perfection of the engines, and the admirable condition in which the line is maintained. The advantages of such means of transit at such a period of general excitement as the present are incalculable, and must be peculiarly appreciated by the press, and in consequence by the public, who reap the benefit of the exertions, to whom the facility of obtaining speedy information as to what is passing in the provinces is of the greatest importance, and to whom, by the extreme courtesy of the Directors of this railway, such facilities are now afforded to the utmost.—*Times.*

---

* The following is the paragraph alluded to:—

"The anxiety so generally felt here yesterday (Thursday) to learn the *actual* result of the City of London election, in consequence of the discrepancy in the first published accounts of the aggregate numbers polled, and which was expected to be set at rest by the receipt of the metropolitan morning journals of Wednesday, met with a disappointment, by the non arrival of those papers by the railway two o'clock train. Thus, the liegesmen had to wait three hours longer, although the mail might have arrived at Glasgow just in time to be too late, as it appears that the mails can only be forwarded by particular trains, and in this case were withheld although there were two intermediate departures from that city. Some difficulty supervenes, it seems—and a small matter often makes an insuperable obstacle with Government offices—in the way of getting over this absurdity, from the nature of the existing contract between the Post-office and the Railway Company; but it is quite obvious that it ought to be got over, and the sooner the better. The delay is of frequent recurrence, and at all times subjects the merchants and others having correspondence to answer in direct course, to great inconvenience, as, instead of having above *four* hours to reply to their letters, they have little more than *one*. If the mail which fails to reach Glasgow in time for the two o'clock train were dispatched at three, two hours of this lost time would be saved, and the inconvenience obviated; and the wonder is not merely that the grievance should exist, but that it should have continued a week without being remedied. Perhaps the point may be mooted at the meeting of the railway proprietors to-day, and some light thrown upon it; but, at all events, means should be taken to correct so glaring and unnecessary a hardship being inflicted on the mercantile interest."

RAILWAY ADJUDICATIONS.

PICKFORD AND CO. v. THE GRAND JUNCTION RAILWAY COMPANY.

This was an action on the case involving a point of great importance to the parties concerned, and incidentally to the public.

Sir F. Pollock and Mr. Martin appeared for the plaintiffs, and Mr. Erle (with Mr. Cowling) for the defendants.

It appeared from the statement of the plaintiffs' counsel, that soon after the opening of the Grand Junction line of railway, the defendants had entered into an arrangement with the plaintiffs, who are well known throughout the kingdom as extensive carriers, both by land and canal, to convey goods entrusted to the plaintiffs, to be forwarded by the railway, at the usual charges, making an allowance of 20 per cent. on the tonnage. In 1840, the defendants thought fit to put an end to this agreement, and refused to convey goods for the plaintiffs at the same rates. They also refused to take small parcels in a hamper for the plaintiffs, at the usual charge per ton, but insisted upon being paid for the contents of the hamper by the parcel. The charge made by the Company for small parcels was 1s. 6d. per parcel, and it was said to be impossible for the plaintiffs to convey small parcels with any profit if they were forced to pay this charge. In order to bring the matter to a legal issue, the plaintiffs at the commencement of the present year had forwarded a small hamper containing parcels. The weight of the hamper was 8 cwt. 3 qrs., and the plaintiffs had tendered 1*l.* 6s. 6d. for the carriage, but the defendants' servants refused to receive the hamper, unless the sum of 4*l.* 1s. 8d. was paid to them, thereby insisting upon their right to charge by the parcel for the contents of the hamper, and not by the ton. Messrs. Chaplin and Horne had an arrangement with the defendants, by which they were enabled to send goods at a less charge by the railway than the plaintiffs could, and if this system of monopoly and preference was allowed to continue, the plaintiffs must abandon their trade, so far as the railway was concerned.

Lord Abinger admitted that the points raised by this action were of great public importance. It did not appear to him, however, that the facts were in dispute, and if this view was correct, it would be far better that the question should be maturely and deliberately considered by the court. The proper course was for the parties to agree to a special case.

Mr. Erle said he had a complete answer to the case about to be set up on the part of the plaintiff. He saw no objection, however, to the course suggested by his Lordship.

A verdict was then taken for the plaintiff, subject to a special case to be laid before the Court of Exchequer; and it was agreed that until the court delivered its judgment the plaintiff's parcels should be taken by the Company at a charge of 1s. 6d. per parcel, an account of the number and weight of such parcels being kept, so that the sum which the plaintiffs claimed, as overcharged by the mode of payment insisted on by the Company, might be ascertained and subjected to the decision of the court.

THE GREAT WESTERN RAILWAY COMPANY v. KNOWLES.

Rolls Court, Chancery Lane, July 7.—Mr. Pemberton and Mr. Stephens for the plaintiffs showed cause against the common order obtained by the defendants, for dissolving an injunction granted upon the application of the plaintiffs, for restraining the defendants, John Welby Knowles and Thomas Garrod, from proceeding in an action of ejectment against the Company for the recovery of certain lands near Reading, for the purchase of which by the Company an agreement had been entered into in August, 1835.

After the plaintiffs' case had been stated,

Lord Langdale asked Mr. Kindersly, who had commenced his defence, if there were no means by by which it could be settled what ought to be paid for the land?

Mr. Kindersley said it would be desirable to come to an arrangement, but Mr. Knowles was abroad, and he was not in a position to be able to accede to one.

After some discussion, the motion was ordered to stand over until the next seal.

ACCIDENT ON THE SOUTH WESTERN RAILWAY.

To the Editor of the Times.

Sir,—I beg leave, through the medium of your widely-circulated journal, to draw the attention of the public to an accident which has just occurred on this railway, and which had well nigh been attended with the most fearful consequences.

The train which leaves Southampton for London, at half-past one o'clock in the afternoon, had proceeded on its journey to a distance of about three miles beyond Basingstoke, with at least 100 passengers, when it was suddenly and with much violence thrown off the railway, and five of the carriaages were completely turned over. I was fortunately one of the first of the passengers, who, having escaped with a few bruises, managed to extricate myself from this disastrous situation, when the first object that presented itself to my view was the conductor of the train with blood pouring down his face from a wound occasioned by being thrown from his seat on to the wooden fence which borders the railway. And here, Sir, permit me to say, the conduct of this individual, under circumstances so trying, cannot be too highly commended. Suffering, as he did most acutely, from this severe injury, he nevertheless exerted himself in the most praiseworthy manner by his unremitting endeavours to allay the apprehensions of the numerous passengers whilst actively employed in rescuing them from their perilous position.

In the course of a short half-hour the whole number was gradually drawn forth from the prostrated carriages, together with the luggage. And by this time a vast number of the inhabitants of Old Basing having been drawn to the spot by the report of an accident, presented to the eye of the spectator a most interesting scene. There, on the skirts of a thick copse, were the entire number of passengers above stated, huddled together in the utmost consternation; some seated on their baggage, others bruised and suffering and stretched upon the green sward, and all looking anxiously upon the dismal scene before them of fragments of wheels, broken carriages, and iron work, widely scattered abroad over the line of railway, which was completely ploughed up by the accident.

It seems that the cause of this was the breaking of both axletrees of the tender, which it is asserted were of unsound materials. Had it occurred only a short mile further on, where there is an embankment of from 40 to 50 feet in height, instead of escaping, as now, with a few bruises, there would in all probability have been a fearful loss of life to many of the passengers. I beg, Sir, to draw your attention most particularly to the above narration of facts, as of great consequence to the public at large, in the hope it may give rise to a strict and searching inquiry.

I am, Sir, your obedient servant,

VIATOR.

Inner Temple, Friday Evening, July 2.

[We quote the following very satisfactory exculpatory notice from the same journal.]

South Western Railway.—In reference to a letter which appeared in our paper of Tuesday last, signed "Viator," respecting an accident which occurred on the South Western Railway, we have to state that we have received a full explanation of all the circumstances, and feel satisfied that no blame can be attached to the Directors, on account of any neglect upon their part, or to any department connected with the railway. It is true that the accident might have been attended with the most fearful consequences, as stated by our correspondent, but what railway accident can be exempted from such a risk? The axles which broke were made by one of the best makers, and were not known to be in any way defective. With regard to the injuries which it is alleged were received by the passengers and guard, we have reason to believe that the statement was very much exaggerated. However alarming the accident may have been, fortunately in this instance no one except the guard received any injury worth mentioning, and he declares that it was a mere scratch, and that instead of being thrown against a fence, he was thrown upon his back, without sustaining any bruise or contusion, except a slight scratch close to his left eye.

RAILWAY PLEASURE EXCURSIONS.

Midland Counties Railway.—(*From a Correspondent.*)—On Monday last the Total Abstinence Society of Leicester and their friends to the number of more than 500 went by a special train to Loughborough, where they met the members of the society in that town and also some friends from Nottingham. The united party had tea on the lawn of W. Paget, Esq., one of the wealthy manufacturers of the place, who has long been known for his encouragement of all instiutions and efforts tending to the moral and intellectual improvement of the neighbourhood. On the journey a band as usual added to the hilarity of these votaries of abstemiousness: the return was accomplished by half-past ten o'clock.

Derby Arboretum.—On Tuesday 485 persons, who came by an excursion train from Chesterfield, visited the Arboretum, and expressed themselves highly pleased with these delightful grounds. We understand it is the intention of several religious congregations in Nottingham and elsewhere, to avail themselves of this cheap mode of travelling, to visit Derby and take tea in the Arboretum; on which occasion the committee of management have liberally lowered the price of admission to one-half the usual charge.—*Derby Mercury.*

Birmingham Mechanics' Institution.—The members and friends of this institution (to the number of nearly 800) paid a return visit per railway to Gloucester on Tuesday se'nnight (29th June). The train was the longest that has yet travelled along the Birmingham and Gloucester Railway, comprising five first-class, 12 second-class, and 11 third-class carriages (the latter fitted up with seats expressly for the purpose), propelled by two engines, and occasionally assisted by an additional one. On the company alighting at Gloucester they proceeded to visit the splendid cathedral, the whole of which, together with the more inaccessible parts usually closed, were, by the kind permisson of the Dean, thrown open to the visitors, and the more prominent objects of interest fully explained by the Vergers. After visiting the other attractions of the city and neighbourhood (to which the fineness of the day gave an additional zest), the party returned to Birmingham, highly gratified with their visit and with the attention paid them by the citizens of Gloucester.—*Worcestershire Chronicle.*

Hull and Selby Railway.—As a proof that the encomiums bestowed upon this line of railway, as being so well adapted for easy and quick transition, are well merited, and also to show the efficiency of this company's locomotive engines, we need only state that yesterday morning a train of 52 goods waggons, containing upwards of 180 tons of goods—the gross weight with the waggons being actually more than 300 tons—was brought down from Selby to this place by the company's engine Liverpool, in the short space of one hour and fifty minutes, a distance of thirty-one miles. We are also happy to perceive that the increasing traffic in goods appears likely to cause the erection of another warehouse in a short time, and which is now imperatively necessary.—*Eastern Counties' Herald.*

2. Toll to London and Birmingham 156*l.* 13s. 10d., to be deducted from gross receipts.

3. The receipts are exclusive of those for the mails; on Sunday mails only are carried.

7. Receipts include the Northern and Eastern toll, &c.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

12. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

14. The 27*l.* 3s. 6d. from goods, &c. is for toll only.

15. Ten per cent. is the maximum dividend allowed by the Company's Act.

16. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station.

20. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed.

21. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.

23. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

24. The 4,070*l.* 10s. 2d. are the receipts after deducting the toll to the North Midland Company, and exclusive of receipts from carriage of mails.

25. The receipts for goods, &c. include, carriages, 24*l.* 13s. 0d.; horses, 16*l.* 19s. 0d.; dogs, 1*l.* 7s. 6d.; parcels, 191*l.* 2s. 6d.; cattle, 19*l.* 3s. 6d.; corn, 13*l.* 0s. 5d; heavy goods, 380*l.* 10s. 0d.; coal, 55*l.* 6s. 8d.—Total, 702*l.* 2s. 7d.

27. Including the traffic of the Manchester and Leeds Railway, 133*l.* 15s. 8d.

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Phago.—*The packet duly received. The conditions prescribed shall be faithfully and strictly observed.*

Fair Play *(Dublin) must be aware that we could not publish such statements as those contained in his letter on anonymous authority.*

A Country Subscriber *is mistaken in supposing that "no complaints had been heard for some weeks." We ourselves had received several.*

Not one of You.—*Much obliged for his favours, of which he will see due use has been made.*

W. H. H. *complains of certain alleged irregularities in the goods department of the Great Western Railway, by which perishable articles have been detained till they are useless, and prepaid parcels have been charged again on delivery. He will observe that these annoyances are of a kind just such as might be occasioned by the misdoings of a very few underlings, and that on newly organised lines it takes some time to detect and prevent them. We have no doubt that a complaint addressed to the Secretary would procure a speedy and effectual remedy, and W. H. H. would be doing all parties a service by forwarding such a complaint. From other correspondents we have also received complaints of considerable want of punctuality in the arrival of the passengers' trains. We trust, however, these irregularities will not exist beyond the period of imperfect organization which commonly follows the opening of every line; if in this respect, however, our hopes are disappointed, we shall advert more particularly to the subject.*

We have to acknowledge the courtesy of the Leicester Chronicle *in forwarding to us a slip of its account of the railway excursion and festival of the teetotallers of Leicester, Derby, &c., but had already in type an account sent us by a correspondent, which we publish elsewhere. Our contemporary, however, supplies an additional particular of some importance. The Directors of the railway (the Midland Counties,) liberally conveyed the party at* half price.

Received—Mr. Eustace—R. L. S.—M.—A Shareholder (London)—A Shareholder (Bath).

THE RAILWAY TIMES.

SATURDAY, JULY 10, 1841.

We have this week the pleasure of laying before our readers another of the frank and satisfactory Reports by which the Scottish Directors are winning for their respective lines the deserved confidence of the public; we allude to the Report and proceedings of the Glasgow and Greenock Railway Company—the "Scotch Liverpool and Manchester," as it is sometimes not inappropriately called.

The first subjects for remark are the efficient state of the line, and the completeness of the working arrangements. Not an accident has occurred in carrying 360,000 passengers on a new railway in the short space of about two months. From the care with which the service has been organised, and the sound state of the line in general, there seems great reason to hope that this well-earned success will not be interrupted.

The Glasgow and Greenock Railway has to compete with a numerous and well-appointed fleet of steam-boats on the Clyde. Here, indeed, we may say, steam navigation for public purposes received its birth, and no where has it been pushed to a greater proportionate extent. Its history too on this particular spot exhibits one of the most instructive lessons on the subject of fares. The success of the first steam-boat Company soon produced competitors, and between the old and new proprietaries a determined rivalry commenced, which speedily reduced the fares. To the agreeable surprise of both parties, however, instead of each seeing their opponent prostrate, the profits of both increased; for the additional number of passengers more than counterbalanced the reduction of the fares. Encouraged by this unexpected result, both parties went on lowering their fares, until at length they reduced them below the point at which any obtainable number of passengers could pay. We understand, however, that since that period the fares have been raised again to a remunerating minimum. It is with this establishment of steam-boats, worked into high efficiency, that the Glasgow and Greenock Railway enters into competition; and its best informed supporters affirm it will certainly succeed. They commence the struggle with fares among the lowest in Britain, being for the first-class d1.8, for the second d1.2, and for the third-class d0.9 per mile. The third-class carriages are stanhopes or stand-ups; both the two others are like those at work under the same denominations on the English railways.

To railway interests in general this competition and its results will be of considerable importance. We trust that not only for their own sakes but for the general guidance and benefit of railway proprietaries, the Glasgow and Greenock Directors will not fail to record and publish such particulars of (comparative) speed, fare, and accommodation, as shall throw light on the effect produced by these considerations on the quantity of travel. A more favourable opportunity for instituting such a comparison can scarcely ever occur.

We are somewhat flattered by the use made of our paper by Mr. Baird, one of the speakers at the meeting. We trust that though prominent as a public instance, it is only one of the many continually occurring in which the free diffusion of intelligence, and the unrestrained interchange of thought have materially benefitted railway interests.

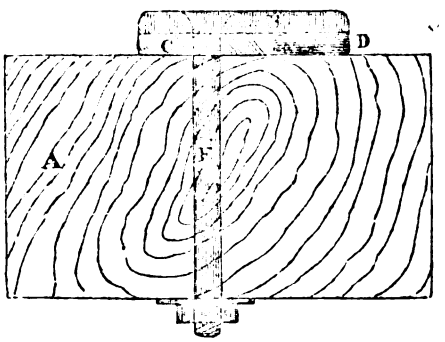
The accounts appended to the Report offer but small ground for exception of any sort. We should be glad to see the "&c." banished altogether from their future documents of this description; and we think that the Directors, or their officers, will find it possible to adopt a more generic system of classification, and one, therefore, which will be a better guide than that they now follow, in their struggle against their formidable floating rivals.

We observe with mingled pain and pleasure the resignation by Captain Huish of the office which he has so ably filled, of Secretary to this Company in order to assume a post of greater emolument, if not of greater responsibility, on the Grand Junction, and the parting honours most deservedly paid to him on the occasion. We cannot compliment the Grand Junction on securing the services of so efficient an officer, without sympathizing in a proportionate degree with the Glasgow and Greenock on the injury they must sustain (for a time at least) in losing him. As far as Captain Huish is personally concerned he has our most unqualified congratulations. He is about to be removed to a sphere of action where his talents cannot perhaps have greater scope than they have had already, but where, from the superior pecuniary ability of his employers, those talents are more likely to be suitably rewarded.

We must not, before dismissing for the present the proceedings of the Glasgow and Greenock Railway Company, forget to notice with approbation, the system pursued by them of stimulating their servants, of all ranks and degrees, to regularity and good conduct by rewards instead of punishments. It is astonishing, that all the world over, so little reliance should be placed on the influence of kindness, or that so little good should be reckoned upon from the stimulus of hope. To punish is the sole, the stale, and commonly ineffectual device of the common run of shallow and self-sufficient makers and administrators of laws. The Glasgow and Greenock Directors have set a laudable example of a better system and a more worthy spirit, and we hope to see it have many imitators.

The opening throughout of the Great Western Railway offers a suitable occasion for making some remarks on the general character of the works, as well as on the effect which the experience furnished and to be furnished, by this celebrated line, may have on the construction of future lines, and on the extension of the railway system.

The completion of the Box tunnel was the crowning event which brought this railway into full working condition; and it may be considered, in point of size and cost, as a type of the works generally. It is the largest (if not the longest) tunnel yet constructed in this country, being 9,680 feet long, 39 feet high, and 35 feet wide to the outside of the brickwork. The contractors were Mr. Burge, and Messrs. Brewer and Lewis. On the contract of Mr. Burge, which was of the length of 6,863 feet, the excavations amounted to 297,000 cubic yards, and the brickwork and masonry to 54,000; the quantity of bricks used was thirty millions; one ton of gunpowder and one ton of candles were consumed every week for two years and a half; and eleven hundred men and two hundred and fifty horses were kept in constant occupation. The contract of Messrs. Brewer and Lewis comprehended the remaining length of 2,820 feet; and the cubic contents of the excavation, which was chiefly in freestone, amounted to 117,000 yards. The influx of water at this part occasioned great expenditure of labour, as well as considerable annoyance; notwithstanding which, this portion of the tunnel is thought by good judges to present the finest specimen of the art of quarrying to be found in the kingdom. The shafts for making and ventilating the tunnel are thirteen in number, and vary in depth from 80 to 306 feet.



The capital and energy of the Directors and Contractors, and the skill and boldness of Mr. Brunel, must have found able and trustworthy agents in the Resident Engineer (Mr. Glennie), and the other superintending officers. The daily and unforeseen difficulties and not unfrequent danger of such a work, could only be braved and surmounted by subordinates animated by the spirit of their leaders, and zealous for the success of so bold and momentous an undertaking. A bare feeling of self-interest, or even a cold though exact sense of duty, never carries men with credit through engagements like these; they never succeed in them except through the stimulus of an enthusiasm, kindred to that which designed and undertook them.

The Kilsby, which is the principal tunnel on the London and Birmingham line, is but 7,174 feet in length, the width within 24 feet, and the clear height 23 feet. The Box tunnel is,

Digitized by Google

therefore, on the whole, about two-thirds *cubically* larger than the Kilsby.

The road through the tunnel has a continued inclination of 1 in 100, or 52 8 feet per mile. It was originally intended to work it with fixed engines, but similar gradients having been successfully worked without them, this intention was abandoned. To provide however for the safe transit of the *down* trains, Mr. BRUNEL has adopted a very novel expedient. To explain its principle, we must remind our readers that Professor BARLOW showed in one of his reports, that the flexure of rails between the chairs retards a train just as an ascent of a certain inclination would do. Mr. BRUNEL avails himself of this principle, to moderate the descent of the trains on the Box tunnel incline. The particular arrangement by which he brings this principle into operation is shown by the subjoined figure.

Longitudinal timbers A, 16½ inches by 8 are laid down through the tunnel as on the rest of the way; above these are placed flat iron plates, B, 7 inches wide and ½ inch thick, (the upper angles being rounded off,) resting immediately towards the outer side on a plank, C, 4½ inches wide, and ¾ inch thick, and on the inner side or wheel track, on a pile of several layers of felt, which is when uncompressed of the same thickness as the plank. The rails are secured to the timbers by inch screw bolts, E, nuts and washers. As the wheels of the carriages impinge on the felt-supported edge of the flat plate B, that edge yields slightly to them, (similar to the wheels of an ordinary carriage in passing over turf,) so that they may be said to proceed through the tunnel on a constantly waving line, which has of course a retarding effect, corresponding to the degree of deviation from a line perfectly straight.

The retarding effect is, in point of fact, such, that the descending trains take about nine minutes to pass through the tunnel, which is at the rate of little more than 11 miles per hour. Since, however, only the descending line is at present laid through the tunnel, the ascending trains are obliged to use that also, and are retarded in a still greater degree, though in their case retardation is not at all wanted. Two engines often take half an hour in dragging a train up through the tunnel, and indeed not unfrequently come to a dead stand in the middle of it. This, however, is but a temporary inconvenience, which the completion of the second line of rails will speedily remedy.

The necessity for driving a tunnel of this magnitude at so great a depth from the surface arose out of the general principle on which the Great Western Railway has been laid down—namely, that of obtaining—no matter (almost) at what cost—the easiest possible gradients, and thereby achieving the greatest possible degree of speed; and in the same principle we may find a key to most of those peculiarities in railway practice, for which this line has been so remarkable. The continuous bearings, the wide gauge, and the careful avoidance of curves of short radii, are all equally with the low gradients, among the number of means employed, to accomplish the grand object kept constantly in view—the formation of a line capable of realising the utmost speed which it is in the power of the railway system to produce. With respect to the width of gauge adopted by Mr. BRUNEL, our readers well know that it has been the subject of continued, and perhaps yet unsettled, controversy. To us it appears, that if it once be determined that nothing less than the highest speed shall content us, an increased width of gauge may be admitted to be among the means very likely to contribute to its accomplishment. For, admitting that there is but little probability of overturning a railway carriage in any case, still that probability cannot but be diminished by widening the base of the moving vehicle. With all imaginable care it is scarcely possible to keep opposite rails precisely level, or those on the same side of road exactly coincident with each other at the ends; neither are the wheels always turned true; and in all such cases of disparity and inequality the rocking effect is, from dynamical causes, much greater and more dangerous at very high velocities, with a high and narrow carriage, than with a low and broad one. *No speed* is perhaps too great for safety, if we can only ensure *steadiness* of motion. For reasons somewhat analogous, the danger of wheels running off the rails when travelling with great rapidity, is much diminished by a wide gauge. The greater the proportion of the weight of the load borne on the springs, is to the weight of the parts carrying the springs, the greater is the quickness with which the springs force the wheels down to the rail after passing an obstacle, and, what is of much greater consequence, the less is the load itself moved by the momentary elevations or depressions of the wheel from the irregularities of the road. An upward impulse, from an obstacle which at a given speed, with a high and narrow carriage, might lift the flange of the wheel above the rail, would, with one of a different construction, leave the flange still safe below it.

But then this greater width of gauge requires much besides to be adjusted in conformity with it. The greater load on each wheel needs a sounder foundation and stronger rails; the greater distance of the wheels, and consequent greater slip of the outside wheel on a given curve, make it necessary to reject many curves that may be used with a narrower gauge, to say nothing of wider embankments, tunnels, viaducts, &c. &c.

Again, it does not follow because it may be advisable for purposes of speed to adopt a wider gauge than that originally employed (when ten miles an hour was thought to be the greatest speed safely attainable!)—that the seven feet gauge is just the thing. Mr. BRUNEL has never, to our knowledge, favoured the world with a single reason for adopting the number of 7 feet, in preference to any other number, such as 5, 5½, 6 or 6½. The number 7 has still all the character it ever had of being an empirical number—adopted at hazard, and with far more reliance upon good luck than scientific calculation.

A still graver question remains: the Great Western Railway will, according to all appearances, be more expensive than any line yet constructed, arising chiefly from the great sacrifices made for the sake of accomplishing a first-rate degree of speed, but it may be fairly asked — was the superior advantage sought worth the extra cost? It may be urged that if in any case high speed be desirable, it is here—supplying, as the Great Western does, not only the means of communication between the metropolis and a port of high rank, and traversing for a great distance populous and productive districts, but forming part of the highway between the two halves of the world —that in short it is just the line to require the utmost speed compatible with a due regard for safety, and for the interests of the adventurers of the capital necessary to obtain it. But on the other hand, the sum spent in obtaining the extra velocity on this road compared with that on others (the Birmingham always excepted), is probably not short of a million and a half, while the time of the journey has been thereby shortened little more than an hour. If the effect should prove that so large a sum has been wisely laid out in effecting so inconsiderable an acceleration, it must be admitted to be one of the most remarkable facts which has yet occurred in the very singular history of locomotion.

We make this remark not for the purpose of disparaging the skill or foresight of Mr. BRUNEL, but for the sake of the bearing which this example may have on future constructions. To decide on the merits of an Engineer, after the facts are accomplished of which he could beforehand only make a guess, and after the experience has been gathered which he could not by possibility anticipate, is a kind of criticism much more remarkable for its cheap facility than for its justice; and to the full benefit of this remark, so far as it relates to the relation between speed and cost, we think the Engineer of the Great Western is fully entitled. All this, however, still leaves fully open the more important questions—how far should his example be followed? and what are the true terms of this most important relation?

It will be seen that we are now rather calling attention to the last head of these remarks, than pretending to do much in the way of discussing it; and we do so in the conviction that it will become a matter of very grave importance. It is impossible to look over a map of England without being at once convinced that the railway system has yet to receive an immense extension. Very important districts lie yet quite out of reach of the now indispensible celerity of this new mode of transit. The income and comfort of every man are the result of efforts made in competition with those of his fellows, and if so momentous an inequality in the conditions of the struggle be suffered to remain, as that which subsists between the old and the new modes of travel, it is clear that the backward districts will very greatly suffer. Increased facility of intercourse has, in all ages and countries of the world, conferred advantages, which no other circumstance or combination of circumstances, has yet been able to counterbalance.

With these views we look with great anxiety to the facts on which depend the questions—how cheaply can be made, and therefore how extensively can be spread, the branch lines by which remote and intermediate districts can reach the main lines of communication—and how near parallel lines of railway may be laid down, without wantonly damaging each other's interest in the population lying between?

We have before us the Prospectus of the Imperial Railway Company of the Brazils. We believe this is the first attempt to introduce

Digitized by Google

railway travelling into this extensive empire; but we have little doubt that, should it meet with but moderate success, it will prove the forerunner of a very wide, though perhaps slow, extension of the system throughout this most productive portion of South America. Shattered as have been the political and social relations of the people of this quarter of the world, by the frequent and bloody changes of the last twenty years, we record with great pleasure this first attempt to introduce a system which, by almost annihilating the difficulties of travelling, will tend to destroy the local prejudices out of which these barbarous convulsions spring, and will, we trust, eventually raise this portion of the globe to the commercial and moral rank its natural capabilities entitle it to take.

Without, however, dwelling too long or too fondly on the future, we are glad to find, from documents which we take to be trustworthy, that the enterprise has already the best prospects. The railway, which is to be constructed under a privilege granted by the Emperor, is intended to commence at Rio Janeiro, to skirt the province of St. Paul, whence crossing the town of Ignassu, it will strike the river Parahibn, and proceed to the towns of Pirahy, Barra, Mansa, Rezendo, and Campo Bello, its total length being about 100 miles. It will thus open an invaluable channel of intercourse between the coffee districts and their natural outlet—the port of Rio Janeiro.

That best of all proofs of the value of a railway enterprise—local support, is here evidently afforded. The land required for the railway, and the timber wanted for its construction, are given gratuitously by the landowners through whose property it will pass, and one-fourth of the necessary capital is subscribed for on the line of the road.

It is expected that the railway and its machinery will cost less than 10,000*l.* per mile. The shareholders unanimously require that its construction should be entrusted to an English Engineer.

To say nothing of either goods or the passenger traffic, the conveyance of coffee alone, at half the existing rates, will furnish, it is said, a satisfactory dividend. It is stated also, that large tracts of land in the neighbourhood of the intended line, fit for the production of sugar, now lie uncultivated for want of such a mode of communicating with the sea.

The difficulty chiefly feared, is that arising from the high rate of interest in the Brazils; since the inducement it furnishes to employ capital in private loans and discounting, may render it not easy to divert the necessary portion of it to this enterprise. Perhaps, however, this difficulty may be exaggerated; for, as the high rate of interest arises partly from a sense of general insecurity, many may be found to prefer investing their capital in an indestructible property, like a railway.

We cordially wish success to this undertaking. It may have to struggle at first with difficulties, arising from its remoteness from the countries in which the construction and use of railways have become familiar; but we apprehend it has within it the elements of great future prosperity.

A LARGE party of shareholders of the London and Brighton Railway accepted, on Tuesday last, the invitation of the Directors to a trip to Hayward's-heath, about 27 miles from town. Going and stopping the journey was performed in about two hours. The enormous cuttings and embankments, and the stupendous viaduct in the valley of the Adur—the necessary consequences of choosing the shortest route—produce occasionally a startling effect even on those accustomed to railway travelling. Perpendicular cuts of 90 feet deep contrast singularly in effect with embankments of corresponding elevation. At one moment we are at the bottom of a deep narrow perpendicular cleft, where we suppose that the little light we have comes somehow from above, and the next, we are high in the air, looking far over the picturesque scenery traversed by this singular line.

It is a pity anything should have marred the day's pleasure. Nevertheless, sundry of the invited found, or thought they found, reason to grumble that they had been asked to a pleasure party refreshments included, but that it turned out on that particular day the word "refreshments" meant only a crust of bread and slice of Cheshire, garnished with lettuce, served to the proprietors in an engine shed at the same table with policemen. They seemed, too, to think it unlucky that this new reading of the phrase should happen on this particular day; for if the trip had "come off" on the previous day they would have been "all right," for then it meant, as applied to Directors' friends, a further jaunt in carriages from Hayward's-heath to Brighton, and a sumptuous entertainment there—at whose expense, however, besides that of the shareholders, does not appear.

We had treated as much too absurd for belief the rumours which had reached us of an intended high rate of fares on this line. We now seriously regret to find that the fares advertised are among the highest, if not the very highest in England, being nearly 3½d. per mile for the first-class, and more than 2½d. per mile for the second. It may be, indeed, that the fashionable folks of Brighton have hit on this scheme for preserving the selectness of their society, but have they agreed to make good the consequent loss to the shareholders? The speed determined on to Hayward's-heath we find is about 18 miles per hour. Perhaps on a new line, and such a line, it may be wise for a short time to adopt this limit, but we apprehend it cannot long remain so.

The opening is advertised for Monday next. We have not heard, however, of the line having been yet inspected. The Directors and their Engineer may perhaps be very confident that Sir F. Smith will find nothing objectionable, and for the sake both of the public and the Company we wish it may prove so. But still—the sufficiency of the line has yet to be affirmed by some competent authority.

The final opening throughout is expected to take place in September. We wish every success to the undertaking, but are sure it will not be promoted by high fares.

—o—

WELL as some of the English railways have paid, and are paying, none of them (if we except the Liverpool and Manchester,) has yet yielded such handsome returns as two or three on the north side of the Tweed. The shares of the Ballochney Railway, on which 16 per cent. has been for some time paid, bear a premium of 232 per cent., and the Monkland and Kirkintilloch (including a bonus of 10s. per share) a premium of 125 per cent. The Garnkirk and Glasgow shares, which some months ago were only a little above par, have within these few weeks, risen to 15 premium—a rise which is supposed to be sufficiently accounted for by the fact that the traffic returns made up to the end of June, exhibit an increase of exactly one-third, beyond the corresponding period of 1840. The Glasgow and Greenock has commenced working so auspiciously, that its shares are already quoted at from 2 to 3 premium. The Edinburgh and Glasgow shares, in the prospect of the line being completed and opened in September, have risen progressively from 38 to 38½, 39, and 39½, and continue in steady demand.

—o—

THE *Bath Journal* states that the first trial passage through the Box tunnel was made with a single engine and tender at three o'clock on the morning of Wednesday, the 30th June (the day of the opening throughout) by Mr. Brunel, accompanied by the Government Railway Inspector-General, Sir Frederic Smith. The opinion of Sir F. Smith was, it appears, not altogether favourable to the sufficiency of the works, "but he consented to the line being opened on Mr. Brunel's guaranteeing its safety." To us, it seems ridiculous to talk of any individual guarantee, sufficing in such a case, for the protection of the public.

—o—

Mr. VIGNOLES, the eminent Railway Engineer, has been appointed Professor of Civil Engineering to the London University College, and will give his first course of Lectures during the ensuing winter. We congratulate the College on having secured the services of a gentleman of so much practical experience, as well as scientific knowledge.

—o—

THE Gosport Branch of the South-Western line is expected to be opened on the 26th instant. Sir Frederic Smith has made an appointment to inspect the line on the 15th and 16th instant, and will be attended in his investigation by Mr. Locke, who is coming over from France for the purpose.

—o—

THE Scotch capitalists, who have a high reputation for shrewdness in their money investments, have been of late among the principal purchasers of Great Western, South-Western, and Brighton Stock.

—o—

SELF-ACTING RAILWAY BREAK.—The attention of railway mechanists is at present much employed in devising means for the prevention of accidents. Among the contrivances designed for this purpose self-acting breaks occupy a prominent place. An invention of this kind by Mr. Robert Montgomery, of Johnstone, deserves the attention of railway engineers. Like most others of the kind, it is founded on the principle of bringing the breaks into action by the cessation of the pull on the carriage. A friction wheel is put on the middle of the axle to the cylindrical surface of which a friction band of steel is applied. The coupling rod of the carriage is connected with a strong spring similar to the buffer spring, and placed near it. When the carriage is not pulled by its predecessor this spring draws back the coupling rod, and by means of it the lever of the friction band, so as to bring the break into effectual operation. When the pull on the carriage is renewed the drawing forward of the coupling rod removes the friction band, and the carriage is left at liberty to move. A light rod with a ring handle at the side of the carriage, affords a ready means of detaching the lever of the friction band from the coupling rod, so as to render the carriage conveniently moveable when not in use.

THE STEAM OF THE SMARTEST NATION IN ALL CREATION.

To the Editor of the Railway Times.

SIR,—I have no doubt that you will feel honoured by being authorized to communicate to the public the following intelligence:—

As soon as I have completed the experiments on which I am at present engaged, with a view to the formation of an Artificial Rain Company in this country (you will see some account of similar proceedings in England in the late numbers of *Blackwood's Magazine*, in the article "Ten Thousand a Year"), I intend to devote my time to the publication of a treatise "On the superior effective Power of American Steam over all others of similar Pressure."

I cannot be expected to anticipate my volume by giving here the analysis of this most striking phenomenon. I will only say that the cause is not, as the learned Doctor Quicksilver has contended, the difference of atmospheric pressure on the opposite shores of the Atlantic, since a similar advantage in the effective power of steam attends the use of American steam-engines even when imported into Europe.

I need only instance the correspondence of Mr. Cocker in your columns of last September, where, after proving that in an American locomotive, steam with the *pressure* on the pistons of no more than 3,104 lbs. exerted an *effective motive power* of 5,000 lbs. at a velocity of 11 miles per hour, he states that the engine is "constructed and working under conditions entirely *different from those in ordinary use*." No doubt!

The author of a pamphlet on Craig's Rotatory Steam-engine, also an American importation, states (p. 23) that the power which "was actually obtained from the engine, was found to be greater than the steam used was *capable* by computation of giving out!"

I give these examples from two eminent and well known English authorities as proofs of the wonderful things in steam that are transacting unobserved beneath your very noses, and as indicative of the important and interesting nature of my forthcoming treatise.

I remain, Sir, with profound consideration,
Your most obedient servant,
DIABOLUS GANDER,
L. L. D. Ph. D. F. R. S. F. G. S. F. Mag. S.,
&c. &c. &c.

Philadelphia, 16th June, 1841.

THE GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I was well aware when I made the communication which appeared in your number of the 26th of June, that the statement therein contained would "be denied by the whole host of officials and sanguine shareholders."

It was to protect this latter most helpless class that I was induced to make the very important statement contained in that paper. It was with a view of enlightening the *bonâ fide* shareholders as to their real situation, of placing an array of facts before them which should lead them to distrust their own sanguine hopes and cause them to be wise in time and not continue to be as in all time before, at once the dupes and the victims of the cautious and crafty dealer and speculator, that I gave publicity to facts which I have the satisfaction to know have not been without good effect.

I *again* state that the cost of the Great Western will considerably exceed 7,000,000*l.*, that the expense of working, *if fairly stated*, will *exceed* 50 per cent. upon the gross receipts, and that such gross receipt will not exceed 10,500*l.* during the first two years computing from the day of its opening throughout. The discreditable practice of including in one return the receipts of the extension line to Bridgewater and the branch line to Cirencester seems to meet with universal disapprobation.

Being desirous that all the shareholders should be upon a par with respect to information, I think it right that they should be made aware that unless the receipts from these two lines exceed 1850*l.* per week they will be attended with loss instead of profit to the Great Western Company. I well know that these statements will be denied both by those with whom their wish stands for a reason, and by all whose self love or identity of feeling, blinds them to the comparative money failure of this line, but I am content to wait. I ask of the calm, equally with the sanguine, to note these statements, and to bear them well in mind; they will serve to check extravagant hopes in Summer and extreme despondency in Winter. If the accounts are kept separate the average receipts will not exceed 10,500*l.*; if confounded with the other lines the average will not exceed 73*l.* 13s. 0d. per mile, or 12,350*l.* per week, which is allowing 1850*l.* for rent, and the additional expense of working the tributary lines.

By the statements here made I am willing to stand or fall; and with an earnest warning to the shareholders to beware of the hopes and expectations put forth by parties who are either *sanguine*, *unsound*, or *insincere*.

I am, Sir, yours very respectfully,
IGNOTUS.

[We cannot help observing that this *explanation*, if so it may be called—just leaves matters where they were. "Ignotus" asserts that the cost will exceed a certain sum, and the receipts not amount to a certain other (average) sum; but he has not yet furnished any data by which we can judge of the correctness of these statements. He should not have hazarded such [assertions without being prepared to verify them; neither would we have published them had we not supposed (knowing Ignotus to be a gentleman well versed in railway matters) that he was ready to sustain them against all impugners.—ED. R. T.]

LONDON AND WOOLWICH RAILWAY.

To the Editor of the Railway Times.

SIR,—As the half-yearly meeting of the Greenwich Railway Company is near at hand, will you allow me a small space in your pages for the purpose of introducing the above subject to their notice. Although a mere tyro in the engineering art, I have had some experience in railway surveying, and still more in preparing estimates of cost: with this by way of preface, I beg to express my belief that the London and Greenwich Railway might be extended to a London and Woolwich one, and connected with a commodious steam-boat pier at the latter place for the sum of 300,000*l.* Supposing that I am correct, which I conscientiously believe to be the case, or even in error to the amount of 100,000*l.*, can there be a doubt respecting the expediency of the Greenwich Railway Company taking up the subject; on the contrary, does not all our experience in such matters favour the opinion that their present receipts would be at least doubled, whilst their expenditure, including mileage duty, would not be increased 10,000*l.* per annum.

Your constant reader and humble servant,
AN ENGINEER'S PUPIL.

July 5, 1841.

SIR GEORGE CAYLEY'S AIR BUFFER.

To the Editor of the Railway Times.

SIR,—I observe that Sir Frederic Smith in his evidence before the Committee of the House of Commons, states it to be a defect common to all the buffers he has seen, that they produce an *instantaneous* reaction the moment they receive the shock. Now, on referring to the description given in your journal of the air buffer of Sir George Cayley, the means of obviating this objection appears to me so obvious and simple that I can but attribute it to mere oversight, or to intentional avoidance of small details that the ingenious and scientific baronet has not himself pointed out how it is to be done. The buffer, I take it, was intended to be restrained from recoil by the addition of a ratchet; or perhaps the catch at the top was meant to perform this office, which it would do very well. The piston shaft could also be so formed as to accomplish the purpose most effectually. Again, as the shock is sudden, a small aperture at the bottom of the cylinder would but in a very small degree weaken the resistance of the air-buffer, while it would soon evacuate the condensed air, and relieve the ratchet from its strain.

Sir George Cayley, it must be remembered, has not pretended, in his very able Essay on the subject of railway accidents, to set forth the best possible manner in which the various contrivances suggested by him may be constructed, but has merely pointed out those general mechanical principles which can be brought to bear practically upon the safety of railway conveyance, and specified (*exempli gratia*) one mode by which each purpose may be effected.

I am, Mr. Editor, your constant reader,
PHILO.

Pall Mall East, July 5, 1841.

THE BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—An advertisement has been issued from the Directors of the Brighton Railway announcing that they will take passengers in two hours to Hayward's Heath, and four hours to Brighton, at the fares of 15s. and 11s. for the whole distance.

Now, Sir, if the Directors were all coachmasters, they could hardly have framed regulations more inimical to the interests of the railway. The two great desiderata are wanting, viz. speed and cheapness. The coaches are only five hours and the fares 20s. and 10s., the latter fare actually cheaper than the railway second-class. Can any thing be more absurd? Surely the whole distance might be accomplished in three hours.—1½ hour by rail and 1½ by coach, and the second-class fare should not exceed 6s. I do hope, Sir, you will notice this subject in your columns. Should the Directors persist in such an absurd system, I hope measures will be taken at the next meeting to unseat them.

Before concluding I wish to ask one question. Is the company to be charged with the expenses incurred on Monday last by taking 200 persons to Brighton and there treating them to sumptuous dejeuner with Champagne, &c.? If it is, I would just ask the Directors how they could in common fairness and decency invite the shareholders to Hayward's Heath on Tuesday last, and set them down to bread and cheese and beer only. It is true wine was to be had—but on the terms of 5s. per bottle, only. If the company is to bear the whole of these expenses, I think that you will agree with me that a more disgusting and offensive specimen of favoritism has seldom been exhibited. By inserting this letter you will much oblige, Sir,

Your most obedient Servant,
A BRIGHTON SHAREHOLDER AND CONSTANT READER OF THE "RAILWAY TIMES."

London, 8th July, 1841.

RAILWAY ERRAND BOY KILLED.—A lamentable accident attended with loss of life, occurred, on Saturday, at the terminus of the Grand Junction Railway, Birmingham. It appears that a lad named Henry Shaw, in the employ of the Company as errand boy, had been in the habit of getting on the engine which brings the half-past eleven o'clock train from Liverpool, and returning by it to Vauxhall to his dinner, although frequently warned of the danger of so doing, and enjoined not to persist in the practice. It is supposed that he must have done so unperceived on Saturday; and, the engine having been stopped to take up some wheels, it is conjectured that he was leaning over the side of the tender, when the sudden jerk from the engine being again put in motion, threw him across the rails, and the wheel of a waggon that was attached passed over him. The engineer, on being called to, immediately reversed the engine, when the wheel passed over the unfortunate lad a second time, and occasioned his instant death.—*Birmingham Advertiser.*

EASTERN COUNTIES' RAILWAY—WEEKLY PROGRESS SINCE THE 1st MAY, 1841.

WEEK, MAY 9–16.

No. of miles opened.	Length of time opened.	Estimated amount of weekly passenger traffic, on the principle of *doubling*, only the number of common road passengers at the most unfavourable season of the year. See "Utmost Confidence" Estimates of August last.)	Estimated amount of passenger traffic, supposing the number of passengers to be *quadrupled* during the most favourable season of the year, summer months according to the general experience of other railways.	Actual receipt from the Company's own proper traffic, no other being included in the "Utmost Confidence Estimates."	Deficiency. On the passenger doubling principle.	Deficiency. On the passenger quadrupling principle.	Estimated amount of weekly current expenditure.*	Estimated amount of weekly money loss out of pocket.	Profit which should and might have been realised from passenger traffic.†	Total amount of estimated weekly loss from money out of pocket and passenger profit not realised.‡	Number of stage coaches running for not less than seven miles parallel with the Railway. At opening of the Railway.	Number of stage coaches running for not less than seven miles parallel with the Railway. Now.
17¼	Since July 1, 1840.	£. s. d. 2078 17 8	£. s. d. 4157 15 4	£. s. d. 598 8 6	£. s. d. 1480 9 2	£. s. d. 3559 6 10	£. s. d. 945 0 0	£. s. d. 346 11 6	£. s. d. 3207 15 4	£. s. d. 3554 6 10	50	46!!!

TIMOTHY COCKER, Accountant.
1, Fact and Figure Buildings.

* This is my estimate, from all I have been able to pick up here and there on the subject, and I believe it to be rather under than over the mark. What the *actual* expenditure is to a shilling or so, the Directors can tell—*if they please*, and no doubt will—*if they think it will be to their advantage*.—T. C.

† From the amount in this column, however, there must be deducted the additional expense of carrying the greater number of passengers, which I assume *ought* to have been carried.—T. C.

‡ I have made no estimate of the loss from goods *not* conveyed, though that, too, must be considerable. In the "Utmost Confidence Estimates," founded, be it remembered, on data obtained by "actual enumeration at the most unfavourable season of the year," it was stated that 1,336 tons of goods, besides great numbers of cattle, sheep, and other live stock passed weekly *through Brentwood*. But though the line to *Brentwood* has been opened for a twelvemonth (5th July, 1841), no arrangements have yet been made for the carrying of either goods or live stock, and the returns are *nil*. So much again for absentee management!—T. C.

(*To be continued weekly.*)

THE EASTERN COUNTIES' ERRONEOUS REPORTS AND THEIR AUTHORS.

To the Editor of the Railway Times.

SIR,—Without seeking to justify the Reports which the Court of Queen's Bench have pronounced to be incorrect, I hope you will permit me to make a remark or two on the exceeding harshness of your therefore inferring, and still insisting (if not in words at least in substance), that the Directors must have issued them with a full knowledge of their incorrectness, and with a deliberate intent to deceive. Is it not more probable that they have themselves been deceived? We all know how much Directors, in such cases, are accustomed to rely on the representations of their officers, and how rarely to examine and judge for themselves. If one Director declares he has looked into a statement and is satisfied all is right, that is commonly enough to make it pass the ordeal of all the rest. Look at the rank, and station, and characters of the twenty gentlemen you accuse of grossly and wilfully misrepresenting the state of the affairs entrusted to their management! Ask yourself what motive they could possibly have for such misrepresentation. And be pleased, on the other hand, to consider how many motives, persons of such standing in society must have, not to forfeit that standing by any unworthy and degrading conduct. The Editor of the *Railway Times* is accused (how justly I presume not to say) of being actuated by motives of private resentment in his public hostility to these unfortunate Directors; but if the fact be so, the juster the cause of resentment, and the more intense therefore the feeling, that ought to make him only the more mistrustful of the soundness of his judgment, in any matter of dispute where they are concerned. Trusting you will receive these observations in the same friendly spirit in which they are meant,

I remain, Sir, your constant reader,
FAIR PLAY.

Reform Club House, 2nd July, 1841.

We should subscribe to the perfect reasonableness of all our friendly correspondent says on this painful subject, but for one material fact which he has omitted to give us the benefit of, namely, that we did not write the article complained of, accusing the Directors of "wilfully" misrepresenting the state of their carrying business, till after we had many times warned them during the preceding twelvemonth of the now admitted fact, that their published returns were erroneous and deceptive, and given them ample opportunity to set themselves and the matter right with the public. We submit that where men, after being so warned, persist in an ackowledged error, even charity should pause before it takes it for granted, that there was nothing wrong *intended*. We agree with "Fair Play," that persons of "such standing in society," as the twenty implicated in the present instance, must have "many motives," and strong ones too, for doing nothing to forfeit that standing; but we can suppose this case also—that *after* people have actually forfeited such a standing by a false step, they may think it better to persist in denying the step altogether, than to submit to the heavy consequences of confessing it. SUPPOSE FOR EXAMPLE CERTAIN LARGE SUMS OF MONEY WERE LENT TO THE COMPANY ON THE FAITH OF THE REPORT OF THE 28th OF AUGUST, 1839, REPRESENTING THAT THE COMPANY WERE NETTING A CLEAR PROFIT ON THEIR CARRYING BUSINESS OF 50 PER CENT., AND ON THE STRENGTH ALSO OF PERSONAL ASSURANCES FROM CERTAIN LEADING MEMBERS OF THE BOARD, THAT THE MOST IMPLICIT RELIANCE MIGHT BE PLACED ON THE ACCURACY OF THAT REPORT. Just *suppose* such a case! In the event of the Company being unable to refund, would not an action lay against the Directors personally, for recovery of the money, on the ground of fraudulent representation? Or, perchance, *an indictment for a conspiracy to defraud!*

Again, "Fair Play" overlooks that the case, as it was put by these Directors to the Court of Queen's Bench excluded altogether the question of *intention*. The Directors denied most positively that they had ever made any such representations as those ascribed to them! They never had pretended that they were making any "considerable profit." We were battling with a giant "impostor" of our own imaginary creation! The matter in issue therefore was simply this:—*Did the Directors say so or not?* Intent, good or bad, was wholly beside the question. The *fact*, the *corpus delicti*, was all that had to be proved. And if the twenty Directors, one and all, have deliberately denied that fact *on oath*, and the fact has nevertheless been proved against them (to the satisfaction of the Court) by documents under their own hands, what apology can any latent innocence of intention in one or two, or three, or even the whole batch, furnish for such conduct?

In order that no doubt may remain as to what these Directors have *sworn* in this matter, we subjoin an office copy of the entire affidavit made by one of their number (all the rest of the affidavits being to the same effect, and mostly in precisely the same words,)—selecting for exemplification that of Mr. R. C. Wyllie, because when he made it, he had ceased to be a member of the Board, and may therefore be supposed to have been less under Board influences at the time than any other of the affidavit-makers.

"Fair Play" alludes to "motives of private resentment." Certainly such motives do exist—we frankly avow them; but we must at the same time distinctly deny that we have ever failed to remember, that we are at liberty to make their conduct a matter of public observation, *only in so far as the public are interested*. We have never obtruded our private wrongs on the public attention; on the contrary, we have always studiously withheld all notice of or allusion to them. We have but waited for such public opportunities as the Directors themselves have afforded for presenting them to the public in their true colours, and have made of these opportunities but a fair and justifiable use. They have been frequent, it is true—nay, almost unceasing—but whose fault is that?—ED. R. T.

AFFIDAVIT OF MR. WYLLIE.

In the Queen's Bench.—Robert Crichton Wyllie, of No. 13, Dover street, Piccadilly, in the county of Middlesex, Esq., maketh oath and saith, that at the time of the publication of the article in a newspaper called the *Railway Times*, as next hereinafter mentioned, the following persons were Directors of the Eastern Counties' Railway Company, that is to say—Sir Robert Alexander, Bart., Samuel Anderson, Henry Bosanquet, Cornelius Butler, Edward Cropper, George Clapham, Robert Crosbie, Samuel Price Edwards, Thomas Gibbes, William Gunston, Charles Hood, David Hodgson, Richard Harrison, Laurence Heyworth, Henry Luard, Robert Mather, Daniel Mather, Theodore Woolman Rathbone, William Collings Wells, and Robert Crichton Wyllie; that the *Railway Times* is a weekly newspaper published every Saturday, and has an extensive circulation amongst the shareholders of the said Company, and amongst the public generally, and

Digitized by Google

that the objects of the said newspaper purport to be to give all such information regarding railways and Railway Companies as it is desirable should be made public, and to be in the nature of a railway organ to the public generally, that a number of the said newspaper called the *Railway Times* was printed, and on the 13th day of January last published, and purporting to be No. 163, Vol. 4, No. 7, of the said newspaper, and which in the 177th page thereof, contained an article beginning with the words, "we beg to direct the attention," &c., and ending with the words, "the career of so shameless a body of impostors cannot surely be of much longer duration;" that under the said Act of Parliament a general meeting of the shareholders of the said Company takes place half-yearly, at which written reports with accounts or balance sheets are read to the shareholders assembled, and are afterwards printed and circulated amongst the shareholders generally; that until the said line of railway had been open for six months, there was not any balance sheet of the traffic receipts and expenditure produced before or reported to the shareholders, but at the general meeting of shareholders held on the 28th day of August, 1839, the said railway having then been partially opened for a few weeks, the receipts for these weeks for traffic were stated, and it was also stated in the paragraph next set forth, that the current expenditure for working the line, according to the best calculations that could then be made, did not amount to 50 per cent. on the gross receipts; that the paragraph last mentioned was in the words and figures following, that is to say, "A statement of the traffic since the opening of the railway is annexed to this Report, but at this early period it is impossible to lay before the proprietors a detailed account of the current expenditure for working the line. Under all the disadvantages, however, of a first and partial opening, a temporary terminus inconveniently situated one mile and a quarter from High-street, Shoreditch, and an establishment nearly extensive enough for opening the railway to Brentwood, THE EXPENDITURE, ACCORDING TO THE BEST CALCULATIONS THAT CAN BE MADE, DOES NOT AMOUNT TO 50 PER CENT. ON THE GROSS RECEIPT, A RESULT WHICH CANNOT FAIL TO BE HIGHLY SATISFACTORY TO THE SHAREHOLDERS." That the current expenditure therein referred to was AFTERWARDS, and in the Report next mentioned, set forth in detail in the balance sheet as to traffic receipts and expenditure, annexed to the same Report, such details of expenditure expressly and intentionally as stated to the shareholders, not containing any items of charge for maintenance of way and depreciation of stock. That the Report lastly mentioned was made and read to the shareholders, at a general meeting of the shareholders, held on the twenty-seventh of February, one thousand eight hundred and forty, the line having then been partially opened for traffic during six months and upwards. And the annexed Report to the shareholders, was made and read to them at the next half-yearly general meeting of the said Company, held on the twenty-seventh of August, one thousand eight hundred and forty, when the said line had been partially opened during twelve months and upwards. And this deponent further saith, that the Reports aforesaid, with the traffic balance sheets annexed, appear to be the Reports to which allusion is made in the said article hereinbefore mentioned as the Reports of the Directors; and this deponent saith, that although the Directors did state, that exclusive of charges for maintenance of way and depreciation of stock, the current expenditure for working the line was less than the receipts from the line, YET THIS DEPONENT DENIES THAT THE SAID DIRECTORS HAVE EVER IN ANY OTHER MANNER IN THEIR SAID REPORTS INVARIABLY OR AT ANY TIME PRETENDED THAT THEY WERE WORKING THE SAID RAILWAY AT A CONSIDERABLE PROFIT, and this deponent positively denies that their representations on this head, or on any others connected with the said railway have been grossly or wilfully false or in any respect whatever untrue, or that the veracity or honesty of the said Board of Directors in any respect whatsoever connected with the said railway has ever been or can be justifiably impeached. And this deponent further saith, that this deponent, and according to the knowledge and belief of this deponent the said Directors have always been able, and are still able to show by facts and figures that any impeachment of their veracity or honesty is unfounded and false, and that they are not guilty of any want of veracity or honesty. And this deponent further saith, that this deponent and the said Directors have never in reference to the said railway been guilty of any imposture whatever.

ROBERT C. WYLLIE.

Sworn in Court the 28th April, 1841.

By the Court.

THE EASTERN COUNTIES' AFFIDAVIT-MAKERS—MR. SAMUEL ANDERSON.

To the Editor of the Railway Times.

SIR,—It is very kind in "A Merchant" to try and save his friend, Mr. Samuel Anderson, at the expense of his brother Directors; but for my part, I am of opinion that when a person of his own free will and choice, embarks in the same boat with any other number of persons, his only honourable course is to sink or swim with them.

But is Mr. Samuel Anderson really the very easy, innocent sort of person in this affair, which his apologist would have us believe? Did he only do as others suggested or advised? Is "A Merchant" aware that it was this very Mr. Samuel Anderson who made the motion at the Board for the prosecution of the *Railway Times?* Who stirred up the Board to take those proceedings which have in the judgment of all impartial lookers on, brought such everlasting discredit upon every member of it?

With the *getters up* of the affidavits—if any such there were—neither you, Mr. Editor, nor I, nor anybody else, save the affidavit-makers themselves, can have any concern. We have to do with the *swearers only.*

Twenty persons of such standing (*hitherto*) in society, that they did not seem to be much out of place, in holding the situation of Railway Directors, *denied on oath*—

"THAT THE SAID DIRECTORS HAVE EVER OR AT ANY TIME PRETENDED THAT THEY WERE WORKING THE SAID RAILWAY AT A CONSIDERABLE PROFIT."

Is this true or not? This, and this only, is the short and simple question to be answered.

Now the answer as furnished by "A Merchant" himself, is, that on the 28th of August, 1839, these Directors reported to their constituents that—

"THE EXPENDITURE, ACCORDING TO THE BEST CALCULATION THAT CAN BE MADE, DOES NOT AMOUNT TO FIFTY PER CENT. OF THE GROSS RECEIPTS." !!!

Can there be two minds as to the truth of the denial on the oath? I think not. At all events I have the satisfaction of knowing, that it is not with the Judges of the Court of Queen's Bench, that I am likely to differ in my own convictions on this head.

Mr. Samuel Anderson's friend assures us, that "a more honourable or better intentioned man does not exist." "*Be it so,*" as you say, Mr. Editor — *only with the slight exception aforesaid.* But passing over his claim to admiration on these high accounts, be it my humbler task to laud equally to the skies his great knowledge—his shrewdness in commercial adventure—his indefatigable habits of application—his *east-end* love of economy—and (as the fruits of all these) his rapid strides to the station of a grand *millionaire.* Everybody knows, that but four or five years ago * * * * * * * * * * * *

* And yet the same Mr. Samuel Anderson, within less than a couple of years after, is seen elevated to a seat at the Eastern Counties' Board, on the strength of holding Eastern Counties' stock to the amount of upwards of 2,000*l.*!

All honour to men who, like Mr. Samuel Anderson, can so suddenly achieve for themselves fortune and dignity! May Sam not, like too many other "Fortunate Youths," serve but to illustrate the old proverb—

"*Fortuna nimium quem fovet stultum facit.*"

I remain, Mr. Editor,
Your most obedient servant,
A DIVIDEND EXPECTANT.

Cornhill, July 6, 1841.

AMERICAN LOCOMOTIVE ENGINES.

To the Editor of the Railway Times.

SIR,—In your number for last Saturday, I observe a letter signed "W. S. Moorsom, Engineer," giving a statement of certain performances of the locomotive engine, *Philadelphia*, on the Lickey incline of 1 in 37.4 on the Birmingham and Gloucester Railway.

The duty performed by the engine, as stated, in the second and third trip, very nearly coincides with the statement made in your columns for the 22nd of August last, of two experiments made with the same engine at the same spot on the 10th August, which I presume were a portion of the same series of trials to which the attention of your readers is now again directed.

On the publication of the former statement a correspondence ensued between a writer under the initials "W. H. B.," and a person calling himself "Cocker," in which the former was at length left in undisputed possession of the field; having shown that to overcome the resistance of the load the pressure on the pistons of the engine must have equalled 97 lbs. per square inch—a very dangerous pressure. I need not now repeat the calculations, which apply to the statement of last week as well as to the one of last August; it is clear that the pressure on the boiler must exceed that on the pistons in proportion to the velocity obtained.

After the exposure to which I have referred, unfortunately supported as it was by the fatal explosion of the *Boston* engine on the same spot, it seems to me very bad taste—to say the least—again to bring forward at this moment the experiments of August, 1840.

The statement given last Saturday, appears to me from its vague form and limited information ineligible for the purpose of throwing any useful light on the important question of locomotive power. Definite data—such as the weight on the driving wheels—the quantity of water evaporated and of coke consumed—the repairs rendered necessary by the strain on the engine, are wanting. We are only given a statement of the gross weight hauled on several occasions; a statement, too, according to which the engine attained a higher velocity when the rails were "wet and dirty," than it did with a quarter ton less load when no such obstacle is remarked; a circumstance which alone may serve to determine the degree of credit due to the experiments.

If, instead of a statement of this description, Mr. Moorsom were prepared after six or twelve months trial of the *Philadelphia*, to come forward with a clear and candid table, stating the number of engines employed in working the trains up the Lickey plane; the cost of wages, fuel, and repairs incurred for them; the number of trips made per engine; the average weight of the trains; and any information on the weight of water evaporated to produce any given result (anything like the London and Birmingham locomotive tables lately published by Mr. Bury), he might do himself some credit, and enable the profession to arrive at some conclusion as to the prudence of working this plane by locomotive in preference to stationary power.

I confess that I have, in common with all those with whom I have conversed on the subject, very strong views on the subject myself—if not quite so vehement as your correspondent "R.G.B." on the 21st November last. The items of repairs and depreciation, I apprehend to be enormous; but any clear information on the subject will be thankfully received and candidly analysed by

Your faithful,
C. E.

6th July, 1841.

RAILWAY FARES.

To the Editor of the Railway Times.

Nisi utile est quod facimus, stulta est gloria.—(Phæd.)
"All useless science is an empty boast."

SIR,—The above was the maxim I had in view when I offered you my remarks on Mr. Ellet's Essay, which, though as I have already stated, it displays considerable skill and ingenuity in the author, is, nevertheless, from its utter unfitness for the object contemplated, and absolute worthlessness in practice, a lamentable instance in illustration of my present motto.

I certainly am not so devoted an admirer of scientific display, as to—

——"*wisely tell what hour o' the day,*
The clock does strike by algebra."—Query, *bray?*

or even—

"*By geometric scale,*
To take the size of pots of ale."

I leave such feats of intellect to those who gravely state that they prefer doing the commonest sum by algebra, as simpler than arithmetic. I must not, however, allow myself to be misunderstood, or permit my meaning to be misrepresented into an attack on the calculus, or an aversion to algebra. On the contrary, I value the calculus, as every one acquainted with it must do, as the most important of all means for the discovery of truth; but I am not, therefore, to allow my admiration to lead me into a blind worship, wherever it may be needlessly applied, merely "*dare pondus idonea fumo*;" to give the subject a fictitious value. My statement is matter of fact, that the majority of engineers are unacquainted with the calculus; that very few venture on the study; and that the greater part of those who do venture are disgusted with the apparent want of rigorous proof, and are deterred from prosecuting the inquiry from the fact that it does not afford to the mind of the *beginner* the same conviction as other branches of the mathematics. That I am not altogether singular in my opinion I shall now show. Among professional writers Gwilt says, "the fluctionary calculus is used by both authors (alluding to Emerson and Hutton); *this is little understood by the profession in general*, nor, indeed, is it absolutely necessary that it should be." Tredgold, no mean authority in such matters, I opine, states as follows:—"I have avoided fluxions in consequence of the very obscure manner in which its principles have been explained by the writers I have consulted on the subject." Surely if Tredgold was deterred from prosecuting the study by its *apparent* want of rigid proof, young gentlemen in the profession may be excused for being disgusted, even were it on account of its being "too tough" for them, as Mr. Townsend remarks. Among professedly scientific writers, Bishop Berkeley characterised a limiting ratio, as "the ratio of the ghosts of departed quantities." Dr. Thompson, author of perhaps the best elementary work on the subject, says, "while men of science, however, eagerly adopted the new discovery, and employed it to aid them in their investigations, the *principles* on which it is based by its great founders were far from giving general satisfaction, being regarded as *obscure* and *unnatural*, and throwing difficulty in the way of students." Professor Airy also remarks, "It is known to every one who has been engaged in the instruction at the Universities, that the results of the differential calculus are received by many rather with the doubts of imperfect faith than with the confidence of rational conviction."

I have, Sir, adduced these authorities in confirmation of my statement, because I consider that when a writer is taken to task for what he asserts on his own authority as fact, it is incumbent on him to show some foundation for his opinion. But individually, I am far indeed from being one of the objectors to the calculus. Whatever may have been the gap that formerly existed between the common and the refined analysis, it no longer exists. The most sceptical must now admit that the calculus, since the publication of Dr. Forbes's work, is derived synthetically from common algebra. But, as that work is of recent date, and is not generally used for instruction, the same difficulties beset the path of the *beginner* as formerly. It is not correct, as insinuated, that I condemn the use of the calculus in the present instance, because I do not understand it, for I have given much attention to the subject, but because no satisfactory result has been obtained to justify its use by Mr. Ellet.

The writer of the letter in the *Railway Times* of the 19th ult., signed "R. W. Townsend, C. E.," although, as he very choicely expresses it, he is not disposed to "*go the whole hog*" with his "Yankee friend," seems from the tone and style of his remarks, to have been not altogether unacquainted with the grovelling herd. I have never yet known in scientific inquiries capable of demonstration, that it was optional to "go the whole hog," or the half hog, at will. I always understood, and have been taught to believe, that if certain premises or axiomatic principles be admitted, every thing which should subsequently be deduced from them in a strictly logical or mathematical manner, must be assented to "without debatement further more or less;" and that the withholding our absolute assent to the whole of the deductions so made and demonstrated, would entail the forfeiture of our claim to the possession of reason. Suppose a person, after admitting the axioms of geometry, to state gravely that he believed a part only of Euclid; or, after assenting to the process employed in the solution of equations, to shake his head sapiently, and say, he could not credit the statement that some of the roots of an equation may be negative! The end of mathematical inquiry is truth. Is it optional in us to believe only a part of the truth? If I assent to the law which Mr. Ellet has assumed, I must of course implicitly believe everything which may be deduced from that law, in a strictly mathematical manner. But I have shown, and Mr. Townsend himself admits (though only to the extent of part of the hog), that the results derived from the hypothesis are erroneous. Now, finding as we do, that the several steps of the investigation are in themselves correctly derived from each other, what must be the obvious inference? That the assumed law is at variance with fact. Can we, then, assent either in part or as a whole, to what we know to be erroneous? Assuredly not, if truth be our object.

I request you, Sir, to bear in mind the circumstances under which my remarks on Mr. Ellet's essay were made. You had recommended it to your readers in very high terms, without alluding to the fact that the whole investigation was based on an assumed law. Upon perusing the paper, I found that to be the case; further, that the results arrived at were absolutely worthless in practice; and that the author in fact had arrived at no conclusion to warrant the publication of the paper. Such being my opinion deliberately formed, I was, and am still, at a loss to perceive in what consists its value. If it be of use, in what does that use consist? Can any one apply the formula to the case of the London and Birmingham Railway, for instance, and tell us what would be the most advantageous fare on that line? My remarks on the publication of such a paper may appear strong. I think them deserved. I do not however seek to withhold from the author my acknowledgement of his skill and ingenuity; on the contrary, I have admitted it fully. But, I am still of opinion, that the very possession of such powers by the author, should call for stronger animadversions on his conduct in publishing the essay, than had it been produced by one less gifted, who might in his ignorance have believed it to be really a solution of the question.*

My remarks have been stigmatised as an attack on Mr. Ellet. Such imputations, like Parthian arrows, must recoil on those who cast them. One who talks of *fair play*, as Mr. Townsend does, ought himself to *play fair*, and not to be the first to commit that which he affects to denounce in another.

Junius observes, that "It is a very common mistake in judgment, and a very dangerous one in practice, first to look for nothing in the argument proposed to us, but the motive of the man who uses it, and then to measure the truth of his argument by the motive we have assigned to him." Mr. Townsend seems to have proceeded in that manner. He starts with *assuming* my remarks to be an attack on Mr. Ellet; then with that notion fully impressed on his mind, views (if really in earnest) all I have written through his own distorted medium, the creation of an overheated imagination.

I shall now proceed to refute the charges made against my objections to Mr. Ellet's essay. After some gratuitous observations and garbled statements, the writer remarks, "so according to this theory of Mr. Bernard's, what Railway Directors ought to do is, to raise the fares until they drive all the passengers off the line, excepting the small number representing the highest grade π." This is a total perversion of my argument; for π does not stand for the number representing the highest grade, but for "*the greatest charge for conveyance which any grade of passengers can afford to pay.*" There must, therefore, be as many values of π as there are grades among the travelling community, and not one only as Mr. Townsend would make it appear. Perhaps it would have been clearer if Mr. Ellet had said "*which each grade*, instead of "*any* grade," can pay. But there can be no possible misconception of his meaning, for he further states, that "*the* problem would be readily solved; for we would then have only to apply the equations already deduced from heavy tonnage to each class, by inserting in the formulæ *the ascertained values* of π and *obtain from them as many* correct results as we should find varieties in the travelling community." Mr. Townsend has here misrepresented the case, so as to make it appear, that there was but one value of π at this stage of the enquiry. What he terms my theory is therefore totally at variance with any inference to be drawn from my statement. I am not singular in my notion, that by finding the several values of π, the limit for each grade, and the point from which any excess would reduce the number of passengers belonging to that grade, the problem would be solved in the readiest manner. The author himself states it to be the case; but was deterred from prosecuting the enquiry in that manner, on account of the supposed difficulty presented by the members of the different grades paying the same fare, though of widely different means. It is obvious, that if the fare be fixed at the very limit π for each class of the community, the receipts of the railway would be greatest; for this same limit π in Mr. Ellet's own language is "a sum which each individual, after considering all the circumstances, all the charges, the advantages sought, and the inconveniences to which he will be exposed, limits the amount that he will *rather pay* for his fare *than decline* the trip." Hence, by the definition, it is the charge which shall include travellers of each grade, and at the same time be the highest fare that would do so; and consequently the one for each grade producing the greatest receipts to the Railway Company. And, therefore, the sum of the limits must also produce the greatest sum of receipts.

The writer next makes some remarks tending to show that π is a function of the distance; but as he afterwards endeavours to prove it, I shall answer them on that occasion.

We are now told, that in default of evidence to the contrary, Mr. Ellet's law is a fair assumption. From this proposition I must altogether dissent. It is contrary to the correctness of mathematical investigation, to assume a law which cannot be proved to be preferable to any other, or to be consistent with reason and experience. Any other law of travel may be assumed with equal semblance of truth. Mr. Ellet has supposed, that the increase of travel is proportional to the decrease of fare. What reason has he for prefering it to this—the travel is proportional to the fare? A very different proposition, but one which seems to have quite as much claim to assumption as the former. We are next told, that "so long as hypothesis is suffered

* We must content ourselves with referring to the reasons we have before repeatedly given for differing *toto cœlo* with Mr. Bernard, with respect to the value of Mr. Ellet's Essay.—ED. R. T.

Digitized by Google

to take rank only as hypothesis there is no more powerful help to investigation existing." Very true: but it is contrary to the practice of mathematical inquiry to give to the world as *facts*, results derived from hypothesis only. This is the case in the present instance. By such a proceeding, hypothesis *is not* suffered to rank only as hypothesis, but is promoted to a higher office; and, therefore, by the writer's own showing, is not confined its legitimate use.

We are told, in the life of Newton, that when first the idea of gravitation occurred to his mind, he sought to *prove its truth*, and for that purpose naturally adopted the common estimate of the magnitude of the earth, at that time believed to be correct, but which was not so. The consequence was, that in the particular instance of the moon, the result he obtained indicated a force of gravity in the moon toward the earth, less by one-sixth than was necessary to produce the rate of motion actually possessed by that satellite. Another might have thought this but a trifling discrepancy, and might have taxed his ingenuity to account for it in a variety of ways; so as still to save the magnificent theory which it came so unseasonably to demolish. But, Newton was too single-hearted a lover of truth for this. In his mind, the refutation was complete, and he admitted it as such. He no longer beheld himself the discoverer of the secret mechanism of the heavens, and by an act of self-denial, more heroic than any recorded in the annals of intellectual pursuit, he dismissed the speculation from his mind for years, when, having obtained more correct data, he was enabled fully to demonstrate the truth of what before had been but matter of conjecture.

I have adduced this example, Sir, to show how widely different is the course pursued in the present instance from that of the highest authorities in science. Newton perceived the law of gravitation; he adopted it as an hypothesis; he immediately proceeded to an investigation that should *test the truth* of the assumed law. The result approached within a sixth of what he believed to be correct. Did such an approximation satisfy him? Did he seek to account for it? Did he give it to the world at all?—No! In obedience to the dictates of reason, and the laws that govern scientific inquiry, he forthwith gave up an hypothesis which was incapable of proof. Contrast his conduct on that occasion, when the result approached within a sixth of the supposed truth—a difference that might readily have been accounted for on the supposition of various disturbing causes—with the method pursued in the essay before us. We have here as hypothesis, a certain law of travel which cannot, to say the best of it, be proved to be correct; nor can it be shown, by sufficient reason, to be preferable to any other of the various theories conjecture may lead to. We are not only required to believe this law, but we are to receive, as facts, results derived from that assumed law; and which results, be it further observed, are in themselves wholly incapable of proof. In the present instance we have no evidence whatever to show that the hypothesis *approaches* at all to the truth, however remotely. It is then, surely, ludicrous in the extreme to require us to repose our faith on such an unsupported assumption. That would indeed be putting truth to an *auto da fé*. It would destroy truth.

We are next told, that what I term two distinct propositions are, in fact, one and the same; or rather, that the one is contained in the other: and the reasoning by which this assertion is supported, is about as satisfactory as to say, that a cabbage *is* green, because a cabbage *is* green. Further on, I am taxed with giving a proportion supposing "the entire number travelling (and not the increase or decrease of that number) to be proportional to the alteration in the fare," and which "of course leads when carried out to an absurdity * ") Nothing can show more plainly than this does that the writer sat down with the determination to cut up my critique, whether right or wrong. He either did not take the trouble to consider what he professes to correct, or, having considered it, he thought proper—to use his own mild and insinuating language—to "pervert" it to his own purpose. You shall now see whether I am guilty of the mistake attributed to me. The paragraph runs thus: "If we put F to desiguate the fare, N the number of passengers, f the *increase* of fare, and n the *decrease* in the number of passengers; we shall have, by the first, $F : f :: N : n$; or, $n = \frac{Nf}{F}$, equal to the *decrease* in the number of passengers." "Now, by the second, T is the number of passengers when o is the fare; consequently, if we substitute them for N and F in the preceding, we obtain $n = T\frac{f}{o} =$ infinity; that is the *decrease* in the number of passengers consequent on raising the fares, from zero to one cent. would be infinite. The number of passengers would in this instance be represented by T—infinity; a value less than nothing." Mr. Townsend admits that the porportion leads to an absurdity. His objection is, that I had given a proportion for the total number of passengers, instead of the increase or decrease. You now see by the foregoing extract, that my proportion *is* for the *decrease* of passengers, consequent on *raising* the fares. Hence, Mr. Townsend's objection is futile; and hence, by his own admission, the absurdity which consists in the impossibility of reconciling the two propositions with each other remains in full force. It also follows that the two propositions, being irreconcileable, cannot be contained in each other as Mr. Townsend supposes.

The writer next proceeds to consider the expression $\delta h = \frac{1}{2}\left(\frac{T}{t} + 2\,\delta h\right)$, as he states; but which ought to be $\frac{1}{2}\left(\frac{T}{t} + \delta h\right)$ The error, however, is of no consequence, as no further use is made of the expression. He then very speciously wishes us to consent to an alteration in Mr. Ellet's notation, as he calls it—but in reality to that writer's system altogether, by substituting it to represent the diminution in the number of passengers corresponding to increasing the fare 1 cent. *per mile*. This is very artfully done, merely for the purpose of enabling the writer to multiply the expression by h for the entire distance. This must obviously make the different terms of the expression functions of the distance. Though by substituting t for the diminution *per mile* that effect must be produced, it does not prove itself to be correct.

If Mr. Townsend admits the principles on which Mr. Ellet has based his investigation to be correct, he must also admit *all* the conclusions derived in a logical manner from them. But if on the other hand he differs from any one result, and cannot detect a flaw in the calculation, he must take rational dissent from the premises; and if he does dissent from them, he does merely what I do, who object altogether to the hypothesis. Mr. Ellet has proved in a correct manner, from his assumed law, that the constant $\frac{T}{t}$ *is not* a function of the distance. Mr. Townsend affects to prove that the same thing *is* a function of the distance. One statement only can be true. Do mathematics, then, prove a thing to be true and untrue at the same time? Mr. Townsend, by what he calls a slight change in the notation, has produced a change in the result; he must, therefore, by that slight change, have made an alteration in the hypothesis itself. Yet he is the avowed champion of that hypothesis; or, if not, to what purpose his laboured attempt to maintain it?

The point to which my observations were mainly directed, was the uselessness in practice of the results obtained. This was the aim of my remarks. Mr. Townsend admits, that "the usefulness of any of them is as yet problematical." If an avowed advocate admits, that the usefulness of a measure is as yet problematical, I think all disinterested persons, the public jury, will allow it to be more than doubtful—to be all but certain. For, had it been possible to show any manner in which the use would be apparent, the advocate would doubtless have taken care to bring it prominently forward. Such an admission on Mr. Townsend's part is, in fact, an acknowledgment of the justness of the value I have set on the essay in question, which I cannot but think utterly useless in practice.

We next meet with this announcement respecting the second and wider problem:—"On commencing these calculations, Mr. Ellet seems to have fallen into an error which runs through the whole of them." Here we perceive the original intention of Mr. Townsend's remarks. Having discovered several discrepancies in Mr. Ellet's investigation, he laboured to produce an exposition of them; but from my having been unfortunate enough to criticise the essay before he had concocted his paper, he naturally feels annoyed at having been forestalled in his letter. He now endeavours to snatch up the bone of contention from him who was the first to seize it. This, with great apparent *naiveté*, he admits to be the case—that he contemplated offering observations on the imperfection of the theory, but seeing that already done by another, he now feels disposed rather "to defend" Mr. Ellet, and, of course, as you see, to attack him who has been so unfortunate as to have gained the start in the path he intended to pursue.

The writer now attempts to throw fresh light on the subject, but in so doing involves it in greater uncertainty. He puts $T - \delta h\, t = y$ "the number of travellers derived from the grade π; this number, therefore, being *an unknown quantity*, renders the remainder of the calculations useless, unless it can be got rid of, or shown to be insignificant." So, then, at one fell swoop, the whole of Mr. Ellet's wider problem is overthrown. Strange to say, the writer overlooks the fact that his objection, if effective at all, is equally so against the first problem. That also must suffer the same fate. This is indeed a singular specimen of defence! Mr. Townsend seems quite appalled at my saying "what the constant quantity is, or in what manner it may be approximated to, we are not told." He would have us suppose that he understands and values Mr. Ellet's production. If so, perhaps he will have the kindness to state *what* the constant is, or give us an *approximation* to it. If he cannot, my observation will be justified by the fact.

It is next stated, that in quoting Mr. Ellet's final conclusion, viz., "add to the constant quantity which experiment dictates for the profit per passenger, the actual cost of his transportation, to obtain the gross charge to be exacted for his conveyance," I have substituted *experience* for *experiment*. I admit it to be so: but I did it wholly unintentionally, and can account for it only from the similarity in sound between the words. I think all will admit the results of experience to be more valuable than those derived from experiment; consequently, that my verbal error, for error it was, if of consequence at all, is rather in favour of Mr. Ellet's views.

Mr. Townsend then proceeds to comment on my statement, that to find the value of $\frac{T}{t}$ upon the hypothesis of travel by means of a certain experiment, when by that same experiment the *true* law (not the hypothesis) can be determined, is an absurd proceeding. He asks how I would proceed, and accuses me of absurdity. Yet he himself admits, that "a series of experiments would determine the law." Why, then, should we not compute the value of the constant from the *true* law of travel thus found by experiment, instead of doing so upon an hypothesis incapable of proof? Is not any other method of proceeding palpably absurd? I have also stated, and every one acquainted with the subject will perceive, that the constant $\frac{T}{t}$ occurs only in consequence of the form which the equation assumes from the hypothesis; and that my remark on the inutility of that constant when the true law shall be discovered, is well founded.

In proceeding to comment on the alleged property that the loss increases as the square of the departure from the charge, the writer shows himself to have had no definite ideas on the subject. He considers it "far from being a function of the ge-

Digitized by Google

neral law to be irreconcileable with it," and states that it may "easily be proved" by a little algebra. This little algebra we have, and a pretty proof it is. If anything were required to substantiate my statement, that a man may succeed admirably in puzzling himself and others in doing the *commonest* sum by algebra, this example alone would be sufficient. Notwithstanding that "it may easily be proved," we have some arithmetic and a little algebra to show that the loss *does not* increase as the square of the departure from the charge of maximum profit. But in the following *Railway Times* is a letter from the same writer, showing that the loss *does* increase in that ratio, and further that it is a function of the general law as stated by me. How the writer, if he really understood anything about the subject, could have made so gross a mistake after having recourse to figures, I am at a loss to determine. It will, however, show how little dependance is to be placed on display of calculation interspersed with algebraic characters; that, unless you watch carefully the assumptions so frequently had recourse to, the results may lead to the grossest errors.

Alluding to my second letter, the writer accuses me with labouring under the mistake of supposing that the entire number of passengers varies inversely at the fare. His reason for holding that opinion is curious, because "by the hypothesis adopted in this essay, if the amount of fare be *diminished* one-tenth, the number of *passengers* will be augmented one-tenth." Ah! ah! This is indeed a ludicrous reason, and about as convincing as to state, that sheep *are not* black, because they *are* black, and is not a jot less absurd. The reason given announces the *very reverse* of what it is intended to prove. I shall show it thus:—If the number of passengers varied inversely as the fare, we should have in the table alluded to,—

Fare.	Passengers.	Receipts.
10s.	100,000	£50,000
9	111,111	50,000
8	125,000	50,000
7	142,857	50,000 &c. &c.

Such would be the result if the number of passengers varied inversely as the fare. But in my table the receipts were successively 50,000*l.*, 49,500*l.*, 48,000*l.*, 45,500*l.*, &c., wherein the law of decrease is observable by inspection.

It appears, then, that Mr. Townsend is the person who has been guilty of mistake. Truly though perhaps unpolitely, did Cicero remark, that those who will deliver opinions on music or mathematics, without understanding those sciences, must talk nonsense. But the most extraordinary circumstance of all, is the unblushing effrontery with which the writer, in his second letter, states that, though I am right in considering the property alluded to as a function of the general law, I must yet have made the assertion *in ignorance* of the fact. Is this becoming language in one who has been guilty of the grossest misapprehension of the whole question—who has blundered egregiously, and now comes forward to explain it? Yet, with a self-sufficiency that can only excite a smile, this same writer has the assurance to accuse me of proving an assertion in ignorance. The table I gave showed on inspection the property alluded to. If such be the index of ignorance, what shall be the test of knowledge? A blind and reckless prejudice against the exposition of truth, perhaps, such as we perceive so conspicuously in Mr. Townsend's letter.

My object in giving the table alluded to, was to show that what was supposed to be a property peculiar to the charge of maximum profit, was simply a function of the assumed law—that it was a property applicable to any assumed fare, and not to the most profitable one only—and, therefore, if admitted, it must make every single fare that of the maximum profit; which is absurd. Hence the property or function of the hypothesis being evidently diametrically opposed to the truth, the hypothesis itself must, *a posteriori*, be erroneous. To this conclusion Mr. Townsend himself must arrive, if he admits that the property alluded to is a function of the general law. He now admits it. Consequently, the whole object of my remarks—to show that Mr. Ellet's hypothesis is incorrect and at variance with fact, has now been attained.

Mr. Townsend, upon consulting his *Horace*, will find that his errors are not confined to mathematics only. In his motto he has left out the word *bene*, which totally changes the sense. For, no one will admit, that he who has begun has half completed; but we may allow, figuratively, that he who has *well* begun has half done. Its applicability to Mr. Ellet's essay, however, ceases. For I stated, and I hope have proved, that he has not taken the right road, but has mistaken the path he should have trod in search of truth.

I trust, Sir, that I have now shown to your satisfaction and to that of your numerous readers, that in commenting on Mr. Ellet's essay, I was actuated solely by a desire to point out the unphilosophical method of procedure, and the unsatisfactory nature of the results derived from the investigation—results which in my opinion are very far from being sufficient to call for the publication of the paper.

The errors and mis-statements contained in Mr. Townsend's letter, and which I trust I have satisfactorily exposed, will tend further to convince you, that no investigation of the subject is likely to be attended with success, which is not in accordance with the rigorous principles of the inductive philosophy, to which alone we are indebted for the vast discoveries in science which the moderns have made.

I remain, Sir, your obedient servant,

C. E. BERNARD, C. E.

P.S.—I must apologise for not forwarding an answer sooner, on account of my absence from home.

THE MONEY MARKET AND RAILWAY PROSPECTS—THE GREAT WESTERN.

To the Editor of the Railway Times.

SIR,—The *Chronicle* of Saturday last states that there is at present a diminution of 3,777,981*l.* as compared with June 1839, in the issues of the various banking establishments of the country, joint-stock as well as private. As soon, however, as our present prospects of an abundant harvest are realized, this unnatural contraction on the part of the banking institutions will no doubt cease, and it may be hoped there will then be no further occasion to lament the depressed value of railway shares.

I have not had any opportunity of ascertaining whether Mr. Boult's work "on the Law and Practice of Joint-Stock Companies," enters fully into the question of the limited liability which the possession of an Act of Parliament confers on railway proprietors, as compared with the partners of other Joint-stock Companies which have not obtained any special Act of the legislature. Should Mr. B.'s work enter upon that subject it occurs to me that you might confer a considerable benefit on railway interests by giving that portion of it in your journal as an extract, for the public are not yet sufficiently aware of the advantage which railway proprietors generally enjoy in regard to the limitation of their liability beyond the shareholders in banks and other joint-stock concerns.* Until the Directors of the Great Western Railway may find it convenient to separate the receipts of the branches from those of the main line, it might be well if you would be kind enough to inform your readers what the amount of rent is which the Company pays for those branches, in order that by deducting it from the total receipts the amount properly appertaining to the trunk line may thus be readily ascertained.† The amount of weekly rent payable for the two branches does not, I imagine, exceed from 12 to 1,400*l.*, but this is a point on which many of the shareholders do not at present appear to be sufficiently informed. Notwithstanding the unfavourable nature of the weather during the past fortnight, the receipts of the Great Western line have continued so great as fully to justify the highest calculations that have ever yet been made in regard to it, and it may confidently be expected that the weekly receipts will reach 16,000*l.* during the present season.

If so a comparison with the early receipts of the London and Birmingham line would be most favourable to it.

In September, 1838, the London and Birmingham Railway was opened throughout, and its highest weekly receipt in that year was about 12,300*l.* In 1839, its largest receipt in any one week was, to speak in round numbers, 15,700*l.*, while in 1840, it had risen to 19,300*l.*, and in June of the present year, which is by no means one of the best months, one return has already reached 19,600; while bets are said to have been offered, that they will exceed 20,000*l.* during six weeks of the season.

These few facts ought surely to be sufficient to prove the rapidly increasing nature of railway income. It has been frequently stated that the railway receipts for the months of May and October may generally be considered as equal to an average of the season; and I believe the receipts of July and September will generally be found nearly equal to each other. The average receipts of the Great Western line for the four weeks of June, previous to its through opening, have exceeded 12,000*l.* per week, and supposing that event may only cause an immediate weekly increase of 2,000*l.*, the amount will yet contrast very brilliantly with 10,700*l.*, which was the first weekly receipt of the London and Birmingham after its final opening in September, 1838, about an equally favourable period of the season. These two lines being so nearly equal in regard to cost, extent, and natural resources, the conclusion to be drawn from the comparison appears irresistible, and almost equal in certainty to the solution of a mathematical problem.

Such, however, would seem not to be the impression in the market, where though the London and Birmingham shares are much too low, considering both its dividend and prospects, those of the Great Western Railway Company, as yet command only one-third of the premium which even they do.

I am, Sir, yours, &c.,

C.

London, 8th July, 1841.

* We shall take an early opportunity of making an extract to the effect desired.—ED. R. T.

† We shall do so next week.—ED. R. T.

LONDON AND GREENWICH RAILWAY.

To the Directors of the London and Greenwich Railway Company.

GENTLEMEN,—One word with you before your general meeting. Let me strongly advise you immediately to place the toll question upon some better footing. *Now*, whilst you have the sympathies of the public with you, and whilst the Croydon and Dover Railway Companies are indifferent to the subject—and not to wait until by perseverance in an unpopular course, you have sacrificed some thousands of pounds, alienated the good feelings of the public, and opened the eyes of the Brighton and Dover Companies to the matter. For be assured that some alteration, at no very distant period, is inevitable; and that you will find it easier to deal with the Croydon Company single-handed, than the three Companies united. Mind, I do not counsel you to do anything rashly: all I would at present recommend you to do, would be to pass some resolution in general terms investing your excellent Directors with full power to settle the question, in any way that they may think would be the most conducive to the permanent interest of the Greenwich Company. I am sure you may safely trust them with this discretionary power, and I feel certain that their enlarged views would lead them shortly to place the matter upon some footing infinitely better for the Greenwich Company, and more satisfactory to the public. At present your Directors, whatever their opinions may be, are fettered by the expressions of the proprietors at former general meetings. Give them full powers, and if the matter be not satisfactorily arranged, I am greatly mistaken.

Your obedient servant,

A PROPRIETOR.

London, July 8, 1841.

LONDON AND CROYDON RAILWAY.

Comparative Statement of Traffic between the two Years ending July 4, 1840, and July 4, 1841, showing the effect of raising the Fares during the latter year.

1839-40.	Number of Passengers.	Total Amount received.	Duty Paid.	Toll to Greenwich Company paid.	Amount of Duty and Toll paid.	Net Amount less Duty and Toll received.
		£. s. d.	£. s. d.	£. s. d.	£. s. d.	£. s. d.
Gross Amount..	570,269½	33,104 7 5½	1,764 13 7	5,932 3 3	7,696 16 10	25,407 10 7½
Fares raised about 20 per cent. on the 5th July, 1840.						
Gross Amount..	485,532½	31,883 10 11½	1,464 6 11	4,736 14 3	6,201 1 2	25,682 9 9½
		Decrease	300 6 8	1,195 9 0	1,495 15 8	
Increase on net amount received by the Croydon Company.....						£274 19 2

There is a difference in the number of annual and prepaid tickets issued in the two several years, which will consequently produce a small variation in the above results.

CROYDON AND GREENWICH RAILWAYS —TOLL QUESTION.

To the Editor of the Railway Times.

SIR,—Your correspondent "Modus," after admitting "that a personal toll of either 3d. or 4½d., levied indifferently on passengers of every class, bears very unequally on the lowest, and is indeed a striking picture of the inequality of the present Government tax,"—goes on to suggest "two modes of settling the compensation due to the owners of a terminal trunk railway." One of these modes is, "by a per centage on the gross traffic receipts," the other, by "a fixed annual rent," and, "in addition, a *small* sum for *every* person and *every* ton of goods carried over the line." As your correspondent has already condemned the latter of these two modes, and instanced the inequality of the pressure of the Government tax, than which it is not easy to conceive a *smaller sum*, I think we may dismiss it as inexpedient upon his own showing, and refer only to the former, or per centage plan, which he thinks "ought to be in something like a compound ratio of the length of the part run upon, to the length of the whole line, and of the comparative *cost* of this portion to the *cost* of the whole."

Now, Sir, if we leave out of consideration the last part of this case of compensation, namely *cost of construction*, which you have so well decided to be no element of the change to be made for fare or toll, and deduct likewise the cost of conveyance over the line of the toll receiving Company—we shall arrive precisely at the proposition made by the Croydon to the Greenwich Company, and rejected by the latter, as seen in their published correspondence, that is to say, "a division of the whole sum chargeable as fare between the toll-paying and toll-receiving Companies, in proportion to the length of their respective lines, upon which such fare shall be charged, reserving to the toll-paying Company a certain sum for indemnification of the cost of carrying its passengers over the line of the toll-receiving Company."* If this rule be applied to the existing fares to Croydon, and the present toll, it will be seen that this toll is commensurate with the highest fare of 2s., and consequently in excess with all lower fares; as thus, the length of the Greenwich line passed over by Croydon passengers, is exactly one-sixth of the length of the Croydon line, One-sixth of 2s. is 4d.; a deduction from this of the supposed cost of conveyance, (or 25 per cent.) would leave 3d.—the present toll. On the other hand, the Greenwich Company is entitled to a larger proportion of the fare upon all distances short of Croydon, because its length of line traversed bears a larger proportion to such shorter distances, and the Croydon Company, in fixing its present fares, has taken this circumstance into consideration, and these fares are now so regulated as to give the Greenwich Company, upon the whole, rather more than its just proportion of the traffic receipts, without reference to particular charges. This raising of the fares has, however, sufficed to check, effectually the natural increase of the traffic, and has thus proved detrimental to both Companies, and what the Croydon Company complains of is that this policy of the Greenwich Company entirely prevents the development of the resources of the Croydon line, by keeping up the fares to the level of the charges on the common road for a distance where the saving of time is comparatively of little importance. In self defence the Croydon Company is endeavouring to establish a traffic between New Cross and the west end of London, wholly irrespective of the Greenwich Railway, and should it succeed, the consequences to the Greenwich Company may be very serious, as there is little doubt that a large portion of the Brighton and Dover traffic will follow in the same direction.

I cannot conclude without expressing a wish that some tribunal could be found before which the case of dispute between these Companies, whose interests, if properly considered, are identical, might be laid, and a decision obtained. I believe the Directors of the Croydon Company would desire nothing more ardently than to be allowed to prove before such a tribunal the justice and expediency of the proposition which they have made to the Greenwich Company.

I am, Sir, your obedient servant,

A CROYDON PROPRIETOR.

July 7, 1841.

* Should the Greenwich Company affect to think that such a division of the fare would not produce so large a gross income as the present arrangement affords, the concluding paragraph of the letter offers guarantee to this extent—"We believe that a considerable falling off of the toll has been the consequence of the high fares induced by the refusal of the Greenwich Company to accept this proposal.

ADVERTISEMENTS FOR APPOINTMENTS.

To the Editor of the Railway Times.

SIR,—You have done much, and fought nobly in many a good cause, in exposing trickery and unfair dealing, and I would wish to draw your attention to a subject that of all others requires reformation, and which is of great importance to the mass of junior members of the profession. It has become common of late to advertise vacant situations on the various railways and other public works, and certainly no fairer or better plan for the proprietors could be adopted, for obtaining the services of the best talent and greatest experience at the time unemployed, and if the contests be fairly conducted it would be equally advantageous to the candidates. But what proportion, think ye, Mr. Editor, are so fairly conducted, and how many appointments have been made solely on account of the fitness of the parties offering? I have seen a good share of these matters, and have learned more from my friends, and can safely and confidently say—not one; not a single individual under these circumstances, has been appointed solely on the strength of his testimonials or recommendations.

But the grossest case of this description has occurred lately in the appointment of surveyorship of bridges to a western county. An advertisement for it appeared in the London papers in the middle of May, saying that all applications must be sent—on or before the 23rd June, and the appointment would take place on the 30th. Now, this appearing in the London papers, led to a conclusion that the magistrates either wanted a man removed from the sphere of local influence, or that they wished to encourage a person of talent to settle in the county. Again, that the appointment was to be made on a certain day, was a direct invitation to candidates to meet them at the place mentioned. I may remark, that the proffered salary was 300*l.* per annum; but as that included travelling and all other expenses, it is evident that little or nothing could be derived from it, beyond that it was a fine professional introduction, and as such it was eagerly contested. To canvass the whole of the magistracy of a large county was no inconsiderable task, (they amounted in this instance to upwards of 300), and the cost to some of the candidates could not be less than from 30*l.* to 40*l.*

It was frankly acknowledged by some of the magistrates that the appointment would not be given to a stranger, but to a certain person, at present residing in the county.

On the 29th, and not the 30th as advertised, the magistrates proceeded to the election; consequently but few of the candidates were present, and the Chairman, in opening the business, observed that there were a great number of candidates for the office, but that only the applications of those proposed and seconded by gentlemen present could be entertained; and as this course was previously unknown, except to the favoured parties, the strangers were of course put at once *hors de combat*.

There were only three regularly proposed and seconded, and their testimonials read, when a magistrate present, who seemed to have more curiosity than the rest, suggested that the names of the candidates, and the names of those recommending or giving testimonials should be read over also; and this farce was accordingly performed, though with but ill grace and unconcealed impatience. And how were they read? Names were miscalled—the names of our first-rate men jumbled together without remark, or without knowing or caring whom they were, or whom they recommended.

With the appointment made, I do not, cannot, complain; but I do complain, first that a fair field was not given to strangers after they had by the advertisement been especially invited, and I do also complain, that with competent men in the county and connected with them, such as those whose testimonials were read (one of whom was appointed), that any advertisement should have appeared at all. It served no purpose but to mislead and to induce many to incur an expense without having any chance whatever for the appointment.

Under these circumstances, allow me to ask whether the advertising parties are not clearly liable to an action for expenses and loss of time, from those whose applications were not considered, for it will be clearly understood that nothing in the advertisement, or any other announcement, implied that the applicants were to be proposed and seconded by magistrates; and in aggravation of this course the election was made previous to the day mentioned.

I write this in hopes that you may kindly insert it in your valuable paper, and this exposé may serve to show that the advertising system is all humbug, and that nothing can be gained through it, for it is merely used as a cloak.

I could mention at least a dozen other instances, if necessary (in one of which a broken down, half-bred, scion of the law was appointed to the superintendence of a railway), but this will, I trust, be sufficient to deter any one with an ounce of wisdom in his noddle from spending his cash or troubling his head with the advertisement columns of a newspaper, for I have never known a situation worth having, being given away to a stranger whatever his merits or fitness for it may have been. Yours, &c.

GRADUATE.

London, June 3, 1841.

THE BRIGHTON RAILWAY.—The Official Map and Section of this line is now published price 3s. on a large sheet coloured; folded in a cover 4s.; on linen for the pocket 6s.; and on rollers 5s. 6d. The extent of country, with all the railways shown in depth on this map, is from 30 miles north of the Thames to the English Channel, and it embraces in width a district of 54 miles.

Published by J. R. Jobbins, 3, Warwick Court, Holborn; R. Tyas, 8, Paternoster-row. Sold by J. Weale, and J. Cross, Holborn; Litts, Royal Exchange, and at the Office of the Railway Times.

Children under Ten years of age Half-price.

Passengers will not be conveyed from Brighton to Hayward's Heath, unless proceeding from thence by the trains.

Horses and Carriages being at the stations marked (C) a quarter of an hour before the time specified for the departure of a train, will be conveyed on this railway at—

For four wheel carriage	£0 15
For two wheel ditto	0 12
For one horse	0 14
For two horses	1 6
For three ditto	1 10

A train will leave Croydon for London at 8 30 a. m. and London for Croydon at 10 30 p. m.

In order to insure the certainty of conveyance throughout to Brighton, passengers must book their places the day previous at either of the under-mentioned booking offices—Griffin's, Oxford-street, Green Man and Still, Hatchett's, Piccadilly; 41, Regent-circus, Spread Eagle, ditto, Golden Cross, Charing Cross; George and Blue Boar, Holborn; Old Bell, Holborn; White Horse, Fetter-lane; Cross Keys, Wood-street; Spread Eagle, Gracechurch-street; or at the station, London-bridge; at all of which places parcels may also be booked.

Parties requiring post horses to meet them at Hayward's-heath on the journey down, or at Croydon or London on the journey up, are requested to signify the same on the previous day.

No fees are allowed to be taken by any servant of the Company on the line of railway, or any coachmen, guards, or porters on the road between Hayward's-heath and Brighton; and the passengers are requested to assist the Directors in enforcing this regulation, as any servant of the Company accepting any fee or gratuity will be immediately dismissed.

By Order,

THOMAS WOOD, Sec.

10, Angel-court, Throgmorton-street, July 3, 1841.

LONDON AND BIRMINGHAM RAILWAY.

—NOTICE is hereby given, That the Books in which Transfers of Shares of this Company are registered, will be closed from Friday, the 30th of July, to Saturday, the 14th of August, 1841, inclusive.

By Order,

R. CREED, Secretary.

Office, Euston Station,
9th July, 1841.

LONDON AND BIRMINGHAM RAILWAY.

—NOTICE is hereby given, That the August Half-Yearly General Meeting of the Court of Proprietors of the London and Birmingham Railway Company will be held in London, at the Euston Hotel, Euston Station, on Friday, the 13th of August next, at Eleven o'Clock in the forenoon. The Chair to be taken at Twelve o'Clock precisely.

GEORGE CARR GLYNN, Chairman,
JOSEPH F. LEDSAM,
Deputy Chairman of the Board of Directors.

By Order,

RICHARD CREED, Secretary.

July 9th, 1841.

ROYAL AGRICULTURAL MEETING, LIVERPOOL.

—Persons desirous of attending the proposed meeting, or of forwarding cattle or agricultural implements to the show, by Railway, are requested to send the earliest intimation of their intention to the Secretary of the London and Birmingham Railway, Euston Station, London, for places situated on the line between London and Birmingham, and to the Secretary of the Grand Junction Railway Company, Liverpool, for places situated between Birmingham and Liverpool.

And all such persons will be pleased to give full information as to the extent of accommodation required, with the intended time and place of departure, that due provision may be made for the same in the order of application, the earliest applicants being entitled to the preference.

By Order of the respective Boards.

5th July, 1841.

PARISIAN BITUMEN PAVING COMPANY,

MILL WALL, POPLAR.—The Directors of this Company take the earliest opportunity of returning their best thanks, on behalf of the Shareholders and themselves, to their friends and neighbours for the assistance rendered by them on the occasion of the fire which took place at their works on the morning of Monday last; they are at the same time happy to state that a large quantity of their Bitumen being uninjured, they are enabled to undertake work to any extent as heretofore at the following prices:—

	s. d.
Covering viaducts, arches of railways, &c., per square yards, 1¼ inch thick	4 6
Paving pathways, kitchen cellars, granaries, malt-houses, warehouses, &c., 1¼ inch thick	4 6
Paving barns, court-yards, tun rooms, wharfs, stables, &c., 2 inches thick	5 6
Paving garden walks, &c., ¾ inch thick	3 6

The above charges include the cost of carriage within three miles of the works, beyond that distance the additional cost must be borne by the parties by whom the work is required.

WM. MACKENZIE.

ANTI DRY ROT COMPANY. — KYAN'S PATENT.

—It having been widely circulated to the prejudice of this Company, that some of the Kyanised Timber used by the direction of Mr. Barry, in the College of Surgeons, Lincoln's Inn Fields, in 1835, had shown symptoms of decay, Messrs. Pearse and Guerrier, the respectable builders in Holborn, were requested to inspect the building, and ascertain the state of the timber, and they have since delivered the following

REPORT.

In reply to your inquiry of the 22nd instant, we beg to say, with the most perfect confidence—that there is no appearance whatever of dry rot in any part of the College of Surgeons, in Lincoln's Inn Fields. The Kyanised timber was but partially used in that building by Mr. Barry's direction, and that principally in the Theatre and Museums, but no part of the deals used in the joiner's work was prepared by Kyan's Patent, except the flooring of the Theatre, and that appears to stand better than any of the other floors, and although we used some of the greenest deals in our stock, the floors shrunk less than those that had been seasoned for several years; therefore we are quite satisfied that the report you allude to is a false one.

PEARSE and GUERRIER.
261, High Holborn.

24th June, 1841.

SOUTHAMPTON DOCK COMPANY.—

TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are prepared to receive Tenders for the Loan of Money, to be secured upon Mortgage of the undertaking, and of the Rates and Tolls arising therefrom, under the provisions of the Company's Act of Parliament, in sums of not less than £200, and for the terms of 3, 5, or 7 years, on interest at the rate of £5 per cent. per annum, to be paid half-yearly at the banking-house of Messrs. Williams, Deacon, & Co., London. The Tenders are to specify the sums, and the term of years for which the same are proposed to be lent, and are to be addressed to the Secretary, at the Company's Offices, No. 19, Bishopsgate-street Within, London.

By order of the Court of Directors,

GEO. SAINTSBURY, Secretary.

Southampton Dock Office,
19, Bishopsgate Within, June 3rd.

SOUTHAMPTON DOCKS.—NOTICE is hereby

given, That the Half-Yearly Interest, computed to the 30th ultimo, at the rate of £4 per cent. per annum, on the capital of the Company actually paid up, will (pursuant to the Act of Incorporation,) be paid to the Proprietors, at this office, on and after Saturday, the 10th instant, between the hours of 12 and 3 o'clock.

The Directors avail themselves of this opportunity to acquaint the Proprietors at a distance, that the works of the Tidal Dock proceed with unremitted energy. The number of men now employed exceed 1,700, with steam and horse power in proportion; and all requisite means are using to accomplish the opening of the dock this autumn.

By order of the Court of Directors.

GEO. SAINTSBURY, Secretary.

19, Bishopsgate-street Within, London, July 1, 1841.

LLANELLY RAILWAY AND DOCK COMPANY, 59, Old Broad-street, London, June 26, 1841.—

The Committee of Management of the Llanelly Railway and Dock Company give notice, that, pursuant to the powers of the Act of Parliament in that behalf, they do hereby make a CALL of £5 per share on each share subscribed for, or held by the several proprietors of stock in the above undertaking; and such call is to be paid to Messrs. Cocks, Biddulph, and Co., bankers, 43, Charing-cross, London, to the credit of the Company, on or before Thursday, the 15th of July next.

By order,

JOHN BIGG, Secretary.

THE THAMES TUNNEL IS OPEN DAILY,

(Sunday excepted), from Nine o'Clock in the morning until dusk. Entrance is on the Surrey side of the river, close to Rotherhithe Church. The Tunnel is lighted with Gas, and visitors can walk up to the Shield, now advanced under the Company's wharf, at Wapping, and which can be exhibited only a short time longer, owing to the junction of the Tunnel with the shaft at Wapping having been made. Admittance One Shilling each.

J. CHARLIER, Clerk to the Company.

Company's Office, Walbrook-buildings,
Walbrook, July, 1841.

N.B. Conveyances to Rotherhithe, by Omnibus, from Piccadilly, Charing Cross, Fleet street, and Gracechurch-street. And by Steam Boats from Chelsea, Vauxhall, Lambeth, Hungerford, Old Shades Pier and London Bridge, to the Tunnel Pier at Wapping. Books, with plates descriptive of the works, are sold at the Tunnel, price One Shilling.

SPECIFICATIONS OF RECENT PATENTS.

The MECHANICS' MAGAZINE, No. 935, published this day, price 3d., contains abstracts of the following recent patents:—Von Rathen's, for certain improvements in fire-grates, and in parts connected therewith for furnaces for heating liquids; Jones's, for certain improvements in carding engines, for carding wool or other fibrous substances; Coles's, for improvements in making or manufacturing tanks and other vessels, of slate, stone, marble, and other materials, and in fitting and fastening such materials together; Baillie's, for improvements in locks and the fixings or fastenings belonging thereto; Mackelcan and Murdoch's, for certain improvements of, or belonging to, tables, a portion of which is applicable to other articles of furniture; Newton's, for certain improvements in looms for weaving.

Also, descriptions, with engravings, of Mr. T. Burstall's patent re-acting steam-engine; Proposition in projection; Electrotype aeal copying process; Performances of the Cornish steam-engines; Pilbrow's condensing cylinder steam-engine; the Thames steamers; Improvements in pianofortes; Galvanic plant protector; Question in mechanical geometry proposed; Statement of the performances of the locomotive engine *Hutchens and Harrison*, on the Philadelphia and Reading Railway; Mine ventilation.

Mechanics' Magazine, Vol. 34, illustrated with nearly two hundred engravings, is now ready, price eight shillings, in boards.

Published at the Mechanics' Magazine, Patent, and Designs Registration Office, 166, Fleet-street, and sold by all Booksellers and Newsmen.

*** Intending Patentees, or Patentees of unspecified inventions, may have every needful information and assistance on moderate terms, by application to the office of this journal; where also may be consulted the only complete Registry extant, of patents from the earliest period, (A. D. 1617,) to the present time.

DUBLIN AND KINGSTOWN RAILWAY.—SALT-HILL HOTEL and TAVERN, Kingstown. The Directors of the Dublin and Kingstown Railway Company are prepared to treat with parties willing to become Tenants to the above-named Establishment, the property of the Company, situated near the Kingstown Terminus, commanding extensive views of the Bay of Dublin and the surrounding scenery, and convenient to sea bathing.

The house at present is fitted up principally as a first-rate tavern, containing two great public rooms, 50 feet long by 22 feet wide, besides other good-sized dining and reception rooms. There are also a few sleeping and sitting rooms. Plans have been prepared for an addition to the hotel department, which could be erected for £4,000, and which, when completed, would afford an additional accommodation of 26 rooms. The establishment would then consist of the great rooms already mentioned, 23 bed-rooms, and seven or eight dining and reception rooms, with bath rooms, closets, and all other suitable accommodation. The Directors of the Company will treat on very liberal terms with any person proposing to become tenant who would be willing to invest the sum necessary for the erection of the proposed addition, and who would be qualified to conduct such an establishment in superior style.

Communications to be addressed to the Directors, at the Company's office, No. 48, Westland-row, in the city of Dublin.

PROSPECTUS OF THE MEERBROOK SOUGH COMPANY, incorporated under an Act of Parliament passed in the 4th Victoria.

CAPITAL—£20,000, in 400 Shares of £50 each. Deposit of £2 10s. 0d. per Share.

DIRECTORS.

Francis Hurt, Esq., M. P.	Richard Hurt, Esq.
The Rev. Philip Gell.	The Rev. John Wolley,
Charles Hurt, Esq.	J. H. Pidcock, Esq.

BANKERS.

Messrs. Arkwright and Co., Wirksworth.

The object of the present Company is to carry forward the Meer Brook Sough, a work which commenced in the year 1772, for the purpose of draining the extensive and rich mineral field of Wirksworth, in the county of Derby; and also for working the several mines connected therewith. The Sough has already been driven a distance of two miles, or thereabouts, from the river Derwent to within a short distance of the ancient mineral field. When it shall have been driven a short distance further, there is every expectation of affording relief to the mines within the valley, which are known to contain large and valuable quantities of lead ore. In these works have already been expended £30,000 by the present Proprietors, and those they represent, to whom, under the provisions of the Act, 240 shares have been allotted, leaving 160 shares to be now disposed of.

By the Act, the Company are empowered to receive as compensation a certain portion of the Ore obtained from every mine relieved from water by aid of the Sough, not exceeding one-sixth, a proportion which leads to the expectation of affording a large and ample remuneration to the Company for their capital employed. In addition to this, it is also confidently expected the Company in the progress of the Sough will meet with valuable veins of Lead Ore, which they will be entitled to work, and which, according to the report of experienced miners, will be a considerable, if not the most important, portion of their revenue.

To those who are unacquainted with the local situation of Wirksworth and its neighbourhood, it may be proper to mention that the mines are numerous, and were profitably worked down to their present level about sixty years ago. They have since that period been lying dormant, in consequence of being inundated with water, and without the possibility of relief, except by aid of this Sough, the progress of which has been for many years impeded by legal objections, now entirely removed.

The works are by the Act required to be conducted under a Directorship of six proprietors, to be chosen annually by the proprietors at large; no person who is not possessed of five shares can be a Director. The Company being incorporated, no Shareholder can be held responsible beyond the extent of his share in the capital not paid up; the calls per Share are not to exceed £5, and to be made at intervals at not less than three months, of which twenty-one days' notice is to be given.

Applications for shares to be made to Messrs. Simpson and Frear, Solicitors, Derby; or P. Hubbersty, Esq., Solicitor, Wirksworth, on or before the 12th day of July next, after which the Directors will proceed to allot them.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.—TENDER FOR LOANS ON DEBENTURES.—The Directors of this Company are ready to receive Tenders of Loans of Money on Debentures to be issued under the provisions in the Act of Parliament, and secured on their undertaking, in sums of not less than £200 for terms of four, six, or ten years, on interest at the rate of five per cent. per annum, payable half yearly.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's-street, Bank, London, or Cirencester. A limited sum only is required.

By order of the Board of Directors,
A. MERRICK, Secretary.

Cirencester, 5th May, 1841.

There is a net revenue of £17,000 per annum, payable half yearly, from the Great Western Railway Company, for the use of the line from Swindon to Cirencester, applicable to the payment of the interest on the debentures issued by this Company.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, TINNING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad-street, City; 69, Princes-street, Leicester-square; Manufactory, Mill-wall, Poplar; and also of the following Agents:—

Robertson and Co., 12, Goree Piazzas	Liverpool,
Mathias Dunn	Newcastle-upon Tyne
Joseph Bothway	Plymouth.
John Thompson and Co.	Wigan.
J. T. Tregellas	Truro.
Thomas Mooney and Son	Dublin.
Coates and Young	Belfast.
James Kibble and Co.	Glasgow.
James Gunn	Leith.
John M. Beatts, 14, Clement's-lane, High-street,	Dundee.

This rope has been in use for standing rigging in her Majesty's navy, and in a great number of merchants' ships for upwards of five years, and is giving the highest satisfaction; the rope is also employed in various mines and railways in different parts of the kingdom, but reference is especially made to the Blackwall Railway, where its capabilities have been most severely tested, for although it has been in use upwards of ten months, and has travelled a distance nearly equal to the circumference of the earth, it is to all appearance as good as when first applied.

LONDON AND BIRMINGHAM, GRAND JUNCTION, LANCASTER, MIDLAND COUNTIES', NORTH MIDLAND, YORK AND DARLINGTON RAILWAYS—In connection with the above lines of railway, places can be secured by Mails to

Edinburgh,	Stratford-on-Avon,	Shrewsbury,
Holyhead,	Carlisle,	Lichfield,
Newcastle-on-Tyne,	Bangor,	Brackley,
Banbury,	Leamington,	Warwick.

Also by Coaches to

Ashby-de-la-Zouch,	Newcastle-on-Tyne
Atherstone,	Northampton
Bangor,	Newark
Buckingham	Newport Pagnel
Bourne	Oxford
Brackley	Oundle
Boston	Olney
Banbury	Oswestry
Carlisle	Peterborough
Deeping	Stamford
Edinburgh	Sleaford
Folkingham	Shrewsbury
Grantham	Spalding,
Harborough	Stratford-on Avon,
Holyhead	Thame,
Kettering	Wellingborough,
Lincoln	Weldon,
Leamington	Winslow.
Lichfield	

From the

Spread Eagle, Gracechurch-street.
Swan with Two Necks, Lad-lane.
Cross Keys, Wood street.
Spread Eagle, Regent's-circus.
Golden Cross, Charing-cross.
George and Blue Boar, Holborn.
Griffin's Green Man and Still, and
The Euston Station.

HORNE AND CHAPLIN, Agents.

Parcels for 8½ p.m. Mail Train, viz. Boxes, Trusses and General Merchandise, received at the above Offices until 7 p.m.; Solicitors' and light Parcels until 7½ p.m.

Omnibuses to and from every Train, Fare 6d.

Post Horses for hire may be had on application at the above Offices, to convey Carriages to or from the Railway and any part of London (within 5 miles) including the driver, 10s. 6d. each pair.

TO GAS COMPANIES.—A Person aged 30, who has been for several years practically engaged in the Gas Manufacture, has erected and superintended Gas Works, both at home and abroad, and is now Manager of a considerable Gas establishment in an English country town, is desirous of removal to a similar situation in any of the larger towns, as Liverpool, Manchester, Bristol, Bath, &c. Satisfactory testimonials and references. Apply by letter, addressed to P. B., care of Mr. Robertson, *Mechanics' Magazine* Office, 166, Fleet-street.

TO RAILWAY AND MINING COMPANIES, ENGINEERS, AND OTHERS.—Mr. R. K. DAVIS respectfully announces, that he has received instructions to submit to Unreserved Sale by PUBLIC AUCTION, on Friday, 23rd July, at 12 o'Clock, at the Mart, Four Locomotive Engines and Three Tenders, adapted to the common Guage, manufactured by Messrs. Braithwaite, Milner, & Co. upon Berry's Principle, similar to the Engines in use on the London and Birmingham Railway; also a quantity of New Boiler Tubes and other requisite Materials for Repairs. They are now lying at the Marble Crane Wharf, St. Katherine's Dock, having lately arrived from the Continent, where they have been in use a short time, and are not for sale on account of any defect in their construction, but in consequence of the Company to which they belong ceasing their operations.

May be viewed Seven Days preceding the Sale, and Catalogues obtained of Mr. R. K. Davis, Auctioneer, 68, Mark Lane.

RANKIN'S PATENT WOOD PAVEMENT.—TO PAVIERS AND OTHERS.—Country Licences for the use of this invention may be obtained on application to Messrs. Millard and Adams, Cordwainers'-hall, London.

HAMBRO' WHARF, near SOUTHWARK BRIDGE, THAMES STREET.—Goods conveyed by Railway to and from Manchester and Liverpool, including Cartage and Delivery in London, at the following reduced rates:—

	Per Ton
Grain, Timber, &c.	55s.
Beer, Hides, Soap, Sugar, &c.	60s.
Raw Coffee, Rice, Earthenware in Crates, &c.	62s.
Bales, Grocery, Oils, Tea in Chests, Wool, Paper, &c.	65s.
Drapery, Drugs, Eggs, Glass in Crates, Indigo, &c.	70s.
Cochineal, Ripe Fruit, Raw Silk, Toys, &c.	80s.
Feathers, Millinery, Furniture, Hats, and similar Articles	100s.

Warrington, Whitmore, Stafford, and Wolverhampton in proportion.

CHAPLIN & HORNE,
Agents to the Grand Junction Railway Company.

FLEETWOOD DOCKS.—PRESTON AND WYRE RAILWAY, HARBOUR, AND DOCK COMPANY.—Incorporated by Act of Parliament.—Issue of Shares (bearing £5 per Cent. Interest) for making Docks, &c.

The Railway having now established itself as a good Investment, with profitable and daily-increasing returns, and the Harbour Works being in a state of great forwardness, the Directors have determined at once to issue a portion of the remaining 4,000 £50 Shares for the formation of Docks and other Works, which the daily-increasing commercial traffic of the port shows will not only be a lucrative investment in itself, but must materially enhance the returns both of the Railway and Harbour.

The mode the Directors propose to pursue in the issue of new Shares will be to require only a payment of £5 per Share on each of these new £50 Shares on their first appropriation, with a further call of £5 per Share every three months, till the whole £50 is paid; such calls to carry interest at the rate of £5 per cent. per annum payable half-yearly, until the whole of the calls are paid, the holders of such new Shares having the privilege at any time by paying up their Shares in full, to come in and participate in the dividends with the old shareholders in lieu of such interest, and as soon as they shall have paid up all their calls, to elect whether they will take such dividends, or continue to receive a priority of interest at £5 per cent. per annum out of the profits of the Company.

As the Railway is now paying a fair profit, which profit it may be confidently expected will be steadily and regularly increased, and the calls on such new shares are spread over a space of two years and a quarter, the present arrangement offers an unusual and most important mode of investment, at once securing to the holders £5 per cent. on their money, with an opportunity of receiving the dividends in lieu thereof, whenever those dividends shall exceed the amount of the interest.

Applications for Shares, to be made at the Company's Offices at Fleetwood on Wyre, Lancashire, and No. 11, King William-street, London, on or before the 20th day of July next.

By order of the Directors,
JOHN POWER, Secretary.

23rd June, 1841.

THE LONDON AND BLACKWALL RAILWAY COMPANY.—NOTICE is hereby given, That a SPECIAL GENERAL MEETING of this COMPANY will be held at the London Tavern, Bishopsgate-street, in the City of London, on Friday, the 16th day of July inst., at Eleven for Twelve o'clock precisely, to consider and determine on the Raising of the Additional Capital and Moneys, which, by the Act of Parliament of the 4th Victoria, cap. 12. the said Company are empowered to raise by the issue of new shares, and by mortgage or bond; and to determine whether the amount which the Company are thereby empowered to borrow on mortgage or bond shall be raised in that manner, or by creating new shares, or partly by one and partly by the other mode, and to authorise the Directors of the said Company in that behalf.

WILLIAM ROUTH,
Chairman of the said Company.

Dated this 1st day of July, 1841.

ON SALE.—TWO LOCOMOTIVE ENGINES FOR RAILWAYS, 4 feet 8½ inches gauge; large copper fire-box, and 120 brass tubes, 2 inches diameter, driving wheels, 5 feet 6 inches diameter, and two pairs carrier-wheels, 4 feet diameter, 13-inch cylinders, and 18 inch stroke. Made by one of the first makers in Lancashire, perfectly new, and could be delivered immediately.

For further particulars, apply to Joseph Johnson, Iron Merchant, &c., Canning Chambers, Liverpool.

Liverpool, July 8th.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet street, Middlesex.—Saturday, July 10, 1841.

G. C. GLYN, Chairman.
H. PATTESON, Secretary.

Offices, 6, Warnford-court, Throgmorton-street, London, July 5, 1841

CROYDON RAILWAY—SUNDAY TRAINS.—On and after the 4th of July, the SUNDAY TRAINS will start as under:—

From London, in the Morning.
5 minutes past 9 o'clock.
5 minutes past 10 o'clock.

From Croydon in the Morning.
5 minutes past 8 o'clock.
5 minutes past 9 o'clock.
5 minutes past 10 o'clock.

In the Afternoon, from both London and Croydon, at 10 minutes before 2, 20 minutes after 2, and 10 minutes before and 20 minutes after every succeeding hour, until 20 minutes past 9 o'clock.

Fares from New Cross to Croydon.

First Class	1s. 0d.
Second Class	0 9
Third Class	0 6

Omnibuses leave the British Booking office, Cockspur-street, Charing-cross, proceeding over Westminster Bridge to the Elephant and Castle, by the Kent Road, to the New Cross Station daily (including Sundays)—morning at 25 minutes past 8 and 25 minutes past 9, afternoon at 20 minutes before 4 and 20 minutes before 5 o'clock, to meet the trains from London to Croydon, and start from New Cross Station for Charing-cross, in the morning on the arrival of the 8 minutes past 9 and 5 minutes past 10 o'clock trains, and in the afternoon on the arrival of the 20 minutes past 4 and 20 minutes past 5 o'clock trains, from Croydon. Fares—inside 9d., outside 6d.

RIBBLE NAVIGATION.—Notice is hereby given, That the Half-yearly General Meeting of the Ribble Navigation Company will be held at their Office, Chapel Walks, in Preston, in the county of Lancaster, on Thursday, the 22d day of July instant, at 11 o'clock in the forenoon.

RICH. PILKINGTON, Sec. to the said Company.

Preston, Ribble Navigation Office, 17th June, 1841.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

In one handsome 4to volume, with 17 splendidly-executed Engravings, including a Railway Map of the United Kingdom; Price £1 11s. 6d.;

THE RAILWAYS OF GREAT BRITAIN AND IRELAND, practically described and Illustrated by FRANCIS WHISHAW, Civil Engineer, M. Inst. C. E.

"We know of no work which ought to be so favourably received in Scotland at present."—*Perth Courier.*

"Developing a depth of principle, and a breadth and variety of details of well-digested facts, which nothing in the history of railways at home or abroad can possibly rival, far less surpass."—*Dumfries Times.*

London: Simpkin, Marshall, and Co.

NEW STEINE HOTEL, opposite the Chain Pier, Brighton.—S. BACON, having entered upon the above Hotel, begs leave to apprise the Nobility and Gentry he has considerably extended and improved its accommodations. The Coffee-room with a commanding sea view, has been much enlarged. The apartments are convenient and elegant; the bed-rooms, spacious and airy, presenting every comfort for families and gentlemen; and by uniting a superior style of attention with moderate charges, hopes to receive those favours which will ever be his study to merit.

N.B. Excellent Stabling, Coach-houses, &c.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is Invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

TAFF VALE RAILWAY.—CALL OF £2 10s. PER SHARE ON QUARTER SHARES.—The Directors of the Taff Vale Railway Company acting under the provisions of their Acts of Parliament, hereby give notice, that the Proprietors of Quarter Shares are requested to pay on or before the 26th day of July, 1841, to any of the undermentioned Bankers, the sum of £2 10s. on each of their respective Shares.

London—Messrs. Glyn, Halifax, Mills, and Co.
Bristol—West of England and South Wales District Bank.
Cardiff—Ditto ditto.
Merthyr—Ditto ditto; Messrs. Wilkins and Co.

By order of the Board of Directors,

JOSEPH BALL, Secretary.

Railway Office, Cardiff, July 2nd, 1841.

EDINBURGH AND GLASGOW RAILWAY.—NINTH CALL OF £5 PER SHARE.—Notice is hereby given, that in pursuance of a Resolution of the Board of Directors, passed in terms of the Act of Incorporation, the Proprietors of Shares in this Company are hereby required to pay a further instalment of £5 per Share (making £45 per Share paid up), on or before Friday, the 30th day of July current, to any of the undermentioned Bankers:—

Glasgow—The Glasgow Union Banking Company.
Edinburgh—The National Bank of Scotland.
Do. —The Western Bank of Scotland.
Liverpool—The Bank of Liverpool.
Manchester—Messrs. Wm. Jones, Lovds & Co.
London—Messrs. Glyn, Halifax, Mills & Co.

Interest at the rate of 5 per cent. per annum will be charged on all such sums as remain unpaid after the date above appointed.

By order of the Directors,

JOHN LEADBETTER, Chairman.

Edinburgh and Glasgow Railway Head Office, 7, North Queen-street, Glasgow, 5th July, 1841.

THE BRIGHTON RAILWAY.—The Official Map and Section of this line is now published price 3s. on a large sheet coloured; folded in a cover 4s.; on linen for the pocket 6s.; and on rollers 5s. 6d. The extent of country, with all the railways shown in depth on this map, is from 30 miles north of the Thames to the English Channel, and it embraces in width a district of 54 miles.

Published by J. R. Jobbins, 3, Warwick Court, Holborn; R. Tyas, 8, Paternoster-row. Sold by J. Weale, and J. Cross, Holborn; Litts, Royal Exchange, and at the Office of the Railway Times

NORTH KENT RAILWAY, FROM GRAVESEND TO ROCHESTER.—CAPITAL, £300,000 in 15,000 Shares of £20 each; deposit, £2 10s. per Share.

Prospectuses may be obtained and applications for Shares made at the Company's Office, 42, Lombard-street, until the 4th of August next.

GEORGE WALTER, Chief Superintendent.

REPORT OF THE SELECT COMMITTEE OF THE HOUSE OF COMMONS ON 11TH CLAUSE OF THE RAILWAY REGULATION BILL.

MINUTES OF EVIDENCE.

(*Continued from page* 719).

593. Mr. Labouchere—You have a large establishment of police upon the Great Western Railway?—I do not know what it may be, compared with other lines; I should think not so large as upon the London and Birmingham.

594. Do you happen to know what is the number of police upon the Great Western Railway as compared with the number of miles; how many policemen per mile?—It averages about one and a half to a mile, including all the policemen at the stations. But with respect to the number on the line, I cannot state the average; it varies considerably at different parts of the line. Between Maidenhead and Twyford, a distance of seven miles and a half, there are only two; it is a cutting in chalk.

595. Sir John Guest—Must not every station where passengers are received and let out, have at least one policeman?—Several.

596. Sir R. Peel—The number of policemen employed upon the line varies very materially at different parts?—Yes.

597. The determination of the number upon the several parts of the line depends upon local knowledge?—Yes.

598. It would be impossible for any person not having practical experience of the daily working of the line, to determine whether it was right to have two policemen upon a certain mile of the road, or ten; but that must depend upon daily observation of the working of the line?—Entirely; and I can assert most positively, that it would be impossible for Sir Frederic Smith, with whom I have had the pleasure frequently of going along the line, and who would see things as quickly as anybody, after spending even a month upon our line, to state at all correctly the number of police which ought to be employed at the different parts respectively. He must know the frequency of footpaths, and of roads, and the probability of sheep or cattle, or other things being in that district: and a great variety of circumstances which it is impossible for any person merely looking on to learn.

599. Mr. Labouchere—Without forming any very accurate estimate upon a point of that sort, suppose that a railway had very much reduced its establishment of policemen, to a degree which was obviously inconsistent with the public safety; do you think it would be impossible for Sir Frederic Smith, upon hearing complaints of such a state of things, to be able to ascertain whether those complaints were founded in truth?—I believe it would be impossible for him to ascertain it with anything like a probability of doing justice to the parties. And one of the great errors into which you have fallen, and into which the officers you have appointed have fallen, is this; in supposing that, with all your desire to watch the public safety, you can have anything like the desire that we have, anything approaching the deep feeling of interest that the Companies have, I mean with reference to their pockets, in doing everything which their particular circumstances require, and which their particular means enable them to do; because you must have reference to the quantity of traffic upon the line. I am quite sure that nothing on your part can approach to the feeling of interest that the Companies feel even in that particular department of providing for the public safety. Their all, their daily bread, depends entirely upon their not only carrying the public without accident, but upon their carrying them without their being afraid of accident; and a great deal of mischief has been done to the Companies, not by what is really public feeling against us, for I doubt its existence, but by that which is called public feeling, by the great attention which has been drawn to our accidents by the newspapers. And depend upon it, their interest to provide for the real safety, as well as the apparent safety, of the public, is infinitely more powerful and effective than any watchfulness, however great it may be, of any officers you can appoint. But with respect to the police, I am quite sure that long before you would find it reduced to such a state that you would interfere, the Company would have found that it was not their interest to reduce it.

600. Sir Robert Peel—You say that really useful discoveries for preventing accidents, or improving the mode of communication can only be made by persons of practical experience in the working of railways, founded on daily observation; but you do find, from time to time, opportunities of making those improvements?—Daily.

601. And after having tested them for a certain time by daily observation, you then adopt them with perfect confidence of their success?—Yes.

602. Then do not you think that there would be a great advantage with respect to that class of improvements of the success of which you are perfectly certain, in a public officer being enabled to communicate those improvements to other railways, to the Manager of which they might not have occurred?—I think, on the contrary, that would exactly be the course that would prevent improvement in the first place; because by the time any improvement has been sufficiently tested to enable that officer to recommend it to another Company, depend upon it that improvement is also itself about to be improved upon, and is about to be thrown aside by some other person making a further improvement.

603. You have stated that upon the Great Western Railway you have found, by experience, that the flange of the wheel should not touch the guard-rail; that the leaving a small interval between the wheel and the rail is of advantage and adds to the security; now, with respect to that particular improvement, supposing that may not have occurred to the Managers of other railways, and that Sir Frederic Smith, acting under the directions of the Board of Trade, being satisfied that it was an improvement, had the opportunity of calling the attention of other railways to this improvement, which has been so tested by actual experience, and of recommending their adoption of it, would not there be an advantage in a public officer so calling the attention of other railways to an improvement of that kind made by your officers, the advantage of which had been tested by daily observation and actual experience?—I believe, as I stated at the outset, that a central or third party, who would suggest to other Railway Companies what was going on on other railways, might possibly be (though I doubt it) of use; but the very case referred to, if it went at all beyond suggestion, and if there were any power of direction, would be most injurious, and I will state why. Sir Frederic Smith might not be aware—I believe he would be in this particular case aware—but he possibly might not be aware, that the guard-rails and other things are different upon other railways from ours, and that the same thing does not apply in other cases; and as a different route is followed by other parties in obtaining the same end, the endeavouring to introduce this modification, which is advantageously introduced with us, into others, might lead to mischief, and would have a very bad effect. The consequence would be, that instead of all the different engineers, and all the different parties engaged in railways, seeking for improvement by various routes, and therefore more likely to arrive at it, would be all confined to one; as soon as one thing was apparently successful, they would be calling the others' attention to it, and indirectly requiring them to adopt it, because it would be rather awkward to refuse to follow a suggestion strongly pressed upon us from such a quarter. The consequence of that would be a complete stoppage of improvement upon that particular point; and I will give a case that occurs to me. In fact, in almost every branch of railway machinery you may see that that case would arise. Originally, in the recollection of everybody, we had cast-iron carriage wheels. An improvement upon those was carriage wheels made very much like common carriage wheels, with wooden spokes and cast-iron fellies. After that we had cast-iron wheels with wrought-iron tires; and after that we had wrought-iron wheels. Now, suppose that in the year 1830 or 1831, when the Manchester and Liverpool Railway was first running their trains, there had been a central Board, other railways were then just starting, I think there is no doubt that the central Board would have been bound to recommend to other railways to adopt the wooden spokes and the cast-iron fellies on their lines, and you would have had 300,000*l.* or 400,000*l.* invested in wooden wheels. The general feeling in the country would have been, that the Board of Trade considered wood preferable, and all the inventors would have been at work with wooden wheels, and we should now have been ten years behind what we actually are, till probably some serious accident had occurred, such as setting on blaze the whole of a train. For those wheels were found to have this defect among others, that they caught up the ashes of the engine, which stuck to the spokes and set the wheel on fire. Some dreadful accident of that kind would have occurred, and then they would have issued a regulation that we must go to wrought-iron wheels; and in the year 1840 we should have jumped from wood to wrought-iron, and those would have been of no better construction than they were in the year 1830. Instead of that, one company started with wood, another started with cast-iron, then another tried wrought-iron, and we have now got to this improved wheel, which, however, is still bad compared with what it might be.

604. You were understood to say, that experience has shewn that there was an actual positive advantage which had not been foreseen, in not bringing a certain part of the wheel in contact with a certain part of the rail, but allowing an interval; do not you think that that depends upon some mechanical principle applicable to all railways, and is not confined to the case of your particular railway?—I must say that, although I ought to be well acquainted with the subject, I would not lay down such a general rule. It is not a mechanical principle; it is a defect that we discovered, that in running on the railway our wheels struck the guard-rails, and we found it better to keep them further apart. It may so happen, that upon a railway differently laid, it may be better to let the wheel strike the guard-rail than to have a wide guard-rail; and I would not pretend to lay down for another railway that it is better to avoid striking the guard-rail. We are obliged to keep the guard-rail pretty close, otherwise the wheels would not be kept on at a turning of the line; and I think it possible that cases may arise where it is better to incur the evil consequences of this little blow on the guard-rail, rather than to have a wide guard-rail.

605. Lord Granville Somerset—In case of curves?—Yes; in case of curves you are obliged to keep this guard-rail very close.

606. Sir John Guest—Suppose the railway company were bound by the Board of Trade to make them a little tighter, would not that increase the danger of their getting over the rail?—Yes, it might injure the line.

607. Suppose you were bound to make it looser, might not that endanger the getting off the line?—Yes.

608. Mr. Easthope—You have not ascertained the principle of the improvement so clearly as to be able to say where it applies and where it would not apply. Although you know that it does apply upon your own specific railway, you are in doubt about the general application of the principle as a measure of improvement?—It is not a principle, and there is the great error which I think is fallen into, in supposing that there is a want of certain principles being laid down; they have been long since learnt, and almost forgotten by us. It is a multitude of little details which do not consist of principles at all, but practical results. We find that the striking the guard-rails does us harm, and that the widening of the guard-rail does not do us so much harm.

609. Must not that be consequent upon some principle?—The principle is, that we know the wheel is injured by a blow; we find that the wheels are injured by blows, and we find that that is more injurious than having the guard-rail wide.

610. Sir R. Peel—Do you think that the leaving an interval between the wheel and the guard-rail tends to prevent the engine being thrown off the line?—I think it tends to prevent the engine being thrown off the line.

611. Do you build every new engine upon this plan?—No; the engines were kept the same, and we altered the guard-rails.

612. Then this result applies to every engine that works upon the line?—Yes, they are all made at an exact gauge.

613. Upon all parts of the line?—Yes.

614. And without any failure upon any part; whether you go slow or quick it equally applies?—Yes.

615. Have you any reason to think that, supposing the rails of another line were at a less distance, the same result would not follow?—The same blow would be given; but upon one railway it will happen that it is better to incur the blows than to have the guard-rail wider, and in avoiding the blow, run the risk of running off the line. Again, the case will be attended by a different mode of laying the rails; a rail fixed upon chairs and upon blocks or sleepers would make a difference, as compared with our railway, so great that you could not properly apply any rule from the one to the other. I mentioned this particular point, but it is one of a million. I can hardly give an idea of the numerous little points of that sort which are gradually being modified.

616. Are not there twenty of the million which are capable of general application?—I do not think there are; they are not of sufficient importance; it is only by the multitude of them that they are important.

617. Mr. Easthope—Are the guard-rails applied throughout the whole of the line, or only at particular points?—Where there are switches, or any alteration in the direction of the rail.

618. Sir H. Verney—If you were Inspector-general

Digitized by Google

you would not give any general regulation on this point?—Decidedly not.

619. Are the Committee to understand from your evidence generally, that you are of opinion that no efficient superintendence can be exercised by any officer appointed by a public Board?—Decidedly so.

620. It is not to your interest that some efficient superintendence should be exercised somewhere?—I cannot conceive why.

621. Would not it be for your interest to co-operate with an officer so appointed?—Unquestionably, if he were appointed, we must then make the best of what I should consider a bad arrangement.

622. You say, that an officer appointed by the Board of Trade could not efficiently superintend railways; but if he had your full and active co-operation and assistance, could not he then, with advantage, superintend railways?—I think he would be still worse than before, unless you suppose me perfect in every respect; I should of course instil into him all those views which suited my own particular objects; and I unhesitatingly say, that such must be the consequence of any such officer listening much to what any individual would state to him.

623. Mr. Labouchere—You think that there are no points of general application upon which regulations might with advantage be issued from a central authority, and made applicable to all railways?—I have never yet heard of one, nor can I conceive one.

624. For instance, take the case of buffer springs; are buffer springs now universally adopted on all railways to the extent to which you think they ought to be adopted, with reference to the public safety?—Certainly; with reference to the public safety, decidedly; sufficiently upon all that I know anything of.

625. Lord Granville Somerset—Will you state to what extent you think buffer springs ought to be used?—That will vary with every railway, according to the speed and the other arrangements of that railway; and it is impossible to lay down a general rule. That passenger carriages should as much as possible have buffers, of course is evident. But the very best carriage that we have on the Great Western, in which we spared neither expense nor contrivance to make it good, has not spring buffers.

626. Will you state why you have not put buffer springs to that carriage?—The advantage of reducing the weight of that carriage, and the general perfection of the carriage, because the arrangement of buffer springs cuts up the frame of the carriage a good deal, and you may make the frame stronger and simpler and lighter, by avoiding buffer springs. In that particular case, there were very good elastic hair buffers applied, and it would of course be used with other carriages that had buffer springs. I do not mean to say that a carriage is better without buffer springs than with, but I mean to say that there may be most excellent carriages made without them. You cannot apply a general rule, because on a railway where the stoppages are very frequent, with a great chance of collision, and where the number of carriages in a train is small, there buffer springs would be more desirable; but I do not know how any third party, with anything like justice, can draw a line, and say where buffer springs are to be adopted, and where not. There was a recommendation formerly made that buffer springs should be applied, for instance, to all waggons; and that recommendation is referred to in Sir Frederic Smith's Reports. By the stroke of a pen in that manner, an expense of 12,000*l.* or 15,000*l.* would be thrown upon the Great Western Company, to do what we, who really ought to know best, and who really have great interest in carrying on our trade safely, consider quite useless.

627. There are two questions, the one with reference to passengers, and the other with reference to goods; do you not conceive that buffer springs are an element of safety in the conveyance of passengers?—Unquestionably they are an element of safety.

628. Do you consider that every carriage which is in the habit of carrying passengers ought to be provided with buffer springs?—I do not think it would be wise or safe to make such a law. There are a great number of railways of a small class, where it is a great object to the public that passengers should be carried cheaply, and where if these expensive carriages were forced upon the Company, they could not any longer carry them cheaply; and without the buffer springs the passengers have got, at the expense of a penny a mile, an infinitely safer seat than a gentleman that rides upon the box of a stage coach. I believe it would be much more safe for all the passengers to sit with their backs to the engine, that I think would be more conducive to safety even than buffer springs; it would still more conduce to safety if you applied a cushion at the back; but I would not have a law passed that we are to carry third class passengers with cushions, and with the seats so arranged as that all the passengers should have their backs to the engine. They are now carried safer than the gentleman who rides on the outside of a stage coach.

629. Is not it rather a fearful thing that between the 7th of August, 1840, and the 25th of January, 1841, 29 persons have been killed, and 150 or 160 injured, by accidents upon railways?—It is very desirable to avoid such accidents, but I should think it very likely that the same number of people will have been drown by skating in Hyde Park or St. James's, in the same period.

630. Supposing there were any means by which persons skating in Hyde Park or St. James's Park could be prevented being drowned, if those means cost a little more money, would it be a sufficient answer to say that the adoption of those means would involve a little more expense?—It is a very awkward question to answer; but I will answer it honestly by saying, that in considering the question of safety, it must be regarded as a question of cost also. I know that that answer may be used to my prejudice, or to the prejudice of Railway Companies; but why does not Government subscribe largely to the Humane Society, and have a much larger force of men upon the Serpentine, or in the Regent's Park? A very little expense would do that, and a very little expense in stage coaches and in carriages, and in every other kind of conveyance which is used, would add considerably to the safety; it is all a question of comparative safety. We now carry them a great deal cheaper, and safer than they can go by any other conveyance. Compel us to put buffer springs; compel us to put cushions, which I think are more important for safety; compel us to make everybody sit with their backs to the engine, which would halve the number in a carriage, and we should be obliged to do it; but we could not do it at a 1*d.* a mile.

631. Sir R. Peel—In constructing third class carriages, would a provision that persons should sit with their backs to the engines have the effect of halving the number of persons carried?—Pretty nearly. The space that is necessary to be left for a person to pass in front of others sitting would be the whole space that is now left between the knees and between the seats, just as in the pews of a church. It would be very little more than half the number that would be carried, besides the necessity of weakening the carriage.

632. Sir John Guest—Do not they stand in third class carriages?—I am not speaking of the stand ups.

633. Sir H. Verney—Will you state to the Committee why it will be more dangerous for the Government officers to superintend railways in connexion and in co-operation with the Railway Companies themselves, than for the Government officers to do it alone?—I am not aware that I used the word dangerous, but I said more prejudicial. First of all you are supposing that which I do not consider would exist; if you put such a power as is proposed to be put into the hands of the officers of the Government, you must not flatter yourself that there would be that co-operation on the part of the Railway Companies that there is now. I should have no hesitation in repeating that I would endeavour, as far as regards any Company in which I am concerned, to do my best to carry out the views which might become the law; but we are but men after all, and it would be hopeless to expect that we should really and warmly co-operate with you in shackling ourselves; it is out of the question; you cannot suppose it. We shall probably, I hope, in a gentlemanly manner, answer questions that may be put, and give general information; but as to pointing out the defects in our own railway, we certainly shall not do that, and you would not wish us to point out the defects in our neighbours.

634. Why should it be considered as shackling you, all that the Railway Companies want is to carry the public in safety, and all that the Committee want is to carry the public in safety; why then should you consider that as shackling you, or as prejudicial to your interests?—I am obliged to say plainly; because we understand very well how to look after the public safety, and the putting a person over us who does not know how to look after the public safety must shackle us. We are much obliged to you for the offer to assist us, but we feel that we know how to do it, we have not only more ability to find out what is necessary than any officer you appoint can have, but I maintain that we have a greater desire to do it, and therefore, when we feel that we can carry on the work safely and well, to put a third person over us, with power to interfere, is shackling us; there is no question about it. Every suggestion that has been made and enforced may be considered good, because it was intended for the public safety; but the fact is, that every one of those, we say, would lessen the public safety, and shackle us very much. There are a number of others besides those I have mentioned, but I am afraid of wearying the Committee by going to a greater length than I have done.

635. Mr. Easthope—Are you able to state that the feeling of alarm and objection, which you have now described, is general among the Railway Companies, or only partial?—I believe it is quite general; there may be one or two exceptions; but I do believe, with one or two exceptions, the railways, large and small, feel exactly as I have now stated to the Committee.

636. Mr. Labouchere—Do you happen to know which are the railways that have petitioned Parliament against this Bill?—I do not know; but I know this, that I have strongly advised one or two Companies that I was connected with not to petition, and therefore I dare say many have not petitioned who still are decidedly opposed to the principle of the Bill.

637. Mr. Easthope—Is that a list of the Companies who are actively engaged in this opposition (a list being shown to the witness)?—I believe that is a correct list.

638. Will you have the goodness to read that list?—"The Birmingham and Derby, the Birmingham and Gloucester, the Chester and Birkenhead, the Bristol and Exeter, the Grand Junction, the Great Western, the Eastern Counties', the Midland Counties', the North Union, the London and Brighton, the London and Croydon, the London and Greenwich, the London and South-Western, the York and North Midland, the Cheltenham and Great Western, the Lancaster and Preston, the Liverpool and Manchester, the Preston and Wyre." Out of this list there are only three with respect to which I cannot personally answer that their officers are fully convinced that the clause would be very mischievous if it could be brought into operation, but I believe that it would be almost inoperative, because it would be found impossible to apply it.

639. Lord Granville Somerset—Are you aware what the system of regulations is upon each of those railways?—I should find it difficult enough to explain clearly what they are upon my own; I only know them by communication with the parties, by travelling upon the railways, and by general information.

640. Can you state whether, generally speaking, they are the same upon those railways as upon the Great Western?—The general principle is the same.

641. Are the general regulations the same?—No, I should think there are not two railways where they are the same.

642. Is the same system followed with reference to the engines upon the Great Western and upon the London and Birmingham?—No, very different.

643. Is there a variation, again, in the system with regard to engines upon the other railways?—Yes, they all differ, but perhaps none so widely as the Great Western and the Birmingham.

644. The Birmingham and the Great Western are the two extremes?—I should think, almost.

645. You are strongly of opinion that the system you pursue upon the Great Western is by far the best?—I think so, of course.

646. And the London and Birmingham have an equally strong opinion as to the excellence of their system?—I presume so.

647. You go upon the principal of having very powerful engines, and fewer of them, and they have their engines smaller, and a greater number of them?—Yes.

648. Sir Robert Peel—Is it not possible that the difference in the width of the rails may account for the difference in the power of the engines employed?—It is connected with it of course, but there are upon the North Midland as powerful engines as upon the Great Western.

649. Mr. Labouchere—With narrow rails?—Yes.

650. Mr. Easthope—By having a wider fire box, they can have greater power?—Yes, it is easier to have a powerful engine upon a wide rail than upon a narrow one.

651. Lord Granville Somerset—With reference to the amount of luggage which one engine or which one train ought to carry, must not that be materially affected by a difference in the size of the engines?—Decidedly; but at the same time, on the London and Birmingham, they have a few engines which have the same power as some of our most powerful ones.

652. But the greater number of yours are powerful ones, and the greater number of theirs are smaller ones?—Yes.

653. There is also a difference between you as to the wheels?—Yes.

654. You adopt six wheels almost universally; and,

Digitized by Google

on the other hand, they adopt four wheels?—Yes, almost universally.

655. The exception in the one case is four wheels, and in the other case it is six wheels?—Yes.

656. Do you know whether there is a great variety of opinion on other railways as to the four and six wheels?—I believe very great.

657. Is there a chance of bringing the advantages and disadvantages of the two systems to anything like a test by any experiments?—Not any actual experiments, I think; I think experience will gradually show that perhaps neither the one nor the other is the best.

658. Can the system of six-wheeled carriages be carried out in the same manner as the system of four-wheeled carriages in small points of detail?—It involves a totally different arrangement.

659. A difference in gradients also involves different arrangements?—It does.

660. The existence of curves also involves different arrangements?—Yes.

661. And deep cuttings involve different arrangements?—Yes.

662. And deep cuttings, combined with curves involve different arrangements?—Yes, a very great difference in the character of the railway.

663*. All those differences render it impossible to specify any particular system which ought to be pursued universally?—I think it impossible to define any such system; and if it were defined, it would put a stop to further improvement.

664*. Then you bring your evidence to this point; either that you cannot admit of any supervising authority at all, or else you must leave to that supervising authority great discretion?—I do not know that we are driven to that alternative; I hope not; I think a supervising authority with full discretion is the most mischievous; therefore as in one degree short of that I should consider it less mischievous, bad as it would be; and I would rather have a supervising authority with some restrictions than without any.

665*. Mr. Labouchere—You think the more it is limited the less mischievous it would be?—The less mischievous.

666*. Lord Granville Somerset—What limitation do you think you could place upon the supervising authority, leaving it any power whatever?—It would require a great deal of consideration; it would depend upon what restriction I could get, rather than upon what I could suggest.

667*. There is another element of consideration, which is the amount of the traffic and the length of the line; those must vary the regulations very considerably?—Yes.

668*. You cannot state to the Committee in what way the supervising authority could be restricted, so as to give it any power whatever upon any point connected with the safety of passengers?—If by supervising is meant what I understand by supervision, I think it might be done; and what all the Railway Companies last year meant by a supervision, namely, a watchful inspection of all that was going on, that would enable any central authority to become a little better informed than they can possibly be at the outset; and at the end, perhaps of two or three years, when matters are a little more settled in the railways themselves, as well as information better obtained, then some legislation, if found necessary (which I doubt), might be properly drawn up. And such a supervision as would be for the collection of facts, and for the suggestion to other parties of improvements which were found to answer in one railway, might be an innocent arrangement, but that is all.

669* You have no objection to supervision, but you have a great objection to a supervising authority?—Most decidedly; simply because I believe that authority cannot act judiciously.

660*. Lord Sandon—You believe that a mere suggestion on the part of such an authority, without any power to enforce, would of itself be a powerful means of correcting anything wrong?—I believe so; and I am sure that the evidence of Sir Frederic Smith ought to have proved that. He states, unhesitatingly that he has met everywhere with the fullest wish to give him information, and with the greatest readiness to adopt suggestions.

661*. Mr. Labouchere—Are you aware of the case of a Railway Company, after an officer of the Board of Trade had distinctly reported that the railway could not be opened for the conveyance of passengers upon it on a certain day, without danger to the public, having notwithstanding that opinion, opened the railway? I am aware of the circumstance; I am not connected with the railway, and therefore I can only suppose what most likely was the case; I think it was very unwise of them, they had better have conceded the thing as matter of policy than have done it; but as regards the public safety, I believe they were more competent to form an opinion upon it than the officer who went down on that occasion. I do not believe that there was likely to be any great danger arising from that circumstance, of early opening, for this reason, that then the attention of all parties is drawn to it. At that time everybody is on the alert, and every precaution is taken. It is not on the first opening of a railway, however unfinished even the works may be, that there is any great probability of accident; it is after parties begin to get a little easier, and after numerous trains are running, and other circumstances combine to increase the chances of accidents, that they are more likely to ensue. In that case I think it was unwise in them, but, no accident occured in consequence.

662*. Was not there rather an unpleasant occurrence upon the London and Birmingham Railway when it first opened?—Yes, but it might have happened just as well to day.

663. Lord Sandon—Was not that occurrence one not at all connected with the newness of the line, but simply with the circumstance that the breaksman was not sufficiently acquainted by practice with the velocity which would be acquired in going down an incline, and therefore did not apply the break so early as it ought to have been done?—Yes.

664. If it were thought desirable that this power should be taken on the part of the Board of Trade to prohibit the opening of a line in the first instance, if they thought there was any danger to the public, should you consider that power innocuous?—I should consider it comparatively innocuous, but I should not think it would do much good.

665. It would not hamper the operations of the Company afterwards?—No; but I think an officer placed in such a predicament would be apt to throw away 20,000*l.* or 30,000*l.* of the Company's money without any regard; and that with one-tenth of that sum of money you might have had the line, during that three or four weeks, working a great deal more safely, by an increased number of attendants, and by a diminished number of trains. For instance, with regard to the future opening of the Great Western Railway, which, I trust, will take place before this Bill can be passed into an Act, if you were to delay the opening of that railway for a week, I suppose it would be 8,000*l.* or 10,000*l.* out of our pockets, and that perhaps, merely because some officer thought it would be dangerous; whereas I can assure him, if it were my interest to let out all the secrets that are behind people frequently run much greater danger long after the opening, when they are not aware of it, whereas here we should be aware of it; and we are all taking precautions. You are not running nearly so much risk as you are the first time that a line of stage coaches is put upon a new line of road, where they do not know all the corners.

666. Can you state the expense which accrues to a Railway Company by any of these accidents, so as to show what is the liability which the Company incurs by a collision?—It is very large; one of our first class carriages will cost complete, perhaps 800*l.*

667. Sir Robert Peel—Is not there a material difference between a power to prohibit a certain thing in the case of a particular railway upon a specific allegation of danger, and a discretionary authority to make regulations for the whole of the railways?—Very great difference, of course.

668. It might be politic to give power to the Board of Trade to prevent such a particular fact as the opening of a railway until it shall be considered safe, as is provided under the sixth clause of the Bill, and it will not follow that it would be safe to trust any Government department with a general authority to make regulations?—Decidely.

669. Should you object to such a power as that?—On principle I should say that it is bad; of course, if it is forced upon us, we must put up with it.

670. Mr. Easthope — Should you object to the power contained in the sixth clause?—Most unquestionably, if I had the power to object.

671. Sir R. Peel—You think the interest of the parties, and their own knowledge and experience, are better securities to the public than any extrinsic control?—Far better; and you must bear in mind that you lessen the security the moment you step in.

672. Sir James Graham—Were you rightly understood to say, that the public being ignorant, but with the knowledge of the Companies, great risks were sometimes now run?—I fear that in endeavouring to state plainly my opinions upon the subject, I run considerable risk of being misunderstood. I certainly never meant that we were secretly running the public into great danger; I said, that of course there will be constantly subjects of difficulty, and possibly subjects of danger, which we know of, and which we are doing our best to prevent, but which Sir Frederic Smith or any other public officer could not see: just the same as I, standing on the top of a house, may know, as you pass under, that I nearly let fall something upon you; but I am not therefore intentionally causing you to run risks which I could prevent. What I meant to say was this, that with respect to the danger of opening a line early, although you may prevent that, you do not prevent the real occasions of danger, because there are much greater dangers frequently run in the ordinary course of business which we know, and which we do our best to prevent, but which the public could not know. Here there was a thing that struck everybody's eye: "Oh, the railway is new; it is dangerous to run upon it, therefore we will prevent it." I say that we can prevent danger at that time, because it is well foreseen, and there is no necessity for interfering; that is all I meant say.

(To be continued.)

THE RAILWAY SHARE MARKET.—The settlement in shares to-day disclosed the unfortunate consequences of the late dealings in those of the Brighton line, for two "defaulters" were declared, one of whom was of old standing in the market. It appears they had speculated extensively in these particular shares for a rise, and it is stated that one of them was called upon to take 1,000 shares, which he was unable to do on account of the heavy differences. Considering the depreciation they have undergone during the present account, it was not at all surprising, for on the 30th of last month they were 2½ discount, but to-day closed 8 to 7¾ discount. Of course money on these and Great Western shares was not to be had except at high rates, but it does not appear that other shares were made an exception to the usual rates of accommodation when capital is easy in the market, which it certainly is at the present time. Great Western shares left off very flat at 14 to 16 premium; Birmingham closed 67 to 69 premium.—*Times of Thursday.*

ACCIDENT ON THE NORTHERN AND EASTERN RAILWAY.— Between ten and eleven o'clock on Wednesday se'nnight the following accident occurred on the line of the Northern and Eastern Railway, near Broxbourne:—A young man named George Chandler, aged 18, an engine-driver on the line, was about to start off near the place in question, with one of the ballast waggons, to which an engine was attached. Just, however, as he was in the act of getting up in front of the engine the signal was given for starting, and before he had gained his seat. The consequence was, that he was thrown on the rails, and the engine, tender, and ballast-waggon passed over him. Surgical assistance was obtained, and the poor fellow was subsequently conveyed up in one of the trains to the Mile-end Station, and thence to the London Hospital. It was found that his right leg and one of his arms were broken, and his back severely injured. Amputation of the leg and arm would have been immediately performed, but the unfortunate man was too weak to undergo the operation. It will have, however, to be carried into effect should he ever rally sufficiently to bear it.—*Chelmsford Chronicle.*

THE CRICH RAILWAY.—We understand that the lime works of Messrs. G. Stephenson and Co., at Amber Gate are now nearly completed. A very considerable quantity of limestone is daily conveyed down the inclined planes of the railway from Crich. Arrrangements are in progress to have an ample supply of coal from Clay Cross to Crich, which cannot fail to prove a great comfort to the poor of the latter place, who will have a plentiful supply of this useful article brought to their own doors at a very reasonable price. The Crich Railway here mentioned, has been formed at a very considerable expense. It is constructed on the best principles, and is capable of conveying to Bull Bridge upwards of 1000 tons of limestone daily. It is anticipated that these lime works will much benefit Crich and the neighbourhood by the constant employment they will afford to a great number of working men.—*Derbyshire Chronicle.*

RAILWAY COMMUNICATION BETWEEN ENGLAND AND SCOTLAND.

LETTER II.

To the Editor of the Railway Times.

SIR,—In my former letter on this subject, I recommended the east coast line from Newcastle to Edinburgh, not that it was the most eligible for facilitating the trading intercourse between England and Scotland, but because it was the only one that had a probability of obtaining capitalists to undertake its construction. Since the publication of that letter, the report of Sir Frederic Smith and Professor Barlow on that subject has appeared; and after a careful perusal, I have no hesitation in confessing that their report has settled the question beyond all controversy as to which of the lines is best suited for accomplishing the objects submitted to their investigation. There cannot be a doubt that, in a national point of view, the line recommended by the government engineers is the best. But it is still to be feared, that if its construction be left to private speculation, the line recommended has little chance of ever being made.

It has unfortunately happened that with few exceptions, the parties who were to be most benefitted by railways, instead of assisting, have as far as possible endeavoured to take advantage of railway speculators. Proprietors of houses and of land purchased for the construction of railways, have in general demanded, and on an average obtained, nearly double the sum they were entitled to for their property. But unless a totally different spirit be shown by those whose property is required for the railway, it is needless to expect that the line to Scotland recommended by the government engineers will ever be undertaken.

In your correspondent "N.'s" letter it is stated, that "among the noblemen and gentlemen who have already shown an interest in the line from Lancaster, and who are interested in a pecuniary point of view, are Lord Lowther, Alderman Thompson, Sir James Graham, Mr. Loch, M. P. (on behalf of the Duke of Devonshire), and T. Green, Esq., M. P. The line recommended by the government commissioners passes through the lands of Lord Lonsdale and Alderman Thompson for almost half the distance between Lancaster and Penrith, or nearly one-third of the entire distance from Lancaster to Carlisle." In a Glasgow newspaper, I some time ago observed it stated, that at a meeting of the county gentlemen of Lanarkshire, they passed a resolution approving of the line of railway into Scotland recommended by the government engineers. But of what use towards the construction of a railway is the mere approval of the preferred line by landed proprietors, who expect their estates to be thereby greatly enhanced in value? It is better, no doubt, than their disapproval and the avowal of their intention to oppose it. But their simple approval will never induce capitalists to engage in what they otherwise conceive to be an unprofitable speculation.

As an inducement to construct the mineral railways in Lanarkshire, the proprietors of the land taking a liberal, while it was, at the same time, a wise prospective view of their own interest, gave the land required for the railways for nothing. What has been the consequence? They have all thereby made fortunes. Numerous railways have been constructed at a comparatively cheap rate; and the value of the adjoining lands, which have all been found to contain either coal or ironstone, or both, has increased in value to an unprecedented extent. The estate of Palace Craig, which was lately sold for 110,000, was purchased before these railways were projected for 15,000*l*. Another estate, which was recently sold for 29,000*l*., cost the previous purchaser (if the information I received be correct) only 1,500*l*.

It is not to be expected that all lands through which railways pass, will be thereby enhanced in value to a similar extent with those above stated; for the unprecedented use in value in these cases was owing to the coal and ironstone contained in them, being rendered available and accessible to a market by the assistance of railway communication. It is nevertheless certain, that all the lands between Lancaster and Glasgow, even those fit only for sheep pasture, would be more or less improved in value by the making of the projected railway. A Glasgow merchant will give 20 per cent. more for landed property fifty miles distant, which he can visit by travelling two hours on a railway beyond what he will give for similar land inaccessible by a railway; and this, too, for the mere satisfaction of being able to visit it with little inconvenience. Besides, there is no doubt that in course of time, all large towns, instead of being restricted to their immediate neighbourhood for supplies of vegetables, eggs, poultry, and all other kinds of farm produce, will, by means of railways, draw supplies from perhaps a hundred miles distance. Even sheep and oxen can be brought cheaper, and in better condition, from a distance to the market of a large town by a railway than by any other means. Owing to these circumstances, it is probable that land within a few miles of a station on a railway leading to a large town, though the station may be a hundred miles from it, will eventually become nearly as valuable as similar land within a few miles of the large town itself.

In a recent number of the *Railway Times*, it was stated, "that the western project has been extremely well received both in Manchester and Glasgow, and there doubtless it may expect to find its most hearty and efficient supporters." It is useless to encourage vain hopes that never will be realized. The western line is regarded in Glasgow only as the most advantageous one for the trade of the city; but considered in a mercantile view as a private speculation or investment for capital, it is looked upon most unfavourably. If the landed interest along the western line be sincerely desirous of seeing it carried into effect, let them imitate the proprietors through whose estates the mineral railways in Lanarkshire have been constructed. Let them offer to give the land for nothing, for unless such be done, or a portion of the required capital be advanced by Government out of the public purse (which is by no means likely), you may depend upon it that subscriptions to the extent even of one thousand pounds will never be obtained in the city of Glasgow for such an undertaking.

The only chance that either the eastern or western line has of being constructed, depends upon the Directors and proprietaries interested in the different connecting lines of railway, either engaging by mutual agreement, according to their relative interests, to do it themselves, or, in addition to commencing the subscription list themselves, offering to lease it for a length of years on terms advantageous for a distinct proprietary to undertake it. In my former letter recommending the east coast line, my expectation of its being carried into effect, was founded upon the principle of its being capable of demonstration, that the aggregate enhancement in the value of the shares thence arising of the Edinburgh and Glasgow, and the chain of railways from Newcastle to Rugby, would more than pay the cost of constructing the proposed junction line from Newcastle to Edinburgh, even on the supposition that the proposed junction line never yielded one farthing of return to the shareholders; whereas, from its being an intermediate link in a great chain of railways, there was a strong probability that of itself it would ultimately be a profitable undertaking. On these grounds, I insisted that it was not only for the interest, but, in consequence of being paid for their services, it became the bounden duty of the Directors of these different railways to take the lead in setting it a going. And it is to be hoped, that the approaching August half-yearly meetings will not be allowed to pass without the question being agitated, and committees of Directors in all the interested lines appointed, with instructions to procure subscriptions for shares, and offers of land through which the proposed railway must pass, and to correspond with each other regarding all matters necessary for carrying the project into effect.

I am sorry to say, that the line recommended by the government engineers, cannot command so great an interest in its favour as the one on the east coast. It is unquestionable that the shares of the Lancaster and Preston Railway, which are now at a discount, would be at least tripled in value by the construction of the western line. But the Lancaster and Preston Railway has comparatively a small capital embarked in it. The proprietors of the London and Birmingham Railway are perhaps fully as much interested in the western as the eastern line, but not to such an extent more as to expect that they will ever stir the question, or lend any assistance in the matter. The shares of the Grand Junction would be more depreciated by the construction of the eastern than raised by the adoption of the western line. At present, the mass of travellers passing between London and Scotland, go by the Grand Junction, and steam it between Liverpool and Glasgow. The proprietors of the Grand Junction are therefore interested in getting the western line constructed chiefly in order to prevent the adoption of the one by the east coast. It may however be remarked, that the Grand Junction proprietary have sufficient reason to fear that if they do not act with promptitude in getting subscriptions for the western line, they will not be long of being superseded by those interested in the construction of the eastern. The government engineers, after giving satisfactory reasons for preferring the line from Carlisle to Glasgow and Edinburgh by Lockerby and Symington, and recommending that only one line to Scotland ought to be sanctioned by Parliament, conclude with the following remarks:—

"We (the government engineers) give this opinion, however, under the supposition that antecedently to, or simultaneously with, the construction of the line from Carlisle by Lockerby, and Symington to Glasgow and Edinburgh, the railway has been formed, or is in the course of formation, between Lancaster and Carlisle. Should this not be the case, and parties should be found to construct the line from Darlington to Edinburgh, either by the east coast line *via* Berwick, or by the inland line *via* Hexham, than the western route should be abandoned for the present; and in that event, we should award the preference to the east coast line, chiefly on account of its superior mechanical properties."

The preceding extract shows the propriety of those interested in the western line losing no time in endeavouring to set it a-going. The government engineer's report being in their favour, they have the means of obtaining an Act for the purpose almost free of expense. But if the matter be delayed, the stronger interest in favour of the eastern line may soon be expected to bring forward their budget of ways and means, and thus, in accordance with the recommendation in the Commissioner's report, Parliament may be induced to pass an Act sanctioning the construction of the eastern line, and precluding all chance of the claims of the western ever being again listened to.

To prevent erroneous surmises as to which of the proposed lines my interest is most connected with, it may be allowable to state, that I hold no shares in any railway except the Wishaw and Coltness and the London and Birmingham; and this was also the case when I formerly wrote on the same subject. I have only further to say, that I remain really and truly what I formerly designated myself, not an Edinburgh, but

Your most obedient servant,
A GLASGOW CITIZEN.

Glasgow, 10th July, 1841.

THE TAFF VALE RAILWAY is now in full operation, with the exception of the three branches not yet complete. There are now nine engines at work on the railway, and four passenger trains every week day, and two on Sundays, to and from Merthyr. Coals and iron also are being brought down every day. The splendid new dock (at Cardiff) is now complete, and has had several very fine vessels in it lately; and by degrees it is hoped that Cardiff will again experience that prosperity which it did previous to the last winter.—*Silurian*, 3rd July.

RAILWAY DINNER AT WAKEFIELD.

(From a Correspondent.)

The stupendous works upon the North Midland Railway being now completely finished, and the labours and responsibilities of the Contractors in upholding or maintaining the permanent way, and their relations with the Railway Company being at an end, Messrs. Horn, J. Stephenson, Wm. Shaw, and Joseph Thornton, four of the Contractors on the Northern Division of the line, determined to celebrate the event, and to mark their sense of the gentlemanly demeanour and equitable conduct towards them of the Resident Engineers, during the progress of the works, by inviting these gentlemen to meet a numerous party of brother contractors and neighbours, and the several merchants who supplied the permanent materials for the Railway, at dinner, at the Stratford Arms Hotel, Wakefield, on Wednesday the 14th inst. The room was tastefully decorated with festoons of evergreens and the choicest flowers, amid which the simplicity and grace of a luxuriant specimen of the *Passiflora cerulea* was pleasingly conspicuous. The arrangements were upon the most liberal scale, and did equal credit to the hospitality of the entertainers, and the good taste and admirable *cuisine* of the worthy hostess, Miss Rhodes.

An excellent band of instrumental music was in attendance, which played some of Rossini's most admired overtures during dinner; and a well tuned set of professional vocalists contributed their share to the general stock of harmony, by giving several favourite songs and glees in the course of the evening.

Mr. Horn, the respected chairman of the Contractors' Association presided with his usual ability on such occasions, and by dispensing with the semi-barbarous custom—"more honoured in the breach than in the observance"—of "three times three and one cheer more"—materially tended to render this meeting what it was in fact, "the feast of reason and the flow of soul." The chairs of the Vice Presidents were occupied by Mr. John Stephenson and Mr. Joseph Thornton, respectively. Among the company were, Mr. Houldsworth, M.P. for the Borough, Mr. Tee, and Mr. Staniforth Beckett, three of the Directors of the Railway; Mr. Dyson, Mr. Ross, Mr. Longridge, and Mr. Dunn, the Resident Engineers, in honour of whom the entertainment was given; Mr. Woodhouse, the talented and respected Engineer of the Midland Counties' Railway (who has recently received a similar compliment in his own district), Mr. Murphy, one of his principal assistants; Mr. Dobbs, Engineer of the Sheffield and Rotherham Railway; Mr. Forsyth, of the Manchester and Leeds Railway; Mr. Craig, Mr. Binger, and Mr. Heald of the North Midland; Mr. J. D. Barry, Secretary to the Contractors' Association; Mr. James Leishman, Mr. James Thornton, Mr. George Mould, Mr. Taylor Stephenson, Mr. David M'Intosh, Mr. John M'Innis, Mr. William Singleton and Mr. Richard Harrison (of Leeds); Mr. George Earle, (Hull); Mr. John Tennent, Mr. Thomas Wade, Mr. Edward Sidebottom, Mr. Marsden, and Mr. Janson, Solicitors; Mr. Starkie and Mr. Statter, Surgeons; Mr. Henry Clarkson, Mr. Richard Poppleton, Mr. Henry Holt, Mr. James Butler, Mr. John Fraser, Mr. Bennett, Mr. Warrington (a gentleman whose vocal and comic powers added much to the conviviality of the evening); and several others with whose names we are not acquainted.

The usual loyal and patriotic toasts were given from the Chair, and many appropriate sentiments, prefaced by eloquent and feeling addresses, were delivered by several gentlemen during the evening. The health of the Directors of the North Midland Railway, with a warm panegyric upon their liberality and affability, was acknowledged in suitable terms by Mr. Houldsworth, M.P. The duty of returning thanks for "the resident Engineers" was delegated by the veteran Mr. Dyson to his talented and eloquent friend, Mr. Ross. Due honour was done to the name of "George Stephenson," to whom the world is mainly indebted for the present system of Locomotion by Railways, and also to that of his amiable and highly-gifted son, Mr. Robert Stephenson, who is an honour to his name, his country, and his profession. The latter was acknowledged by Mr. Ross, as one of "the Staff," in a most eloquent address, replete with

"thoughts that breathe, and words that burn;"

redolent of devotion to the man, and admiration of his talents and of his virtues. Taken altogether, this entertainment was one of the most gratifying at which it has been our good fortune to assist. It afforded a rare and felicitous instance of Railway Directors, their Engineers, and their Contractors, assembled round the festive board to do homage to integrity and private worth,—pouring forth, in the fulness of their hearts, expressions of mutual satisfaction and good-will, on the termination of the business between them—"*O! si sic omnia!*"

RAILWAY PLEASURE EXCURSIONS.

The long looked-for return visit of the Chesterfield Mechanics' Institution to that of Belper took place on Tuesday, the 6th inst. Expectation, though highly raised, was, it seems, outdone by the actual pleasure of the day. The people of Belper raised a splendid and very extensive pavilion for the accommodation of their guests. The visitors, after first proceeding to Derby to visit the Arboretum, and there nearly doubling their numbers, returned to Belper, and formed with the friends they were visiting a splendid procession. Two thousand persons sat down to tea; after which excellent speeches were delivered by Edward Strutt, Esq. M.P., the Chairman, Mr. Hancock, E. T. Coke, Esq., Rev. J. Williams, W. Evans, Esq. M.P., &c. &c. We have but little room for extracts, but we cannot omit to quote a passage in the speech of Mr. George Stephenson, whose present residence in the neighbourhood brings him into frequent contact with its population and institutions.

"Well do I remember the beginning of my career as an engineer, the great perseverance that was required for me to get on. Not having served an apprenticeship, I had made up my mind to go to America, considering that no one in England would trust me to act as engineer for them; however, I was trusted in some small matters and succeeded in giving satisfaction. Greater trusts were reposed in me, in which I also succeeded; and soon after this I commenced making the locomotive engine. The result of my perseverance you have this day witnessed, many of you having been brought here by railway. (Cheers.) I may observe that the time I first went to Parliament, to give evidence on the locomotive engine, when I stated that I would make that machine to travel 20 miles per hour, I was considered to be mad. (Laughter.) You will be surprised when I tell you that during my recent examination before a Committee of the House of Commons, on the management of railways, I stated as my opinion, that the speed of the locomotive should not exceed 40 miles per hour. I have been censured by many for giving that opinion. It is true that I said that the engine might be made to travel 100 miles per hour, but I always put a qualification upon this, viz. as to what speed would suit the public best. (Cheers.) I can assure you I have been buffetted about in Parliament no little, as those gentlemen on my right well know. (Laughter, and hear, hear.) But notwithstanding all the buffeting I was determined to conquer, and you are aware of the production of my labours. (Loud cheers.) Ladies and gentlemen, I have spent more money than any man who ever lived in the profession, and I will venture to say that I have never seen a difficulty before me. (Hear, hear.) The greatest obstacle I ever had to contend with, was the management of man, and I have no doubt but that several of the ladies present have had similar tasks to perform, I mean in the management of their husbands. (Loud laughter.) Always be sure to carry your arguments with mildness, and you will certainly gain your points. (Laughter and cheers.) I will make one more remark before I conclude. I promised to my fellow townsmen at Chesterfield that if at any time when they think they have found out some new invention, they would bring their discovery to me, I shall be ready at all times to give them my opinion on its merits as far as I am able. (Applause.) Mechanics of Belper, to you I am happy to make the same offer; at the same time let me caution the young mechanic to be on his guard against spending money on new inventions until he has ascertained the utility. (Applause.) I fear I should prove tedious were I to prolong at this meeting any further the topic of mechanics—(Go on)—especially as I intend to give lectures on this subject at Chesterfield. (Mr. Stephenson sat down amidst tremendous cheering.)"

THE AGRICULTURAL MEETING AT LIVERPOOL.

At a monthly meeting of the council of the Royal Agricultural Society, on Wednesday the 7th instant, a letter was read from Mr. Creed, Secretary to the London and Birmingham Railway Company, assuring the society that the Company would do everything that depended upon them to accommodate, as far as possible, the parties who might travel or send stock by their railway to the meeting in Liverpool in the week commencing July 19th and that they had instructed their Superintendent to take every step to carry their wishes into effect. A letter was also received from Mr. Sandbach, Director of the Liverpool and Birmingham Grand Junction Railway, and a member of the committee appointed to communicate with the society on this subject, informing the society that as more accommodation than has ever been required, or is at present provided, would in every probability be rendered necessary on the occasion of the Liverpool meeting of the society, the Board of Directors were desirous of doing all that lay in their power to accommodate the public, provided such intimations were given to them in due time of the general amount of stock to be sent to the meeting as would enable them to make the requisite additional arrangements, and guard as much as possible against disappointment. Mr. Sandbach concluded by suggesting that the society should apprise the parties who intend to send stock of the necessity of applying as early as possible for the accommodation they require, stating where and at what time it is likely to be required, in order that additional or special trains might be provided if necessary. Mr. Moss, the Chairman, and Captain Cleather, the Manager of the Railway Company, also attended personally at the rooms of the society to offer any explanation or receive any instructions from the society on this subject, expressing their intention of endeavouring to obtain the desired information as to the parties or stock likely to travel along the line of the railway by public advertisement. The council referred these communications and a letter from Lord Hatherton, in reference to the arrangements at the meeting, to the Liverpool committee.—*Midland Counties' Herald.*

Railways in France.—The works of the Paris and Orleans Railway are going on with great rapidity, and in order to be fully prepared, twenty-four locomotive engines were ordered of Mr. Stephenson, of Newcastle, several months ago. The results of the branch of the railway already opened to the public, viz., from Paris to Corbeil, have just been published by the Company. It appears that from the 20th September last to the 31st May, 253 days, the number of passengers was 505,394, and the total amount of the receipts 764,360f., being an average of 1f. 51c. for each person. This total gives an average of nearly 2,000 persons per day, or about 739,000 per annum, the receipts for whom would be about 1,100,000f. Estimating the expense of this portion of the road at 10,000,000f., and the current expenses at 45 per cent., it would give a net revenue of about 600,000f., or about 6 per cent. interest.—*Galignani's Messenger.*

LONDON AND GREENWICH RAILWAY COMPANY—GENERAL MEETING.

The Half-Yearly General Meeting of this Company was held yesterday at the London Tavern; W. Shadbolt, Esq., in the Chair.

The following Report was read:—

REPORT.

During the period which has elapsed since the last general meeting, the attention of your Directors has been principally occupied with the objects comprised in the Report then laid before you, and especially in carrying forward the new works with as much expedition as possible.

Contracts have now been made for erecting the whole of these works, including the station to be given in exchange for that of the Croydon Railway Company, in conformity with the Act of Parliament, and they will be executed within the estimates of your Engineer; which confirms the assurance your Directors have already expressed, that the new capital would be found fully sufficient for the objects proposed. The satisfactory progress made in the execution of the works is detailed in the Report of Colonel Landmann, which will be read to you.

On the scrip shares, of which the appropriation was closed previous to the last meeting, instalments to the amount of 4*l.* per share have become due, making in all 92,305*l.*, of which 84,072*l.* has been paid, leaving 8,236*l.* in arrear.

In proceeding to raise the further sum of 50,000*l.* to complete the capital for the new works, your Directors, considering that it would be advisable to defer the issue of further shares or bonds until the fresh channels of revenue were more fully developed, by the entire opening of the Brighton Railway, have abstained from exercising the power entrusted to them, and have made financial arrangements which will obviate that necessity for some time; still considering themselves authorized to act on the resolutions adopted by the special meeting in August last for raising the above amount, either by mortgage or by shares, when occasion may make it desirable.

Considerable progress has now been made in relaying the rails. From Deptford to the Surrey Canal one-half the breadth of the viaduct has been asphalted, and new rails laid down; the other half has been partially asphalted; but the new rails have been laid the whole way to Corbet's-lane, and a great improvement in the ease and steadiness of motion has been thereby secured. The condition of the rails between Corbet's-lane and London makes it desirable to lose no time in carrying the same improvement into effect there, and your Directors have therefore resolved to relay the whole line as fast as the existing traffic will permit. In progressive liquidation of this outlay, 1000*l.* has been applied out of the profits of the last half-year.

The Deptford station, the construction of which it has been deemed advisable to postpone from a variety of causes, now occupies the attention of your Board, and it is their intention to get it completed before the winter. In regard to the station at London, your Directors have been in communication with the Committee for erecting a joint station for the Croydon, Brighton, and Dover Railways, and they have agreed to a plan for the erection of one uniform building, within which all the Companies will be accommodated; and there is reason to expect the outlay for our portion of this building and the Deptford station will bring the cost of all this Company's stations considerably within the 60,000*l.* raised for their construction.

The gross receipts of passenger traffic for the last half year are not quite equal to those of the corresponding period of 1840, being 26,468*l.* 17*s.* 9*d.*, against 27,121*l.* 11*s.* 7*d.*, or 652*l.* 13*s.* 10*d.* less. This is entirely owing to the comparative unproductiveness of the fares at Easter and Whitsuntide, which yielded 926*l.* 3*s.* 3*d.* less than in 1840; and the Sunday traffic, which shows a diminution of 276*l.* 16*s.* 6*d.*; whilst the regular weekly traffic shows an increase of 550*l.* 5*s.* 11*d.* As it is only in the latter that the third-class carriages have been used, whilst on fair days and Sundays the same rates have been charged as in 1840, some experience has been afforded by the use of these lower-priced carriages for the last twelve months, by which it would appear to be imperative from the existing competition, that they should be continued. Your Directors therefore, after very frequent and anxious consideration of this subject, have come to the resolution that, as it is not desirable to have three descriptions of carriages on the railway, it is expedient to discontinue the 2nd class, and to reduce the charge for the first class to such a price as will ensure their use by the great majority of those who now travel by the former. In conformity with this resolution, new carriages are now in progress of construction by your contractor, which will have the advantage of conveying the full number of passengers with a much smaller train than at present, and thereby effect a saving in the locomotive power.

It having been found necessary to close the footpath during the progress of the new works, the Company have sustained a loss of revenue from that source, amounting to 283*l.* 15*s.* 10*d.*

The toll on the Croydon Railway traffic shows a deficiency of 685*l.* 17*s.* 10*d.*, as compared with the same period of 1840. This result, however, is only of temporary importance, as there can be little doubt that the ample accommodation now afforded by the Brighton Railway Company conveying passengers to and from Croydon, will cause an increase and diversion of the traffic.

Against these items of diminished receipts, however, your Directors have pleasure in saying, that they have succeeded in effecting a diminution of about 1,400*l.* in the current expenditure of the half-year, as compared with the same period of 1840. The results show a net profit of 3,449*l.* 8*s.* 8*d.*, after payment of all interest due on bonds and Preference shares, to which is to be added the reserve of 751*l.* 14*s.* 2*d.* out of the profits. As a new class of shareholders will be admitted before the next accounts are closed, your Directors think it only just that the whole of the profits realised should be divided amongst the original proprietors; and they therefore recommend that a dividend of four shillings on each original share be now declared.

During the recent session of Parliament, a Bill materially affecting the interests of railways was introduced by the Government. Your Directors, entertaining a most decided opinion that the interference of a Government Board in the management of railways could neither be conducive to the interests of the proprietors, nor the safety of the public, were amongst the first to use every exertion to obtain modifications of this Bill; the more so, as one clause in particular would, unless the short lines had been exempted from its operation, have proved most prejudicial to their interests. The Bill having subsequently been referred to the Select Committee on Railways, it will be gratifying to the proprietors to know, that the Report which they have laid before the House of Commons, as the result of a lengthened investigation of the subject, confirms the opinion entertained by your Directors in common with nearly every other Railway Board in the kingdom, by recommending the withdrawal of the obnoxious clause: and it is to be hoped that henceforward it will not be attempted to remove the management of railways from the hands of those who were constituted by the Acts of Incorporation as the guardians of the important interests therein concerned.

In conclusion, your Directors have pleasure in referring to the partial opening of the Brighton Railway, as an earnest of considerable additions hereafter to be secured to the annual receipts; and they hope when they next meet the proprietors, they will be able to report the completion of the works, which will entitle them to the additional toll guaranteed to them by the Legislature.

WILLIAM SHADBOLT, Chairman.

15 July, 1841.

RESOLUTIONS.

1. Moved by Admiral Sir William Hall Gage; seconded by Lyon Samuels, Esq.—"That the Report now read be received, approved, and adopted; and, with a copy of the accounts, printed and circulated among the proprietors."—Carried unanimously.

2. Moved by Admiral Sir W. H. Gage; seconded by Sir William Beatty, M.D.—"That a dividend of four shillings per share, for the half-year, on the registered shares of the original capital, be declared, and that the same be payable on and after the sixteenth of August next."—Carried unanimously.

3. Moved by John Homer, Esq.; seconded by Henry Hunt, Esq.—"That the best thanks of the proprietors are eminently due, and are hereby offered, to the Directors, for their unceasing attention to the interests of the Company."—Carried unanimously.

4. Moved and carried unanimously—"That the best thanks of the proprietors be tendered to the Auditors, for their zealous discharge of the duties of their office."

WILLIAM SHADBOLT, Chairman.

Moved and carried unanimously—"That the best thanks of the meeting be given to the Chairman for his able and urbane conduct in the chair."

J. Y. AKERMAN, Secretary.

J. T. BOWER, THOS. W. PERRY, } Auditors, 15th July, 1841.

H. ADRON, Accountant.

Colonel Landmann's Report was then read. It stated that there was no ground whatever for imagining that the contracts which had been entered into for widening the railway would be at all exceeded by the ultimate cost, or that the whole would not be completed within the sum he had estimated. (Cheers.)

The Chairman said, he should be most happy to hear any observations which proprietors might have to make on the affairs of the Company.

Mr. Williams made some complaint, the nature of which we found it exceedingly difficult to gather, against the Directors or the Secretary for having, as he said, sold 160 of the last new shares to strangers instead of to himself, alleging that he had a prior claim, and that he had been treated falsely by the Secretary. (Loud cries of "oh, oh.")

The Chairman said, the Directors had long known, and fully appreciated the honour, as well as the ability of Mr. Akerman—(loud cheers)—and they knew him incapable of anything unfair, though they were well persuaded that his zeal for the welfare of the Company had ever been most sincere and indefatigable. (Cheers.)

Mr. Akerman said, he should treat with indignation such a charge—(cheers)—and it was only out of respect to the proprietary that he should condescend to give more than an unequivocal denial. (Cheers.) To show the meeting, however,

Digitized by Google

the utter injustice of the charge—(hear, hear)—he stated this most distinctly upon his honour, that he had offered no stranger any one share until by letter, and personally, he had offered them to every shareholder with whom he could communicate. (Hear, hear.) Certainly, after having done this, his duty to the Company—towards whom he entertained feelings of gratitude—impelled him to do his best to get rid of the shares. (Cheers.)

Mr. MONEY (late Chairman of the Company) said, he felt imperatively called upon to state to the meeting, that having—perhaps more than any man in the room—had opportunities of judging of the character of Mr. Akerman—(hear, hear)—whom he was proud to call his friend, he had the greatest pleasure in bearing his strongest testimony to the ability, the integrity, and the zeal which that gentleman had ever displayed in the service of the Company; and further, he would state this, that to his exertions they owed, to a very considerable extent, their prosperity.—(cheers)—and that Mr. Akerman was as incapable of aught worthy of reprehension as any gentleman in the Company. (Loud cheers.)

Several SHAREHOLDERS stated, that Mr. Akerman had, to their knowledge, done all he could to get rid of the shares among the old proprietors, and that in their opinion he had acted perfectly right in doing what he had done. (Cheers.)

Mr. WALTER doubted whether it would be well to abolish the 1s. carriages.

Mr. HINTON said, he was persuaded that the diminution in the Croydon traffic was to be traced to causes not at all indicative of any decline in the traffic—for instance, he believed the Croydon Company had most injudiciously endeavoured to force their passengers to get into the carriages at New Cross; (hear)—that was injurious to the Company he had no doubt. Now, as to asphalting the arches, he hoped it would keep them dry, and that then they could be let, which would be a valuable source of income to the Company. (Hear, hear.)

Mr. WILSON begged to draw the attention of the meeting to the great saving in the locomotive expense. (Hear, hear.) The coke was reduced to the extent of 26 lbs. per train per mile, including waste, and the locomotive expense was 1s. 1½d. per train per mile. (Hear, hear.) This was most important as a constant system of saving. (Hear.) He thought it well to preserve the fares at a rate that should never exceed 6d. for the inferior carriages. (Hear.) As to the wood for relaying, &c.—the Company had deemed it right to change the stone sleepers, which had been found to work badly, and the expense of the relaying with the asphalting would be 12,000*l.* This was to be spread over six years, by half-yearly instalments of 1,000*l.*, and 4,000*l.* had been paid already in this way.

A SHAREHOLDER suggested that it would not be quite fair towards the old shareholders, who had been paying the previous instalments of 1,000*l.*, to let the new shareholders come into all the benefit, at a third of the cost.

Mr. WILSON begged to draw attention to this circumstance—that generally the new shares would be taken by the old proprietors, though true it was of course that in some cases the old proprietors would not take them; but then let it be recollected that as to these there had been half-yearly dividends (when there ought to have been annual) to the exclusion of the new shareholders. (Hear, hear.) That was *bonus* enough perhaps. (Hear, hear.)

A SHAREHOLDER expressed some doubt as to the propriety of the alteration in fares suggested. A great mass of the people went by the 6d. fares, and let it be remembered that the steam-vessels went for 6d. (Hear.) The effect of which reduction from 8d. had doubtless been felt by the Company.

Mr. Deputy CORNEY would just bring it to the recollection of the proprietary, that while the 6d. fares were to be continued—(hear,)—the 1s. fares were to be reduced to 9d., so that in fact there was a benefit to the public. (Hear.) But now let him say a word as to the probabilities of future prosperity (Hear, hear, hear.) And first he would observe, that if the Government should adopt the measure which had been proposed by Mr. Alderman Wood, for preventing steam-vessels carrying passengers beyond a number proportioned to their tonnage, the result would be that the steam-vessels could not afford so to lower their fares as they now did. (Hear.) This of course would prevent their competition from injuring the Company. (Hear.) Then if, as was by no means problematical, but very probable, these vessels should be prevented from coming further up the river than Greenwich, the effect would of course be to throw upon the Railway the traffic now carried on upon the river. (Hear, hear.) Then, again, he would observe, the Croydon Company had been trying to induce the Company to reduce the rate of toll, upon the contract which the Croydon Company had themselves insisted upon having observed. The fact was, the Croydon would not do by itself, it must be linked with some other line. Now it was not at all improbable that the Brighton line would take it up as one concern, thus saving 10,000*l.* a year: and the advantage to the Greenwich Company would be that a fourpence-halfpenny toll would be paid cheerfully, when now threepence was grumbled at. (Hear.) All parties would thus be benefited by working harmoniously together. (Hear, hear.) His firm opinion was that the Company was destined to see most prosperous days: each half-year producing increased returns. (Cheers.)

Mr. HINTON said he thought it should not be considered that the steamers were prejudicial to the Company; perhaps rather the reverse, in some degree; for he knew that very generally it was the case that those who went out by the steamers came back by the Railway. (Hear, hear.)

Mr. WILSON said, in corroboration of this statement, he could inform the meeting that on many summer evenings the Railway had carried home 7,000 passengers in two successive hours—a great portion of whom doubtless had gone by the steamers to Greenwich. (Hear, hear.)

In answer to a question, the CHAIRMAN said the Company had found it necessary as a matter of prudence to go before Parliament for an additional degree of security.

Dr. OUTRAM begged to know if the Company were not under penalties to complete the works within a given time, and if the Engineer could say anything as to the probability of completion?

The CHAIRMAN replied, that the Contractors being under the same penalties as the Company, there was little probability of the works not being completed within the required time. (Hear, hear.)

Mr. ADDISON. Is all the land purchased?

The CHAIRMAN—Yes, and paid for. (Cheers.)

Mr. M. GOLDSMID said he should just observe that it did not seem the best policy to be ever shifting fares as the steam vessels changed theirs. Of course the steam vessel fares were some guide for the railways, but they should not be followed as presenting a positive criterion, for the steam vessel companies had not, as the railway had, responsible management—so much under the check of a public proprietary—and the consequence was, that fares were chopping and changing every now and then in a manner highly calculated to destroy all confidence in their steadiness or firmness. Sometimes the passengers would be taken up for 6d., and charged 8d. coming home. The best way for the railway would be to preserve an uniform equity and firmness of charge, and never to take more than 6d. fare. (Hear, hear.)

The adoption of the Report was moved by Admiral Sir Wm. Gage, and seconded by L. Samuels, Esq. (Carried unanimously.)

The resolution declaring a dividend of 4s. was also carried by acclamation on the motion of Sir Wm. Gage, seconded by Sir Wm. Beatty.

Mr. HOMER moved a vote of thanks and of confidence in the Directors—to whose ability and discretion the Company owed their present prosperity. Carried by acclamation.

LONDON AND BLACKWALL RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL GENERAL MEETING of this Company was held yesterday, at the London Tavern, to "consider of the raising of additional capital, as authorised by the Act, 4 Vict., c. 12, and to determine whether the amount required shall be raised by issuing new shares, or on mortgage, or by bond;" W. ROUTH, Esq., in the Chair.

The SECRETARY having read the advertisement by which the meeting had been called,

The CHAIRMAN rose: "The object of this meeting is to consider the raising of money that was required by the Directors for the purposes of the Company. The proprietors are aware, that by Act of Parliament 150,000*l.* may be raised by issuing new shares, and 50,000*l.* either by debentures or shares. But, looking to the state of the money market, the Directors have come to the conclusion that it would be disadvantageous to raise money by debentures. For as they are aware the Act of Parliament limits the rate of interest to 5 per cent., and that rate of interest cannot be obtained in the present state of the money market, the Directors therefore looked to see how they might raise the 200,000*l.* on shares without any sacrifice, and have, after due deliberation, come to the conclusion that the best course they can recommend to the proprietors is, that 24,000 new shares shall be raised, but that no more than 8*l.* 6s. 8d. shall be the price of each new share, and that those shares shall be offered to the present proprietors according to the number of shares each individual may possess. I am aware of the objections which at first view may appear to that course. But in the first place it must be recollected that there is an absolute necessity for raising money; for the credit of the Company is at stake. It is necessary to fix the shares at such a price as will make it the interest of the shareholders to take them, and also to enable those shareholders, who are unwilling to increase their stock, to dispose of the new shares and to dispose of them at a profit. It does not appear safe to the Directors under those circumstances to fix a higher price than 8*l.* 6s. 8d. and our recommendation is for you to authorize us to make such an arrangement, taking a deposit of 2*l.* 6s. 8d. on the shares on or before the 15th of August, and calling for the remainder 6*l.* by the payment of 2*l.* at intervals of three months. Those arrangements can be made to square with the interests of the Company, and after deliberate consideration it does not appear to us that a better course can be taken. We have not acted on our own judgment, but we have been advised by gentlemen who are well acquainted with the money market. Their opinions concur with our own, and we have prepared a Report in conformity with those views. I will state further that as a general meeting will take place in a month's time, we shall then be prepared to lay before you the details of all the accounts, and to give every information with greater accuracy than we are at present enabled to do. A vacancy has taken place in the Direction by the resignation of Mr. Alderman Humphreys. It is not at present the intention of the Directors to recommend you to fill up that vacancy."

The SECRETARY then read the Report, which stated, that an Act of Parliament had been obtained empowering the Company to raise a further capital of 200,000*l.*, to complete the works on the Extension line to Fenchurch-street. The serious and earnest attention of the Directors had been given to the manner in which that money should be raised so as to cause the least detriment to the interests of the present shareholders, and at the same time due regard being had to the liabilities of the Company, and the immediate completion of the works. The Report then stated, that the Directors propose to raise that sum in the manner which had been detailed.

The CHAIRMAN then said that a resolution had been prepared to carry out that Report, and if any gentlemen wished for any information he should be happy to give it them before the resolution was proposed.

The CHAIRMAN of the Northern and Eastern

Digitized by Google

Counties' Railway—Are you quite clear that this sum of 200,000*l.* will be quite enough for everything?

The CHAIRMAN—Certainly.

Mr. GOLDSMIDT—I rise, Mr. Chairman, to put a very different question from the last. My question is, Do you not think it will be too much? In every case in which money is to be called for, the Directors must state to the Proprietors clear grounds for the necessity of so doing. From a variety of circumstances, and from what the Chairman has told us we should bear in mind the present unfavourable condition of the money market. I have attended two meetings. At the first I heard with great pleasure the Chairman declare distinctly as his opinion—at the time I was rather incredulous, although I confess it was stated by a high authority with full confidence in the prophecy, namely—that on that day year we should divide a profit of 10 per cent. I now certainly think the Chairman is, in justice to himself, bound to state what are the circumstances which have caused the disappointment. At the second meeting I heard a statement which, though not so agreeable, was not a matter of opinion, but a matter of fact. It was that 50,000*l.* had been spent in law, including the expenses for Parliamentary business. Considering that there was an expense of 400*l.* attending the settlement of each case, it appears to me that that is the most profuse expenditure I have ever heard of by any Company whatever, and which, in my opinion, requires a full explanation before any further sum can be raised. If a satisfactory explanation can be given on those points, I shall thank you, Mr. Chairman, to give me an explanation on another, namely, whether you can make out a case for raising the amount at so depreciated a rate as that proposed. Many proprietors would not, I am confident, take shares even at such a depreciated rate. I therefore think it is doubtful whether it is expedient to throw so large an amount of shares on the proprietors, who may be compelled to sell them, and thereby depreciate the value of the present shares. I say all this without any personal feeling: for I think it would be to my advantage to take the shares. If the explanation is satisfactory, I shall be ready to accede to the proposal. If not, it may become a question whether the proposal ought not to be modified.

The CHAIRMAN—I regret the anticipations that I formed with regard to the profit of the concern have not been realized. I hoped and believed that the Extension line would have opened in April last. Circumstances over which we have had no controul prevented it and disappointed our obtaining that result earlier than the present period. Perhaps we ought not to have expected a profit till the Extension line was opened. It is the opinion of the Directors, and I may say that no gentleman on this side of the table has sold a single share, that the prospects of the concern will not be fully developed till we have obtained the advantages that we have a right to expect from the full extension of the line to Fenchurch Street. There are other circumstances which have depreciated the apparent prospects of the concern. We were at one time constantly liable to difficulties arising from the breaking of the rope which has necessarily prevented so many people from using our Railway. We now have a wire rope on the line which has been employed with great success. It has never broken and has been in use for a period of ten months. We are trying several sorts of rope and we are only prevented from adopting wire rope by a wish to try which is the best description of rope for the purpose. With regard to the law expenses they are unquestionably very heavy, but if any proprietor will take the trouble to look into the details of the last meeting he will find that the Directors have not countenanced by any means the system of going to law, but on the contrary have avoided it as much as possible. The expenses are not so much for contested claims as for conveyancing, and when I remind you that 2000 properties have passed from one hand to another, you will see that that cannot be done without very heavy expenses.

Mr. GOLDSMIDT—I thought it was 1200?

The CHAIRMAN—No: I think it was 2000. And I think it is but justice to our solicitors to say, that those gentlemen have themselves suggested, and declared that they are most anxious that their bills should be put into the hands of some other professional gentlemen: we not professing to know well what are the proper legal charges; they are willing and desirous that their bills should be submitted to some professional gentlemen, and taxed in the most rigid manner. (Hear, hear.)

Mr. GOLDSMIDT—Are you prepared to state positively, that you want the money?

The CHAIRMAN—We are.

Mr. GOLDSMIDT—And immediately?

The CHAIRMAN—Yes.

Mr. GOLDSMIDT—Do you not think that in the present circumstances of the money market, you could do with half at present?

The CHAIRMAN—Not without an absolute sacrifice of property; our engagements requiring that the whole should be raised.

Mr. GOLDSMIDT—You forget that your own arrangement will not raise the whole money for nine months?

CHAIRMAN. Yes: but then this is to be kept in mind, that as soon as the shares are appropriated an advance can be obtained upon them without any difficulty: till they are appropriated it is impossible (Hear, hear.) Then, let me ask, will it be well to keep part of the shares hanging over the market? (Hear, hear.) In fact, the Directors want the money—they have no alternative but to make the present proposition. I should think you would give them credit for having endeavoured to postpone it as long as it was possible. (Hear, hear.) We have well and duly deliberated upon it, and think that it is requisite for the interests and credit of the Company. (Hear, hear.) Experience has shown that shares hanging over the market (as they would be known to be) have produced the worst possible effects. (Hear.)

A SHAREHOLDER wished to put a question of some importance; before doing so he would just observe, that in all probability the receipts of the Company would greatly increase shortly, and this would of course materially assist the Company. (Hear.) He wished to ask, as the other 50,000*l.* was to be raised by debentures at a future period, if they would at all be forced upon the shareholders. (The CHAIRMAN—no, no.) He at the same time should like to be informed, whether those of the present proprietors who might not wish to take the new shares would be placed in a worse position by reason of any preference being shown to the new shareholders in respect to interest. (No, no.)

The CHAIRMAN said it had not, he was aware, been unusual in other Companies to pay the difference to the new shareholders; but, in all such cases, the result had been by no means beneficial. And the Directors had made up their minds, the best course would be to pay the interest *pari passu*, taking the shares at a depreciation. (Hear, hear.) If the shares were distinct, they would be shared in equal proportion to such as had taken new shares. (Hear, hear.)

Mr. WOLF said he considered the suggestion of Mr. Goldsmidt was only one of time. For if one portion of the shares are to be issued now, and another held over for six months, he could not see that the suggestion amounted to more than the mere difference of time. What then was to be gained by that slight delay? What would be the difference between taking the whole amount now, and giving it to be understood that half would be issued in six months? (Hear, hear.) What was most important to meet was any impression that might have been created that the Company had found their scheme a failure. To that end it would be desirable to have the assurance—which he was sure the meeting would take from the Directors—that, from what they had seen and known, there was every prospect that the Railway would pay a good rate of interest. (Hear, hear.) He believed that there would not be the slightest difficulty in raising the money wanted (hear), inasmuch as then it would be advantageous to every proprietor to take the shares offered. (Hear.) "I really don't see what good would arise (said Mr. Woolfe) from telling the public that in a few months the remainder of the shares will be issued. I think the best way will be to pay them all at once. (Laughter.) I wish to know—as I have been a great portion of my time upon the Continent, and really know not much of the affairs of the Company. I have heard it indeed suggested that it was a perfect failure. I should like therefore to hear such a satisfactory statement as will convince the proprietors that they need not fear they will be able—so many of them as may wish to keep more shares than they have—to dispose of them at a great profit." (Hear, hear.)

Mr. SALOMONS said, having recently become a Director of the Company, he was anxious to express an opinion on the various subjects which had been started at this meeting. He was ready to grapple with the whole matter; and give his opinion honestly, and in accordance with what he believed fully to be the truth. Now, first, as to the raising of the money:—it was always an exceedingly ungracious thing, on the part of every Directory, to call upon the proprietors who had recently made advances to the full extent of their obligations, to contribute yet more. But such was the situation of the Company that, so far as they were able to foresee, they found that they would require 200,000*l.* to complete the work—getting completely out of debt: they therefore were impelled to ask for the sum they at present wanted, in the manner which had been suggested. They had put it off till the latest possible period; the Company might naturally suppose that the Directors had not embarked in the concern without personally inearring liabilities; they had not done so—there was not one of them who had not become personally liable to a considerable extent. Of course, from their liabilities they came to be relieved: it might happen, they hoped it would, that the whole of the 200,000*l.* would not be required; but under existing circumstances, from the means they now had of judging, that was the extent of their necessity; they came therefore to the meeting to ask for the only means of raising that sum; means whereby the shares would be offered at such a price as would incline the proprietors to take them; a price which would seem to such of the proprietors as were not desirous permanently of increasing their shares beyond their existing numbers—the certainty of being able to dispose of them at a fair profit. That price the Directors had, to the best of their judgment, decided should not be higher than 8*l.* 6*s.* 8*d.* per share. And they did decid dly think it by far the best way—that in this mode the sum wanted should be raised at once, than that only half should be raised and the remainder kept hanging over the market; depreciating thereby the undertaking, (hear, hear.) So much for the propriety of raising the money as proposed: infinitely the preferable course, to going on accumulating interest on loans, which was obviously the most disadvantageous course, forming a considerable drain upon the profits of the undertaking. Now, as to the prospects of the Railway. And, Gentlemen, (continued Mr. SALOMONS) I can assure you I have paid great attention to the undertaking; I confess at first, I had occasional misgivings as to the principle by which we were working; but after a close inspection of the undertaking, the most minute enquiries among experienced practical persons, and the greatest observation of my own, I am prepared to say, that I stake my reputation upon the principle we have now adopted of working by wire ropes. I am confident in the efficacy and the value of that principle, not merely from enquiries among the engineers, but (what perhaps was not quite regular) from enquiries among those practical men who were working upon this principle themselves; from them I am satisfied as fully as I ever have been of any thing, that this principle will answer every purpose it is designed for. (Hear, hear.) One word as to the Railway itself; if ever there was one which should be satisfactory to the

Digitized by Google

are of course instituted with a view to profit, and in most cases they have not the merit which undoubtedly this possesses, of being calculated, not to divert proper traffic and injure the interests, but to forward the interests of humanity by promoting the saving of life. (Cheers.) In fact, this may with truth be said to be a philanthropic design to prevent the highly dangerous traffic in the pool above Greenwich—(Hear, hear, hear)—destructive as it has been to the lives of those who navigate the river in small boats. (Hear, (hear.) This ought not to be left out of view, as likely to have a very material influence on the public mind in favor of this railway. (Hear, hear.) Nor can it be kept out of mind, that when the *terminus* of our line is brought, as it soon will be, much nearer the sources, the centre of business, than the wheries and steamers can ply, there is every probability of an immense increase of traffic, which may be confidently looked to by the proprietors as a source of constantly increasing traffic—(hear,)—so that, though from the unfavourable circumstances of the money market the shares may have been unfortunately unfairly depreciated, there is no doubt whatever that they will be in a very different and much more attractive situation ere long. (Hear, hear.) Considering that from the period at which we first started—even with an imperfect and unfinished line—there has been a gradual increase of receipts, there cannot be a doubt of this. (Cheers.) I know myself that, with all the disadvantage of not coming fairly into the city, there lately has been a weekly receipt of 1,000*l.* constantly, and the amount is increasing steadily. (Cheers.) I do not at all doubt, that when a terminus is brought, one may say, within a stone's throw of the Royal Exchange, there will be a great transit of goods as well as passengers. (Hear, hear.) I feel warranted, from all the data I have been able to collect, and all the circumstances of which I have any means of becoming cognizant, in stating, that this concern must and will prosper—(cheers,)—provided you, the shareholders, assist us, by releasing us entirely, in the manner we ask, from all liabilities—thus freeing yourselves from all debt. (Hear.) And you should lose no opportunity of impressing upon parties interested, the great public benefit they would confer by landing passengers at Blackwall instead of bringing them up to London Bridge, to the increase of the imminent peril to life, by reason of the crowded and dangerous navigation. (Hear.) There is a positive certainty that if this consideration on has its due weight, and you exert yourselves well, to place the Company in its due position, the expectations formed by the projectors of this line, of its ultimate prosperity and public utility, will be abundantly realised. (Cheers.)

Mr. Ward asked what proportion of the 1000.*l* weekly received—is to be deducted for expences ?

The Chairman, replied, about 425*l.*

Mr. Ward—And what is the interest on the debentures ?

The Chairman—10,000*l.* a year.

Mr. Ward—Will the money now to be raised be sufficient to finish the work as well as to pay the liabilities ?

The Chairman—Yes.

Mr. Ward—If the Railway is continued to Mark Lane ?

The Chairman—That will cost nothing. The property sold will balance the cost. (Hear.)

A Shareholder here cried out from the bottom of the room—Well, putting all the circumstances together—can you give us any idea of what the interest will be ? (Loud laughter.)

Mr. Salomons—I have given you all the data on which I formed the opinion I have expressed. I have told you that considering, since the first opening of the line—in an unfinished state—there has been a constant increase of receipts to upwards of 1000*l.* per week, and taking into calculation the immense public advantage and utility which will result from our affording the facilities for transit of goods and passengers from a spot so near the very centre and focus of business as our traffic will be—a most prosperous line. But really to ask me to commit myself to the precise figure of what the interest will be—is perhaps, going too far into speculation. (Laughter and hear, hear.)

Mr. Wheeler begged to ask if the Directors had turned their attention to the subject of fares ?—he had of conrse great reluctance in mentioning the subject—but he had always been strongly of opinion that the present fares were too low.

The Chairman—The subject has been under our most careful consideration, and our impression at present is, that the existing fares are the right ones. (Hear.) At all events it is decidedly best to give the present fares a thorough trial. (Hear.)

A Shareholder having inquired what liabilities the Company were under for compensation in respect of houses of which notices under the Act had been given ?

The Chairman said, he believed the surveyor would be prepared to give a specific answer; by the Act they were liable to compensate any person whose property was injured, provided notice was given within a certain period, expiring 6th July. A great many notices had been given. In one or two cases there had been trials, in which verdicts for 40s. had been recovered against the Company; there was no cause, however, for apprehension as would be seen by the Surveyor's statement.

Mr. Tite, the Surveyor, then said, The notices served have been fifty, in respect of 83 houses, 54 of which are under the value of 200*l.*, and if persevered in successfully, the total loss to the Company cannot exceed 4,000*l.* (Hear.) My belief is, that the loss cannot exceed 2,000*l.*; for many, if not most of them, cannot be maintained. As to legal expenses, it has been resolved to determine the majority of them by reference, which will incur no expense at all worth mentioning. It is important to state that one very serious point of principle has been settled by the decision of the Court of Queen's Bench, in our favour. It had been supposed that the Company were liable in cases where, as in the instance of a public house, &c., the neighbourhood had been injured for trade, but Lord Denman had delivered a judgment, laying down that they were not liable for anything but such obstructions to light and air as were nuisances at common law. (Hear, hear.)

The Chairman—And doubtless it is owing to that decision that so few cases have since been persisted in. (Hear.)

Capt. Page—May I ask the Directors at what time they think the line will be opened to the extended terminus, and if they can give any idea of the probable amount of tonnage which may be calculated upon in respect to the transit of goods ?

The Chairman—I am assured that the line will be opened fully on Monday week—certainly within the present month. I think it will take still some months to make the necessary arrangements for goods. As to the extent of the tonnage, I cannot give any idea. This I know, that goods can easily be brought on this railway for less than half the amount now paid by the public, and yet at a considerable profit. (Hear, hear.)

Capt. Page—When will the arrangements be completed for the transit of goods ?

Mr. R. Stephenson, the Engineer, said there were arrangements to be made between the Directors and the India Dock Companies. But he recommended this—that the passenger traffic be first caried on, under the improvements now introducing before the additional perplexity was introduced, of carrying goods, on a system already apparently marked with novelty. The period he should recommend for delay would be at least three months.

The Chairman remarked, that there could be no doubt the East and West India Dock Companies would be very ready to make arrangements, but they could not be expected to be so imprudent as to commit themselves before hand with the present carriers. I have no doubt this expenditure now to be provided for, of 200,000*l.*, will place the railway in a condition of thorough profit, and of very good will be as anxious to proclaim the dividend as you will be to receive it. (Hear, hear.)

Mr. Eccles asked what had been the receipts for the last six months ?

The Chairman—From July 6 to June 30, the passengers carried were to the number of 1,848,156, the receipts 33,659*l.* (Cheers.)

Mr. Eccles wished to know if any provision had been made for guarding against noise ?

The Chairman said, he believed this had now been effectually guarded against. As to the Extension line there would be no noise, the motion of the carriages being secured, one way by momentum, the other by gravity. (Hear.)

Mr. Stephenson said, in answer to a question, that he believed the railway, having been constructed on the most stable principles, would bear any degree of weight likely to be put upon it. (Hear.)

Captain Page asked if any applications had been made for leases of the arches ?

The Chairman said, there had been a great number; so many, indeed, as to convince the Directors that they were of great value. None had as yet been let.

In answer to a question,

The Chairman stated, that almost the whole of the shares once in arrear had been paid up, the rest had been forfeited.

A Shareholder, who was also a shareholder of the Southampton Company, said, he had no doubt whatever of the success of the plan now proposed, which had been adopted by the Southampton Directory: some of the proprietors indeed had declined taking fresh shares, (the deduction being only 52 per cent., whereas this Company was about to have 66 per cent. offered them), but what had followed ? Why, these proprietors at a subsequent meeting came to the Directors and entreated, on a variety of excuses, to be permitted to retract their refusal—(laughter)—as to some, the excuses were allowed; as to others, disallowed—(laughter)—and in these latter cases the shares were sold at such a premium that 9,000*l.* was put down to the credit of the Company in respect of these sales. For himself he sold at 100 per cent. profit; others much more; the fact was he sold too soon. (Loud laughter.)

Mr. Goldsmidt—Assuming that the shares are issued at 8*l.*, and a proprietor cannot take them, but sells them, the persons buying them for 10*l.* or 11*l.* will have the same dividend as those persons who originally purchased shares at 25*l.* Whereas, if you wait for six months, those who do not wish to keep them may sell them for 16*l.* Therefore I say, that if the Directors do not want the whole of the money till six or nine months, or a year hence, it will be most advisable to take only what we comparatively want at a low rate, and probably the shares six months hence will fetch a higher price in the market. This is not a matter of such importance as to compel me to resist the Directors if they think they are bound to take the course they have suggested. I merely throw it out for their consideration. As to what my friend Mr. Woolf said, I think he has been so long on the continent, that he has forgotten how to calculate, if he does not perceive this.

Mr. Woolf—I am sure I have not lost my calculating powers that Mr. Goldsmidt speaks of, for I never thought I had them. (Laughter.) I have heard with attention what Mr. Goldsmidt has said, and probably I have lost another faculty, for I cannot see the force of the argument Mr. Goldsmid has just used. I cannot see that there will be any difference in the effect on the shares of the Company whether a number of shares are actually in the market, or whether they are hanging over the market: for it will be known that they must soon come into the market; and thus, whichever way it is, there will be the same profitable trade going on. There is one suggestion I should like to make. It has been stated that several of the Directors have made advances on the concern. Suppose we let the accounts of the Directors remain a little longer on the books of the Company ? (laughter, and cries of

Digitized by Google

"no, no.") and then, perhaps, Mr. Goldsmidt's views can be met.

The CHAIRMAN—I am glad to hear that Mr. Goldsmidt will not press his proposition, for the Directors are satisfied that unless the course they propose be adopted, there will be a number of shares hanging as an incubus over the market. I therefore move, that the Report be received and adopted.

The motion was carried unanimously.

The CHAIRMAN—There is now a resolution founded on that.

The SECRETARY then read the following Resolution founded on the Report: "That this meeting do order that the sum of 150,000*l.*, which by the Act of 4th Vic., ch. 12, the Company is empowered to create by issuing new shares, be created accordingly; and that a further sum of 50,000*l.*, empowered to be created by mortgage or bond, or by issuing new shares, be created by issuing new shares; and that the sums of 150,000*l.* and 5,000*l.* making a total of 200,000*l.*, shall be divided into an equal number of shares, and that the calls on them be made payable at such times as the Directors shall think fit."

The CHAIRMAN—Gentlemen, you see by this Resolution it is proposed to authorise the Directors to fix the time of the calls in such a way as may be necessary for the convenience of the Company. The Directors are most anxious to fix them in such a way as may suit the convenience of the shareholders. We are not yet able to decide the dates; but the shareholders will be informed of them as soon as they are fixed.

The resolution was then carried unanimously.

Mr. RENNIE, M. P.—There have recently been some reports floating about with reference to the retirement of Mr. Alderman Humphreys from the Direction. I should be glad to hear what explanation the Directors are prepared to give.

The CHAIRMAN—I submit that it is not expedient to go into any of the circumstances connected with the retirement of Mr. Alderman Humphreys from the Direction.

Mr. RENNIE—Those reports affect the credit of the Directors, and I think they ought certainly to be explained.

The CHAIRMAN—As it seems to be the wish of the meeting, I certainly cannot refuse to give an explanation. I do it however with great pain. Not later then last Saturday it came to the knowledge of the Directors that one of their body had sold shares which he did not possess. A meeting of the board was called and the resignation of Mr. Alderman Humphreys was the consequence. To what extent the interests of the proprietors have been affected it is impossible to say. No other Director has been a party to any thing of the sort.

Mr. RENNIE—I feel that the reports have been but too true. Mr. Ald. Humphreys, as a Director, has abandoned his trust. (Hear, hear.) He has been guilty of trafficking in shares, with the view of depreciating the profits of his constituents. I have not words to express my contempt for such conduct, and if that opinion is concurred in, I shall draw up a resolution which I shall submit to the meeting. I think the meeting should not separate without expressing its reprobation of conduct so disreputable. Mr. Rennie then proposed the following resolution—

"This meeting has heard with astonishment and indignation, that Mr. Alderman Humphreys, M.P., forgetting his duties as a Director of the Company, and betraying the trust reposed in him, has trafficked in shares, for the purpose of depreciating the property of his constituents, and for individual gain; Resolved—that this meeting, as a duty, expresses in the strongest manner its censure and reprobation of conduct so unworthy and discreditable as almost to disqualify him for holding any situation of responsibility or trust."

Mr. CRAWSHAY—I hope the honourable gentleman will not press his resolution,

Mr. SALOMONS. No one can defend the conduct of a Director attempting to reap a profit at the expense of the shareholders. If a Director is desirous of lessening his stake in a concern, the shareholders willingly assist a Director under such circumstances. But when an individual profiting by the information which he has confidentially acquired, betrays that confidence, he is guilty of a gross breach of trust. I think, however, that the case coming before the meeting is a sufficient punishment. Nobody can regret more than I do the betrayal of the confidence, but I hope that the resolution that has been proposed by Mr. RENNIE will not go forth to the world, or it may tend to ruin an individual holding a public situation. I trust, however, that the Proprietors will feel that their own dignity and honor are satisfied, and that they will let the subject drop.

The CHAIRMAN.—I trust the honourable gentleman will be induced to withdraw his motion. I do not wish to say a word in extenuation of the conduct of Mr. Alderman Humphreys; but I beg to remind the meeting that that individual is not here to answer for himself. He may be at a future meeting.

Mr. RENNIE—My object is to give publicity to conduct which is so disgraceful. I do not care whether the resolution is carried or no. It will be known how Mr. Humphreys has conducted himself. His conduct has been unworthy of his situation in life—unworthy of a man in his position as a Director of a Railway Company, a Member of Parliament, and an Alderman of the city of London.

Mr. SAINTSBURY—I think that it is a spot on the Direction, and that such conduct should be stamped with all the obloquy with which it can be stamped. Has any circumstance transpired tending to mollify the charges against Mr. Alderman Humphreys? If any mitigatory circumstance can be communicated to the meeting, Mr. Humphreys should have the benefit of such a circumstance.

Mr. HARVEY thought the resolution should be withdrawn.

Mr. RENNIE—If a proprietor of shares finds it necessary to dispose of them, there can be no fault found; but then it is dishonourable in a proprietor when he sells shares that he does not possess. It is honourable to the Direction to wish to screen a Director, but really I think for their own credit, the resolution should be passed. I therefore adhere to it.

Mr. SALOMONS—I have no wish to screen a man who has sold property to which he is not entitled, but at the same time I think a member of the Direction should not be marked by such a resolution as that. I do not ask you in justice, but in mercy, not to put such a resolution on your books.

The CHAIRMAN—I think I ought to state any justification that Mr. Humphreys has assigned. At the same time I may say that it did not appear to the Directors to be any justification. It is in the recollection of many present that the Directors had undertaken the building of three steam-boats, that run between Blackwall and Gravesend. That speculation has been attended with success and not with loss. Mr. Humphreys stated that as a Director he might be liable to losses by those steamboats, and therefore he had a right to sell the shares as he had done. (A laugh, and cries of "Worse and worse.")

The resolution of Mr. Rennie, leaving out some words was then agreed to.

A vote of thanks to the Directors was then carried, and the meeting adjourned.

THE EASTERN COUNTIES' RAILWAY works are progressing considerably in this neighbourhood. The immense embankment extending from Springfield is now closely approaching the road leading from New Street, over which the viaduct is in an advanced state of construction; and will, when completed, present a fine arch of about 22 feet in height. The embankment from Cherry Garden Lane towards the river is also actively increasing, and the whole of the houses at Widford, recently sold by Mr. J. Beadel, have been raised to the ground, preparatory to the diversion of the London road, under which the line will pass in a cutting.—*Essex Standard.*

PERFORMANCES OF THE AMERICAN LOCOMOTIVES.

To the Editor of the Railway Times.

SIR,—I am sorry that the note or abstract of performances which I supplied to your journal of the 3rd instant, with the sole object, as was then stated, of enabling your readers to make any useful comparisons between two locomotive engines, should have elicited only the objections, or strictures, or taunts—whichever they may most properly be termed—of your correspondent "C.E." To those who do know the facts of the case it must be still more matter of regret that "C. E." should bring forward an accident which had no bearing whatever (if we are to believe evidence) on the performances alluded to.

If "C.E." will have the goodness to consult the archives of the Institution of Civil Engineers, he will find the very singular assertion of "97 lbs. pressure per square inch," refuted by the trials made with a mercurial gauge. I must beg to be excused from being any further drawn into correspondence with an anonymous writer, than might seem called for by the above points; but if "C.E." really desires to "analyse," he may find as near an approach to a "clear and candid table" as I have been able to procure, (for I don't now "work the trains up the Lickey plane" as "C.E." seems to imagine) in the hands of Mr. Wishaw.

I am Sirs, yours faithfully,
W. S. MOORSOM, Engineer.

King's End House, 13th July, 1841.

SECOND-CLASS CARRIAGES.

To the Editor of the Railway Times.

SIR, — Having noticed the observations of "Viator," dated *Derby Mercury*, June 19, 1841, I would beg leave to suggest that he appears to entertain expectations from the Directors of railways which, unless his complaint is very *strongly* taken up by the public, are little likely to be realised.

Can "Viator" imagine that while the public are simple enough to ride in these *death* carriages, without unceasing remonstrance, that the managers of railways will feel the slightest inclination to remedy that, which was created for no other purpose than to drive passengers into first-class carriages and higher fares. No; they are much more likely to take off the present covering; unless, indeed, they can find out some *more* ingenious means of rendering second-class carriages more dangerous to health than they have yet done, and done pretty successfully.

I remember, some years since, being told in conversation with an officer of the (then Southampton) South Western Railway, during the existence of closed and glazed second-class carriages on the Great Western Railway, that it was a most injudicious measure, and tending to injure first-class fares. Doubtless this opinion actuated the Great Western folks in shortly after removing this accommodation, and placing the public at the mercy of such blasts as come in all directions through these open carriages at a speed of 30 miles an hour.

The Great Western line, last year, exercised another manœuvre to this end of profit, by marking the two extreme and sheltered boxes of each second-class carriage "Conductor's Box," very wisely driving the public into the very worst of the bad.

I am, Sir, yours, &c.,
A TRAVELLER.

5th July, 1841.

RAIL *v.* ROAD.—The traffic between Cheltenham and this city, on the turnpike road, has so greatly decreased since the opening of the railway, that the profits arising from the tolls are insufficient to defray the expenses of keeping the road in repair. Under these circumstances, Mr. Stratford, the clerk to the trustees of that district of roads, made an application to the Cheltenham magistrates, on Thursday se'nnight, to allow the highway rates of the parishes through which the road extended, to be applied to the purposes of repairing the turnpike road. The application was of course allowed.—*Gloucester Chronicle.*

2. Toll to London and Birmingham 143*l.* 16s. 7d., to be deducted from gross receipts.

3. The receipts are exclusive of those for the mails; on Sunday mails only are carried.

7. Receipts include the Northern and Eastern toll, &c.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (88+31.)

12. The 5,331,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

14. The 26*l.* 19s. 4d. from goods, &c. is for toll only.

15. Ten per cent. is the maximum dividend allowed by the Company's Act.

16. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station.

20. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed.

21. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.

23. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

24. The 4,070*l.* 10s. 2d. are the receipts after deducting the toll to the North Midland Company, and exclusive of receipts from carriage of mails.

25. The receipts for goods, &c. include, carriages, 84*l.* 13s. 0d.; horses, 28*l.* 6s. 6d.; dogs, 1*l.* 13s. 6d.; parcels, 203*l.* 2s. 11d.; cattle, 13*l.* 12s. 0d.; corn, 16*l.* 17s. 4d; heavy goods, 470*l.* 19s. 7d.; coal, 102*l.* 0s. 8d.—Total, 871*l.* 5s. 6d.

27. Including the traffic of the Manchester and Leeds Railway, 107*l.* 13s. 0d.

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

The table sent us by D. E. *is in several respects valuable, but it is rendered incorrect in an important particular, apparently by the compiler having understood the term "tram road" to mean a railroad for the transport chiefly of goods. The locality the writer dates from (Lincoln's Inn) may account for his being better acquainted with Railway Acts than with railway terms and practice. As* D. E. *may wish, we will either return the table or use it, with thanks, after making the needful corrections.*

The patent signal lamps of Mr. Bettie, of Glasgow, probably deserve attention, but the paper sent to us does not sufficiently describe their peculiarities of construction to admit of our forming any decided opinion on their merits.

A correspondent who is desirous of testing the performances of the locomotive engines under his care, is desirous of having some further particulars of the performance of the Liverpool locomotive engine on the Hull and Selby Railway, noticed in our last. He would be glad to be informed of the size of the cylinders and driving-wheels—area of fire grate, and inside of fire box—length, size and number of the tubes, the gradients of the line passed over, &c. We apprehend our present correspondent is only one of many who would be glad to receive information of this kind.

The Rival Carriers.—*We have inquired into the facts connected with the damage to goods, &c. &c. complained of by Mr. Townsend, of Chester. It appears that neither overcharge, damage, nor delay, can be fixed on Messrs. Pickford, for the goods passed from their hands into those of another carrier, and they do not, in point of fact, carry to Chester. Of course there could, in this instance, be no competition between them and the Grand Junction Railway Company. It was only through mistake, indeed, that the goods were received by them at all. On the whole we do not think that the circumstances of this particular case furnish any legitimate data for instituting a comparison between the care and diligence of the Grand Junction Company and those of the private carriers. If future occurrences should tend, more clearly than the present, to point out the practical consequences to the public of one or the other mode of managing the carrying business, we will readily give them all publicity and attention.*

Sunday Observance.—*Our views on this question have at length found an able antagonist in* "Anti-Sunday Translitarian." *We are unable to find room this week for his paper, but it shall appear without fail in our next.*

We regret that Mr. F. Coste has to do with persons so reluctant to do justice, but as a general meeting is close at hand, we would advise him to withhold his tale of grievances till then.

A Railway Shareholder, but not in the Great Western or Birmingham Lines, *merely echoes the unsupported assertions of* Ignotus.

THE RAILWAY TIMES.

SATURDAY, JULY 17, 1841.

WE earnestly request the particular attention of our readers to the extraordinary correspondence which we publish this week, respecting *the getting up* of the affidavits in support of the late abortive application, by the Directors of the Eastern Counties' Railway Company, for a criminal information against the *Railway Times*, and to the strong light which it throws on the motives and principles of the authors and abettors of that very *criminal* proceeding.

Mr. WYLLIE, one of the Directors of the Company at the date of the article in this journal which was charged as libellous, and who was, therefore, required to join his former colleagues in denying on oath the truth of the imputations it contained, and who did—*looking to the record merely*—go nearly as far as any of them in such denial, comes now manfully forward—impelled thereunto by the publication in our last week's number of his affidavit at full length, and by the damaging import of our strictures upon it—and shows, by the incontestible evidence of a preceding correspondence between him and *the solicitor for the prosecution* on the subject of that affidavit, that he did not intend his denial *in the sense* in which it was made use of by his ex-colleagues or their legal adviser or advisers, to influence the minds of the judges. The correspondence proves further, that the whole of the other nineteen Directors were distinctly warned by this one honest (and therefore Ex-?) colleague of theirs, that if they swore what it was proposed they should swear—and which they have since actually sworn—it would be understood by the judges and everybody in a sense *the very opposite to the truth!!!* They swore erroneously and deceptively—not as we have hitherto charitably supposed from oversight, but *after* they had been formally warned in writing that if they did so, they would be guilty of something which their ex-colleague, Mr. WYLLIE, being no "practised or latitudinarian swearer," holds, in common we imagine with all honest men, in extreme abhorrence!

The case is this:—The twenty Directors in question all swore positively that—

"Although the Directors did state that exclusive of charges for maintenance of way and depreciation of stock, the current expenditure for working the line was less than the receipts from the line, YET THESE DEPONENTS DENY THAT THE SAID DIRECTORS HAVE EVER, in any other manner in their Reports, indirectly OR AT ANY TIME pretended THAT THEY WERE WORKING THE SAID RAILWAY AT A CONSIDERABLE PROFIT."

Whereas, these same Directors in the Report made by them to the shareholders on the 28th of August, 1839, stated expressly—without making any mention of "maintenance of way" or "depreciation of stock," and without the slightest qualification or reservation whatever, that—

"The current expenditure for working the line *according to the best calculations that could then* be made DID NOT AMOUNT TO FIFTY PER CENT. ON THE GROSS RECEIPTS; a result which cannot fail to be highly satisfactory to the shareholders."

* * * * *

[Other reports were made by the Board calculated to keep up the same favourable impression, but we confine ourselves to that of the 28th of August, 1839, as admitting of no dispute or doubt about the meaning intended to be conveyed by it.]

What the Directors, therefore, denied on oath, they had ever done, this Report clearly proves they did; and how this came about, is the subject of the explanatory correspondence which we now lay before our readers.

On the 19th April, Mr. DUNCAN, the Solicitor to the Company, writes to Mr. WYLLIE, enclosing "an affidavit," to be sworn by him as one of the Directors in office on the 13th of February, 1841, which affidavit is said to be "in the same form in which it *has been sworn* to by the several Directors." At that date, however, none of the Directors had yet "sworn" anything. The earliest of the affidavits is dated the 22nd of April.

On the 19th April, Mr. WYLLIE writes, in answer to Mr. DUNCAN, declining to make the affidavit in the terms proposed, for the following reason among others.

"As regards what other Directors may have stated about the profit of the working of the line, I cannot positively swear; what I know is that my own conviction (*founded on statements of Mr. Hall*, which I think I took down in my minutes,) was on the 13th of February, that we were working at a profit. I remember quite well stating that we *were* to Messrs. Tucker, Barnett and Co., of Birchin-lane, when we wanted to borrow money upon our debentures. I avowed that conviction at the adjourned Board of 24th February, when Mr. Cropper took upon him to lecture me upon a question which I put connected with the law of libel. *and I cannot swear to that part of the affidavit without perjuring myself.*"

Even down to the 24th February last, two or three days before Mr. WYLLIE ceased to be a Director of the Company, it appears he was under a firm impression that they "were working at a profit," and he remembers well having stated that they *were* so to "Messrs. TUCKER, BARNETT and Co., of Birchin-lane, *when we wanted to borrow money on our debentures.*" So then, the case which we only *supposed* last week, turns out to be not altogether a *fiction!* "*Certain large sums of money* WERE (not lent to but) *attempted to be borrowed by the Company on the faith of the Report of the 28th of August*, 1839, *representing that the Company were netting a clear profit on their carrying business of* 50 *per cent., and on the strength also of personal assurances from certain leading members of the Board, that the most implicit reliance might be placed on the accuracy of that Report.*"

Mr. DUNCAN replies (20th April), requesting an interview with Mr. WYLLIE on the subject of the affidavit, which he says "*I will make to your mind*, if after explanation from me it be not already so."

The interview takes place, and on the 24th April Mr. DUNCAN forwards to Mr. WYLLIE what he calls a "new" affidavit—respecting which he says, "you will find it even still more correct than the former, and *I have attended to your wishes.*"

Mr. WYLLIE however still demurs, and on the 26th April writes Mr. DUNCAN a long and very remarkable letter. He desires it to be understood that he is "no party to the prosecution" of the *Railway Times*, and disapproves of it altogether; (it appears, indeed, from the letter by which Mr. WYLLIE introduces this correspondence to our readers, that this was one of his principal reasons for withdrawing from the Board.) He thinks that "even if successful," it will do injury to the Company, "*as tending to dispel a very favourable belief respecting the traffic, generally entertained, and participated in by myself*," that is to say, that if the Directors *persisted*, in spite of his (Mr. W.'s) warnings, in *swearing* that they "never pretended that they were working the railway at a considerable profit," they will be giving the lie to all their own previous representations, and to the actual belief, down to a very recent date, of one at least, if not more, of their own body on the subject. He quotes the very words of the Report of the 28th August, 1839, which we have so often cited, as being in direct opposition to the swearing of the Directors, and calls again to mend the specific representation made to Messrs. TUCKER, BARNETT, and Co.

"If I do swear to it" ("the affidavit before me"), "it will be in the restricted sense that the Directors, in their public Reports never used *the words* 'consi-

Digitized by Google

derable profit.' I cannot do otherwise, for were I placed in the witness box, and interrogated upon oath, I would have to confess that the extract which you embody in the affidavit, namely, that 'the correct expenditure for working the line, according the best calculations that could be made, did not amount to 50 per cent. upon the gross receipts, a result that cannot fail to be highly satisfactory to the shareholders,' was indeed highly satisfactory to me as a shareholder, and *did convey* to my mind the persuasion *that we were working the line to a considerable profit*. I would have to confess that I believed the sums *which Mr. Hall, in his weekly financial statements*, submitted to the Board, placed to the credit of traffic, afforded a true measure of that profit, and that upon this very basis I had not, as a liar and impostor, but as *a true believer*, attempted to borrow for the Company money on debentures, with my highly respectable brokers, Messrs. Tucker, Barnett, Ellis, and Co., of No. 11, Birchin-lane. Consequently, I cannot swear to anything more than the use of *the words literally taken, being* MYSELF IMPRESSED WITH THE VERY MEANING WHICH THEY CONVEY. You and the Directors may laugh at these scruples, but I assure you, they are serious matters to me, and whatever courtesies and kindnesses I may owe them (the Directors), I owe it to the safety of my own soul not to swear one iota beyond my own conscientious knowledge and belief in their service."

And under all these circumstances, Mr. WYLLIE refuses to make any affidavit—not even in the restricted sense he points out—unless the Board will guarantee him against being saddled with any of the expenses which a failure in the prosecution may cast on the swearing Directors.

Mr. DUNCAN sends Mr. WYLLIE three days afterwards "a letter of indemnity" to the effect desired by him, and requests to see him on the following morning with the affidavit, when he "shall not be detained two minutes."

Mr. WYLLIE appears to have called accordingly at Mr. DUNCAN'S office on the following morning (28th April), but not meeting with him, and tired of waiting, he leaves a note for him, in which he says—

"Make out an affidavit *so as to tell the whole truth and nothing but the truth, in the strict sense of my last letter*, and ending in the words there used. I will swear to no other."

Here the correspondence ends; and here we beg it may be particularly observed, that though *by this time* all the other persons who were Directors on the 13th of February last, had executed their respective affidavits—all swearing that they never did that which their Report of the 28th of August, 1839, positively proves they did do—the application to the Court for the Criminal Information had not yet been made, (it was moved for on the 30th April), and it was still in the power of the Directors to have withdrawn and suppressed them if they pleased. Time there was also—ample time—for their legal adviser to discuss with them the question raised by Mr. WYLLIE of perjury or no perjury; and if he did not discuss it with them we leave it to all professional men to judge, whether he did not grossly fail in his duty. As it was, the nineteen Directors, one and all, *stuck fast by what they had sworn*; if not, after due deliberation on the part of each and every one of them, still with a perfect knowledge on the part of their legal adviser, Mr. DUNCAN, that their ex-colleague, Mr. WYLLIE, had pronounced all swearing in the *obvious and substantial* sense of the affidavits to be *rank perjury*.

But what did Mr. WYLLIE himself swear at last? Mr. WYLLIE says, that he depended on Mr. DUNCAN'S so modifying his affidavit as to suit the strict sense in which he wished it to be understood? Did Mr. DUNCAN do so? Did he so modify the original draft submitted to Mr. WYLLIE, as to meet Mr. WYLLIE'S expressed "wishes," and as he pledged himself he would do? Did he confine Mr. WYLLIE'S denial to the use merely of the literal phrase, "considerable profit?" Did he introduce into Mr. WYLLIE'S affidavit his own very qualifying addition, that though the Directors never used that identical phrase, they used others which conveyed to his mind the impression that they were, in point of fact, "working the line to a considerable profit?" Did he, as required by Mr. WYLLIE, and as Mr. WYLLIE trusted he would do, so shape his affidavit as that it should "tell the whole truth, and nothing but the truth, in the strict sense" of his letter of the 26th April? No—nothing of the sort. Mr. WYLLIE'S affidavit differs in no respect whatever as regards the denial about making profit, from the affidavits of all the other Directors. He swears, as they all do, that they "never pretended," &c., though he distinctly warned Mr. DUNCAN, that were he to do so, he would be "perjuring himself."

We have compared with some care the affidavit made by Mr. WYLLIE, with the affidavits of the nineteen other Directors, and we can detect but one material circumstance in which it differs from the rest. The "one material circumstance" is this: the nineteen Directors all swear that—

"These deponents speaking for themselves and the Directors of the said Company generally, according to the knowledge and belief of these deponents have always been impressed with the conviction that their duties under the said Act of Parliament are public duties to be discharged with care, fidelity, and honour, *and that they have to the best of their judgment and ability discharged the same with care, fidelity, and honor, in every respect.*"

Mr. WYLLIE does not swear so; he had made objections, we presume, in his personal conferences with the Company's Solicitor on the subject; and as it was not absolutely essential to the success of the Criminal Information that he should do so, the Solicitor had humoured him so far in his scruples as to leave this passage out. The omission is of great significance notwithstanding. Mr. WYLLIE, who must know his ex-colleagues and their doings better than any body else not of the Board, *would not swear* that they have "to the best of their judgment and ability discharged their duties with *care, fidelity*, and *honour*, in every respect!"

But was the mere leaving out of this certificate of character what Mr. DUNCAN meant when he wrote to Mr. WYLLIE "I have attended to your wishes?" Was it by this slight stroke of the pen he fulfilled Mr. WYLLIE'S emphatic injunction to "make out the affidavit so as to tell *the whole truth* and *nothing but the truth*, in the strict sense of my last letter" (that of the 26th April)? Why, it no more conveys the strict sense of that letter—what *he meant to swear and thought he was swearing*, "the whole truth and nothing but the truth"—than it does his opinion of the origin of the punishment of the pillory, or the shortest road to Coventry. The affidavit represents Mr. WYLLIE as denying point blank that the Directors had "ever pretended that they were working the railway at a considerable profit;" while the letter—in "the strict sense" of which that affidavit should have been drawn up, and was supposed by Mr. WYLLIE to be drawn up—shows that he always understood and believed, down to as late a date as the 24th of February last (if not later), that they "were working the line to a considerable profit," and had given all the world every reason to understand and believe so too. "Consequently," quoth Mr. WYLLIE, "I cannot swear to anything more than *the words literally taken*, BEING IMPRESSED WITH THE VERY MEANING WHICH THEY CONVEY." That is to say, he was ready to swear the Directors did not, in any of their Reports, make use of the precise words "*considerable profit*," but felt bound at the same time to acknowledge that they did make use of certain other words which "impressed" him, as well as many besides, "with the very meaning which the words "considerable profit" were calculated to "convey." Can it be that it is upon such a miserable quibble as this, of not having used the words "considerable profit," that the other nineteen Directors depend for their justification, in swearing as they have done? We know not what effect such a plea might have at the bar of the Old Bailey, but of this we feel well assured, that had the Court of Queen's Bench suspected that the affidavits of the Directors were intended in any other than their natural and obvious sense—that they meant merely to deny the precise words ascribed to them, and not the body and substance of the offence laid to their charge,—nay, had they been aware that even one only of the affidavits was to be taken in such a restricted but hidden sense—*had they but known all that* Mr. WYLLIE *has now disclosed to the world*—there would not have been one moment's hesitation about the mode of disposing of the case; the Rule Nisi would have been at once discharged—both the Directors and their legal advisers would have been indignantly reproved for presuming to trifle so with the Court—and the whole costs of the double-faced proceeding would have been thrown upon them and not upon us, its innocent victims. And why, may we ask, was not Mr. WYLLIE'S affidavit at least, made in the terms in which he so expressly, so anxiously, and so repeatedly desired it should be made? Stand forth, Mr. DUNCAN, and tell us why. Justify, if you can, your part in these dark proceedings. Explain, if you can, why "that part of the affidavit" which your friend, "My dear WYLLIE," told you he could not "swear to" without "perjuring" himself, was nevertheless retained in the affidavit. Mr. WYLLIE has placed you on your defence at the bar of public opinion, and whether you plead or not, the public will judge. Do not, however, flatter yourself that silence will serve you; for on our own parts we beg to assure you, that the case shall not be suffered to rest here. We have yet our remedies, and both you and your employers may find ere long, to their bitter cost, that we know how to make good use of them.

WE have laboured hard from time to time—seconded always most ably by two or three esteemed correspondents of like views and sentiments as ourselves—to urge Railway Companies to greater particularity, and to a more unreserved openness in their published accounts. We are sworn enemies to the lumping system so generally prevalent in England—a sure cover as it is for every conceivable sort of malpractice—and shall not cease from our endeavours, till we see the accounts of all Railway Directories laid before their constituents in such minute detail, and at the same time so classified and arranged, that all concerned may learn from them at once, how their affairs are

Digitized by Google

managed in every single particular. In now returning once more to the subject it is not because we suspect, in the slightest degree, that our former arguments need correction or support, but it is in the belief that no truth however obvious, however undeniable, however important, ever comes to influence general practice without strong and constant reiteration in different aspects.

It may be well to meet at first the objection to the proposed practice which assumes that Railway Companies are really private associations for making the most of the money of their members, and that therefore there is no more reason to call upon them to publish their accounts, than to call upon any other of the multifarious profit-seeking associations to do the same thing. We put aside for a moment our main argument, that it is for their own profit to do so, in order to remark that in this case there is really no privacy to be violated. A Railway Company consists of hundreds, perhaps thousands of shareholders; the affairs of the Company are the affairs of each of these persons; but who ever heard of privacy among thousands? If it were ever so much desired, how is the telling of tales to the public to be prevented? To a great extent the affairs of every railway *are* matter of constant discussion by all sorts of parties, owners, riders, and lookers-on. No men live more in public than Railway Directors and officers. In the Olympian games the competitors rode indeed with less speed, but not with greater publicity; the eyes of the whole community are on the railways. Now what we urge is, that that which *is* known and will be known in disjointed and imperfect parts, should be made public methodically, completely, and by authority; that that which is known and will be known, but often only so as to cast doubt on the truth or prudence of the Managers, should be given to the world with its true explanation—that that which is known, and will be known, as facts generating discontent, yet leading to no satisfactory defence, or conciliating adjustment, should be so presented as to supply the needful materials of argument, and grounds of decision.

It may be indeed—(would that it were an impossible supposition!)—that there are here and there self-important officials, or Directors of mysterious and empty-headed gravity, the one class ruling by mere accident of position, and the other by mere weight of purse; there may here and there be such who may deem our proposal a mere invasion of their *peculium*—an attempt to break in on the secresy which constitutes, in lack of either brains or hearts, their whole strength and importance; who will cry out as though we were for letting profane light in upon their mysteries, and for putting words into the mouths of the multitude, at the utterance of which the whole fabric of railway prosperity—aye, and the railways themselves, rails, viaducts, embankments, and all—would magically and most lamentably vanish. It may be (we wish we could avoid the saying of it) that there are dark transactions and foul jobbing which will not bear the light, which mystery and confusion only can cover, which honest comparison and fair and candid emulation would soon expose. In these cases, the world wonders not at resistance to publicity; and we shall content ourselves with saying, that resistance will not long avail.

But what are parties like these, and their silly airs or selfish interests, to the far greater numbers of honourable and pains-taking men who stand in like circumstances? Why should they who zealously and honestly do their duty, be deprived of that best of all rewards, out of a man's own bosom, the approbation of his fellows, merely that the whims or plunder of "the baser sort" should not be disturbed? While anything short of the fullest and most orderly exposition is withheld, the suspicion and dissatisfaction engendered by mystery, will fall alike on its real authors, and on those who stand side by side with them in the view of the public. But, "what is the chaff to the wheat?"

We have been drawn from the direct line of our argument, by the passing inducement to point out the kind of persons who are most likely to oppose this wholesome publicity of accounts, and the fact that the much greater number of Managers and officers who have not these faults, are certain to share their blame. We return to our course by remarking, that there exists this great difference between Railway Companies and other trading associations as to the claim which the public has to the publicity of their accounts; that in other cases, whatever is done by the first adventurers, if not to the satisfaction of their customers, may be done over again, and better, by others; but not so (at least till after grievous delay and injury) with railways. Let a Company start a steam-boat, and if their fares are exorbitant, or their speed unsatisfactory, or their civility deficient, or their punctuality not to be relied on, the evil is soon remedied by competition. Let a Banking or an Insurance Company enter the field, and shortly their good behaviour is soon secured, if needful, by the better manners of their neighbours of the like occupation. But in the case of a railway there is no such competitive check; by the railways must their customers—the totality of their customers, shortly termed "the public"—go, submitting, if it must be so, to whatever overcharge or incivility, grasping miscalculation, or insolence of office, may inflict upon them; no other road is open, or at least none of which the established, and now inevitable, necessity of speed will permit the use. The fair and only defence of the public against this possible abuse of a practical monopoly is publicity of accounts. If the authority and power of the whole community have been employed in establishing an indispensable means of transit, under circumstances which leave no choice but to use it, surely the least right of the community is, to be assured that it uses the road on fair terms.

Another and very important difference remains, and one on which hereafter grave proceedings may be founded. In the establishment of other corporate enterprises no previous rights are infringed. To start a steam-boat no cultivated property or cherished spot is broken in upon—no home of generations is demolished, or scene of endeared recollections buried or cut away; nay, even the commonest and coarsest of social rights, the right of property, suffers no infringement. But if in seeking to obtain the abolition of ancient rights, and the sacrifice of present attachments, the projectors of a railway had said to the legislature—"Pray let us do this, because we can make a great profit by it," needs it two words to tell the answer? The plea, the just and sufficient plea, was the public good, and the plea must be upheld by the result. Consistently with fair, liberal, ample remuneration for outlay and risk, the legislature are bound, if it is necessary, to see that the rights they gave power to destroy, were not sacrificed to new and inferior interests, and still less so to reckless or mismanaged speculation. Here there may hereafter be found a reasonable and necessary ground for extensive legislative interference in railway management—an evil which we should deeply deplore, and to which nothing but the pressure of still greater evils would reconcile us. Its avoidance is easy, and that by means exactly coincident with those required by the personal reputation of railway administrators, and the best interests of the proprietors. Satisfy the public by plain facts, to be shown from published accounts, that they are fairly dealt with, and no government, however troubled with that prevailing vice of governments, the propensity to meddle, would ever have either the power or the pretence to interfere.

The main argument, however, on which we would rely is that of the tendency of this publicity to promote the real interests of the railway proprietors themselves—we may go further and say its absolute necessity to the due promotion of those interests.

Of railway proprietors, how does or how can each know that the line he is interested in is honestly, economically, and judiciously worked? Only by comparing it with the working of other lines. The owner of a stage-coach can easily judge of his neighbour's expenses, and if, as in the case of railways, he left it to the care of servants, he could still judge on the whole, whether his expenses were much greater than they ought to be, by finding whether he could profitably carry passengers at the fares charged by his neighbour. But in the case of railways, all such parallel objects of comparison are wanting; the proprietor must learn what his own railway is doing, and compare it with the doings of others, and he must be careful to purchase the means of effecting this salutary comparison, by reciprocably affording to others his share of the information thus required by all.

But further, let us suppose it to be discovered that a certain railway is working at a cost of 60 per cent. on the receipts, while another in nearly similar circumstances is costing only 45 per cent. This bare fact affords no guidance whatever—it merely supplies a strong reason for inquiry. It may be that the receipts are kept down by high fares, or that the line is extravagantly burdened with salaries, or that the nature of the line is such as to require great expense in maintaining the way, or that justice is not done in the management of the locomotives—or it may be a combination of those things—or it may be an unavoidable result, and there may be no fault at all. Particulars—carefully digested particulars, and arrangement—uniform, or nearly uniform arrangements, are necessary to afford an opportunity of comparison item by item, fact by fact, in the several ratios of miles, of trains, of passengers, of times, &c., &c., until the truth is ascertained, the evil, if any exist, is remedied, or the administrators justified to their constituents. And why should not this indispensable course be taken? Is there anything in professional jealousy or official pride which ought to be suffered to stand in the way?

It does not follow that because a man is diligent and faithful, he does every thing in the best possible way, nor that because he is observant and ingenious, he has monopoly of invention. The most careful and the most talented may learn something from those who, in these qualities, are much below them. Well, therefore, as a line may be managed, it is far from impossible that in many particulars it may be improved by the example of others. It is true that talent (perhaps we ought to say, that lower degree of ability which assurance makes to pass for talent) is sometimes un-

Digitized by Google

happily associated with pride—which foolishly disdains to acknowledge that it has anything to learn; but we are quite satisfied that the minds which are the fittest to be intrusted with powers of control, are the most willing to be better informed. It is not therefore by those of the working Managers, whether Secretaries or Engineers, whose services are best worth having, that publicity and uniformity of accounts will be opposed.

As intimately connected with this subject, we again call attention to the important results on profits which follow from the relation between current cost and fares. It is not doubted that high fares diminish the number of passengers, and increase the cost on the conveyance of each—the only dispute is as to the degree in which this effect takes place. It is equally clear that there is a fare too low to afford any profit as well as one too high to admit passengers enough to pay at all, whatever the number of passengers may be. But every thing depends, much more than at first sight appears, on the proportion between the expenses and the fares, and on the effect produced on the number of passengers by alteration of fares. These vital questions require, for their solution, results gathered from the widest field and the most diversified situations. For instance, suppose it known that a railway at certain fares per mile carries in a year a number of passengers bearing a certain proportion to the population within reach of it; ought not that fact, with due allowance for known difference of circumstances, to assist, with other considerations, in pointing out the probable effect of proposed rates of fares on the traffic of another line? Again, suppose a line working three classes of carriages, and with a certain proportion between the fares of each; may not a knowledge of the proportionate numbers of its different classes of passengers, help materially to show why its results are different, better or worse, than those of another line, where different fares, or different proportionate fares, are in use? It may be said, indeed, that these facts, from other railways, may furnish no decisive and demonstrable rule for that in question. Exactly so, and thereby is our argument strengthened; for by so much is increased the necessity for extended and varied observation. We do not need two reasons or two examples to convince us that the three angles of a triangle are equal to right angles; the logical proof is complete, and in every possible case it is inevitable. But in economical, as in moral questions, it often happens that we must act on probabilities: and the graver the case, the more important is it that the probability should be strong,—that it should be pointed to by a variety of considerations from various quarters, each perhaps insufficient of itself to determine the question, but leading to a conclusion towards which the others also would tend. If we cannot for any one railway, determine the best proceedings from the results of any other single line, the proper and indeed the only safe course is, to call to our aid the experience of all, by contributing in return of ours for the benefit of every other.

To see something of the value of the practice we urge, let us suppose it universal—let us suppose that accounts at least as minute as those of the Belgian railways, and if possible better arranged than they are, were regularly published by every railway in Britain. Where is the officer or servant who would dare venture on corruption or indulge in negligence? Where is the Board that could persist in practices proved by universal experience to be detrimental? Where are the shareholders who would not point, if needful, to the better doings of other lines, and require results as good as theirs? Where are the officers who, if good for anything, would not aspire to the distinction such publicity would necessarily confer on those who deserved it, or the servant who would not feel proud of his line?

THE usual Half-yearly Meeting of the Greenwich Railway Company was held yesterday at the London Tavern. After the Report had been read, a charge was made by Mr. Williams against the Secretary, Mr. Akerman, of partiality in the allotment of shares, which, however, was successfully rebutted, and drew from the late Chairman of the Company a warm eulogium of the Secretary. The new carriages of the Company are said to require diminished locomotive power. The coke consumed amounts to 26 lbs. per mile. The two classes of fares at one shilling and at eightpence are to be consolidated into one at ninepence, the sixpenny fare remaining as before. The railway on one occasion brought seven thousand passengers to London in two consecutive hours. It is anticipated that ere long large steamers will be prohibited from coming higher than Greenwich, and that small ones will have their number of passengers so limited according to their tonnage, that they cannot successfully compete with the railway. The Croydon Company, which is now endeavouring to get a reduction from the rate of threepence per passenger they are now paying, will soon be asked for fourpence halfpenny, which it is said they can well pay when their line merges, in the longer ones of which it forms part: at present there is a falling off in the receipts from this quarter in consequence of their exertions to stop the traffic before it comes on the Greenwich line. A dividend was voted for the half-year of four shillings for each of the original shares, and after thanks to the Directors and Auditors, the meeting broke up.

—o—

A SPECIAL General Meeting of the Shareholders of the Blackwall Railway Company was also held yesterday at the London Tavern to deliberate on the mode of raising the additional 200,000*l.* authorized by their Act of Parliament, and now rendered necessary by the engagements of the Company. Of this sum the Act permits 150,000*l.* to be raised by new shares, and the remainder either by shares or debentures. The Directors proposed, and after some discussion the meeting unanimously determined, that the whole should be raised by new shares to stand nominally at 25*l.* per share, to be equal in number to the old ones, and to be offered rateably to the present proprietors at 8*l.* 6s. 8d. per share; a deposit of 2*l.* per share to be paid on the 15th August, and the rest in calls of 2*l.* each, at intervals of not less than three months. In answer to some inquiries, the Chairman (W. Routh, Esq.) stated that his opinion, and that of the Directors still is, that the concern will soon pay very satisfactorily; and he accounted for its not having done so already by the unavoidable delay which had taken place in obtaining the necessary steam-boat traffic to the Blackwall terminus, and in the completion of the extension to Fenchurch-street. The breaking of the ropes had no doubt done harm to the reputation of the line, but the wire ropes now in use had never failed. Mr. Salomons supported these views, and added, that the railway deserved and doubtless would receive support for its diminishing the risk to human life on the crowded river. It was stated also by the Chairman that the extension to Mark-lane would be made, if at all, without addition to the capital of the Company. The present receipts are about 1,000*l.* per week, and will be augmented by the improvements in progress. The extension to Fenchurch-street will be opened probably next Monday week, but certainly in the course of the month. Goods may be carried with profit at half the present price of cartage. It was, however, strongly recommended by Mr. Stephenson, the Engineer of the Company, that the passenger traffic should be well organized before that of goods was commenced. The amount the Company will eventually have to pay under the clause in their Act requiring them to compensate for damage done to property within 50 feet of their line will not amount to four thousand pounds. Of 50,000*l.* spent in law and compensation the greater part is for conveyancing, nearly two thousand properties having changed hands. The Directors think that the present fares are not too low for the interest of the Company, and that at all events they should have a full trial. The meeting, against the expressed wish of the Directors, (who, however, did not screen the delinquent), passed a resolution strongly condemning the conduct of the retired Director, Mr. Alderman Humphery, M.P. in trafficing in shares to the prejudice of the proprietors generally. Thanks were with great apparent cordiality voted to the remaining Directors.

—o—

WE are glad to learn that the result of Sir Fred. Smith's examination of the Brighton line was entirely satisfactory, and that the opening to Hayward's Heath, which took place on Monday, the 12th instant, agreeably to the announcements of last week, was made with the perfect approbation of the Board of Trade. Mr. Laing, in his letter to the Directors, conveying the sanction of the Lords Commissioners, observes: "the Report is so satisfactory as to the state of the line, and the arrangements for conducting the public traffic, that it only remains to request the attention of the Directors to the recommendations offered by Sir Frederic Smith, and to impress upon them the necessity of extreme caution in working the junction with the Greenwich and Croydon lines." The only parts of the 27 miles now opened, which Sir F. Smith represents to be not yet quite in a finished state, are, we understand, the parapet walls of the Ouse Viaduct, and the facades of the north entrances of the Merstham and Balcombe Tunnels.

We adverted last week to what seemed to us an improper delay in the inspection of this line. It was not, we have heard, ready for inspection till Thursday, the 8th, and the opening being positively announced for Monday, the 12th, there were thus but three open days left for the Government Inspector to make his examination and Report, and the Board of Trade to signify, or withhold, their sanction. We were the more induced to draw attention to these circumstances from having on several recent occasions observed, as we thought, an unfair disposition on the part of Companies to reduce the Government supervision to a matter of mere form, by affording its officers as short a time as possible for the exercise of their functions. In the present instance, for example, it was so utterly impracticable to do all that was requisite within the three days left for the purpose, that the letter conveying the authority

Digitized by Google

of the Lords Commissioners for opening the line, was not dispatched till the 14th—two days *after* it was actually opened. Such things ought not to be; either the Government superintendance should be abolished altogether—a length to which we apprehend but few are prepared to go—or it should have a liberal latitude and fair play.

—o—

When the Directors of the Edinburgh and Glasgow Railway got some time ago by the ears, about the "concentration plan of management," we gave it as our opinion that the Edinburgh section of the Board had the law, as well as a great deal of good feeling, on their side. The result, as our readers will perceive from the letter of an Edinburgh correspondent inserted elsewhere, proves we were right. The Court of Session have decided that the resolutions for swamping our modern Athenian friends, are contrary to the provisions of the Company's Act of Parliament, and therefore null and void.

—o—

The opening of the Gosport branch of the South-Western line, which was fixed for the 26th instant, is necessarily postponed for several weeks, owing to an unexpected failure in part of the Fareham tunnel. Early on Thursday morning last, a length of about 40 yards fell in. It is said to have been occasioned "not by the direct weight of the superincumbent earth, but by a side pressure created by a mass of earth slipping off on the side of the tunnel"—an explanation, however, which we cannot say we exactly understand. The soil in which the slip has taken place is of the London clay description, resting on a *slippery* bed of lias. Happily, no lives were lost, nor any injury whatever sustained by the numerous workmen employed at this point.

—o—

The statement which we copied in our last from the *Bath Journal*, that Sir Frederic Smith consented to the Bath and Chippenham portion of the Great Western line "being opened on Mr. Brunel's guaranteeing its safety," in spite of certain misgivings of his own respecting its sufficiency, is, we are happy to learn, altogether unfounded. Sir Frederic Smith went no less than three different times very carefully over the whole of this part of the line, and it was with his entire approbation it was opened; the only things stipulated for by Sir Frederic being that two or three portions of the works which were still in an incomplete state, should be actually completed previous to the opening, and that the trains should for a definite period work only on the north line through the Box Tunnel—both of which injunctions Mr. Brunel readily pledged himself should be attended to. It is this pledge, no doubt, which has given rise to the idle story about the "guarantee." We pronounced it on the first blush to be "ridiculous," but we should have better done justice perhaps to all concerned, had we set it down at once as altogether unworthy of credence.

—o—

The omnibuses of the London Conveyance Company now run every ten minutes from Paddington to the terminus of the Blackwall Railway in the Minories. Rapid steam-boats ply between the other end of the same railway and Gravesend. The time occupied is as follows:—Paddington to the Minories, by omnibus, 50 minutes—thence to Blackwall, 10 minutes—finally to Gravesend about 1¼ hour. Gravesend is therefore reached from the north-west of London in about two hours and a quarter, and the three kinds of passenger travelling in most general use are employed on the journey.

—o—

The Bordeaux papers state, that the Teste Railway has been opened with great pomp. The archbishop, the prefect, and all the authorities were present; the prelate gave his blessing to the undertaking at the Segur station (Bordeaux), and the president of the managing committee made a suitable reply. The party were then transported to Teste, were a similar ceremony was gone through, and the prefect delivered an address. A sumptuous banquet followed, and the authorities having visited the basin of Arcachon, were carried back to Bordeaux. The journey to Teste was performed in 2½ hours, and the journey back in one hour and fifty minutes. Immense crowds of spectators were assembled, and the day passed off without accident. The length of the line is 52,200 metres or about 57,200 yards. "The new railway between Bordeaux and Teste," says a private letter, "will open a market for vast productions of timber and firewood, which have been hitherto limited by the expense of transport, but which may now be conveyed at a moderate rate by the Canal des Landes and the railway. Teste, which is rapidly increasing, may now procure lime for building at a low rate, which it has hitherto been obliged to procure from Nantes at 40f the cubic metre. The journey between Bordeaux and Teste, by Bouviers, which required three tedious days in former times, and only a few days ago occupied at least 12 hours, may now be made in an hour and a half, and at much less expense. A line of steamers is about to be established between Teste and Bilboa, and thus a passage between these two ports may be made in one day. These, and other benefits too numerous to detail, must greatly promote the prosperity of Bordeaux and Teste, the basin of the Gironde, and the Landes."

RAILWAY PUBLICATIONS.

It is known to our readers, that on several late occasions the *Sun* newspaper has attracted considerable attention by its large medallion portraits of distinguished personages, and other devices somewhat out of the ordinary range of newspaper practice. Its number of Monday last is equally remarkable for having one of its pages occupied with a map of the English, and some of the Scottish and Irish Railways. The map has been produced by Woone's gypsographic process, and if not a very delicate specimen of art, serves at least to furnish a cheap and popular view of the existing and projected railways. The map is accompanied with another page of letter-press, in which we have first a rapid sketch of the history of English roads from the time of the Britons, then an equally slight account of the structure of a railway, and a comparison of the speed of the locomotive engine with that of other means of transit, after which comes a short account of each of the existing railways.

A cheap tract on the same subject, but one of much higher pretensions, has just appeared as the 5th number of *Knight's Store of Knowledge*. A pretty full history of the origin and progress of railways, and of the earlier locomotive engines brings us to the new starting epoch of the railway system—the opening of the Liverpool and Manchster Railway. A good popular account of the structure and principles of railways, and their locomotives follows, and the whole is concluded by a list of the principal British railways, with their course, length, capital, and date of opening. To those who seek only slight and popular knowledge of the subject this cheap production may be very properly recommended. It is an abridged copy of the article "Railway" in the *Penny Cyclopædia*, where the subject is treated in the same style, but with somewhat greater detail. The table with which the article concludes professes to contain the date, direction, length, capital, and various other particulars of all the executed railways, whose Acts of Parliament have been passed since the beginning of the present century.

THE FREE TICKET SYSTEM.

To the Editor of the Railway Times.

Sir,—In the *Railway Times*, of the 26th ultimo, I observe your reply to "G." on the subject of the Free Ticket system on railways. The allusion evidently is to the —— Company, from the number of Directors and length of line, and I find upon inquiry, on Change, that this reprehensible practice does exist to a frightful extent, not upon this line alone, but on many other lines now in operation in the kingdom. Who would not be a Director? Not content to save his own expenses when travelling, he can help a friend occasionally to a lift, by means of letters of introduction from one station to another. On speaking to a friend, after reading your paper, he supplied me with facts that are perfectly astounding. That men of such standing in the world as the Directors in question, should be guilty of or even tolerate such conduct is most abominable, and until it is contradicted it must stand as evidence against them. The annual meeting cannot be put off long, and if the Directors meet with any thing discourteous on the occasion, they must recollect that their appointment to the post was owing to their high standing, and that they have thrown the first stone. Can you, Mr. Editor, or any one, inform me by what Act of Parliament paid agents have been appointed in different towns in connexion with this and other lines, and what are their duties? My first purchase in this undertaking was in 1838—upwards of 100 shares—and I never experienced any difficulty in the correct registration or transfer by the broker who I employ to purchase and sell for me. If the appointments are made by the Directors, for the convenience of the Secretary, when visiting the towns on business, equal facilities are to be had at any respectable inn and at little expense. The same remark applies to another line where I hold a very considerable stake; and I trust to the support of the proprietary to carry this amongst other very serious reductions in our expenses. Another writer, in the same number, draws attention to the intended retrenchments on the North Midland line, and particularly to the reduction of seven in the number of the Directors. I trust, however, that on both lines the measure will be carried further—leaving only five, or at most seven, Directors to each Company; I feel satisfied the work would be better done; I have before me a small publication with the names and number of Directors attached to each line, and I find more men at the head of a minor line than are employed as principals to direct the ramifications of the British army, navy, ordnance, &c., united. As to salaries, Mr. Editor, the accounts being lumped together in such a manner, there is not an opportunity of judging, but perhaps the fair way would be to pay according to the produce of each line, compared with the prospectus sent out to the world. At any rate ten per cent. is not a sufficient reduction on large amounts, until the line pays the proprietors a remunerating dividend.

I am, Sir, yours obediently,
THOMAS DAVIS.

Liverpool, 14th July, 1841.

The depression in the Great Western Railway shares is owing to a report at the Stock Exchange that the Directors are about calling on the proprietors for a loan of 1,000,000*l.* more money to complete the line.—*Times* of Thursday.

TIMOTHY COCKER, Accountant.
1, Fact and Figure Buildings.

* This is my estimate, from all I have been able to pick up here and there on the subject, and I believe it to be rather under than over the mark. What the *actual* expenditure is to a shilling or so, the Directors can tell—*if they please*, and no doubt will—*if they think it will be to their advantage*.—T. C.

† From the amount in this column, however, there must be deducted the additional expense of carrying the greater number of passengers, which I assume *ought* to have been carried.—T. C.

‡ I have made no estimate of the loss from goods *not* conveyed, though that, too, must be considerable. In the "Utmost Confidence Estimates," founded, be it remembered, on data obtained by "actual enumeration at the most unfavourable season of the year," it was stated that 1,336 tons of goods, besides great numbers of cattle, sheep, and other live stock passed weekly *through Brentwood*. But though the line to *Brentwood* has been opened for a twelvemonth (5th July, 1841), no arrangements have yet been made for the carrying of either goods or live stock, and the returns are *nil*. So much again for absentee management!—T. C.

(*To be continued weekly.*)

THE GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Your oracular correspondent, "Ignotus," has assumed the Sibyl's pen with a vengeance, and refuses to offer a single reason in support of the peculiar want of railway faith that is in him.

Prophecy has hitherto been understood to be a gift superior to reason, yet not inconsistent with it; but "Ignotus" must be something else than a prophet, as his railway predictions are in direct opposition to both reason and experience.

"Ignotus" appears to think he knows more in regard to the Western Railway than all the Directors and shareholders put together, and proceeds accordingly to exaggerate the cost, diminish the revenue, and increase the working expenses after his own pleasure. If "Ignotus" has been speculating for a fall in these shares, an accidental circumstance which his "prophetic soul" could neither have influenced nor foreseen, certainly for the moment favoured his views. I allude to the unnaturally cold and rainy weather that has prevailed during the three past weeks, which by having put a stop to pleasure excursions, has diminished the receipts of the Great Western line to the extent probably of 2,000*l.* per week. Such even has been the effect of the late weather on the London and Birmingham line, though that is much more exclusively devoted to business travelling than the Great Western is.

In proof of this assertion, I need only refer to your last traffic return, which shows that the last reported week's revenue of that Company has only increased on that of the corresponding week of last year by 293*l.*, though the average increase of each of the 26 previous weeks of 1841, has amounted to 1,500*l.* above the respective weeks of 1840, and to above 4,000*l.* per week over those of 1839. Had the weather been of late favourable, the weekly receipts on the Western line could scarcely have amounted to less than 14,000*l.*, and the shares would in all probability at the present moment have been at 30 premium in the market.

As it has taken the London and Birmingham Company nearly three years to develope the resources of their line to even its present extent, we have every right, reasoning from analogy, to believe that a similar period will produce the same ratio of increase in respect to the Great Western. It requires a considerable time to attract travellers from the routes to which they have been long accustomed, and in regard to any extensive traffic in goods the difficulty is much greater, and the time requisite for its developement necessarily longer.

The last week's revenue of the Great Western as reported to me, is 12,800*l.*, which is *greater* than the highest receipt on the London and Birmingham line within the first 8 or 9 months after its through opening, and *greater* by from 2,000*l.* to 3,000*l.* than the *average* weekly receipts of that great line during the first 8 or 9 months alluded to. Such being the case, and the London and Birmingham Company having commenced with a 7 per cent. dividend, having shortly afterwards increased it to 8 per cent., and being now again in a position to divide a further increase, there seems no reason why "Ignotus" should yield to despondency in regard to the Great Western.

It may be further remarked, that in the parallel case of the London and Birmingham Company, two sets of fractional shares have since the final opening been issued to the proprietary at par, and that the Directors find themselves in a position to pay an increased dividend on these, as well as on the uncalled capital of their quarter shares. Had the London and Birmingham Directors borrowed the amount of additional capital required for their works at 5 per cent. instead of creating shares for it at par, they would now have been paying a dividend on their original shares of about 13 per cent. All the great railway authorities (with the exception indeed of "Ignotus") acknowledge that the per centage of working expenses diminishes according to the increased length of the line, and to this established principle I feel much inclined to add, that they will be found further to diminish according as the breadth between the rails is increased.

It is, for example, self-evident that an engine having a breadth of 7 feet between the wheels, may be made incomparably more powerful than one which has only 4 feet 8½ inches, and that in the former case, one engine will be sufficient for a train which, on the narrow gauge lines, would require two.

In conclusion, I beg leave to annex for the especial comfort of "Ignotus," a calculation of revenue and dividend for the current year, made on what will generally be acknowledged to be an exceedingly moderate estimate, and I shall not shock his prejudices by conjecturing how much per cent. that dividend will naturally increase in each of the three succeeding years.

I am, Sir, yours, &c.,

C.

London, July 15.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—With reference to the letter of "Ignotus" in your last number (admitted however under proper protest), allow me to say that it is quite outrageous that he should again attack the Great Western Railway with the same slanderous and unsupported assertions as had been already fully refuted in your columns, by various writers,* and without a single attempt on his part at reply to those refutations.

You seem by your note to have expected that your correspondent being "well versed in railway matters," might have sustained his assertions by data. If he be so qualified, his conduct is less excusable, as then he must have known that all his assertions were at variance with authentic facts and fair arguments. As to data, obviously neither has he given, nor will he give you any, (for the best of all reasons,) because they are not in existence—all correct data tending to show the contrary.

With reference to his repeated sneer at "officials and shareholders," I wish it consisted with the practice of officials to put down all such unjustifiable aspersions by direct and open refutation under authority. It can be no reproach to shareholders to do so. What can be more legitimate and natural than that they should indignantly expose such attacks on their property, from one who may be fairly inferred to be himself no shareholder, greatly as he may desire to become so, as much as possible at their expense?

In my last, I submitted a calculation showing how 120*l.* per mile per week, or 14,190*l.* per week, on the 118¼ miles, would yield dividends of 10 per cent. per annum, exclusive of profit on the two leases. On the same data, the whole 169½ miles would require weekly 95*l.* 2s. 6d. per mile, or 16,100*l.* to yield equal dividends. The calculation is subjoined. The rents are 17,000*l.* and 30,000*l.*, whereto add the mileage to the Bristol and Exeter Company which is taken at the highest amount held out in advocating the lease, being 15,000*l.* per annum for the 33 miles now open, though this is more than can be expected to be realised at the commencement.

I beg to send you a table of results showing the progress half-yearly of this railway, of which I propose, after the next general meeting, to send you a continuation.

Yours respectfully,

F.

Bath, 13th July, 1841.

* Alluding particularly to the excellent letter of "R.M." in your number of the 3rd instant, which has been since well followed by the able letter of "C." in your last number.

THE GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—As you have inserted "Ignotus's" prognostications respecting the Great Western line, may I request you to insert my facts not to be contraverted.

The Birmingham line opened throughout Sept. 15th, 1838, the receipts the first week ending the 22nd were as follows:—

Sept. 22nd	Total Receipts....	£10,769
Sept. 29th		11,059
Oct. 6th		10,841
Oct. 13th		10,714

11,059*l.* was the greatest receipt during the first six months the line was opened, 7718*l.* the week ending Dec. 30th the lowest.

The Great Western receipts, one entire week after opening, ending July 13th, inclusive, are 12,500*l.* or thereabouts. Deduct 2000*l.* which is more than "Ignotus" admits will be the rent and working expenses per week of the Bridgewater and Cirencester lines, and rather more than the actual receipts, and it will leave 10,500*l.* for the receipts of the main trunk, within 200*l.* of what the Birmingham took. July is about equal to September, or perhaps not quite so good. Now where is the boasted difference of receipts between the Great Western and Birmingham lines on opening? What are the facts?

The London and Birmingham has cost (it matters not where or how the money has been spent) 6,000,000*l.*, and is 112 miles long.

The Great Western has cost 5,750,000*l.*, and will cost, no doubt, 6,000,000*l.*, and is 119 miles long.

Where is the much talked of difference of cost of way? Look we are told at "the immense cost of the Great Western!" "It never can pay." "What an awful expense!" What then are the causes of the malignant falsehoods, the injurious reports against this line, and by whom are they propagated? The reason is, I suspect, that on the Western line the speed is much greater than on any other line; that the line is smoother, the carriages better, and the arrangements for the public better organised than on any other line, and that it has excited the jealousy of the North Country gentlemen and rival engineers.

We have had no jobbing Directors, no dishonest conduct, no concealments.

The faction now crying out so lustily, are the same parties who endeavoured, three years since, to turn out the present Directors in order to get their places for jobbing and speculative purposes.

I have the honour to be, Mr. Editor,

A LOVER OF TRUTH.

July 13th, 1841.

A WORD OR TWO FOR THE LONDON AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

SIR,—You will probably allow me to remind those who are calculating upon the increase of traffic of the Great Western Railway, being equal to that on the London and Birmingham for the first year, or one year and a half after its opening, that on the latter railway fell the burden in a great measure of doing away with a strong prejudice, against comparatively a novel mode of conveyance—a prejudice fostered by many whose interest it would be to prevent the old modes of travelling from being put out of use, and fostered also by many who could not so readily change their old habits of moving from place to place. On the London and Birmingham also fell the task of introducing people to the facilities afforded by railway transit, of rapid communication with distant parts of the kingdom, a communication affording also the advantage of safety, as well as such an amount of freedom from fatigue, as enabled the London tradesman to personally visit his country customers and return to town without any interference with his business or comforts worthy of notice. This introduction and victory over prejudice and old custom, was effected previous to the opening of any part of the Great Western, and the increase in traffic consequent upon it must not be expected by its sanguine supporters.

My object, Mr. Editor is not to "take from" the character of the Great Western, the prospects of which have of late occupied so large a portion of your columns, as I believe that its passenger traffic will be very large; but I honestly wish that anticipations of increase of profit, for which there do not appear grounds, should not be held out to the prejudice of persons who might contemplate making permanent investments—possibly a portion of provision for their families. Railways have, I believe been engaged into an extent greater than is consistent with prudence; however the past cannot now be recalled, and the business of every fair and candid person, who may be concerned in them, should be to prevent, as far as in him lies, future investments in them from being *blindly* made. In fact the "honest Scotch system," which you advocate, should be introduced with as little delay as possible into this country; bnt I certainly must congratulate railway shareholders generally on the disposition, which seems to influence their Directories each day more and more, to make them acquainted with the true position in which the several undertakings stand. As what I have said can injure no one, and this correspondence will in all probability, be my last effort, as it has been my first, it will not be necessary that it should bear my signature.

I am, Mr. Editor, your obedient servant,

ONE CONCERNED IN RAILWAYS.

July 12, 1841.

ELECTION PASSENGERS.—EXTRAORDINARY HAUL.—On Thursday the 1st inst. the committees of the liberal and conservative candidates for the West Riding of Yorkshire, at Leeds, applied to the Manchester and Leeds Railway Company, to have a number of their respective friends conveyed to Wakefield, for the purpose of being present at the nomination. Mr. Edmondson, who fills the situation of check clerk to the Manchester and Leeds Company, and who is the inventor of a very peculiar machine for printing tickets, to which we have alluded on former occasions, went from Manchester to Leeds the same day, to make arrangements with the parties, who were anxious to have tickets provided by the following day. He returned the same night. The printing commenced at half-past eight o'clock the following morning. Eight thousand tickets were printed in consecutive order; which the machine arranges as it prints them; and Mr. Edmondson left Manchester with the tickets by the half past eleven o'clock train, and arrived in Leeds by half-past two o'clock p.m. On Monday last (the day of nomination), 16,000 passengers were conveyed on the line, without confusion, or the slightest accident to any one.—*Leeds Mercury.*

THE EASTERN COUNTIES' DIRECTORS AND THEIR AFFIDAVIT-MAKING IN SUPPORT OF THE PROSECUTION OF THE "RAILWAY TIMES" FOR AN ALLEGED LIBEL—R. C. WYLLIE, ESQ. IN EXPLANATION.

To the Editor of the Railway Times.

SIR,—It was remarked by Sir Robert Peel in his address on the establishment of a Library and Reading room at Tamworth, that "however highly respectable and esteemed individuals may be, and however entitled to confidence, yet he was perfectly willing to admit that it is legitimate and right to be jealous of the exercise of power." Admitting the truth of this, as a general principle, I never questioned your right, as a public writer, to be jealous of the exercise of power by the Directors of the Eastern Counties' Railway Company, or fairly to discuss how far, or with what fidelity, they exercised that power for the benefit of the great Company whose interests they manage. While I held the trust of being a Director of that Company, I considered myself responsible to the public for the faithful discharge of my duties. I can affirm conscientiously, that I endeavoured to discharge these in the way I believed to be most conducive to the promotion of the interests committed to my care; and I shrink not from the severest scrutiny of my conduct respecting any measure that, as a Director, I may have participated in.

In consistency with the principle of public responsibility, I cannot complain that you comment upon my public conduct, upon the ground of "making it a matter of public observation only so far as the public are interested," but I do complain of your *personality* in selecting, in your last No., my affidavit as an exemplification of the truth of the various charges adduced against twenty affidavits, admitted by yourself to be all "*to the same effect, and mostly precisely in the same words.*" If all the affidavits be precisely in the same words—why not have inserted one affidavit, as the affidavit of the Directors *collectively?* In selecting my name, it would appear as if you wished to affix a greater stigma upon me than upon any other of the other nineteen Directors.

Having been guilty of this *personality*, I claim of you as a matter of *justice*, that you give equal publicity to this letter, and that as you have made an example of my affidavit, you also insert the accompanying correspondence between me and Mr. Duncan (the Solicitor to the Eastern Counties' Railway Company,) as the fairest illustration, both of the motives of my affidavit, and of the sense in which it was sworn to.

It is not *impossible* that the words of my affidavit may admit of an extension beyond that restricted sense, but if they do, the circumstance must be attributed to the ambiguity of language, and not either to an intention on my part to state more than the truth, or to any deception practised upon me by Mr. Duncan, in whom I trusted to modify the affidavit, so as to express my meaning, and nothing more.

Where such modifications were required, to convey a particular and defined meaning, it is to be presumed that my affidavit was not a *fac simile* of the other 19; and as you have singled out the affidavit of the most humble individual acting at the Board on the 19th of February last, I think it only fair and reasonable that you should give equal publicity to the affidavit of the most distinguished—I mean, of the honourable Chairman, Henry Bosanquet, Esq., himself, that I may have an opportunity of proving, and of *explaining*, what differences may be found to exist between the two documents.

It is but right I should tell you that I expressed a wish that Mr. Duncan should read my letter of the 26th April to the Board, in the hope that the question of your *criminal* prosecution under the law of libel might be dispassionately considered, with reference to the facts therein stated.

As a Director of the Eastern Counties' Railway, I was bound by the decision of the majority, but I neither could, nor ever would, approve of that prosecution, under a law considered by jurists a blot in our statute book, in which prosecution I disclaim any, even the smallest, participation; and to free myself from which, I resolved not to continue a member of the Board. I beg you will not understand this disclaimer as made purposely to propitiate you, and prevent you from criticising my public conduct as freely as you may consider just. Although opposed to prosecution on *personal* grounds, you will see that I had no objection to bring to judicial issue in court the *pecuniary question* between you and the Company, but from this frank avowal, do not think that I had prejudged your case or that, *as a Director*, I would have been more eager to exact from you the last farthing proved due to the Company, than to pay to you the last farthing to which you might prove a just claim, either upon the ground of services unpaid, or on any other that equity, justice, and the practice of other public Companies, might sanction the payment of.

In concluding, allow me to correct a mistake you seem to be under, with respect to my retirement from the Board, on the 25th February last. I declined standing for re-election, and before I left the Eastern Counties' Board, on the previous day, penned a note to Mr. Luard, for him to read, at the ensuing general meeting, for the information of the proprietors.

I am, Sir, your obedient servant,
ROBERT CRICHTON WYLLIE.

105, Pall Mall, 12th July, 1841.

P.S.—In the following copies of the correspondence between Mr. Duncan and me, it will be perceived that I have left out an expression or two. I have done so because these expressions might give offence, and they are not necessary to my own vindication:—

CORRESPONDENCE.

19, Great George-street, 17th April, 1841.

MY DEAR SIR,—The motion for a Criminal Information against the *Railway Times* comes on upon Tuesday. It is thought by counsel that each Director who was so on the 13th February should deny the charges made against him by the libel, and I send you an affidavit in the same form in which it has been sworn to by the several Directors. I shall be glad if you can be at my house to-morrow, Monday, before 4 o'clock, or at 10 o'clock on Tuesday morning, without fail.

Yours truly,
(Signed) JOHN DUNCAN.

R. C. Wyllie, Esq.

No. 2, Pinner's-court, Old Broad-street,
19th April, ½ to 4 p.m.

MY DEAR DUNCAN,—I have just come in and found your letter of the 17th, with a written affidavit, for me to swear to, as one of the Directors in office on the 13th February last, and consequently, one of those libelled as guilty of gross and wilful falsehood, &c.

As I am not now one of the Board, I do not see why I should mix myself up in the pending suit further than stating, that I hold myself to be incapable of gross and wilful falsehood, and that I believe all the gentlemen with whom I acted on the 13th February, were equally so, and that neither I nor they are impostors.

As regards what other Directors may have stated about the profits on the working of the line, I cannot positively swear; what I know is, that my own conviction (founded on statements of Mr. Hall, which I think I took down in my minutes,) was on the 13th February, we were working at a profit. I remember quite well stating that we *were* to Messrs. Tucker, Barnett and Co., of Birchin-lane, when we wanted to borrow money upon our debentures. I avowed that conviction at the adjourned Board of the 24th February, when Mr. Cropper took upon him to lecture me upon a question which I put, connected with the law of libel, and I cannot swear to that part of the affidavit without perjuring myself.

I cannot call to-night because I have to dine with a friend in Berkeley Chambers, but send me a note to the R. Club, where I shall call to-morrow, as I go into the City. If I do not find a note from you I shall conclude myself *not* wanted.

Yours, &c.
(Signed) ROBERT C. WYLLIE.

John Duncan, Esq.

19, Great George-street, 20th April.

MY DEAR WYLLIE,—I shall be glad to see you here at half-past 10 on your affidavit which I will make to your mind, if, after explanation from me it be not already so. You will find it quite correct when you look to the reports which I have.

Yours truly,
(Signed) JOHN DUNCAN.

19, Great George-street, 24th April.

MY DEAR WYLLIE,—I have been very busied in getting all the other affidavits ready, or I should have sent your new one sooner; I now send it to you, and you will find it even still more correct than the former, and I have attended to your wishes.

Yours faithfully,
(Signed) JOHN DUNCAN.

R. Club, 26th April, 1841.

MY DEAR DUNCAN,—I received your note of the 24th late on Saturday evening. Why do you omit the engagement which I expressly stipulated for, that I am to be saddled with no expenses connected with the prosecution of the *Railway Times?* I will sign no affidavit without such an engagement in the name of the Board, signed by the Chairman. If expenses be incurred the Board may turn round upon me and say, 'Mr. Wyllie, you are not one of the Board, and, consequently, we have no power to pay your share of the expenses.' I must be secured against this, for though I was, indeed, one of the Board on the 13th February, yet I hold myself to be no party to the prosecution for libel, and upon the following grounds, viz.:—

1st. I am vain enough to think that with those who have known me and my transactions in all parts of the world, nothing said in the *Railway Times*, or in any other newspaper, will make them believe me to be a liar or an impostor; consequently, I do not believe that the *Railway Times* has done me one farthing's worth of injury.

2nd. Having sustained no personal damage, I can afford to be generous in overlooking charges which do not affect either my purse or my reputation, and which we all believe to emanate from a party who in his connection with the Railway Company, has experienced much disappointment.

3dly. I do not believe that the charges on which the action for libel is brought, have injured my property as a shareholder to the extent of one farthing; and I am not sure that the action itself, even if successful, will not do greater injury, as tending officially to dispel a very favourable belief respecting the traffic, generally entertained, and participated in by myself.

For these reasons, I *must* have the bond, and will make no affidavit without it. I am no practised or latitudinarian swearer; the affidavit before me is the first appeal to my Maker in that line (for a certain round-robin objuration practised months

Digitized by Google

ago at the Board was a declaration upon honor), and if I do swear to it, it will be in the restricted sense, that the Directors in their public Reports never used the words *considerable profit*. I cannot do otherwise, for were I placed in the witness box, and interrogated upon oath, I would have to confess that the extract which you embody in the affidavit, namely, "that the current expenditure for working the line according to the best calculations that could be made, did not amount to 50 per cent. upon the gross receipts, a result that cannot fail to be highly satisfactory to the shareholders," was indeed highly satisfactory to me as a shareholder, and did convey to my mind the persuasion that we were working the line to a considerable profit. I would have to confess that I believed the sums which Mr. Hall, in his weekly financial statements submitted to the Board, placed to the credit of traffic, afforded a true measure of that profit; and that upon this very basis, I had not, as a liar and impostor, but a true believer, attempted to borrow for the Company, money on debentures with my highly respectable brokers, Messrs. Tucker, Barnett, Ellis and Co., of No. 11, Birchin-line. Consequently, I cannot swear to any thing more than the use of the words literally taken, being myself impressed with the very meaning which they convey. You and the Directors may laugh at these scruples, but I assure you they are serious matters to me, and whatever courtesies and kindnesses I may owe them (the Directors), I owe it to the safety of my own soul not to swear one iota beyond my own conscientious knowledge and belief in their service.

I have always been an advocate for trying in Court the validity of all pecuniary claims appearing against the late Secretary, but as for the action for libel pursuant to the resolution moved, not very temperately, by Mr. Anderson, I did not hold up my hand for it, and when I endeavoured to satisfy some of my doubts as to its policy or safety, I was attacked by Mr. Cropper, with a virulence, neither very consistent with calm and fair discussion, nor very becoming in a brother Director. But no personal feeling of a vindictive nature originates my present scruples; I despise the indulgence of such feelings, and consider that I give a proof that I am above them, when I pardon the *Railway Times* the unmerited attacks repeatedly made upon myself.

If you will send me the bond as required, I will sign the affidavit in the sense herein explained, out of mere courtesy to the Directors, and by no means as a party to the action for libel.

Hoping that Mrs. Duncan and the children are well,

I remain, yours, sincerely,

(Signed) ROBERT C. WYLLIE.

John Duncan, Esq.

19, Great George-street, 27th April, 1841.

MY DEAR WYLLIE,—I went to the Board today, and obtained a letter of indemnity under a Board minute, and enclosed the same, and I shall be glad to see you to-morrow morning, with the affidavit, as soon after half-past nine as you can, and you should not be detained two minutes.

Yours, truly,

(Signed) JOHN DUNCAN.

19, Great George street, 28th April.

MY DEAR DUNCAN,—I cannot wait any longer. Make out an affidavit so as to tell the whole truth and nothing but the truth, in the strict sense of my last letter, and ending in the words there used. I will swear to no other.

* * * * *

If they would sue Robertson on the ground of the monies appearing due to the Company, it would do them more credit than to sue him upon personal grounds. What matters it to the Company what Robertson writes of the Directors?

Yours, ever,

(Signed) R. C. WYLLIE.

AFFIDAVIT OF MR. BOSANQUET AND MR. RATHBONE.

[In compliance with the request of Mr. Wyllie, and in justice to him, we subjoin the affidavit made by the Chairman and Deputy-Chairman of the Company.—ED. R. T.]

Court of Queen's Bench.—Henry Bosanquet, of Lower Berkeley-street, Portman-square, Esquire, Chairman of the Eastern Counties' Railway Company, and Theodore Woolman Rathbone, of Allerton Priory, near Prescot, in the county of Lancaster, Esquire, Deputy-Chairman of the said Eastern Counties' Railway Company severally make oath and say, that at the time of the publication of the article in a newspaper called the *Railway Times*, as next hereinafter mentioned these deponents and Sir Robert Alexander, Baronet, Samuel Anderson, Cornelius Butler, Edward Cropper, George Clapham, Robert Crosbie, Samuel Price Edwards, Thomas Gibbes, William Gunston, Charles Hood, David Hodgson, Richard Harrison, Lawrence Heyworth, Henry Luard, Robert Mather, Daniel Mather, William Collings Wells, and Robert Crichton Wyllie, were the Directors of the said Company; that the said Robert Crichton Wyllie, and William Gunston, are not now Directors of the said Company; that since the publication of the said article, Robert Harrison, Esq., and Joseph Christopher Ewart, Esq., have been chosen Directors of the said Company; that the *Railway Times* is a weekly newspaper, published every Saturday, and has an extensive circulation amongst the shareholders of the said Company, and amongst the public generally, and that the objects of the said newspaper purport to be to give all such information regarding railways and Railway Companies, as it is desirable should be made public, and to be in the nature of a railway organ to the public generally; that a number of the said newspaper called the *Railway Times* was printed, and on the 13th day of February last published, and purporting to be No. 103, Vol. IV., No. 7, of the said newspaper, and which contained an article which was in the words and figures following, that is to say, "We beg to direct the attention of such of our readers as take any interest in the fortunes of that great corporate misfortune, the Eastern Counties' Railway, or in the merits of the long-standing dispute between its Directors and this journal, to the Report given in another part, of the final proceedings at the Ilford petty sessions respecting the rate at which that railway should be assessed for the relief of the poor of the parishes through which it passes. It may be remembered that ever since this line has been partly opened to the public the Directors have in their Reports invariably pretended that they were working it at a considerable profit, and that we have as invariably maintained that their representations on this head (as on but too many others) were grossly and wilfully false. The Directors have shown in various ways vast indignation and fury at this impeachment by us of their veracity and honesty, but that is all; they have never been able, and indeed have never attempted to show by facts and figures that they were not guilty." And now what do we behold? Two of the principal servants of these very Directors, their sub-Engineers, and their Accountant, proving on oath in a public court, that during the six months ending July the 6th, 1840 (at which time the Directors pretended to have realised a profit of no less than 3,948*l.* 12s. 10d.), their carrying trade had been attended with an actual loss of 716*l.*, and that during the period from July the 12th, 1840, to January the 3rd last, the total gain amounted only to 902*l.*, that is to say, that taking into account the opening of the Northern and Eastern line during this latter period which has seldom yielded to the Eastern Counties' Company less than 150*l.* a week, the working of its own line from London to Brentwood has been carried on at a still weekly increasing loss!!! Such facts need no comment. The career of so shameless a body of impostors cannot surely be of much longer duration." That the said number of the said newspaper marked A, is hereunto annexed. That the Eastern Counties' Railway in the said article mentioned is the railway in respect to which these deponents, and the Directors aforesaid were and are as hereinbefore mentioned the Directors managing and conducting the affairs thereof under and by virtue of two several Acts of Parliament, the one of such Acts being an Act passed in the year of the reign of his late Majesty King William the Fourth, entituled "An Act for making a railway from London to Norwich by Romford, Chelmsford, Colchester, and Ipswich, to be called the Eastern Counties' Railway, and the other of such Acts passed in the year of the reign of her present Majesty Queen Victoria, entitled "An Act to amend and enlarge the powers and provisions of the Act relating to the Eastern Counties' Railway." That the said periodical newspaper has for a long time past, that is to say, from about the month of February, one thousand eight hundred and thirty-nine, been managed and conducted as these deponents verily believe by one Joseph Clinton Robertson, who is as these deponents have been informed, and believe, the chief proprietor and editor thereof, and who, from the time of the passing of the said first-mentioned Act up to the said month of February, one thousand eight hundred and thirty-nine, acted as and was the Secretary of the said Company; that the said Joseph Clinton Robertson, in the said month of February, 1839, ceased to be Secretary to the said Company: that throughout the whole period from February, 1839, until the month of February last, the said newspaper has more or less, in almost every number contained frequent and unfounded attacks regarding the conduct and management of the Company by the Board of Directors thereof; that these deponents verily believe that the said article hereinbefore set forth was written, printed, and published, with the intent to injure the characters of the Directors of the said Company, in the estimation of the shareholders thereof, who are a large body of persons, amounting to about 1,190 in number, and in the estimation of the public generally; that these deponents, for themselves and the Directors of the said Company generally, according to the knowledge and belief of these deponents, have always been impressed with the conviction that their duties, under the said Acts of Parliament, were public duties, to be discharged with care, fidelity and honour, and they have to the best of their judgment and ability discharged the same with care, fidelity and honour, in every respect; that under the said Acts of Parliament a general meeting of the shareholders of the said Company takes place half-yearly, at which written Reports, with accounts or balance sheets annexed, are read to the shareholders assembled, and are afterwards printed and circulated amongst the shareholders generally; that until the said line of railway had been opened for six months there was not any balance-sheet of the traffic receipts or expenditure produced before or reported to the shareholders, but at the general meeting of shareholders held on the 28th day of August, 1839, the said railway having then been partially opened for a few weeks, the receipts for those weeks from traffic were stated, and it was also stated in the paragraph next set forth that the current expenditure for working the line, according to the best calculation that could then be made, did not amount to 50 per cent. on the gross receipts; that the paragraph last mentioned was in the words and figures following, that is to say, "A statement of traffic since the opening of the railway is annexed to this Report, but at this early period it is impossible to lay before the proprietors a detailed account of the current expenditure for working the line; under all the disadvantages, however, of a first and partial opening, a temporary terminus inconveniently situated one mile and a quarter from High-street, Shoreditch, and an establishment nearly extensive enough for opening the railway to Brentwood, this expenditure, according to the best calculation that can be made, does not amount to 50 per cent. on the gross receipts, a result which cannot fail to be highly satisfactory to the shareholders;" that the current expenditure therein referred to was afterwards, and in the Report next mentioned, set forth in detail in the balance sheet, as to traffic receipts and expenditure annexed to the same Report, such

Digitized by Google

details of expenditure expressly and intentionally as stated to the shareholders not containing any items of charge for maintenance of way or depreciation of stock; that the Report lastly mentioned was made and read to the shareholders at a general meeting of the shareholders held on the 27th day of February, 1840, the line then having been partially open for traffic during six months and upwards; and the next Report to the shareholders was made and read to them at the next half yearly general meeting of the said Company, held on the 27th of August, 1840, when the said line had been partially open during twelve months and upwards, and these deponents further say, that the traffic balance-sheets which the Directors annexed to the Reports made to the two half-yearly general meetings of shareholders, held on the 27th day of February, 1840, and 27th day of August last, respectively, and annexed to the said two last mentioned Reports, were in the words and figures set forth in the two paper writings hereunto annexed, marked B and C respectively; that such traffic balance-sheets were printed and circulated with the Reports to which they were annexed, and copies of such printed Reports are hereunto annexed, marked respectively B and E; and these deponents further say, that on the 13th of February last, the date of the publication of the said article hereinbefore set forth, the aforesaid two traffic balance-sheets were the only two traffic balance-sheets that had then been reported or laid before the shareholders of the said Company; and these deponents further say, that the Reports aforesaid, with the traffic balance-sheets annexed, are the Reports to which allusion is made in the said article hereinbefore set forth as the Reports of the Directors; and these deponents say, that although the Directors did state that exclusive of charges for maintenance of way and depreciation of stock the current expenditure for working the line was less than the receipts from the line, yet these deponents deny that the said Directors have ever in any other manner in their Reports invariably, or at any time, pretended that they were working the said railway at a considerable profit; and these deponents positively deny that their representations on this head, or on any other, have been grossly or wilfully false, or in any respect whatever untrue, or that the veracity or honesty of the said Board of Directors has ever been, or can be, justifiably impeached; and these deponents further say, that these deponents and the said Directors have always been able and are still able to show, by facts and figures, that any impeachment of their veracity or honesty is unfounded and false, and that they are not guilty of any want of veracity and honesty; and these deponents further say, that these deponents and the said Directors have never been guilty of any imposture whatever; and these deponents further say, that the sum of 3,948*l.* 12s. 10d., mentioned in the said article hereinbefore set forth is the same sum as is mentioned and set forth in the latter of the said two traffic balance-sheets, being the balance sheet ending the fourth of July, 1840, and being one year after the partial opening of the line; that not only did the Directors state verbally to the general meetings of the shareholders of the said Company, before which such two balance-sheets were produced and underwent much discussion, that the charges for maintenance of way did not occur, and were not included in the said traffic balance-sheets for the reason that the Directors considered that they were acting according to precedent, and the practice of other Railway Companies, in not charging that item against the traffic during the first year of the opening of the railway, but the Directors in their Report of the date of the 27th day of February, 1840, to which the former of such traffic balance-sheets was annexed, drew the attention of the shareholders expressly to the circumstance that no charge for that item did or would appear in the traffic balance-sheets by a paragraph in the same Report, which was in the words and figures following, that is to say, "A separate account of the receipts and expenditure of the traffic department is annexed to this Report; the average passenger receipts for the last year have amounted, with the present imperfect termini of the line, to the considerable sum of 28*l.* per mile per week; the ordinary expenses of working the line, not of course including during the first year the maintenance of way and depreciation of stock, amount only to 51 per cent. on these receipts, notwithstanding the operation of several disadvantageous circumstances arising out of a first and very limited opening;" that by the same paragraph the Directors in effect intimated, that during the first year of the opening of the railway no charge against the traffic would appear for depreciation of stock, but the Directors did in the second of their Reports, notwithstanding such last-mentioned intimation, charge the first year's traffic, ending 4th July, 1840, with the sum of 2,420*l.* for wear and tear of engines and carriages or depreciation of stock; that the Directors continued as intimated in the said last mentioned paragraph, not to charge maintenance of way during the first year of the opening of the railway; that the reason for not making this charge during such first year, was because it has been the established practice of other Railway Companies to leave out this charge against the traffic during the first years of their respective openings, and the principle upon which this is done is that the contractors who make railways or portions thereof, stipulate by their contracts to maintain the works they construct at their own expense for twelve months after their construction, and these deponents further severally say, that they have been informed, and believe, that the parish of Romford having rated to the poor the portion of the railway passing through that parish at the sum of 800*l.* per annum, an appeal was commenced and carried on against the said rating, and the question of whether the said Railway Company was over rated or not came on for hearing before a bench of magistrates at Romford, on the 9th day of February last, and, after a long hearing, the assessment made by the parish authorities of 800*l.* per annum, was reduced 578*l.* 15s. per annum; and these deponents say, that the officers of the said Company were instructed by the Directors to appear before the said bench of magistrates, and to produce the books and accounts of the said Company, and to prove that the sums charged by the said Company in the said traffic account hereinbefore set forth as paid by the said Company, had in truth been paid by the said Company, and the said officers were further instructed to insist, that in fixing the rateable value of the said railway in the parish of Romford for the purposes of the poor rates, the said Company were entitled to have other deductions made beyond the charges last mentioned out of the annual receipts of the Company from traffic, and such other deductions were depreciation of stock as before mentioned, and also for maintenance of way, and also for a rent for offices at Shoreditch to regulate and conduct the traffic and keep the accounts thereof, and for rates, taxes, and insurance, and also 20 per cent. for tenants' profit; and these deponents say, they have been informed, and verily believe, that Mr. Nathaniel Davis, the Accountant of the said Company, attended the said meeting of magistrates, and did prove that the said Company had paid the several charges and disbursements set forth in the said traffic accounts, hereinbefore set forth as being payments, and therein stated as payments, and that the said Nathaniel Davis did not speak to any items for maintenance of way, or depreciation of stock, or rent of offices, or tenants' profit, but expressly stated that these were estimates and not outlays, and that the estimates were matters of engineering which were made in the Engineer's department of the said Company, and in respect of which he was not competent to depose; and these deponents further say, that Mr. Sidney Braithwaite, who acts as sub-Engineer of the said Company, was examined before the said magistrates, and stated as these deponents have been informed, and believe, that if in estimating the rateable value of the said railway in the parish of Romford, items for maintenance of way and depreciation of stock, and rent of offices, with rates, taxes, and insurance should be charged to the debit of the receipts of the Company, he estimated that the maintenance of way should be taken at the rate of 350*l.* per annum per mile, and the depreciation of stock at the rate of 2,420*l.* for the first twelve months of the opening of the railway, and the rent of offices, rates, taxes, and insurances at the rate of 300*l.* per annum; and these deponents further say, that such estimates of additional charges to be made against the traffic of the said Company were submitted to the judgment of the magistrates as these deponents have been informed, and believe, as fair and proper to be taken into consideration for the purpose of their reducing the rating of the said railway, but these deponents have been informed and verily believe that neither the said Sidney Braithwaite nor the said Nathaniel Davis said, or pretended or attempted to say, that such estimated sums had been paid or disbursed by the Company, and these deponents further say, that they have been informed and believe that no other officers of the said Company, and no other person, was examined as a witness before the said magistrates, and these deponents deny that the Directors have ever pretended that they had realized a profit of no less than 3948*l.* 12*s.* 10*d.* during the six months ending July 6, 1840, inasmuch as the Directors have stated and represented only that after deducting certain enumerated items from the traffic receipts for the first six months, and the second six months after the opening of the railway, ending the 4th day of July, 1840, and without charging or debiting anything for maintenance of way, there was a balance of receipts from traffic in hand amounting to 3,948*l.* 12*s.* 10*d.*, which fund it is competent for any general meeting of the proprietors to treat as profit, if they think fit, or to direct the same to be applied in paying outlay on the works or otherwise, as such general meeting may determine; and, lastly, these deponents say that the accounts of traffic receipts and disbursements laid before the said magistrates to the 4th day of January, 1841, were not reported or submitted to the shareholders until the half-yearly general meeting of the Company held on the 26th day of February last, being subsequent to the printing, issuing and publication of the said article hereinbefore set forth of the date of the 13th of the same month of February.

Sworn in Court at Westminster, the 21st of April, 1841, by the deponents, Henry Bosanquet and Theodore Woolman Rathbone.

HENRY BOSANQUET,
THEODORE W. RATHBONE.

By the Court.

TRAVELLERS TO IRELAND AND RAILWAY WRANGLES.—That large portion of the public which travels between London and Dublin *via* Liverpool is made to suffer great inconvenience, to the extent occasionally of being kept in Liverpool 12 hours by the private disputes between the Grand Junction and the Crewe and Chester Railway Companies. The Post-office directs the Irish letters to be carried on the Crewe and Birkenhead Branch Railway, instead of, as heretofore on the Liverpool and Manchester line. By this route there is a saving of 20 minutes, which is of great importance in the despatch of Irish letters. Accordingly, a carriage with the letters leaves the London train at Crewe, whilst the passengers are carried on to Liverpool, where they most generally arrive just in time to see the mail packet on her way—able sometimes, in open boats, with danger and discomfort, to reach it, but most often left behind to wait for the evening packet. Though the post-office can overrule the disputes of the Railway Companies, and compel the conveyance of letters, it has no power to direct the conveyance of passengers; and the public interest is thus sacrificed to the wrangles of the Companies, which blind to their own interest, are thus cultivating, not the good will, but the hostility of the public.—*Manchester Guardian.*

The Birmingham Mechanics' Institution are making preparations for a second railway trip to Cheltenham and Gloucester, on Tuesday, the 27th July.

THE GREENWICH AND CROYDON RAILWAYS—THE TOLL QUESTION.

To the Editor of the Railway Times.

SIR,—With every disposition to promote an amicable and equitable settlement of the differences between the Croydon and Greenwich Railway Companies, and heartily concurring in the wish expressed by "A Croydon Proprietor" in the last paragraph of his letter, I cannot acquiesce in some of his conclusions. In the first place, with respect to the relation between cost and charges, although it may be an established rule that, as between a Railway Company and the public, the first cost has nothing to do with the rate of fare; and yet, in spite of this dogma, the Directors of the costly London and Birmingham line *have* succeeded in obtaining the highest fares that I am acquainted with; still I would contend that between one Company and another the case is different: for here the question simply is, what amount of compensation will it be better for the proprietors of a new line to pay for the use of a good *terminus* already constructed, rather than incur the expense of making another and independent one? For instance, supposing the Greenwich line not in existence, could any possible traffic between Croydon and London warrant the formation of an approach to London Bridge at a cost of not less than 400,000*l.*? Yet it might be consistent with the interest of both parties to pay and receive a compensation of about 7,000*l.* a-year for the use of such an approach already formed. It is only on the well-founded expectation that several railways from the south-east would make use of the Greenwich viaduct to win their way into London, that the enormous expenditure upon this work can be justified. The local traffic of Greenwich and Croydon alone will never produce an adequate return to the shareholders for the money laid out; and even the Croydon Railway, which is also an expensive line, cannot be expected out of its own peculiar traffic to make a profitable return. But the shareholders may reasonably look for their harvest from the influx of the Brighton and Dover traffic; and if they pull fairly with the Greenwich proprietors, both may hope to prosper.

Secondly, With respect to the proposed toll of a *small* sum upon every person and every ton of goods passing over the line, I do not admit the analogy between such a toll and the Government tax. The latter increases uniformly with the distance, and constitutes a large per centage upon the lowest class of fares: the toll which I contemplated (small enough in all conscience) was only "the small sum of one halfpenny" for each passenger, free from any deduction for the Government tax, and one penny for each ton of merchandise; which, for passengers, would amount to nearly one-twentieth part of a penny per mile for the whole distance, and could not be pretended sensibly to affect any fare which the Croydon Directors might choose to fix.

I am more desirous of establishing a principle than of settling details; but, for the sake of exemplifying the proposed scheme of compensation by a fixed rent and small poll duty, I will state what were my views at the time of making the suggestion. The legitimate object of a toll-receiving Company is to secure a certain amount of revenue, and some share of the profits arising from an increase of business. With such a view I would propose a rent of 5,000*l.* a year, to be paid by each Company using the Greenwich line, and 1½*d. net* for every passenger, with 1*d.* for every ton of goods passing over the line: and though some people may think that this would be an error on the side of moderation, I am rather confirmed in the belief that it would not be very far from equity, by the facts deducible from a Table inserted in the same page with "A Croydon Proprietor's" letter in your last number.

From this Table we may learn that, in the year ending July 4, 1840, the number of passengers carried over the Greenwich Railway by the Croydon Company was 474,573, and the toll paid 5,932*l.* 3*s.* 3*d.*, leaving 95,636 persons who used the Croydon line only. Now, with the same number of passengers, my plan would produce 5,988*l.* 13*s.* 10*d.* In the year just ended it appears that the number of *tollable* passengers was 378,937, being a diminution of 95,636, and the toll only 4,736*l.* 14*s.* 3*d.*, whilst the diminution of numbers on the whole line was only 84,737, and the numbers exclusively using the Croydon line amounted to 106,595. But if the plan proposed had been in operation the rent and toll together would have produced at least 5,789*l.* 9*s.*, and the Croydon Directors would have felt it their interest to encourage the thorough traffic.

The terms now suggested appear to me applicable only to the Greenwich line in its original state; and the additional outlay incurred under the compulsion of Parliament, for the special accommodation of other Companies, will require a special addition to the amount of compensation; the manner of providing which, if different from that prescribed, or allowed by Act of Parliament, may be easily arranged after the principle is agreed upon.

MODUS.

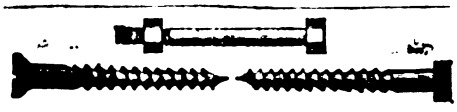
July 13, 1841.

THE PARIS AND ROUEN RAILWAY.—The shareholders held a meeting yesterday. It was reported that the line would be open as far as Montes in the spring of 1842, and would be completed in May, 1843.—*Le Temps, July* 10.

NORTHERN AND EASTERN RAILWAY.—Notice is hereby given, that the next Half-yearly General Meeting of the Proprietors of this Company, will be held pursuant to the Act of Parliament on Thursday the 12th day of August next, at 2 o'clock precisely, at the London Tavern, Bishopsgate Street, when three Directors will retire by rotation, who are eligible for re-election.

WILLIAM CRAWSHAY, Chairman.
WILLIAM BOURNE, Secretary.

Shoreditch, London, 15th July, 1841.



TO GAS COMPANIES.—A Person aged 30, who has been for several years practically engaged in the Gas Manufacture, has erected and superintended Gas Works, both at home and abroad, and is now Manager of a considerable Gas establishment in an English country town, is desirous of removal to a similar situation in any of the larger towns, as Liverpool, Manchester, Bristol, Bath, &c. Satisfactory testimonials and references. Apply by letter, addressed to P. B., care of Mr. Robertson, *Mechanics' Magazine* Office, 166, Fleet-street.

TO RAILWAY CONTRACTORS, BUILDERS, &c.—SALE OF RAILWAY PLANT.

MESSRS. SAMUEL PATTESON & CO. having completed their contract, near Stockport, on the Manchester and Birmingham Railway, announce their intention of SELLING BY AUCTION about the middle of August, if not disposed of by private treaty previously) the Whole of their RAILWAY PLANT, consisting of 200 tons of flange bottomed rails, 35 to 40lb. per yard; a great quantity of sleepers, 80 earth waggons, 2¼ yards each, 4-8 guage, 2-6 wheels, and 3 inch axles; 20 horses and geers, eight carts, an excellent four-wheeled stone lurry, a large quantity of centering, timber, smith's tools, &c. &c.; the whole of which may be seen on the works, Edgeley, near Stockport.

Also a CRANE, suitable for the erection of bridges or viaducts, &c. with traverse motion, single, double, and treble geering, and blocks and chain complete; capable of lifting from 10 to 15 tons, and is now standing near the station, Fairfield-street Manchester.

Previous to the sale by Auction (of which due notice will be advertised), further particulars may be obtained from Mr. Samuel Patteson, Manchester, or Mr. John Worsley, on the works at Edgeley.

T. H. RYLAND AND CO., OOZELL'S STREET, BROAD STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of
A 12-horse high-pressure engine, metallic piston, with or without boiler.
Two boilers, quite new, 18 feet by 4 feet.
Planing machine, works by hand, will plane 5 feet by 16 inches.

ROYAL SANTIAGO MINING COMPANY.—The Directors hereby give notice, that the six months dividend of two pounds ten shillings per share, declared this day, will be paid at the office of the Company, 38, Broad Street Buildings, on and after Monday the 19th instant. The proprietors are requested to leave their dividend warrants three days before the day of payment.

July 14th, 1841.

MALLEABLE IRON RAILS.—TO IRON MASTERS, RAILWAY CONTRACTORS, COLLIERY AGENTS AND OTHERS.—The Great North of England Railway Company propose to sell by PRIVATE CONTRACT, the following quantities of Iron Rails and Chairs, viz:—

23 tons of 22lbs. Parallel Bar.
330 tons of 28lbs of Flange Rail.
19 tons of 30lbs. of Flange Rail.

with 5870 Chairs, from 7 to 14lbs. each, suiting to the above Rails.

For further particulars apply to Henry Whitwell of Darlington, the Company's Resident Engineer.

Darlington, 14th July, 1841.

SPECIFICATIONS OF RECENT PATENTS.—The MECHANICS' MAGAZINE, No. 936, (Double Number) price 6d., published this day, contains copious abstracts of the following recent patents:—Beattie's, for certain improvements in locomotive engines, and in carriages, chairs, and wheels for use upon railways, and certain machinery for use in the construction of parts of such inventions; Adams's, for certain improvements in the construction of wheeled carriages, and of certain appendages thereto; Grylls's, for improvements in machinery used in raising or lowering weights; Hensman's, for improvements in ploughs; Adcock's, for improvements in the means or apparatus for condensing, concentrating, and evaporating aeriform and other fluids; Sewell's, for certain improvements in obtaining carbonic acid from certain mineral substances; Scott's, for improvements in the manufacture of ink or writing fluids; Kempton's, for improvements in lamps; Stubbs's, for certain improvements in the construction of screw-wrenches and spanners, for screwing and unscrewing nuts and bolts; Newton's, for certain improvements in the rigging of ships and other navigable vessels; Parkes's, for improvements in the manufacture of covered buttons; Bessemer's, for a new mode of checking the speed of, or stopping, railroad carriages under certain circumstances; Hall's, for a seed and dust disperser, which is particularly applicable to the freeing of corn and other plants from insects.

Also description, with three engravings, of Montgomery's self-acting break for railway carriages; Proposal for cultivating Dutch rushes in England; On the theory of heat; New theory of the universe; South polar expedition—the cause of magnetic attraction discovered, &c.; Solution of mathematical question; On short life annuities; Remarks on Nautilus's theorem; Oscillating engines—an inquiry; Walker's improved flooring cramp, with engravings. Review of New Publications:—On the nature, properties, and applications of steam, and on steam navigation; Painting with colourless fluids; New motive power applied to pumping, with an engraving; Gilcrest's mortiferous ordnance, with an engraving; Cause of rain during thunder storms—an inquiry; A popular mis-quotation corrected; Bootmakers' blocking machine: Fresh water from sea water: Franklin's printing press; New patent Britzska head; Solar eclipse; The Cadogan chain-pier, Chelsea; Improved locomotive; Anglo-Turkey carpets; Improved hour-glass; &c., &c., &c.

Mechanics' Magazine, Vol. 34, illustrated with nearly two hundred engravings, is now ready, price eight shillings, in boards.

Published at the Mechanics' Magazine, Patent, and Designs Registration Office, 166, Fleet-street, and sold by all Booksellers and Newsmen.

*** Intending Patentees, or Patentees of unspecified Inventions, may have every needful information and assistance on moderate terms, by application to the office of this journal; where also may be consulted the only complete Registry extant, of patents from the earliest period, (A. D. 1617,) to the present time.

TO RAILWAY AND MINING COMPANIES, ENGINEERS, AND OTHERS.—Mr. R. K. DAVIS respectfully announces, that he has received instructions to submit to Unreserved Sale by PUBLIC AUCTION, on Friday, 23rd July, at 12 o'Clock, at the Mart, Four Locomotive Engines and Three Tenders, adapted to the common Guage, manufactured by Messrs. Braithwaite, Milner, & Co. upon Berry's Principle, similar to the Engines in use on the London and Birmingham Railway; also a quantity of New Boiler Tubes and other requisite Materials for Repairs. They are now lying at the Marble Crane Wharf, St. Katherine's Dock, having lately arrived from the Continent, where they have been in use a short time, and are not for sale on account of any defect in their construction, but in consequence of the Company to which they belong ceasing their operations.

May be viewed Seven Days preceding the Sale, and Catalogues obtained of Mr. R. K. Davis, Auctioneer, 68, Mark Lane.

TO RAILWAY COMPANIES, ENGINEERS, AND OTHERS.—Mr. R. K. DAVIS respectfully announces, that the Sale of Locomotive Engines and Tenders advertised (as above to take place on Friday, 23rd July, is unavoidably postponed for a short time.

LONDON AND BRIGHTON RAILWAY.—This railway is now open from London to Hayward's heath, near Cuckfield, for the conveyance of passengers, parcels, horses, and carriages. The trains will run as under:—

Down Trains will leave the station at London-bridge at half past 9 and half past 11 a.m., and at half-past 1 and half-past 5 p.m.

Up trains will leave the station at Brighton at 7 and 9 a.m., and at half-past 12 and half-past 5 p.m. The first train on every Monday morning will leave Brighton at half-past 6 o'clock.

Time Altered.—Sunday trains, down, will leave the Station at London Bridge at 10 a.m., and at 2 and half-past 5 p.m.

Sunday trains up, will leave the station at Brighton at half-past 9 a.m., and at 5 p.m.

Passengers will be conveyed by coach between Hayward's heath and Brighton, and the fares throughout from London to Brighton, or from Brighton to London, will be—for the first class carriages, 10s., and for the second class, 11s. Children under 10 years of age half price. The whole journey will be completed in four hours. Passengers will not be conveyed from Brighton to Hayward's heath unless proceeding by the trains.

In order to insure conveyance between Hayward's heath and Brighton, passengers for the whole distance must book their places on the preceeding day at either of the following offices:—

Griffin's, Oxford-street, Green Man and Still; Hatchett's, Piccadilly; 41, Regent-circus; Spread Eagle, ditto; Golden Cross, Charing Cross; George and Blue Boar, Holborn; Old Bell, Holborn; White Horse, Fetter-lane; Cross Keys, Wood-street; Spread Eagle, Gracechurch-street; or at the station, London-bridge; at all of which places parcels may also be booked; and in Brighton at the Blue, the Red, and the Spread Eagle coach and railway offices, Castle square.

Bills containing the time of departure from and the fares between the intermediate stations, the terms for conveying horses and carriages, with every other requisite information may be obtained on application at the terminus at London-bridge and Brighton; at the respective booking offices; or at the offices of the Company, 10, Angel-court, Throgmorton-street.

By Order,
THOMAS WOOD, Sec.

July 15, 1841.

LEEDS AND SELBY RAILWAY COMPANY.—NOTICE is hereby given, That the annual General Meeting of the Shareholders in this Company will be held at Scarborough's Hotel, in Leeds, on Monday, the 26th day of July instant, at Twelve o'clock at noon, for the purpose of transacting the General Business of the said Company; and that at such Meeting a Resolution will be proposed, in conformity with the Powers conferred on the Company by an Act passed in the last Session of Parliament, for confirming the Arrangement already made for Leasing the Leeds and Selby Railway, and all the Works belonging thereto, to the York and North Midland Railway Company.

By Order of the Directors,
JOHN ATKINSON,
Law Clerk to the Company.

Leeds, July 2nd, 1841.

PATENT MANUFACTURE.—An excellent opportunity offers itself to any person disposed to embark in the manufacture, under Patent, of an article in extensive demand, the present cost of which will be reduced by the patent process upwards of 50 per cent. For the purchase of the entire Patent Right and the fitting up of the requisite manufacturing machinery, £5000 will be required. Letters from Principals to be addressed to M. M. care of Mr. Robertson, Patent Agency Office, 166, Fleet-street.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.—TENDER FOR LOANS ON DEBENTURES.—The Directors of this Company are ready to receive Tenders of Loans of Money on Debentures to be issued under the provisions in the Act of Parliament, and secured on their undertaking, in sums of not less than £200 for terms of four, six, or ten years, on interest at the rate of five per cent. per annum, payable half yearly.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's-street, Bank, London, or Cirencester. A limited sum only is required.

By order of the Board of Directors,
A. MERRICK, Secretary.

Cirencester, 5th May, 1841.

There is a net revenue of £17,000 per annum, payable half early, from the Great Western Railway Company, for the use of the line from Swindon to Cirencester, applicable to the payment of the interest on the debentures issued by this company.

NOTICE is hereby given, That a stated General Half-yearly Meeting of the EDINBURGH, LEITH, AND NEWHAVEN RAILWAY COMPANY is to be held within the Company's Office, 14, South-street, Andrew-street, Edinburgh, on Thursday, the 29th current, at Two o'clock in the afternoon, for the purposes mentioned in the Act. No Proprietor in arrear of any part of the calls is entitled to attend or vote.

By order of the Board,
ALLEN GEO. FIELD, Secretary.

Edinburgh, 8th July, 1841.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, TINNING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad-street, City; 69, Princes-street, Leicester-square; Manufactory, Mill-wall, Poplar; and also of the following Agents:—

Robertson and Co., 12, Goree Piazzas	Liverpool,
Mathias Dunn	Newcastle-upon Tyne
Joseph Bothway	Plymouth.
John Thompson and Co.	Wigan.
J. T. Tregellas	Truro.
Thomas Mooney and Son	Dublin.
Coates and Young	Belfast.
James Kibble and Co.	Glasgow.
James Gunn	Leith.
John M. Beatts, 14, Clement's-lane, High-street,	Dundee.

This rope has been in use for standing rigging in her Majesty's navy, and in a great number of merchants' ships for upwards of five years, and is giving the highest satisfaction; the rope is also employed in various mines and railways in different parts of the kingdom, but reference is especially made to the Blackwall Railway, where its capabilities have been most severely tested, for although it has been in use upwards of ten months, and has travelled a distance nearly equal to the circumference of the earth, it is to all appearance as good as when first applied.

LONDON AND BIRMINGHAM, GRAND JUNCTION, LANCASTER, MIDLAND COUNTIES', NORTH MIDLAND, YORK AND DARLINGTON RAILWAYS.—In connection with the above lines of railway, places can be secured by Mails to

Edinburgh,	Stratford-on-Avon,	Shrewsbury,
Holyhead,	Carlisle,	Lichfield,
Newcastle-on-Tyne,	Bangor,	Brackley,
Banbury,	Leamington,	Warwick.

Also by Coaches to

Ashby-de-la-Zouch,	Newcastle-on-Tyne
Atherstone,	Northampton
Bangor,	Newark
Buckingham	Newport Pagnel
Bourne	Oxford
Brackley	Oundle
Boston	Olney
Banbury	Oswestry
Carlisle	Peterborough
Deeping	Stamford
Edinburgh	Sleaford
Folkingham	Shrewsbury
Grantham	Spalding,
Harborough	Stratford-on-Avon,
Holyhead	Thame,
Kettering	Wellingborough,
Lincoln	Weldon,
Leamington	Winslow.
Lichfield	

From the
Spread Eagle, Gracechurch-street.
Swan with Two Necks, Lad-lane.
Cross Keys, Wood street.
Spread Eagle, Regent's-circus.
Golden Cross, Charing-cross.
George and Blue Boar, Holborn.
Griffin's Green Man and Still, and
The Euston Station.

HORNE AND CHAPLIN, Agents.

Parcels for 8½ p.m. Mail Train, viz. Boxes, Trusses and General Merchandise, received at the above Offices until 7 p.m.; Solicitors' and light Parcels until 7½ p.m.

Omnibuses to and from every Train, Fare 6d.

Post Horses for hire may be had on application at the above Offices, to convey Carriages to or from the Railway and any part of London (within 5 miles) including the driver, 10s. 6d. each pair.

SHILDON TUNNEL near Darlington.—TO TIMBER MERCHANTS AND OTHERS,—Offers will be received for the supply of 1,500 Railway Sleepers of a large size, cut out of the following kinds of Timber, viz., English Elm, Ash, American Rock Elm, or natural grown Scotch Fur. The whole of the Sleepers to be delivered at Shildon.

For further particulars, apply to John Harris, Engineer, Darlington.

The Tenders to be delivered in on or before Tuesday, the 27th instant.

Stockton and Darlington Railway Office,
July 14th, 1841.

FOR SALE BY PRIVATE CONTRACT.—A new Iron Steam Boat of 269 tons register, inclusive of Engine Room, and of 146 tons, exclusive length on deck 125 feet, breadth over the paddle box wing wales 37 feet. Propelled by two engines of 80 horses power. This Steamer is ready for immediate use, and is particularly well adapted for navigating a river of some length, or for short sea passages. Draught of water when loaded, 36 inches, and sails very fast with the lowest consumption of fuel.

Has a neat finished saloon, ladies and dining cabins, and stewards pantry, aft, and dining and captains cabins, stewards pantry and other apartments forward. For further particulars and terms apply to James Robinson and Co., Engineers, 150, Fenchurch Street.

LONDON AND BIRMINGHAM RAILWAY.—NOTICE is hereby given, That the Books in which Transfers of Shares of this Company are registered, will be closed from Friday, the 30th of July, to Saturday, the 14th of August, 1841, inclusive.

By Order,
R. CREED, Secretary.

Office, Euston Station,
9th July, 1841.

LONDON AND BIRMINGHAM RAILWAY.—NOTICE is hereby given, That the August Half-Yearly General Meeting of the Court of Proprietors of the London and Birmingham Railway Company will be held in London, at the Euston Hotel, Euston Station, on Friday, the 13th of August next, at Eleven o'Clock, in the forenoon. The Chair to be taken at Twelve o'Clock precisely.

GEORGE CARR GLYNN, Chairman,
JOSEPH F. LEDSAM,
Deputy-Chairman of the Board of Directors.

By Order,
RICHARD CREED, Secretary.

July 9th, 1841.

LONDON AND BIRMINGHAM RAILWAY.—To Contractors, Ironmasters, and others.—FOR SALE, a quantity of useful Railway Stores of the best description, consisting of about 150 tons of Fish-bellied and light Contractors Rails and Chairs, Platelayers Tools, such as Punners, Beaters, Long Levers, Helves, &c., which may be viewed at the Company's Station, Camden Town, between the hours of 10 and 4 daily. For Terms and Particulars enquire at the office of the Company's Storekeeper, Camden Station, London.

By order,
R. CREED, Secretary.

Camden Station, 14th July, 1841.

LONDON AND COUNTY BANKING COMPANY—Parent Establishment, 71, Lombard-street.—CAPITAL in Shares of £50 each.

DIRECTORS.

Emannel Cooper, Esq.	John Cuthbert Joyner, Esq.
William Cory, Esq.	Philip Perring, Esq.
William Evans, Esq.	Alex. Rogers, Esq.
Philip Frith, Esq.	Richard Springett, Esq.
William Hawes, Esq.	Clement Tabor, Esq.
Swynfen Jervis, jun., Esq.	John Wheetton, Esq.

SOLICITORS.—Messrs. Stevens, Wilkinson and Satchell.

The Company open accounts with commercial houses and private individuals upon the plan usually adopted by the London Bankers, or by charging a small commission to those persons to whom it may be more convenient to use the whole of their capital.

They receive deposits of £10 and upwards, for agreed periods at the interest till further notice of 3 per cent. per annum.

They allow interest at the rate of 2 per cent. per annum on the minimum balance of each customer's account during the preceding month.

They receive Dividends: Army, Navy, and Civil Pay, and Pensions; proceeds of ecclesiastical property and rents, and transact financial business generally.

THOMAS DIGHTON, Manager.

LONDON AND COUNTY BANKING COMPANY.—NOTICE is hereby given, That the Half-Yearly General Meeting of the Proprietors of the London and County Banking Company, will be held at the Company's House, 71, Lombard Street, on Thursday, the 5th of August next, at 2 o'clock precisely.

By order of the Board,
R. P. NICHOLS, Secretary.

71, Lombard-street, 7th July, 1841.

HAMBRO' WHARF, near SOUTHWARK BRIDGE, THAMES STREET.—Goods conveyed by Railway to and from Manchester and Liverpool, including Cartage and Delivery in London, at the following reduced rates:—

	Per Ton
Grain, Timber, &c.	55s.
Beer, Hides, Soap, Sugar, &c.	60s.
Raw Coffee, Rice, Earthenware in Crates, &c.	62s.
Bales, Grocery, Oils, Tea in Chests, Wool, Paper, &c.	65s.
Drapery, Drugs, Eggs, Glass in Crates, Indigo, &c.	70s.
Cochineal, Ripe Fruit, Raw Silk, Toys, &c.	80s.
Feathers, Millinery, Furniture, Hats, and similar Articles	100s.

Warrington, Whitmore, Stafford, and Wolverhampton in proportion.

CHAPLIN & HORNE,
Agents to the Grand Junction Railway Company.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 186. Vol. IV.—No. 30.] SATURDAY, JULY 24, 1841. [Price, 6d.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—Notice is hereby given, That the Half-Yearly General Meeting of Proprietors of the Birmingham and Derby Junction Railway Company will be held in pursuance of the provisions of the Act of Incorporation, at the Waterloo Rooms, Waterloo-street, Birmingham, on Tuesday, the 10th day of August, 1841, at Twelve o'Clock at noon, for the election of Three Directors, in the place of the same number who will retire by rotation, and for other purposes.

The Chair to be taken at One o'Clock precisely.

HENRY SMITH,
Chairman of the Board of Directors.

Waterloo-street, Birmingham, July 7, 1841.

Extract from the Act of Incorporation, Section 93:—"And be it further enacted, that no proprietor of any share on which any call made shall be unpaid, shall at any meeting of the Proprietors of the said Company be allowed to vote, either personally or by proxy, until the money called for in respect of such share shall have been fully paid."

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—Notice is hereby given, That the Books kept by the Birmingham and Derby Junction Railway Company, for entering the Memorials of the Transfer of Shares in that Company, will be Closed, in pursuance of the provisions of the Act of Incorporation, from Monday, the 2nd day of August, to Tuesday, the 10th day of August, 1841, both days inclusive.

By order
THOMAS KELL, Secretary.

Waterloo street, Birmingham, July 14, 1841.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—TENDERS FOR LOANS ON MORTGAGE.—The Directors of the Birmingham and Derby Junction Railway Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £5,000 each, and for a term of not less than Three Years, and to grant Mortgages of the Tolls and Works of their Undertaking as security for the same, bearing Interest at the rate of 5 per cent. per annum.

Interest Warrants, for the whole term for which the Loan is made, payable half-yearly, on the 1st January and 1st July, at the Company's bankers in London and Birmingham, will be delivered to the Lender with the Mortgages.

The Tenders are to express the sums, and the term of years for which they are proposed to be lent; and are to be addressed to the Secretary, at the Company's Office in Waterloo street, Birmingham; to H. Patteson, Esq., at the Office of the North Midland Railway Company, No. 6, Warneford-court, Throgmorton-street, London; or to Messrs. Laurence, Cazenove and Pearce, Auction Mart, London.

By order,
THOMAS KELL, Secretary.

Dated this 21st day July, 1841.

THE GRAND JUNCTION RAILWAY COMPANY give notice, That they have taken the Offices lately occupied by the Trans-Atlantic Steam Navigation Company, 24, WATER-STREET, Liverpool, where any information respecting the carriage of Goods or Passengers on their Line of Rail will be given, and small parcels received, either for the *Passenger or Luggage Trains*, up to Six o'clock p.m. daily.

By order of the Directors,
BRAITHWAITE POOLE, Agent.

24, Water-street, July 10, 1841.

TO GAS COMPANIES.—A Person aged 30, who has been for several years practically engaged in the Gas Manufacture, has erected and superintended Gas Works, both at home and abroad, and is now Manager of a considerable Gas establishment in an English country town, is desirous of removal to a similar situation in any of the larger towns, as Liverpool, Manchester, Bristol, Bath, &c. Satisfactory testimonials and references. Apply by letter, addressed to P. B., care of Mr. Robertson, *Mechanics' Magazine* Office, 166, Fleet-street.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

In one handsome 4to volume, with 17 splendidly-executed Engravings, including a Railway Map of the United Kingdom; Price £1 11s. 6d.;

THE RAILWAYS OF GREAT BRITAIN AND IRELAND, practically described and Illustrated by FRANCIS WHISHAW, Civil Engineer, M. Inst. C. E.

"This is one of the most striking and valuable works that have lately issued from the Press; the author handles his subject in that masterly style which proves his perfect acquaintance with the matters upon which he treats."—*Bath Chronicle.*

"Mr. Whishaw is a discriminating statistician, and has a thorough acquaintance with his subject."—*Athenæum.*

"No railway capitalist who studies his own interest will remain long without it; it is a work of immense labour and research, rich in original and authentic information, and embellished to profusion with splendid Engravings."—*Railway Times.*

"A faithful record of the rise and progress of the greatest modern result of the genius of man."—*Polytechnic Journal.*

"The completest view of railway statistics yet produced."—*Morning Chronicle.*

"A complete history of all the railways in the United Kingdom."—*Liverpool Mercury.*

"Full of sound practical information, derived from the fountain head itself."—*Observer.*

"A more complete and satisfactory account of the Railway System of Great Britain could scarcely be devised."—*Courier.*

"Here the practised engineering skill of the author manifests itself"—*Manchester Courier.*

"It may be looked upon as a rare and precious acquisition to the practically scientific literature of the country."—*Manchester Times.*

"It is not the mere opinion of a theoretic man, but the result of a practical and talented engineer."—*Plymouth Herald.*

"Such a work, the product of a practical man, is clearly entitled to the distinctive term 'national.'"—*Hereford Journal.*

"A text-book on railways for the next half century."—*Maidstone Gazette.*

"We know of no work which ought to be so favourably received in Scotland at present."—*Perth Courier.*

"Developing a depth of principle, and a breadth and variety of details of well-digested facts, which nothing in the history of railways at home or abroad can possibly rival, far less surpass."—*Dumfries Times.*

London: Simpkin, Marshall, and Co.

SHILDON TUNNEL near Darlington.—TO TIMBER MERCHANTS AND OTHERS.—Offers will be received for the supply of 1,500 Railway Sleepers of a large size, cut out of the following kinds of Timber, viz., English Elm, Ash, American Rock Elm, or natural grown Scotch Fir. The whole of the Sleepers to be delivered at Shildon.

For further particulars, apply to John Harris, Engineer, Darlington.

The Tenders to be delivered in on or before Tuesday, the 27th instant.

Stockton and Darlington Railway Office,
July 14th, 1841.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This Invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

TAFF VALE RAILWAY.—CALL OF £2 10s. PER SHARE ON QUARTER SHARES.—The Directors of the Taff Vale Railway Company acting under the provisions of their Acts of Parliament, hereby give notice, that the Proprietors of Quarter Shares are requested to pay on or before the 26th day of July, 1841, to any of the undermentioned Bankers, the sum of £2 10s. on each of their respective Shares.

London—Messrs. Glyn, Hallifax, Mills, and Co.
Bristol—West of England and South Wales District Bank.
Cardiff—Ditto ditto.
Merthyr—Ditto ditto; Messrs. Wilkins and Co.

By order of the Board of Directors,
JOSEPH BALL, Secretary.

Railway Office, Cardiff, July 2nd, 1841.

EDINBURGH AND GLASGOW RAILWAY.—NINTH CALL OF £5 PER SHARE.—Notice is hereby given, that in pursuance of a Resolution of the Board of Directors, passed in terms of the Act of Incorporation, the Proprietors of Shares in this Company are hereby required to pay a further instalment of £5 per Share making £45 per Share paid up, on or before Friday, the 30th day of July current, to any of the undermentioned Bankers:—

Glasgow—The Glasgow Union Banking Company.
Edinburgh—The National Bank of Scotland.
Do. —The Western Bank of Scotland.
Liverpool—The Bank of Liverpool.
Manchester—Messrs. Wm. Jones, Loyds & Co.
London—Messrs. Glyn, Halifax, Mills & Co.

Interest at the rate of 5 per cent. per annum will be charged on all such sums as remain unpaid after the date above appointed.

By order of the Directors,
JOHN LEADBETTER, Chairman.

Edinburgh and Glasgow Railway Head Office,
7, North Queen-street, Glasgow, 5th July, 1841.

THE BRIGHTON RAILWAY.—The Official Map and Section of this line is now published price 3s. on a large sheet coloured; folded in a cover 4s.; on linen for the pocket 6s.; and on rollers 5s. 6d. The extent of country, with all the railways shown in depth on this map, is from 30 miles north of the Thames to the English Channel, and it embraces in width a district of 54 miles.

Published by J. R. Jobbins, 3, Warwick Court, Holborn; R. Tyas, 8, Paternoster-row. Sold by J. Weale, and J. Cross, Holborn; Litts, Royal Exchange, and at the Office of the Railway Times

NORTH KENT RAILWAY, FROM GRAVESEND TO ROCHESTER.—Capital, £300,000 in 15,000 Shares of £20 each; deposit, £1 10s. per Share.

Prospectuses may be obtained and applications for Shares made at the Company's Office, 42, Lombard-street, until the 4th of August next.

GEORGE WALTER, Chief Superintendent.

REPORT OF THE SELECT COMMITTEE OF THE HOUSE OF COMMONS ON 11TH CLAUSE OF THE RAILWAY REGULATION BILL.

MINUTES OF EVIDENCE.

(*Continued from page 740*).

673. Occasionally an embankment slips or a bridge fails more or less; the Company are cognizant of it and the public are not; do not trains continue to run notwithstanding that imminent risk?—No, not with any knowledge of mine; of course I cannot answer for others.

674. Mr. Labouchere—Is not the great pecuniary interest which a Company has to open a railway as soon as possible, a cause which may possibly lead to railways being opened in a state in which it is dangerous and improper to use them?—It might do so; I think experience has shown that it has not been the case, and therefore it cannot be necessary to prevent it.

675. Lord Sandon — Have not the Company a greater pecuniary interest on the other side, which will operate to induce them not to open before there is every reasonable prospect of safety?—Much greater.

676. Will you state any expenses you have yourselves incurred from accidents?—I was endeavouring to remember one or two. I remember an accident occurring merely upon an experimental train, when experiments were making by other parties, not myself, where the experimental train was run into. I thought the expense had been 2,000*l.*, or somewhere thereabouts; Mr. Saunders thinks that 1,000*l.* was about the amount; but here was a little accident, by which nobody was endangered, occasioned by an engine running into this experimental train and smashing carriages to the amount of 1,000*l.* I was making experiments myself once upon a carriage, when, owing to great neglect on my part, we ran, at the speed of about 30 miles an hour, into another engine, which was coming towards us, and the carriages which were between the two engines were smashed. I suppose there could not have been much short of 600*l.* or 800*l.* lost that morning.

677. Are you aware that on one accident on the Eastern Counties' Railway the damage to the Company was 10,000*l.*, including the falling off of the fares in consequence of the accident?—I have heard so.

678. Do not those heavy damages which arise to Companies, whether through the falling off of trade or through the immediate damage inflicted upon the property of the Company, operate as a very strong pecuniary inducement, if none other existed, to constant vigilance against accident?—I think they do; and I believe a great deal stronger than any sense of duty could operate with any public officer, and a great deal stronger than it will operate when you throw the responsibility upon any public officers.

679. Do you believe that the Board of Trade would feel confidence enough to enforce as many regulations upon you, which shall be practically useful and applicable to your case, as your own sense of interest and responsibility would induce you to adopt?—Certainly not; if they did they must force such an immense number upon us, that we may as well shut up the railway.

680. Sir R. Peel—Supposing such a discretionary power were given to any department of Government, do not you think that in case of any future accident the Railway Company would throw the whole blame upon that department?—Unquestionably we shall. It has been stated by Sir Frederic Smith that he believed that the Board of Trade will be skilful enough still to keep the responsibility upon the Company: with every respect for the skill of the Board of Trade, I believe that our Directors and Secretaries will be quite a match for them, and that if the regulations are passed we shall throw the responsibility upon the public officers; we cannot help doing it.

681. Mr. Labouchere—You think it would be impossible for the Board of Trade to frame simple regulations which, while they would not exonerate the Railway Companies from any part of the responsibility, still would increase their responsibility if their regulations were not complied with?—I think it is not possible; but all those simple regulations have long been thought of by us and applied, and what remains to be done lies much deeper than that superficial class of improvements.

682. Do you feel quite sure that that answer is not applicable only to the Great Western Railway in particular, and other well-managed railways, but that it is of universal application to all railways throughout the kingdom?—I cannot say that, for this reason, that even if I knew them all, I should be sure that the leading railways were better managed than the inferior ones: but still I think those inferior ones are sufficiently well managed to be out of your reach; that is to say, that the regulations they have already established are better adapted to their circumstances than any you will establish for them; particularly as you must generalize, to a certain extent, your regulations; you cannot run the risk of committing gross injustice by legislating in one way for one railway and legislating in a totally different way for another, because when you met the Secretary or the Engineer of one railway, your officers thought him a stupid fellow, while the Engineer of another might know how to state his case better; you must generalise, and from that moment there will be this danger, that, upon ten railways that you legislate for, the rules will be inapplicable to nine of them.

683. Mr. Easthope—Are the Committee to understand that you think that those who have the management of railroads will lessen their care and their anxiety by any voluntary determination of their own, when they know that they are watched by the Board of Trade?—I am quite sure that such must be the case; I feel that it would unavoidably be the case with myself.

684. That you would by intention and voluntarily lessen the exercise of your own care and diligence with a view to the public safety?—I never said "by intention."

685. Do you think that they will, by intention, lessen their care in consequence of their being thus watched over by the Board of Trade?—It is too nice a line for me to draw between that which is intentional, and that which you do although you ought to know it to be wrong.

686. Have you not in your evidence said that which might by mistake be construed to mean that?—I most decidedly do not suppose that amongst the railway interests, any more than amongst the generality of other bodies where respectable men are employed, you will have any intentional neglect or any intentional frustration of the proceedings of the Board of Trade. But, to be honest, I think that even is going very far.

687. Sir Robert Peel—They will not kill people to spite the Board of Trade?—No; but if I have got a dinner engagement which induces me to leave the line that day, and there is an engineman going upon the engine whom I do not know much about, but who has had his licence given him that day by the Board of Trade, it may make a difference with me whether I shall go to Bristol, or whether I shall go very quietly home, trusting that no accident will occur, and knowing that at all events the man has got a licence from the Board of Trade.

688. What you mean is, that a divided responsibility will lessen the security?—Yes.

689. Mr. Freshfield—You would look with less anxiety into everything, when you knew that the attention of the Board of Trade was drawn to the subject?—Considerably; I will mention an instance in the case of the last length of railway that was opened on the Great Western. There was no power on the part of the Board of Trade of course to delay our opening, but Sir Frederic Smith thought, as is shown in the correspondence, that we were not quite ready. I assured him that we could get ready for it. He, with a degree of confidence in myself and in the Railway Company, which I am afraid he will think is rather ill repaid by my free opinions of his evidence, wrote a report to the Board of Trade, stating that he did not think we were ready; but that as I assured him we could be ready on a certain day, if I wrote to the Board of Trade to state that we were ready, there might be no objection to our opening. What was the consequence? That when the day arrived, I could have taken Sir Frederic Smith down, perhaps not him, but most inspectors, I could have taken them and satisfied them that we were literally ready; but the responsibility was thrown upon me to state positively that we were, and I therefore wrote to the Board of Trade to state, that as Sir Frederic Smith had placed confidence in me to state upon my responsibility that we were ready, I could not do so; and therefore the opening of the whole length was postponed to the next day, to the great inconvenience of the Company. On the next day I was able to state that things were literally ready, and the line was opened. But if that had been a question of safety, instead of a question of being literally ready for opening, and if Sir Frederic Smith, instead of throwing the responsibility upon me, had gone and seen it, and thought that it was ready, of course all my anxiety and responsibility upon the subject would have ceased; and I should have trusted to great care in running the line.

690. Sir Robert Peel—Did you not feel that preliminary objection made, and doubt stated by Sir Frederic Smith, to add to your responsibility?—Not my responsibility to the public; to the Board of Trade, I did.

691. Mr. Labouchere—Suppose some serious accident had happened, do not you think that the Company with whom you are connected would have been visited severely by any Court of Justice, if, after that warning on the part of the Board of Trade, they had opened the railway and an accident had happened?—I think they would, and that is the way in which a suggestion of that sort is more powerful than a positive prohibition.

692. Sir Harry Verney—If there had been no officer of Government, there would have been no suggestion in that case?—Our opening a day sooner would not really have increased the danger; it was only because I was called upon to do certain things which I had not been able to do by that day, but which did not really affect the opening; they formed one or two of a list of things which as a whole were necessary, and which Sir Frederic Smith put down, and went out of town; and I did not feel myself authorised in saying to the Board of Trade, "Those are points which are not necessary, therefore I have opened the line this morning in spite of the understanding with Sir Frederic Smith;" but I was obliged to take it literally, and as they were not literally done, I prevented the running of the trains that morning. The next day they were literally done, and it was opened; but I believe a suggestion of that sort, in a friendly way, is more likely to produce real good than a positive prohibition, because a positive prohibition must have lost us a week or two, and a large sum of money would have been lost; and is it fair to expect, that the next time I should take down Sir Frederic Smith or any other inspector upon a piece of new line and point out to him, as I did upon that occasion, the things which were not finished? Can it be expected that I should do that? Should not I merely take the officer down, let him see all he could, and take my chance of his report?

693. Mr. Labouchere—In your intercourse with the railway department of the Board of Trade, have you found a disposition to exercise the powers already given to them, in a peremptory manner, or have they endeavoured to do it in a conciliatory manner towards the Railway Companies, so far as you have had means of observation?—I am sorry to have to qualify anything I have to say in praise of the manner in which we have been treated by the officers, but it must be remembered that they have no power at present; at least it is small, and it is not brought into operation.

694. Have not they the power of instituting prosecutions, in case any Railway Company violates the Act under which it is constituted?—Yes.

695. Is not that a very important power?—It is a most horrible power, I admit.

696. Sir Harry Verney—In the construction of a railway are the same rails laid down as will hereafter be used when the railway is used for the conveyance of passengers?—To a certain extent they are, and to a certain extent not. Frequently a certain number of the rails that will be required permanently are used, but in the majority of cases an inferior sort of rail is used.

697. Is the fish-bellied rail generally used?—No; the fish-bellied rails are sometimes used by contractors from this circumstance, that they may happen to be discarded rails, and they can buy them cheap.

698. Are they dangerous rails to use?—No; the Manchester and Liverpool Railway ran for two or more years upon them without danger; some think they are the best.

699. Mr. Easthope—With regard to the statement that you made about the opening of your line, was it not the fact that Sir Frederic Smith was obliged to go to Scotland shortly before the opening you adverted to just now, and that he explained to you, with a view to your being more careful, the points that he was in doubt about?—That of course was the effect upon me, I do not recollect that he put it in that way to me.

700. And your knowing that he was in doubt about those points, and obliged to be abroad at the time, made you more careful in respect to the opening?—Yes.

701. Chairman—Have you any other grounds of objection to this Bill, which you wish to state?—I have so many that I am afraid I cannot hope to call the attention of the Committee to them. There are some points which have been proposed and suggested by Sir Frederic Smith and others to which I should wish to refer, to show that they are not at all applicable, and cannot be. There is one which I do not think is a suggestion of Sir Frederic Smith's, but it shows the difficulty of making suggestions for us, namely, that the power of the engine should be ascertained by

Digitized by Google

some party in authority, so that the load which those particular engines draw should actually be determined. Now that shows that the party proposing it did not, as of course he could not, know the real working of locomotive engines.

702. Mr. Labouchere—Is this one of the points on which the suggestion made by the inspecting officer has been at all adopted in the Report of the Railway department of the Board of Trade?—I do not know that it has yet, nor do I know that it may not be. He is an officer appointed by the Board of Trade, and who, I presume, was instructed to throw out suggestions, and he threw out this suggestion.

703. He is not one of the permanent officers of the Board of Trade?—I do not know; it is Captain Melhuish, at page 46 in the Report on Eastern Counties.

704. Lord Sandon—You do not understand that the discretion of the Board of Trade would be limited to such points as are now recommended by Sir Frederic Smith?—I take for granted that it would not.

705. Mr. Labouchere—Is it fair to anticipate that a suggestion will be adopted by the Board of Trade, if it is in itself unreasonable, merely because it is contained in one of the reports which the different engineer officers who have been sent down to inquire into accidents have made?—I am glad to have an opportunity of answering that question, because I feel that I am placed in a difficult position. I have not the slightest idea that the Board of Trade as at present constituted, of course I cannot answer for what it may be hereafter, but from the little experience I have had, the considerate and kind attention given to me by Mr. Labouchere, and by Sir Frederic Smith, and by Mr. Laing, when I have made any representation to them, would lead me to believe that they would not intentionally enforce anything that would be vexatious, or that would be injurious. I take for granted that they would not, but what I assert is, that they are not, and cannot be competent judges of what is, and what will be useful to the railways; and there are other officers appointed by themselves, and who, for aught I know, may in future be officers of the Board of Trade, who when called upon to make suggestions show that they have not a correct acquaintance with the working of the line. I have mentioned suggestions of Sir Frederic Smith's, which I think show that he cannot be acquainted with the detailed working. This happens to be one of Captain Melhuish's, whom I have not the pleasure of knowing at all, but he suggests a thing which is perfectly impracticable, and therefore so far is innocent, but which would be most injurious if attempted to be carried out; which is, that you should ascertain the power of the engines, and that the actual load which that engine is to carry, should be fixed by some law. Now, the fact is this, that if the power of an engine is ascertained to-day when it is in good order, and the maximum is fixed from that, it would be three or four times what that engine can ever carry in practice; therefore you must either fix a maximum load which is beyond reason, or you must fix it below the average running of a train; because the point where an engine fails is not that the engine is overloaded if it is in good order; but that it happens to start with perhaps an average load; it gets out of order, and then it is unfit to drag that train. Therefore if you class your engines, as in Lloyd's List a ship may be classed, and put that load to it, it will be absurd in practice. The next point is one which I believe may be taken as a positive recommendation. The first part of it is very good as a general rule, when we are left to our discretion as to when it is to be applied; but if it is attempted to be followed in every case, it could not be done, namely, "That all trains employed in the public traffic, whether of passengers or goods, shall be worked by time-tables, properly constructed with reference to the gradients, &c. of the line, and specifying the time of arrival and departure at each station." Now that appears a very desirable thing; but upon a railway of large traffic there will be so many exceptions to the rule, that the rule would become useless. The evidence of Mr. Booth, which is much better of course than mine upon that point, has, I hope, convinced the Committee that such is the case upon the Manchester and Liverpool; that the variation in the number of their goods trains, according to circumstances is so great, that they cannot prepare beforehand a time-table for the special trains sent out; that the number of exceptions becomes so great, that it is safer not to have a rule, as applied to that particular class of trains, than to have it, because it would be broken through so often, that the rule would be neglected, and it is safer that they should be always on the look-out for those trains than that there should be such a multiplicity of rules which would be broken every day. The next is a most prominent one, which has been discussed a good deal, which is the fifteen minutes' clause. Now, that is perfectly impossible to apply, and I am afraid it must only be taken upon our assertion that it is impossible. There is no difficulty in saying that all the trains starting from London or from Bristol should be at fifteen minutes' intervals, but that we shall do without that regulation. It would be too close to be convenient. Therefore, if the regulation is to be of any use, it must apply to intermediate stations. There is no great fear of accidents just after starting from the main station. It is at the intermediate stations that the rule must be applied to be of any use. Now, we have short trains from Reading and from Slough, coming to Paddington at various times of the day, and we have long trains coming in from Bristol. To say that we must make our time-table so that there shall be fifteen minutes interval, would be of very little use, because we should be driven to make time-tables that would obey the law; but practically the trains could not come in punctually to them. We could not, by any arrangement, secure a train coming all the way up from Bristol, coming to Slough, either fifteen minutes after or fifteen minutes before a Slough train. And if its proper time happened to be fifteen minutes before the Slough train, and it was late, it would not do for the Slough train to be stopped for fifteen minutes, because that would throw the whole system into disarrangement; the Slough train must start at its proper time. If the Bristol train, which ought to have been up fifteen minutes before, came up just as the Slough train was starting, then, according to this regulation, it must stop fifteen minutes more; and the consequence would be, that it would be half an hour beyond its proper time, and the chances are that that would interfere with the next train coming up, and that again with the next one. It would not be difficult to pick out from the time-table of the Great Western, cases in which the following these instructions would throw the whole line into confusion, and produce ten chances of collision instead of one which you suppose to exist from the first train coming too close upon the other.

706. Is not the mention of fifteen minutes in the 11th clause merely in the way of a restriction and limitation upon the Board of Trade, to prevent them from intertering with the time of the starting of trains beyond that limit, and not in the way of obliging them, in instances where the rule shall be inapplicable, to force too long an interval?—No; in the Bill it so worded, and I think we may almost state this as another reason for fear on our part; in the Bill it is only discretionary, and therefore it might be said that while the limit is fifteen minutes, the average perhaps would only be five or six. But what is the recommendation? The recommendation of Sir Frederic Smith is positive, "That in the construction of these time-tables it should be a general rule that no train is to start within less than fifteen minutes of another, or to succeed another upon any part of the line at an interval of less than fifteen minutes."

707. Sir James Graham—Your objection, if well-founded, would apply to any fixed time as much as to 15 minutes?—Yes, to any fixed time which public officers are likely to fix; we, for our interest, and for the sake of avoiding confusion and avoiding risks, and looking at the difficulties of the case, make the intervals, at different parts of the day, greater or less; we know best how to make them; our interest is far greater than yours in making them wide, but to carry out that proviso is impossible.

708. Lord Sandon—You vary your time-tables at different times with the changing circumstances of the different trains?—Yes.

709. Mr. Labouchere—As a general rule, have you any interval of less than 15 minutes?—None; but we must have exceptions.

710. You mentioned what Sir Frederic Smith says about 15 minutes; does not he lay that down as what ought to be a general rule, not an universal rule?—That may be; but if we perceive that these recommendations are founded upon an inadequate knowledge of the details of working a railway, are we not perfectly justified in supposing that when he has the power to pass a law, and not merely making suggestions which are open to us to criticise, but has the power to pass a law, that he would pass these same regulations, or perhaps even more stringent?

711. Do not you suppose that if an interval of 15 minutes were insisted upon in some of the shorter lines of railway, the effect would be to shut up the railway altogether?—Yes.

712. Is not it reasonable, therefore, to suppose that Sir Frederic Smith never could have contemplated the 15 minutes' provison as of universal application?—I did not suppose that he would apply it to short railways, because that is evident to anybody; but upon the face of the suggestion there is a want of sufficient knowledge of the practical working of the system, and therefore a man that makes that suggestion, if he has the power given to him, will probably insist upon regulations which we cannot carry out, or which if carried out, will produce mischief instead of good.

713. Lord Sandon—Is it safer for the public upon a long line, or upon a short line, that the interval shall be short?—The shorter the line the less the interval may be; it may be less on a short line than on a long one. In many of the short lines 15 minutes would be more than enough for the whole journey, and a much greater punctuality can be observed.

714. But supposing that a long interval were not insisted upon, upon a line of great traffic, on account of the public inconvenience that would arise, would the public safety be more secure in such a case than in the other case?—I think the public safety would then be provided for in some other way. If a great degree of traffic involved the necessity of having additional trains, we should then be driven to adopt other precautions; and if you leave us alone, depend upon it we shall discover those precautions a great deal quicker than they can be pointed out to us.

715. Sir James Graham—You have supposed the case of a short train from Slough, and the non-arrival of a long train from Bristol at the expected moment. With a view to that happening, which you think inevitable, what regulations do you propose to make, in order to meet the inconvenience and the danger?—Our present regulations would meet it much better than those which are suggested; our present regulations simply are these, that each train starts at its proper time, and therefore it does as well as it can. If it cannot keep its time, it goes on at the best time it can keep, and on the line there are signals given, which enable it to know whether it is close to another train or not.

716. Suppose this case, that the Slough train starts at the appointed time, and a long train from Bristol arrives within four minutes after the starting of that short train from Slough; under those circumstances, by your existing regulations, what would the Bristol train do?—The Bristol train would have to stop at Slough long enough to take up passengers. In that case the Bristol train could not move under three minutes after the Slough train; and until the signal of ten minutes ceased to be seen, it would go slower till it got an interval of ten minutes from the other train; so that there would be an interval of three minutes by actual prevention, and ten minutes for precaution, and this I maintain is a great deal safer than a longer interval, and for this reason, that if you attempt to keep up such a long interval as that, of course you must have signals along the line which will tell the train that is coming that the other is within 15 minutes; but if you had signals which should endure for 15 minutes along the line, the consequence would be, as Mr. Booth explained it very clearly, those signals would always be up; they would be up so often, that the engine men of all the trains would constantly see the signal of danger before them, and it would cease to be a signal of danger. At present we have a positive signal of stoppage for three minutes after a train passes, and for ten minutes after a train passes we have a signal indicating it. The signal, on pressing occasions, tells the man to stop, but he has not it so constantly before his eyes as to get careless of it. That is a great deal better, in point of time, than the 15 minutes clause.

717. Practically, is not your existing regulation very nearly a mere substitution of 10 minutes for 15?—No; it is very different. In the first place, it is three minutes instead of 15; and in the next place, it is a general regulation of ours, which, under certain circumstances, we can modify; which makes all the difference in the world, instead of a law which we could not modify if the public safety required it. It is very different from having a regulation which we think it desirable to make, but which, on occasion, we can modify.

718. Mr. Labouchere—Supposing the Board of Trade, instead of laying down regulations of that kind, and enforcing them upon all railways, were simply to require that there should be regulations upon this point, leaving it to the discretion of each railway company to make those regulations in such a manner as they thought best applicable to the circumstances of the case, would not that be a useful exercise of a general controlling power on the part of the Board of Trade?—It is such a very small controlling power, that whether it existed or not, I should not care much about it.

719. Are you confident that regulations of this kind are enforced and are observed upon all railways?—To

Digitized by Google

some extent they are; not of course upon a railway where there are 4 or 5 trains a day, to anything like the extent to which they are upon others where there are 20 each way; it will all depend upon the degree of traffic, and upon the general objects to which the particular railway is devoted; but I am not aware of any railway in England, that is worth calling a railway, which has not regulations which the Managers of that concern thought were well adapted to the object.

720. Sir James Graham—You do not believe that there is any railway in Great Britain carrying passengers in which there is not some regulation with reference to the interval between the trains?—I think it is very likely that there may be; and for this reason: if there were a branch railway of four or five miles long, which had five trains a day, and the hours were fixed when those trains passed, it would be certainly very useless for them to pass a law that the trains should not be within half an hour of each other; of course, in that case, you would find no regulation against it, because the occasion does not require it, because there are only five departures in a day.

721. Mr. Labouchere—Have you looked at the list of accidents which have taken place lately upon different railways?—I have.

722. Have you examined the causes of those accidents?—I have.

723. Are you prepared to say that in some of those instances the want of proper regulations was not the cause of those accidents?—It was; the list furnished a number of the circumstances which led to the accidents.

724. Had those regulations existed, perhaps the accidents would not have occurred?—Perhaps they would not: but another time you will have another combination of circumstances which will produce it. I am not aware of any railway upon which the regulations are so bad as to lead to accidents. After every accident we have, partly to satisfy our own feelings, modified some regulation or made a new one; but I believe it is rather to satisfy our own minds than as productive of any general good.

725. Have you observed, that in the Report of the Railway Department, it is stated, that "out of thirty-five railway accidents which have occurred in the course of five months, twenty-one are attributable, among other causes, to defective arrangements"?—I quite agree with that; but then I agree with it perhaps with a different meaning from those who state that; I say it is defective arrangement, because there are a multitude of little imperfections in all the details.

726. Lord Sandon—Do you believe that the defective arrangements are of such a nature that the Board of Trade would have prevented them?—No; they would never have dreamed of them at the Board of Trade.

727. Lord Granville Somerset—You think there must be either a very excellent code of signals, accurately observed, or else a considerable space of time between the departure of the trains, to ensure the safety of passengers?—I think either one of those two is desirable; on the Manchester and Liverpool, they have a very quick succession of trains. I do not think their signals are so complicated as ours on the Great Western, nor so numerous in their parts; but I think it is very likely, when you arrive at a great extent of traffic, the quantity of signaling ought then to begin to diminish instead of increase, and that you must depend more upon the actual looking out, and the feeling that every engine-driver has, that he is running the line with a number of others, and that he must look out, rather than to trust to a complication of signals. I think the regulation of trains and signals must vary with every railway.

728. Mr. Labouchere—Are you aware whether a system of signals at all upon your principle is adopted, either upon the South-Western, or the London and Birmingham, or the Grand Junction?—On both of those I believe they have a signal indicating that a train is a short time ahead, but I cannot keep myself up to a knowledge of the daily changes that take place. With respect to signals, a few weeks back Sir Frederic Smith did us the honour to approve of our signals, and to say they were very good, and particularly referred to the lamps in our carriages; since then all those have been rejected as bad. We thought them very good, and they were very good at the time; and if Sir Frederic Smith goes along our line now, he will see totally different signals everywhere along the line, very much improved in construction. This great principle of red, and green, and white, and so on, is much the same, but as to the particular code and the mode of signalling it is very much improved. And with respect to our lamps, which Sir Frederic Smith thought well of, we actually now consider those lamps invisible, and we have an entirely new set of lamps making for the carriages.

729. This change has been a very costly one to you?—It has been costly.

730. Supposing the great improvement that you have discovered, and which you make use of upon the Great Western, not to be generally adopted, because it is a costly change, do not you think there should be some public department to give an intimation to parties that they should adopt equally good signals to those which you now use, and that they should not be deterred by the expense?—I think that regulation would be most mischievous, and the circumstance I have mentioned I think proves it. If at the time when Sir Frederic Smith went along our line, when he thought our signals very good, and when I thought them so too, if he had required the Birmingham Railway to adopt them, then they would have been incurring an expense of some thousands of pounds—and just about the time that I was introducing further improvements in our signals and lamps, they would have had theirs in use, and you would have had to call upon them next day to adopt ours.

731. Do you conceive that the signals which Sir Frederic Smith approved of, some months ago, were superior to those in use upon other lines?—I think they were rather better.

732. If those other lines have not adopted those signals even at the present moment, those other lines still have signals of an inferior character?—Probably they have, but they will get a-head of us in the next start, and then we shall get a-head of them. We are all striving to arive at perfection; if you, at any moment, lay your hand upon one particular system, and say "that is the best, you shall all adopt that," you are shutting up the road to further improvement.

733. Then are you never to suggest an improvement which has been made upon another line, for fear the improvement upon that line should be improved upon hereafter?—No; suggest improvements, and they will come and look at ours, and make something a great deal better; but if you force them to adopt ours, you will have a very different result.

734. Sir James Graham—Has the progress of experience combined with science, led to a sure mode of stoping trains, at a high speed, more rapidly?—They are stopped better than they used to be, but they will be stopped better still. Upon that point I am afraid the Committee will hardly listen to half what I have to say; but with respect to breaks, I believe there is not a more mistaken idea than that of compelling one Railway Company to adopt all the improvements of another. It is suggested that every carriage almost of the carriages, should have breaks.—Now on the Great Western Railway we have few breaks: nobody, I believe, will accuse our Company of stinting, for some paltry saving, that which we thought advantageous; but on the Great Western we have no breaks to our first class carriages; we have a certain number to the second class, and those to the second class I hold myself to be tolerably useless.

735. [Lord Granville Somerset — Have not you drags upon the carriage trucks?—But they are of no use upon the line. If you were to pass a law to require it, there would be breaks, but the question is whether they would break. With respect to breaks we have to the carriage trucks, they are useful only in shifting the trucks about in the stations; they were originally meant, I admit, to be blocks upon the line. A carriage truck is not a thing heavy enough to be worth breaking, the resistance would not be worth having, and therefore the breaks that we now have for carriage trucks are of no other use than to move about in the stations. We have no breaks upon our first class carriages, we have a great many upon the second class carriages, but upon our line, as we aim at great speed, our engines are heavier in proportion to the loads drawn, than upon those lines where they go slower. We have six wheels also to our engines, and six to our tenders; the consequence is, that I am sure the best means of safety in a train would be to leave the command of breaking the train entirely in the hands of the engine man, with his engine and tender. Where a break applied to it would be really effectual, we have breaks now to our tenders, which can lock the wheels completely. I think it possible that we shall hereafter have breaks to the engine wheels. If that could be done, we should have a much more effectual break to our train, and much more under command than if we left it in the hands of two or three sub-guards scattered along the train. If we apply the break entirely to the engine and tender in that way, we shall improve the safety of the train; but it is proposed to compel us to apply breaks to all the carriages at an expense of 10,000*l.* or 15,000*l.* It is not the expense that would deter us for a moment, but that would of course prevent me continuing any improvements that I am endeavouring to effect upon the tender and engine, because, of course, if we are compelled to have breaks and extra guards to a train, we shall not trouble ourselves about endeavouring to effect it in another way. Of course, if the rule were made, it must be general, and must apply to us. Then I believe it would diminish the safety upon our line, instead of increasing it.

736. If you diminish your reliance upon signals when extra trains are required, and rely upon the look-out, running the trains pretty close to each other, does not your safety then depend upon being able to stop the speed?—And therefore I am aiming at the best possible way of effecting the breaks; but you step in and say that you know a better way, and that I must follow that.

737. You are confident that with a view to the public safety, in the circumstances you have described, of signals being very much laid aside, the breaks recommended would not be effectual?—They would, in our particular case, be worse than not effectual, they would be mischievous.

738. That is a recommendation which is made by the officers of the Board of Trade?—It is one of the numerous things which are thrown out.

739. Sir Harry Verney—Why should the Government officer necessarily require you to employ breaks? Why should not he be convinced by you that you were taking the most effectual way to diminish the danger, and leave it in your hands?—Then I do not see what is the use of the Government officer.

740. Then your opinion is, that such a power could not advantageously be vested in the Government?—It could not advantageously; and I believe it would produce mischief. A maximum speed is also thrown out, with respect to passenger trains. Now I will be very short upon this point; but there again I do not think it possible that they can to-day determine a maximum speed which shall do for to-morrow; I do not think it possible that they can determine such a maximum speed, without fixing it so high that it shall be useless; because the Committee may perhaps smile when I say that, on the Great Western, you must fix it at 50 miles an hour. People will laugh, and say that that is an absurd regulation. You may as well leave it out altogether. It is a very nice point to say whether we are going 50 or 60 miles; and to fix it at 50 is tantamount to saying that there is no maximum speed.

741. Sir James Graham—What speed have you ever gone?—I am not aware of having gone more than 62 or 63 miles an hour.

742. Mr. Labouchere—That was under special circumstances?—Yes.

743. Have you no maximum rate of speed under ordinary circumstances, which is enjoined upon your engine-men?—Not fixed in mileage; they are bound to depart and arrive at certain times at the stations, and they are bound not to exceed the speed necessary for doing that; but as for actual mileage, it would be talking in a language which they could not understand, because it requires certain habits of observing.

744. Is there no restriction put upon them with regard to the rate of speed?—Simply this, that they are not to go at a greater speed than necessary to arrive at the stations at the proper time. The stations are only four or five miles apart. Thus we arrive at the end you aim at by a practicable mode. You would arrive at it by a mode which would be impracticable; you would talk to the engine-men of not exceeding 40 or 50 miles an hour; that to them is imaginary language; they have not the habits necessary to it. If you tell them that they are to start at Slough and arrive at Maidenhead at a certain time, and that they are not to go unnecessarily quick to do that, then that is a practical rule; and that is just the difference between the way that we take to arrive at safety, and that which a stranger would take. To fix a maximum speed, you must fix it so high that it would be admitting that we are to run at enormous speeds. In August last I wanted to ascertain the quantity of delay in entering our stations at Slough and elsewhere, and in the course of the month I had accurate observations of the trains, and I will mention the results. The result was, that the average speed of passenger trains in and out of London, including stoppages, was about 28½ miles an hour; the average speed, exclusive of stoppages, was 30 and 31; the average speed, exclusive of the delay in getting up the speed at each station, was about 34, 35, 37, and even 40: while the maximum speed varies from 45 to 46, 48, and even 50 miles an hour; that was the actual running of the trains in August last. Therefore, if we are to keep the time which we now keep, you must fix 50, or some absurd maximum of that sort, as the maximum speed, and that would be

Digitized by Google

telling us, in other words, that we may drive furiously.

745. Sir James Graham—Then practically, upon certain parts of the line, the speed of 50 miles an hour is touched?—Every day.

746. Of course, consistently with safety, the speed upon different parts of the line will vary with the difference of gradients and curves?—Yes.

747. Practically, then, you touch 50 miles an hour now?—Yes; those are the average results of the observations.

748. And therefore, to continue your working at the present rate imposed, you must be permitted to go occasionally 50 miles an hour?—Yes; and yet I admit that that would be too large a margin to legalise. That is to say, if we run 45 constantly on many parts of the line, I think to legalise that would be unwise, at all events this year.

749. Lord Sandon—May it not be desirable, for the purposes of safety, sometimes to accelerate the speed beyond what would be usually desirable?—Very desirable. When a train happens to be late at a station, the conductor, knowing the state of things, may think it proper to go quicker.

750. Sir James Graham—Independently of accident, is not, upon a perfectly straight level, the same degree of speed safe, which would be very dangerous upon a slight curve?—Decidedly. Upon the line between Twyford and Maidenhead we have seven miles of straight line in cutting, and there, invariably, I observe that the speed run up to is 45, 46, 47, 48, 49, and 50.

751. Then you maintain your average speed by going fast there, and then slackening upon other parts of the line where there are curves?—That would, perhaps, be effecting more systematic caution than is really followed, because we have no curves between here and Wootten Basset, which requires that reduction of speed; but a curve does reduce the speed, and so does a gradient, and every circumstance that requires a little precaution has the same effect to restore it.

752. In lines where there are curves, such a course ought to be adopted?—It ought, but it would be impossible to make a general rule for it.

753 Lord Sandon—Do not you conceive that the exercise of proper discretion, with a view to the public convenience and public safety which is necessary to be reposed in the conductors of engines, would be much fettered if they felt that they were responsible to the Board of Trade, as well as to their own employers, and that therefore they would be less at liberty to consult either the public convenience or the public safety?—I think any double responsibility of that sort is very injurious, and it would have these serious consequences—with the best intentions on the part of the leading officers, the necessary consequence would be this, that the Board of Trade might, under those circumstances, assume the power which at present rests solely with the Directors as to the control of their servants. At present, if a servant does anything which we consider injurious, the Directors and leading officers are all desirous of sifting it, and ascertaining everything which really did lead to the mischief which would justify punishment. If we are liable to have the examination again carried on by a supervising authority, (and I believe most of the examinations into accidents have produced mischief in this way,) we of course being mixed up a little in the faults of our servants, it is not natural to suppose that we shall exert the same scrutinising power in sifting out and tracing the fault to the right man, when we ourselves shall be exposed to blame for it. I am quite sure that there will not be the same facility for tracing out the causes of any accident, or the same constant desire on the part of the Company to punish their servants, when they feel that the punishment of a servant is an admission that they are to blame.

754. Mr. Labouchere—Your objection goes not only to giving the Board of Trade any power of positive interference, but even any power of examining on behalf of the public into the causes of railway accidents?—No, I would not refuse that power; but looking at it as a balance of evils, I think the advantage to the public will not balance the disadvantage.

755. Sir James Graham—You object to the power of appealing to the law at the public expense against a very strong Company?—It sounds very well, but I do not believe in practice it would be good, and I think it is very bad in principle.

756. Mr. Labouchere—In a former answer did not you designate it as a horrible power?—I think it is a horrible power in principle.

757. Sir James Graham—Would not a power of supervision, without a power of appealing to the law be very ineffectual?—I think not, because this power to appeal to the law is made perfectly general; they may step in and prosecute on the part of an individual whose proper remedy is by the common course of proceeding against the Company; the Board of Trade have that which we were not aware of, but I believe they have the power, and they are compelled to interfere in what we consider private matters; now I believe that will be very mischievous, but we seem to be very weak, and we must yield to any law which Parliament chooses to pass.

(To be continued.)

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

Sir,—Although it is likely you may have the information from other quarters, I think it right to let your readers know, that the Supreme Court here has decided against the *redoubtable* resolutions of the Proprietors of the Edinburgh and Glasgow Railway, passed at their Statutory Meeting in February, and found them all illegal.

An interdict *ex parte* was the first stop put to the resolutions—the interdict was then argued before the Judge who granted it, and it was continued. This course of proceedings is similar to an injunction in England, granted *ex parte* and continued after argument. The Glasgow Board were not satisfied with this, but carried the point before the Second Division of the Court—the same as an appeal with you from the Vice Chancellor to the Chancellor. It is this last Court which has confirmed the decision of the Judge in Ordinary, and that unanimously.

You will not be surprised at this issue to an ill advised course of procedure. You said at first the Glasgow Directors "had not a leg to stand upon," and so it has turned out.

The Manchester and Liverpool Shareholders will now see on what a slender reed they chose to lean—they will have to pay for this railway whistle! For as a consequence the expenses must be paid by the law breakers, not law makers, as has been proved—indeed one of the judges is understood to have said, that the entire shareholders could not make such resolutions valid in law; by doing so, they would incur heavy responsibilities; if I mistake not some one told them so six months ago. There is one consolation to the shareholders, that this skirmish has not stopped the completion of the railway; it is very nearly ready for traffic, and if the Glasgow gentlemen, now that they are soundly trounced, will go on like men of sense, abandon their topping absurdities, make the fares low, the hours of starting from both towns regular and fitting public convenience, render in fact the undertaking a popular one, eschewing too much influence to Kirk Sessions; I say if they will do all this, and have the good luck to open it in fine sunny weather, the Manchester and Liverpool Shareholders will soon forget the law charges which their proxies have incurred.

A SHAREHOLDER.

Edinburgh, July 10, 1841.

AMERICAN LOCOMOTIVES.

To the Editor of the Railway Times.

Sir,—In your Saturday's number I observe a letter in answer to my remarks on the table, furnished in a former number, of the gross loads hauled up the Lickey Incline in August, 1840.

As I have not my books and papers by me just now, I cannot "consult the archives of the Institution of Civil Engineers" at the moment, although I shall look with much interest, as soon as I can find time, at any statement therein contained of trials made with the mercurial gauge. In the only discussion on the subject, however, which I can remember at the Institution, the opinions of the members were quite opposed to those ideas of the mysterious advantage in the construction of Mr. Norris's engines, that appear to be entertained by their advocates.

The subject revived by my letter, or rather by the statement that called it forth, had been matter of full discussion in your columns, in which the American advocate was fairly beaten from the field. In again bringing forward the subject, it would appear to me to be more fair and more conclusive, for the apologist of the American Locomotive to endeavour to disprove the statements then made by "W. H. B.," by either showing the fallacy of his calculation, or adducing the counter evidence afforded by the mercurial gauge, in a manner clear enough to be convincing to your readers, instead of referring to "archives" accesible only to the few, and thus assuming "*omne ignotum pro*" *probato.*

My remark as to the inconsistent results stated by the engines is unnoticed.

I think it is not fair, and I am pretty certain that it is not wise, for any one who appears as a volunteer correspondent in your columns to advance statements, and then to "beg to be excused from being any further drawn into correspondence" in their support, when they are questioned or impugned. In a paper like yours, ranking amongst its contributors the first professional talent in the country, the writers are not in the habit, any more than in other journals, of affixing their names, unless they should be required to authenticate any statement made on personal authority. It is only where a writer is adduced as a witness that it is needful or customary that he should divest himself of that privacy, which so much tends to prevent scientific or commercial questions from merging into mere matters of personal dispute.

I am Sir, your obedient servant,

E.

21st July, 1841.

Railway Offender.—On Friday last, Samuel Smith, of Little Chester, was summoned before the magistrates at the County Hall, Derby, by Inspector Churchill, for trespassing upon the North Midland Railway, and taking a hat from off the line. In consequence of his master with whom he had lived for two years, coming forward and giving him a good character, he was fined in the mitigated penalty of 10*s.* and 15*s.* costs.—*Derbyshire Chronicle.*

North Midland Railway.—We understand that an hotel and posting-house will shortly be erected on the North Midland Railway, adjoining the Masbro' station, to be called the North Midland Railway Hotel. It is to built upon land belonging to Benjamin Badger, Esq., and the cost of it will be, when completed, about 2,000*l.* It is to be three stories high, and the first story will be of Ashlar stone.—*Derby Mercury.*

Oldham Branch Railway.—The construction of the Oldham Branch Railway was let on Monday to Messrs. Smith, and in the course of a fortnight the works are to be in full operation. The principal part of the line will be an embankment, and the upper portion for a short distance will be excavation. The bank over Stockbrook valley will be a great height, and a viaduct has been spoken of at this point.—*The Yorkshireman.*

Preston and Wyre.—We understand (says the *Preston Chronicle*) the managers of the Fleetwood Railway Company have at last succeeded in making satisfactory arrangements for the erection of a pier on Roe Island, and that all impediments being removed, the work will be commenced immediately; so that in a very short time the steamers will be able to play constantly between that place and Fleetwood, and land their passengers at any hour of the day. This is a most important addition in the chain of communication between the great manufacturing districts and the north; and as it has become the principal, if not the only route for the tourists to the magnificent scenery of Cumberland and Westmoreland, there can be little doubt that, were it continued to Whitehaven, it would, in nineteen cases out of twenty, be preferred by travellers of every description, as not only the quickest, but by far the most agreeable route to Cumberland and Scotland—*Liverpool Standard.*

The railway between Aix-la-Chapelle and Cologne will probably be opened on the first of September.—*Augsburg Gazette.*

APPENDIX TO THE FOURTH REPORT OF THE COMMITTEE APPOINTED BY THE LORDS OF THE TREASURY, RESPECTING RAILWAY COMMUNICATION BETWEEN LONDON, EDINBURGH, AND GLASGOW.

Printed by order of the House of Commons.

(*Abstract continued from page 720.*)

GREAT NORTH BRITISH OR EAST COAST LINE, WITH REMARKS ON THE MIDLAND LINE, BY CARTER FELL.

In pursuance of a request made to him by a meeting held at Newcastle, of parties interested in the formation of a railway to Edinburgh, Mr. George Stephenson, in a Report dated September 13, 1838, points out the course of the line he recommends, together with its advantages and his reasons for prefering it to other proposed routes.

Mr. S. proposes that the line should commence on the south side of the Town Moor of Newcastle, on the west side of Brandling-place; then passing to the east side of the turnpike road along the low side of the Town Moor to the west side of Gosforth church it presents a choice of two lines, one of which diverging to the east leaves Gosforth Moor House to the left and North Farm to the right, then runs to the north of Forest Hall and west of Buckworth, passes Wolf Hill, Low Stead, Mare Close, Whiteridge, and North Moor. The other line passes from the point of divergence through moor land planted by Mr. Brandling and added to his park, and afterwards by Annett's Ford and Moor Farm to North Moor, where it joins the other route. Passing then a short distance eastward of Horton and High House the line crosses the river Blyth near the Bedlington iron works, and the Wansbeck near Sheepwash Mill, the Coquet a little to the east of Warkworth Castle, and the Aln near its outlet to the sea: it then passes on the east of, without disturbing the grounds of Howick on the west, of Craster Tower and Dunstanborough Castle to the east of Tuggal Hall and west of Swinhoe, thence to Bamborough Castle, and crossing Warnham Flats it proceeds nearly parallel with the coast to Berwick. From this point two lines present themselves about a mile apart; the preference would depend on the result of future surveys. The proposed line would cross the Tweed on the west side of the present bridge, and following the line of the coast to Burnworth, would then bend to the west, and pursue the valley of the Eye to the source of that river, where the summit level of the line occurs, and thence it descends to near Dunbar along the valley of another brook. For the rest of the route, Mr. Stephenson refers to his Report to the Directors of the Edinbugh and Dunbar Railway Company, from which it appears he had examined the line proposed by Mr. Grainger, viz., one by Haddington (the other passing to the north of that town), and that he preferred the former, although the more expensive, on account of the larger population it would accommodate and its near approach to the coal field. These two lines unite near Musselburgh and then proceed to Edinburgh, the entire length from Newcastle to Edinburgh being 117 miles.

Mr. Stephenson states, that in the whole course of his experience he never examined a country for railway of this length where the works to be executed were of an easier description, or the levels and inclinations of a more favourable character.

Mr. S. then describes, for the purpose of condemning, a line proposed to pass from Newcastle towards Stamfordham, and by Rothbury and Wooler, and so direct to Edinburgh: he pronounces this line incapable of producing favourable inclinations, and the works such as have never yet been attempted.

Reference is next made to another proposed route from Newcastle by Stamfordham and Otterburn, crossing the Carter Fell and passing by Jedburgh, Melrose, and Galashiels to Peebles, where it divides, one branch proceeding by Eddlestone and Pennycuick to Edinburgh, the other by Biggar, Lanark, and Hamilton to Glasgow. His opinion of this project is first given in his Report to the Directors of the Edinburgh and Dunbar Railway Company, and then more decidedly in remarks founded on the more exact information given in the Report of its projector, Mr. Richardson. The difficulties of the line he considers quite insurmountable, and the required works of a magnitude far exceeding anything that has ever been attempted, either in this country or in the world. He instances a tunnel, two miles in length (we presume at Carter Fell), of which the highest point is 550 feet below the surface of the ground, and which would therefore require shafts approaching that depth; the excavations at each end would be 160 feet in depth. He further notes embankments, at the Jed of 210, and at the Teviot of 190 feet extreme height, and several cuttings of 100 and 150 feet extreme depth. He declares he can scarcely form any conception of the magnitude of such works, and that after all, the gradients obtained are very unfavourable, some of them rising 30, 35, and 45 feet in a mile: and further that to obtain a line suitable to locomotive power it would be necessary to make the tunnel at Carter Fell eight or nine miles long. The distance by the east coast line to Edinburgh would be 117 miles, and to Glasgow 163; that by the midland line would be 107 and 132 miles respectively, but in Mr. Stephenson's judgment the advantage in point of distance is much more than lost by the midland line from its disadvantageous gradients. Its summit would be 860 feet above the sea, that of the east coast line being only 330 feet.

In giving reasons for preferring the east coast line for the thoroughfare between the southern and northern capitals, Mr. Stephenson strongly urges the necessity of providing for this certain and uninterrupted performance of locomotive engines by the selection of suitable gradients: he condemns explicitly steep inclinations carried over a high country as being very likely in frequent conditions of the atmosphere to be altogether unsurmountable by locomotive power. He says too, that in case of war the east coast line would be extremely serviceable for the conveyance of troops, as well as that it might be formed into a continuous battery from Newcastle to Edinburgh.

He states, as further advantages, that if this line be adopted there will be no inclination between London and Edinburgh (except at Euston-square) of more than 20, and the characteristic will be 16 feet in a mile; and that if it were on any occasion necessary, the same engines would be able to convey the trains throughout the entire distance.

With reference to the general principles he follows in laying down lines of railway, Mr. S. remarks, that except for very strong local reasons he always prefers a low country, because it nearly always presents the easiest line, because it usually gives opportunities of forming cheap lines along the valleys which it crosses, for the service of the towns lying at distance from the main line, and because it is of great importance that such lateral branches should have a falling inclination to the main line, since the greater weight of traffic is usually from, and the smaller to, the country districts. The towns of Morpeth, Belford, Alnwick, and Kelso, would be accommodated by such branch lines.

Mr. S. concludes his Report by stating his firm conviction that this is the only line between Newcastle and the cities of Edinburgh and Glasgow, on which locomotive power can be advantageously applied.

The next document is an estimate by Messrs. Grainger and Miller, of the cost of this line from Edinburgh to Berwick, from which it appears that the distance is 55¾ miles, and the sum required at Scotch prices would be 1,134,000*l.* The cuttings amount to more than 9, and the embankments to more than 7 millions of cubic yards: there occur 14 viaducts, varying length from 600 to 62 feet, and in height 80 to 20 feet.

Mr. Bidder next estimates the cost of the line from Berwick southward, beginning with a bridge over the Tweed at an elevation of 100 feet above low water, to consist of 11 timber arches of 150 and 140 feet span each, and one of stone of 50 feet. The estimated cost is 71,814*l.* 18s. 1d.

The length of the proposed line from Berwick to Newcastle is 65 miles 1,600 yards: the viaducts are in number eight (including that over the Tweed, described above), and they are of various lengths from 2,030 to 396 feet, and of different heights from 40 to 93 feet. The cost of that over the Tyne is taken at 120,000*l.* The cutting amounts to between 5,696,441 cubic yards, and by something exceeds the embankments; the sum to be spent on both being 281,937*l.* The cost of the permanent way is taken at 5,000*l.* per mile. The expense is stated at 1,238,507*l.* 6s. 2d., with it should seem, from the next letter, 55,310*l.* additional for stations.

A letter follows in which Mr. Bidder explains some discrepancies between the details of his estimates for the southern portion of the line, and those of Messrs. Grainger and Miller for the northern.

Thirty-four pages are then occupied with tables, reports, &c. &c., collected by Mr. Davidson, all bearing more or less directly on the prospects and advantages of the proposed east coast or North British line: we can notice only a few of the more prominent results.

The estimated revenue is from passengers 247,813*l.* 11s., from goods 110,201*l.* 12s., from which deducting 40 per cent. for working the line, a free revenue would be derived of 214,569*l.* 3s.

In the parishes within 10 miles of the line from Newcastle to Berwick, the poor's rates in 1838 amounted to 60,487*l.*, and the county rates to 4,645*l.*; in 1839 the assessed taxes were 22,941*l.*, the population in the same district being nearly 200,000 persons, and the property being of the value of nearly 1,000,000*l.* per annum.

For the Scotch portion of the same account it appears that in 1815 the annual value of the property was 1,630,898*l.*, and in 1831 the population amounted to 276,401 persons. The poor and county rates seem in Scotland to afford no certain information.

The sum for which the several turnpike tolls in the same district were let in several years past are given in a number of authenticated tables, and a very particular account is presented of the kind and amount of the commercial transactions of the several ports, towns and neighbourhoods, as well as of the customs duties paid.

It is stated that 782,733 passengers annually leave Edinburgh for various places. Of these 400,532 go to Porto-Bello and 21,000 to London. It is remarkable that the whole of the latter number is stated to go by sea.

From a list of the principal proprietors through whose estates the line would pass, it appears that a considerable majority are in favour of it; indeed, as far as this statement goes, it would seem that only three proprietors are positively known to object, that they own about six miles of the land required, and that they are all peers.

Mr. Davidson goes into a variety of statements calculated to show the superiority of the east coast line. He gives the distances from London, Birmingham, Manchester, Liverpool, Leeds, Newcastle, and Hull—to Edinburgh and Glasgow; and assigns, on the whole, great superiority to his own line. It is, however, noted (apparently by the Commissioners) that he has assumed that they would recommend the Morecambe Bay and Whitehaven, and the Kilmarnock Railways, and that he has lost sight of the Symington branch to Edinburgh. With the same view of showing the greater value of the east coast line Mr. D. then makes a variety of observations, interspersed with tables, on the foreign and coasting trade, fisheries, and manufacturers of the east, as compared with those of the west coast of Scotland. From the whole he concludes that those of the east coast are more extensive and important than those of the west, and especially that the foreign commerce is more rapidly increasing, and the fisheries are beyond comparison more productive, that but from the frequent occurrence of severe easterly gales the facilities for intercourse with England are much less than those enjoyed by the east coast, and

Digitized by Google

that the fisheries and the consumers of fish suffer greatly from the want of speedy means of conveyance.

The Commissioners bestow a handsome compliment on the readiness and diligence displayed by Mr. Davison, in collecting and supplying the requisite information.

These Reports are accompanied by five plates of sections, with a plan of the route in and near the city of Edinburgh, and another of the timber viaduct by which it is proposed to cross the Tweed.

MORPETH DEVIATED LINE.

In a Report, the style of which may be deemed pert or vigorous, according to the taste of the reader, Mr. Bowman demolishes all former projects, and in particular shows that Mr. Rennie's line north of Morpeth, by Longhorsley and Rimside Moor, is laid over an impracticable country, and that a line further east, to pass midway between Felton and Warkworth, within three miles of Alnwick, and on the west side of Lesbury, would avoid some difficulties and have some advantages, and amongst others that it is not too near the sea, but that the gradients would still be too severe. To exhibit the difficulties to be encountered on these routes he gives two sketches, from which it would appear, that even enormous cuttings and embankments would not suffice to obtain practicable gradients.

Mr. Bowman then proposes that the railway should proceed in a straight line from Newcastle to Morpeth, that it should pass over the high lands between the Coquet and the Aln, at the east edge of High Buston, which is their most depressed point, and that northwards of the latter river the like passage should be effected at the hollow separating Ratcheugh from Longhoughton. Morpeth will thus be connected with Newcastle, Alnwick would be approached within three miles, and the population situated in the district 20 miles wide from the sea would supply profitable occupation for the road. He enumerates other advantages, and in particular that it passes through, or rather between, the most fertile and populous parts of the country, without however actually requiring the most valuable parts of the land; and that in this respect it contrasts favourably on the one hand with the midland lines, which with enormous works and severe gradients traverse districts almost uninhabited for many miles, and on the other with the sea coast line, which is liable to inconvenience from spongy and sand drift, and possibly from hostile ships, and can derive its employment only from one side.

Mr. Bowman then attacks Mr. Stephenson's project, as to the line immediately to the north of Newcastle, on the ground of its affording no accommodation to Morpeth, which he says his levels prove may be easily effected; he afterwards descants on the advantages, present and prospective, of his own line, and anticipates confidently the establishment of large and flourishing manufactures along it, the population of which he thinks will be much more stable customers to the railway, than those employed in the collieries, which as the pits near the sea are successively worked out, emigrate for employment towards the west. He affirms that the line will be of the first class as to gradients and curves, and proposes that it should join Mr. Stephenson's line near Swintroe, or perhaps proceed independently to Berwick.

He apologises for the length of his Report, "on account of the preceding Reports of the Engineers who have surveyed the different competing lines, not only containing a highly coloured picture for their own line, but also matter calculated to prejudice some of the other competing lines in the eyes of the public;" this being the case, he "found himself quite under the necessity of clearing away all the smoke and rubbish thrown out from the neighbouring premises, before" he "proceeded with the foundations of" his own "structure!"

The estimates which follow apply to the first 32 miles of the line, and are two-fold, being formed on different suppositions as to gradients. The most level and expensive estimate gives, as the cost, 374,747*l.*, or 11,710*l.* per mile, including land and locomotives. The steepest gradient is 15¼ feet per mile. The cuttings and embankments are nearly equal, the former amounting to 3,802,258 cubic yards. The population in 10 miles on each side of the line amounts to 144,641 persons, and the weekly traffic is estimated at 3,000*l.* and 4,000*l.* for passengers and goods respectively. The Report is accompanied by a section of the line throughout.

MANCHESTER, BOLTON, AND BURY CANAL NAVIGATION AND RAILWAY.

SIXTH HALF YEARLY REPORT.

THE half year to which the annexed accounts refer, began under auspices not very favourable. Differences between the coal-owners and their miners had led to a general turn-out of the latter, which extended, with one exception, to every colliery on both canal and railway, and was the cause of a considerable falling off in the receipts from the carriage of coal, during the whole of January and February last. Since the adjustment of these differences, the works, at the respective collieries, have proceeded as usual.

On the 4th of last February, the Bolton and Preston Railway was opened to Rawlinson Bridge, for the conveyance of passengers only; the arrangements for the carriage of merchandize have not yet been completed. In three months more it will be extended into the town of Chorley, and the whole line may be expected to be finished by the autumn of next year, until which event your Committee cannot look to your being greatly benefited by it.

One coal-owner is just beginning to send coal from Blackrod to Manchester; others are preparing to do so; and, as there are in that neighbourhood extensive mines of valuable cannel, and excellent house fire coal, there is a reasonable prospect of an increase of traffic in those articles; but it must be borne in mind, that this is a species of trade requiring time for its full development.

Though extraneous sources are not yet brought into operation so as materially to benefit you, the Committee have pleasure in stating that there is an improvement in this over the last half year, sufficient, in their opinion, to justify them in declaring the increased dividend; especially as the saving of interest, arising from the reduction of the bonded debt, will not be fully experienced until the forthcoming half year.

Salford, July 16, 1841.

Bankers' interest and commission.....		108	3 11
			7,115 10 7
Net profit for half-year ending 30th June, 1841			£7,851 15 5½
Add last half-year's dividend on 120 shares held by the Company.....		£120	0 0
Balance due from the 30th December, 1840		1683	2 1
			1,803 2 1
Disposable net proceeds			£9,654 17 6½

A dividend of 30*s.* per share amounts to 9,301*l.* 10*s.*, leaving on hand, including the dividend on the 120 shares held by the Company, a surplus of 533*l.* 7*s.* 6½*d.*

Your Committee, in reference to the preceding statement of accounts, have directed a dividend of 30*s.* per share to be paid to the proprietors on the 2nd of August next.

JOHN CROSTHWAITE, Chairman.

P.S.—The dividend as ordered will be payable at the Railway office, New Bailey-street, Salford, between the hours of ten and one, on and after the 2nd of August next. For the convenience of proprietors resident in Liverpool, it will be payable on the 14th of August only, between the hours of ten and three, at the office of Messrs. John Crosthwaite and Co., Colonial Buildings, Dale-street, Liverpool.

FRENCH RAILWAY ACCIDENT.—A fatal accident (as stated in the French papers) lately occurred on the Versailles Railway. At the moment of the arrival of the mid-day train at the Courbevoie station, the chain of the tender became unfastened, and a passenger who was in a carriage immediately behind, becoming alarmed at the circumstance—in which there was not, however, any danger really to be apprehended, but which he fancied threatened the destruction of the passengers, and himself in particular, as being near the engine—made an attempt to jump out. Mons. Delamarre, a barrister of Versailles, who was with him in the same carriage, did all in his power to prevent this rash and thoughtless act. But he persisted in his attempt; the melancholy result was that he of course fell to the ground, and one of the iron steps coming in contact with his neck, severed his head as completely from his body as if he had been guillotined. The unfortunate man, who was very respectably attired, was about thirty years of age, and his name is stated to be Edward Deacle.

SIR FREDERIC SMITH'S REPORT ON THE BRIGHTON RAILWAY.

To the Right Hon. Henry Labouchere, M. P.

SIR,—I have the honour to acquaint you, that on the 8th instant I received an intimation from the Secretary of the London and Brighton Railway of its being the intention of the Directors to open to the public, on Monday, the 12th instant, that portion of their line which extends from the junction with the Croydon Railway to Hayward's-heath, in the county of Sussex.

In consequence of this intimation, and of previous notices which the Brighton Company have delivered to the railway department, I appointed to commence the inspection of the works yesterday, with Mr. Rastrick, the engineer of the line; and I was accompanied, in my performance of this duty, not only by that gentleman, but also by Mr. Harman, the Chairman, and Mr. Maclean, the Deputy Chairman of the Company, by whom every facility was afforded me for conducting my investigation; and I should not omit to mention that Mr. Rastrick, and Mr. Wood, the Secretary, supplied me with all the plans and sections I required, as well as the various returns of the proposed establishment for working the line, and the code of regulations for the guidance of the police, porters, and switchmen. These for the engine-drivers I expect to receive on Monday.

I yesterday commenced, and have this day completed my inspection, and I have to inform you that I see no objection to this line being opened to the public on Monday next, subject to the conditions contained in this report.

In the first place, I am desirous of observing that with very few exceptions the works are in a very complete, sound, and satisfactory state, and I have, on scarcely any previous occasion of inspecting a line before its opening for the public traffic, found them in so perfect a condition.

The London terminus for this railway is at present the same as that for the Croydon Company, at Tooley-street, and is situated on the north side of the Greenwich Company's western terminus. But, pursuant to an Act of last session, a station-house is to be built on the south side of the existing railway, and two lines of rails laid on a viaduct which is to be formed from the intended station-house to the point of junction between the Greenwich and Croydon Railways.

The Brighton trains will take in passengers, for the present, on the same platform as that used for the Croydon passengers, and the trains will run on the down line of the Greenwich Railway as far as the junction with the Croydon Railway, and then along the latter line as far as the junction with the Brighton Railway, being a distance of about 9¼ miles. At the former junction, a servant of the Greenwich Company is placed in charge of the "points" and signals, and at this junction a servant of the Croydon Company is employed.

The gauge of the three Companies is the same, viz., 4 feet 8½ inches, so that the engines of all of them might run upon either line.

The first or northern station of the Brighton Railway is at Croydon; it stands in a most convenient situation, a little to the east of the town, and about one mile south of the point of junction with the Croydon Railway.

At this station are the carriage-sheds, engine-houses, stores, warehouses, and other buildings which are usually placed at the termini of great lines, and it appeared to me that this is the most suitable position for them, and that the general arrangement of the several buildings is well calculated to promote the public safety and convenience, and the dispatch of business. Not only here, but at almost all the stations on this line, the engineer has laid down four sets of rails, and built booking-offices, both for the up and the down trains, so that the engines and carriages will not stop upon the main lines, nor the passengers have to cross the rails either in joining or leaving the carriages. An arrangement which will tend much to the safety of the traveller, and highly creditable to the Company.

The stations are as follows:—

The Godston	4 miles from the junction with the Croydon Railway.
Stoats-nest	5¼ ditto.
Merstham	10¼ ditto.
Red-hill and Reigate	12 ditto.
Horley	16¼ ditto.
Three Bridges	20 ditto.
Balcombe	24¼ ditto.
Hayward's Heath	28¼ ditto.

At all these stations there will, I conceive, when they are entirely finished, which is not yet the case, be everything that can be required for the safety, convenience, and comfort of the passenger that the nature and probable extent of the traffic can demand.

Throughout the whole length of line now under consideration, with almost the single exception of a small portion near the north entrance of Merstham Tunnel, I found the cuttings cleared out, and the slopes satisfactorily trimmed.

The embankments are generally sufficiently consolidated, and I have no doubt that with proper care, in the very few instances where this is not the case, the traffic may be carried on with perfect safety. I observed with much satisfaction that nearly the whole of the embankments are made considerably wider than the ordinary dimension.

There are two tunnels on the portion of railway about to be opened, viz., the Merstham and the Balcombe Tunnels. The former is 1,780 yards in length, and is one of the dryest that I have met with. The centre half is lighted with gas, and it is intended to light the whole in the same manner, a gasometer having been erected for this purpose, and the same has been done for the Balcombe Tunnel. This latter is only 1,122 yards in length. The wet has in some few places penetrated through the arch, but the passengers will not in consequence be subjected to any inconvenience, as these parts of the brickwork have been lined with lead, behind which the leakage is carried off into vertical pipes that communicate with an ample culvert, formed not only under this tunnel, but also under the Merstham Tunnel.

The bridges have been generally constructed so as to afford even greater accommodation and convenience to the public than is provided for in the Acts of Parliament, and they appear to be of sufficient strength for their respective purposes. There are three of which the parapet and coping are unfinished.

On this part of the line is that magnificent structure, the Ouse Viaduct. It is of brick, and consists of 37 semicircular arches, each of 30 feet span; the extreme height of the centre arch is 96 feet.

The whole length of this viaduct is 480 yards, and the width between the parapet is 28 feet.

The brickwork is completed, and almost all the centres are struck, but the parapet, which is to be very handsome and of stone from Caen, in Normandy, is yet in a very backward state, and cannot be finished for some weeks. In order, however, to admit of the masons proceeding with their work, without interruption to the traffic of the railway, Mr. Rastrick has established a moveable scaffolding, which traverses along the viaduct on an independent set of rails, and by this means he may avoid having any of the workmen or their materials within the line of the parapet walls.

The permanent way is only laid at present on the West, or up line, on this viaduct; but with two other exceptions only, and these only for a few yards in length, it is complete for both lines. Where these breaks occur crossings are put, and Mr. Rastrick has undertaken that the traffic shall be so arranged that two trains cannot meet on the single portion of the line.

The rails weigh 75lbs. in the lineal yard, and are on the embankments laid on cross Kyanized wooden sleepers, and in the cuttings generally on stone blocks.

The bearings are, in the middle, 4 feet, and at the ends 3 feet 6 inches; therefore, there are four to each 15-foot rail; excepting in the tunnels, where five bearings are used, and where the intervals are narrowed to 2 feet 6 inches at the ends, and 3 feet 4 inches in the other spaces.

The weight of each joint-chair is 26lbs., and of the intermediate chair 22½lbs.

The fences are of a substantial description, and are complete from end to end of the line on both sides, with proper field gates, and the mile-posts have been put up; but the signal and lamp-posts are only, as yet, fixed at the Croydon Station. The whole, however, are ready to be put up, and as this may be done in a few hours, the deficiency need not delay the opening of the line.

The code of signals is to be the same as on the Great Western Railway, and the superintendant of the Brighton Railway having been an officer in the employ of the former line, he is presumed to be acquainted with the system which prevails there.

There are four crossings of parish roads on the level, and gates have been placed across these roads, and watch-boxes provided for the policemen who are to be stationed at these points.

The Earlswood embankment having originally been formed of clay, and in a wet season, has had some slips, but a better material having been thrown in, the work seems now tolerably firm. However, in running over this and some of the other lofty embankments, the enginemen must use increased caution until all appearance shall have ceased of an extensive subsidence. I must here remark that for the present, the Directors have very properly decided on limiting the average speed to 20 miles an hour, inclusive of stoppages.

In order to save time, and as the best means of giving the Directors of the Brighton Railway Company a knowledge of my opinion of the state of their works, I shall forward a copy of this letter to the Chairman of the Company, who is now residing here, and who I am aware will take an active part in providing for the public safety, at and for some time after the opening of the line, and I will personally explain to that gentleman, as well as to Mr. Rastrick, the engineer, who is also on the spot, the necessity of the greatest vigilance being used by the Superintendent and other officers, as well as the servants of the Company, to prevent accidents at the few unfinished parts of the line.

The points of junction with the Croydon and Greenwich lines are also matters of some anxiety, for unlike the ordinary junctions of other railways, these occur where there are no stations, and consequently the safety of the traveller depends mainly on the switchman at each place.

At the Greenwich junction the management of the signals and switches is confided to a servant of the Greenwich Company, and at the Croydon junction to a policeman of the Brighton Company.

It is to be borne in mind that until the new station at London-bridge is formed and the additional lines of rails laid, the engines of the three Companies will work on the same rails from the Greenwich junction. Great vigilance will therefore be required at this junction, and it is desirable to impress upon the Directors of the Greenwich Company the paramount necessity of always placing at this important point a policeman of well established character for strict obedience of orders, steadiness, promptness and presence of mind, since at this junction, owing to the frequent passing of the Greenwich trains, and to the Croydon and Brighton trains having to cross both the up and down lines, it will be chiefly on this servant that the safety of the passenger will depend.

My present duty, however, is with the Brighton line, and it behoves the managers of the railway to make their engine drivers and conductors fully sensible of the necessity of the strictest obedience of all signals, and of their approaching the two junctions at such a moderate rate of speed as to admit of their having the trains completely under command.

I have here to observe, that I was surprised to find that the switchman at the Greenwich junction is instructed to exhibit as a symbol that the points are right for the Croydon and Brighton trains, a red flag, which is ordinarily the signal of danger. Some attention on this head is indispensible to prevent confusion and risk to the passengers.

The engines about to be used on the Brighton Railway are both four and six-wheeled.

The carriages are well built, handsome and convenient.

Digitized by Google

There are buffer springs to the whole of them, including the horse boxes, and carriage trucks, and breaks to all the second class carriages. These breaks are generally of an improved construction invented by Mr. Rastrick.

The second class carriages and horse boxes have coupees, the latter being intended for the grooms, which will be found a great convenience.

I have the honour to be, Sir,
Your most obedient servant,
FREDERIC SMITH,
Lieut. Col. Royal Engineers,
Inspector General of Railways.

Brighton, July 10, 1841.

RAILWAY ADJUDICATIONS.

SUSPENSION AND INTERDICT.

JOHN LEARMONTH AND OTHERS, COMPRISING THE EDINBURGH COMMITTEE OF THE EDINBURGH AND GLASGOW RAILWAY COMPANY v. JOHN LEADBETTER AND OTHERS, DIRECTORS OF THE SAID RAILWAY.

Court of Session, Edinburgh: Second Division —8th July, 1841.—This was a suspension and interdict applied for at the instance of the Edinburgh Committee of the Edinburgh and Glasgow Railway Company, against certain resolutions which had been come to at a general meeting of the shareholders of the Company, held on the 22nd February last.

The suspension and interdict were presented to Lord Ivory, as Junior Lord Ordinary, and his Lordship after ordering answers, and hearing counsel very fully for the parties, pronounced the following interlocutor and note:—

"Edinburgh, 21st June, 1841.

"The Lord Ordinary having resumed consideration of this cause, and having heard parties by their procurators, passes the note and continues the interdict.

(Signed) "J. IVORY.

"NOTE.—The Lord Ordinary is of opinion, that the resolutions complained of are a clear evasion of the statutory provisions, as regards the constitution and powers of the Edinburgh Committee.

"Whether the management of the Company's business through the intervention of Committees be attended with advantage or disadvantage, it cannot admit of dispute that such, from the outset, has formed, and was intended to form, an essential branch of the statutory machinery—and this not merely during the execution of the line, and with reference to the temporary purposes connected with that stage of the proceedings, but permanently and with reference to the general administration of the concern, so long as the Company itself should, as a creature of the statute, continue in existence.

"It may be more difficult to define what are the proper functions of these Committees—and how far they are exclusive, if at all, of the actings of the General Board. It is not necessary, however, in the present question, either in passing the note, or continuing the interdict, to pronounce definitively on this head. So far seems indisputable. 1. That both Committees are to be appointed annually. 2. That both have certain powers and authorities (whatever these may be) vested in them by force of the statute itself (sect. 166, 167), independently of what may be "confided to them" by the Directors. And 3rd, That their whole constitution implies the most perfect equality of the Committees *inter se*, while (not going beyond the express words of the statute) it seems impossible to avoid the conclusion, that this equality has, and was intended to have, relation to the respective interests of Edinburgh and Glasgow, as interests to be somehow or other effected by the independent and separate existence of the Committees.

"Now, the resolutions complained of point at the total subversion and overthrow of this state of things. Their avowed object is, to put an end to "the present divided management of the Company's business, by Committees sitting in Edinburgh and Glasgow, having co-ordinate powers." A new machinery not recognised by the statute is proposed to be created, and should this machinery, "appear not to be sanctioned by the present act," a third and intermediate scheme of management, just as little founded on the statute, is meanwhile to be resorted to, viz., "to remit to the Glasgow Committee such of the details of the management of the line as shall appear expedient," the Edinburgh Committee being thus thrown entirely into the background, and indeed, to all practical intents, substantially annihilated.

"It may, or it may not be, that the respondents shall eventually succeed in establishing all this to be in accordance with a sound construction of the statutory enactments. The Lord Ordinary can only say, that such result bears, *prima facie*, at least, so very little of probability or presumption in its favour, that he deems it right, before practically giving effect to it, by all at once inverting the existing order of things, to put the matter in train for further discussion and consideration. It appears to him that there is no principle, consistently with any fair reading of the statute, upon which the respondents can dispense with the Edinburgh Committee now, in regard to the permanent management of the undertaking, that would not equally have entitled them to dismiss and cashier that Committee while the actual execution of the line of the railway was temporarily in progress. Had such a thing been then proposed, the absolute repugnance of it to the plain *bona fides* of the whole projected relations of the Edinburgh and Glasgow shareholders, would, it is thought, have been too palpable to receive a moment's countenance. As it is, the statute does not seem to be framed with a view to any such double construction.

"Upon the whole matter the Lord Ordinary is satisfied that there is more than enough, in the present stage of the case, to entitle the complainers to an interdict *ut possidetis*; and judgment has accordingly been so pronounced.

"It only remains to explain that the interdict, as granted, has reference to the first or primary prayer of the note touching the carrying into effect of the resolutions complained of. The other and subordinate prayers, however, fall all, more or less, within the scope of this. But of course nothing is done, and nothing is intended, to the effect of sustaining the application as one which calls in question all exercise whatever of independent executive functions on the part of the general Board. Indeed, it does not occur to the Lord Ordinary, that, fairly read *secundum subjectam materiam*, so very broad a construction of the interdict meant to be asked can properly be put upon the words of the prayer.

"J. I."

Against this interlocutor, Mr. Leadbetter and the Glasgow Directors presented a reclaiming note, contending that the Company had full power to pass the resolutions complained of. The case was fully heard, having been debated before the Court for four days, and the following were the opinions delivered:—

The LORD JUSTICE CLERK said, if their Lordships had formed a clear opinion on the case, they ought to deliver it immediately, although they might take time to consider as to the terms of the judgment.

Lord MEDWYN said, he certainly had formed such an opinion. It was impossible to look at the Act of Parliament without seeing that some things were committed to the Committees, and some to the Directors. It was obviously in the contemplation of the parties that they were to have certain powers committed to them by the statute, that there was to be one Committee at one end, and another at the other end. Each Committee had the same powers to enter into contracts, and so forth. The entering into contracts was not even specified in the powers of the original Directors, though it might be implied in them. There might be difficulties as to the extent of powers, but it was clear that these Committees were statutory Committees, and could not be interfered with. There might be some words in the prayer of the suspension that they might require to modify, and therefore he (Lord Medwyn) would like a day to consider the terms of the judgment.

LORD JUSTICE CLERK said, they would no doing justice to the parties if they withheld their opinion for a day, after the able pleadings they had heard from both sides of the bar. Everything had been urged that counsel could possibly have urged in support of their arguments; and had there been the least doubt entertained on the question they would have given it all the attention possible. But he had no doubt on the question whatever. When they looked to the words of the Act, they found they had nothing to do but to look at the contract between the parties embodied in the Act of Parliament. It would never do to maintain that either the Directors or proprietors were entitled to do away with those Committees. The Act provided for two great Committees, and provided how they were to be constituted; and there was a special clause in it authorising them to appoint sub-Committees, who should have the same power that the Committees themselves had. They could not shut their eyes to the fact, that certain things were vested in these Committees quite apart from any delegation by the Directors at all. It only required them to look at the resolutions themselves, against which the interdict was asked, to satisfy them that the movers of it were convinced that what they aimed at could not be done consistently with the existing Act of Parliament. They could not supersede these Committees. The proprietors might apply for an Act of Parliament to declare that there should be no such thing in this great undertaking as two Committees, but that was not a matter for the Court to deal with. When they looked at clauses 166 and 167, it was perfectly plain that there were great powers conferred on these Committees, beneficial for the interest of the undertaking. It was understood that they were to carry on the business at the two ends, one from Glasgow to Linlithgow, and the other from Edinburgh to Linlithgow. They had gone on amicably hitherto, and why should it be presumed that they might not do so hereafter? If there did arise any embarrassment, they might apply to the legislature. It was the duty of the Court merely to interpret the Act as it now stood, and he (the Lord Justice Clerk) did not entertain the shadow of a doubt that this interdict was properly applied for. They might however, if they thought proper, take a day to consider the terms on which they were to grant the interdict. It appeared to him that the object of the suspenders and the justice of the case would be obtained if they were generally to interdict and prohibit them from carrying into effect the resolutions quoted.

Lord MEADOWBANK was clearly of the same opinion. It was the purpose of all concerned to obtain from the legislature powers to have the nomination of Directors, who should have a general power of superintendance, but in the ordinary acting and management of the Company that there should be two executive bodies, one residing at the east, the other at the west end of the railway. It was in order to smooth difficulties arising perhaps from the jealousy of the two parties at the two ends that this agreement was entered into. And at the same time, for carrying the same object out, Glasgow was made the seat of Government of the whole Directors when assembled. It did not appear to him that there could be any doubt that it was intended that these two Committees should be permanent bodies. That was clear when they took into consideration several of the clauses referred to; but the 169th clause put it out of all doubt, which provided that the Committees should keep books, which should be received as evidence in courts of justice. One of the resolutions complained of was, that other Committees were to be appointed. He (Lord M.) would like to know if the evidence of their books could be received in courts of justice? Certainly not. Therefore, it being clear that the Committees named by the statute were to be permanent bodies. The distinction between the powers vested, and those to be conferred, was perfectly clear, and they could have no difficulty in suspending the resolutions.

Digitized by Google

Lord MONCREIFF could have no doubt about the question. The statute was the contract of the Company, as had been well observed by the Dean of Faculty—a statutory contract that must be carried into effect according to its terms. Whether it was an expedient contract or not was not for the Court to consider. What they had to deal with was certain resolutions taken by a general meeting of proprietors, voting upon a majority. Mr. M'Neill very ably endeavoured to put the case on supposed powers existing in the Board of Directors as it stood, and so to turn the Court away from the matter upon which an interdict was asked on these resolutions passed as a bye-law. That was not what the Court had to deal with. These bye-laws were carried in order to enable the Court of Directors to act by themselves without Committees. The intention was to put an end to the present management, and to the acting through the intervention of the Edinburgh Committee altogether. The Directors did not afterwards carry out the resolutions of the proprietors to their full extent, probably because they found there waa a great deal of more doubt in the matter than had been supposed at the time they were passing the resolutions. Whether an Act of Parliament could be obtained to alter the statute, was not a matter which the Court had to deal with. The words of the 166th section admitted of no ambiguity. As to the constitution of the Committees, it provided that the Directors should choose these two Committees out of the number of Directors, and this having been done, there were special things given to them to do. Here then were two Committees, with statutory powers on important matters vested in them. Could any meeting of the Directors extinguish that part of the statute? The Directors tried to do it by passing what they called a bye law; but when they came to the clause concerning the power to make bye-laws, it was decidedly limited by the qualification, that those bye-laws should not be repugnant to any direction contained in the statute. Was it not a direction in the Act, that those Committees should be appointed, and should have certain powers? How then could it be said that these resolutions were not repugnant to the direction in the statute. It was not in the power of the whole Directors together to do away with these Committees. It would involve the right of third parties if they were to form Committees which were not in the statute. The extracts from the books of such Committees would have been no evidence in courts of justice. On every view of the matter, it was quite clear that the suspenders were entitled to an interdict from carrying into effect those resolutions.

The following is a copy of the interlocutor pronounced by their Lordships:—

"Edinburgh, 8th July, 1841.—The Lords having heard parties and advised the reclaiming note, refuse the desire thereof, and adhere to the interlocutor of the Lord Ordinary submitted to review, in so far as it passes the note of suspension and interdict; continue the interdict to the effect of prohibiting and interdicting the respondents and all others acting under their orders from carrying into effect the resolutions of the 22nd of February, 1841, quoted in the eighth article of the statement of facts, and remits to the Lord Ordinary to proceed accordingly.

(Signed) "D. BOYLE, I. P. D.

"Signed, 10th July, 1841."

For the Edinburgh Directors—The Dean of Faculty, and George Moir, Esq., advocate. Messrs. Dalmahoy and Wood, W.S. agents.

For the Glasgow Board—Duncan M'Neill and Adam Anderson, Esqs. advocates. Messrs. Gibson and Hector, W.S. agents.—*Caledonian Mercury.*

JONES *v.* THE LLANELLY RAILWAY COMPANY.

Glamorganshire Assizes, Nisi Prius.—This action was brought to recover compensation for land taken by the defendants under an Act of Parliament. It had been brought into a court of law on a former occasion, but it was then agreed to be referred to a gentleman. He decided that the sum of 700*l.* should be paid for the land, and that, as the railway passed through the middle of the plaintiff's farm separating it into two unequal parts, four tunnels should be made at the expense of the Railway Company, to connect one part of the farm with the other, and that those tunnels should be completed within three months of the formation of the railway. In pursuance of the award, the sum of 700*l.* had been paid, and three tunnels made; but the fourth tunnel was not formed, the defendants pleading that the nature of the ground altogether precluded it. The award further stated, that if the tunnels were not formed within the period of three months after the completion of the railway, a penalty of 200*l.* should be paid by the Railway Company to the plaintiff. On the plaintiff's part it was contended that the three tunnels were not formed within the time specified—three months after the completion of the railway—and that it was impossible that the ground would allow a fourth tunnel to be formed. The defendants argued that the railway was not finished until the rails and blocks were laid down. The plaintiff contended that the railway was finished as soon as the embankment was prepared.

After a lengthened and tedious examination, the jury returned their verdict—That the three tunnels were built within the specified time, and in consideration of the fourth tunnel not having been built, the jury awarded 50*l.* damages. Upon the suggestion of Mr. V. Williams, the form of the verdict was altered to debt 50*l.*, damages one shilling. Leave was given to move that the damages be increased to 200*l.*

Counsel for plaintiff, Mr. Chilton and Mr. James; attorney, Mr. Jones. Counsel for defendant, Mr. Evans and Mr. V. Williams; attorneys, Messrs. Jones and Jefferies, of Carmarthen.

EDINBURGH AND GLASGOW RAILWAY.

On Saturday last a jury was impanelled at Falkirk, by the Sheriff of Stirlingshire, to assess the compensation due to Mr. Andrew Binnie, farmer, on the estate of Callender, near Falkirk. The claim consisted partly of an annual sum for rent, profit, and intersectional damages during the lease, and partly of a capital sum for unexhausted manure, &c. After a long and patient investigation, in which a great deal of evidence was adduced by both parties, and after hearing the agents on the import of the evidence, the Jury returned a verdict for a less sum than had been tendered to the claimant by the Railway Company. The agent of the Company then moved that the claimant be found liable in a moiety of the expenses incurred by his clients in terms of the act, which motion the Sheriff granted. This is the only instance in which the Railway Company have been compelled to go to a Jury with a tenant. Agents for the claimant, Thomas Lisbon, writer, Falkirk. Agents for the Railway Company, A. & D. J. Bannatyne, writers, Glasgow; and George Hume, writer, Falkirk.—*Glasgow Herald.*

BRANCH RAILWAY FROM WORCESTER.

(From the *Worcestershire Chronicle.*)

SIR,—Having often witnessed the interest felt by your fellow citizens on the subject of railway conveyance, and especially the unequivocal expressions of the public mind this week, of a desire for a connecting branch between this city and the Birmingham and Gloucester line, I hope you will excuse me for troubling you with a few words on this most important local improvement, as they may possibly lead to this much desired object.

Among the innumerable local matters I have thoroughly investigated, for the purpose of giving to the world correct information on them, in my history of this County now in the press, this branch railway is one. I enclose you a copy of what I say on the subject, which I give you full liberty to use in the way you think best for the public good; and to show you how far the facts stated can be relied on, I will add, that the article has been read and approved of as correct, by a citizen of Worcester, whose private worth, public spirit, and intimate connexion with this railway, combine to make him the most proper authority to be consulted here. You will thus perceive that the result of my inquiries, from all the authorities connected with this business, leads to the opinion that a branch railway may any time be obtained between this city and the Birmingham and Gloucester line, if a sufficiently influential meeting of the citizens call upon the Company to construct such a line, and cancel the engagement about the south branch to Abott's Wood. Hoping this will soon be done, and that the welfare and prosperity of this ancient city will be thereby greatly promoted, its resources rapidly developed, and its wealth much increased.

I am yours and the public's humble servant,

JOSEPH BENTLEY.

"The Birmingham and Gloucester is the principal, though not the first constructed line in the country; it appears to have been first brought before a public meeting in 1835; the Act was applied for and obtained in the spring of 1836; though operations were not actively commenced in making the line till November, 1837. On the 24th of June, 1840, that part of the line between Bromsgrove and Cheltenham was opened; a further opening to Coston Hacket took place in September; to Gloucester in November; the line was opened through to Camphill, Birmingham, December 17th, 1840; and in August, 1841, it is intended to effect the junction with the London and Birmingham line. The length of the whole railway is 52 miles, the estimated cost was 950,000*l.*; but, including engines, carriages, stations, &c., the expense already incurred is 1,250,000*l.*, and a considerable sum will still by wanted to complete the whole works. The great misfortune under which this railway labours, especially in this county, is its distance from all the principal towns. No one can avail themselves of of, without a long rumbling and jolting in a coach or omnibus, and from several of the smaller towns there is little certainty of any conveyance. The vast increase in the number of travellers, where lines have been opened that give full accommodation to the public has arisen not so much from an increased amount of business, as from the ease and certainty with which journeys could be made, being such as to draw out people on pleasure as well as business, and thus add to the number of passengers. Any one having eight hours to spare, and being half inclined to pay a visit to somebody they wish to see, whose distance is a three hours ride, would be at once induced to say, "I'll go," if any one could shorten the journey an hour; because in the latter case, four hours out of the eight could be devoted to friendship, while only two could have been thus enjoyed before. On the passing of the Act for making this railway, a bond of 70,000*l.* was given by the Company to make a branch from the city of Worcester; but, as the line the parties who hold the bond want making is different from that the Company wish to make, nothing has yet been done. The Company wish to make a branch from Worcester direct to the main line by the nearest and best route, while the other parties wish the connecting branch to be in a S. E. direction, and join the main line at Abbott's Wood, nearly five miles S. E. of the city, which would thus make the distance from Worcester to Birmingham, London, and the greater part of Great Britain seven or eight miles more than at present."

[The citizens of Worcester require the Birmingham and Gloucester Railway Company to fulfil the conditions of the bond into which they entered as the price of obtaining their second Act. They desire nothing more, and will be satisfied with nothing less. By that bond the Company covenanted either to construct their then projected line from Abbott's Wood direct to Worcester, thereby enabling Worcester to become a station instead of a mere branch, or to forfeit 70,000*l.*, and allow the citizens to make the line themselves.—ED. *Worces. Chron.*]

BIRMINGHAM AND GLOUCESTER RAILWAY—WORCESTER CHAMBER OF COMMERCE.

At the annual meeting of this board held on Wednesday last, the Report of the Directors stated with regard to the branch railway from Spetchley to this city, a committee had been appointed to observe the movements of the Birmingham and Gloucester Railway Company, and to oppose any attempt at extension of their powers until the engagement entered into of making such branch should have been performed. The report states also that respecting the London and Dublin Railway, that Government had not yet decided on the line to be adopted; but that the Chamber would embrace every opportunity of recommending that by Worcester, &c., to Port Dynllaen, in which they would experience the able advocacy of the Great Western Railway Company.

Mr. Tymms adverting to the subject of the Branch Railway from Spetchley, said that he did so as a person desirous of promoting the welfare of the city, and not as being deputed by the Birmingham and Gloucester Railway Company, of which he happened to be a Director. He had conversed with Captain Moorsom, the Chairman of the Birmingham and Gloucester Company, as to the relations subsisting between that Company and this city, and the mode of putting those relations on a better footing. The gallant Captain had expressed his willingness and anxiety to promote such an adjustment, and to agree to some plan which should be alike advantageous to both interests. It was well known that the proposal of the Company in 1839 to conduct a branch to this city, having its terminus in Sansome Fields, was rejected by this Chamber on the ground that a grand connection line might be formed, which appeared of far more benefit than the branch; it therefore now appeared desirable to consider how far it was likely that the grand connection line would be formed, and whether this city had not better look to the other alternative. It was well known that nine-tenths of the railways were now at a discount, and therefore it was less probable that persons would be found to embark their property in them, and new projects would no doubt in future be looked at with greater care before they were adopted. The projected line to Wolverhampton (the cost of which was estimated at 1,000,000*l.*,) of which the Abbott's Wood branch was to form a link, would if viewed with favour by capitalists, no doubt have been made, even if that link had not been provided; but there was now small probability that that line would ever be formed, and if such were the case, would it not be better to adopt some other mode by which the present inconvenience to the public should be removed? Mr. Tymms concluded by observing that he was not empowered to make any specific proposal, but he threw out as a suggestion whether a branch, having its terminus somewhere behind the County Courts, and with the line struck at a convenient distance, would not be found desirable; also that a spirit of conciliation and treaty between the Worcester Chamber of Commerce and the Railway Company would be productive of advantage to the interests of both.

Some conversation ensued, in which the faithlessness of the Railway Company, in flinching from its bond, was the principal topic.

Mr. Lea observed that the friends of that Company had often unjustifiably defended its breach of contract by alleging that the fault lay with the citizens of Worcester, whereas it was no such thing, for they had at the outset of the project exerted their best endeavours to get Worcester included in the line, but without avail, for they were put off with sundry excuses, among which might be enumerated the truly philosophical objection that a tunnel would thereby be indispensable, and that in passing through this tunnel *the carbonic acid gas would be annoying and pernicious to travellers!* (Laughter.) That was the kind of argument with which the claims of this city had been put off.

A further conversation took place, in which Mr. Chalk having proposed to set aside past differences, and meet the Company in some mutual plan, several members were of opinion that the initiatory step should be taken by the Birmingham and Gloucester Company, inasmuch as the party first in error should be the first to conciliate. At length the following resolution was adopted.

That the Chamber will be willing to receive any overture from the Board of Directors of the Birmingham and Gloucester Railway having for its object the fulfilment by the Company of the engagement which it entered into for connecting this city with its line, and that the secretary be requested to send a copy of such resolution to Mr. Tymbs, with the request that he will lay the same before the Board of Directors.

RAILWAY ACCOUNTS—RAILWAY CLUB.

To the Editor of the Railway Times.

Sir,—If ever the exhausting labour of reiteration was necessary to convince an association of persons engaged in a commercial pursuit, of the disasters—often of ruin—attendant on sluggish indifference to the conduct of the managers of their concerns, and to the mode of selection of such managers, it is surely so in the case in which you feel yourself condemned to undergo it, that of railway shareholders. Save a flying note or so upon detached points where the shoe pinches—laying stress upon minutiæ, never thinking of the principle—loudly complaining of individual wrong, caring nothing for the general welfare—demanding remedies for a scratch, but viewing with indifference deep-seated disease—what evidence is there that proprietors at this late moment, are at all sensible of that which for years we have striven to prove to them, that an entirely different mode of appointment of Auditors and Directors is, of all others, the paramount consideration?

However, the longest lane has a turning or an end, and if nothing else brings home to their conviction the necessity of stopping self, life, clique, house, election of Boards, the time will come when daily discovered delinquency, and its natural consequence, shareholders' empty pockets, (yet in these close borough bodies how hard it is to get at the knowledge of it), will effect what we in vain, perhaps, hope to accomplish by exhortation; and they will at last—alas! too late for many—insist on having unpaid Auditors taken, for a year and no longer from the Share-lists, in alphabetical rotation, and eight Directors for each Company, at 1,200*l.* a year, named from the Share-lists for alphabetical standing, for residence near the lines, and for largest holding, ineligible for re-election in less than three years, and no vacancy from casualty to be filled up but by shareholders in general meeting assembled. While upon this topic I may be excused for digressing for a moment from my subject, to observe that the pleasantries some of your correspondents have indulged in, as they conceive at my expense, for advocating a reduction of Directors to the number *eight*, equally apply against the opinions of a people not deficient in shrewdness, for I see that the number *nine* is that fixed upon as the most eligible by the framers of a proposed national bank, at the suggestion of Mr. Clay, in the United States. If, therefore, there is anything ridiculous in my proposition, I have at least the consolation of knowing that it is shared with me by a people—if not by their Government—whose experience upon such subjects entitles their judgment to weight.

To pursue your process of reiteration, is it reasonable to suppose that Auditors appointed by Boards, or Directors appointing themselves Auditors, are anything but a joke upon proprietors? Take the Auditors of the Greenwich for instance—persons employed and paid by their patrons, during good behaviour, like any other servants—is any man insane enough to fancy that they oppose any check to Directorial extravagance or other misconduct—that they are anything but clerks ticking off the correctness of the common arithmetic of the expenditure? They serve to hood "the contented creatures," and that is all. What would be the effect of the performance of the duty of their office in its vigorous and efficient interpretation, of their taking exception to exceptionable outlay, of their remonstrating against improvident or corrupt disbursement, of their refusing to certify all and every the figures placed in Board accounts, of reporting neglect and breach of faith to general meetings? The answer is on the surface, "*we have no further occasion for your services*," and the hired accountant would be displaced for one of easier conscience and more flexible frame of mind. I make no reflection on those Auditors; they do all they engage to do, add up and subtract, but they are not wanted for that, which is the business of the clerks of the establishments, and is usually correctly done by them. We require Auditors independent of Boards, and until we have them we have nothing approaching their character but their name. The Auditors now appointed are an insult to the little understanding we may possess, a tax upon our credulity, a levy upon our green youth, a veritable humbug, and well may Directors be forgiven, if they loudly laugh at the success of such a hoax.

A main cause of shareholders failing to protect their property arises from their having no concert—no combination—no opportunity of union—no place for the interchange of opinion. Strangers to each other, they meet for half an hour, half-yearly, at public meetings; and though willing to co-operate, do nothing from fear of committing themselves by conversing with unknown parties; much, if not the whole, of this difficulty, would be got over, by the establishment of a railway club. I am quite sure that its formation would tend to shareholders having a better understanding of their concerns than any measure that could be deviseal. Let some active shareholders, then, set about this salutary undertaking, and organise a club upon a footing (and what is to prevent it, when probably ten millions of railway capital are represented in and near town?)—as respectable in character, in appointments, in wealth, as most of the clubs in London. Well brought out, it is sure to succeed, and its prosperity would be a guarantee for our receiving the best dividends it is possible to realise upon our capital of seventy millions!

A RAILWAY SHAREHOLDER.

THE OMNIBUS CHARGE TO THE BRIGHTON RAILWAY.

To the Editor of the Railway Times.

Sir,—In addition to the fare of fifteen shillings by railway and coach to Brighton, sixpence per passenger is demanded at the booking-office, Golden Cross, for conveyance to the station, and this payment is insisted upon before places can be taken, without reference to whether the passenger wish to make use of the carriage or not!!

The clerk at the above office refused to book two places for me this morning in consequence of my non-compliance with this demand.

As I am sure the Directors are not aware of this most unjust and absurd regulation, will you do me the favour to publish this, the first communication of

Your constant reader,

A BRIGHTON SHAREHOLDER.

London, July 19, 1841.

The Post Office and the Railways.—The expence of sending mail-bags by railway (says the *Leicester Chronicle*) forms so serious an item in the post office expenditure, as to cause the authorities to defer carrying out the plan generally, until some arrangement can be entered into for conveying them at a less cost. The Manchester and Leeds Railway Company has, indeed, already set an example in this respect; since, we are informed, it merely charges in this respect; since, we are informed, it merely charges the letter-bags according to weight, and a second-class fare for the guard who has them in his possession.

2. Toll to London and Birmingham 141*l.* 3s. 2d., to be deducted from gross receipts.

3. The receipts are exclusive of those for the mails; on Sunday mails only are carried.

7. Receipts include the Northern and Eastern toll, &c.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 71¼ (83+31.)

12. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169¼ (118¼+18+33.)—See on this head, however, the observations of our correspondent "F."

14. The 25*l.* 5s. 9d. from goods, &c. is for toll only.

15. Ten per cent. is the maximum dividend allowed by the Company's Act.

16. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station.

20. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed.

21. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.

23. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

24. The 4,626*l.* 14s. 6d. are the receipts after deducting the toll to the North Midland Company, and exclusive of receipts from carriage of mails.

25. The receipts for goods, &c. include, carriages, 34*l.* 8s. 0d.; horses, 20*l.* 19s. 0d.; dogs, 1*l.* 11s. 0d.; parcels, 199*l.* 10s. 2d.; cattle, 8*l.* 8s. 6d.; corn, 8*l.* 11s. 2d.; heavy goods, 504*l.* 12s. 0d.; coal, 76*l.* 10s. 9d.—Total, 854*l.* 10s. 7d.

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

The correspondent who in our last requested particulars of the Liverpool locomotive engine on the Hull and Selby Railway, is referred to our paper of December 5, 1840, for that, as well as for a history of the other engines of the same line. We have received, to be forwarded to him, a request that he will favour our readers with the results of his observations on the engines under his care.

The Greenwich and Croydon Railways.—*The letter of Mr. Deputy Corner, of "A Constant Friend to the Railway Times," did not reach us till after the ground had been previously occupied by several other able correspondents.*

The Directors of the Bristol and Exeter Railway are recommended to make inquiry into the conduct of the five or six of their guards who travelled on Sunday, July 10, by the 7 o'clock evening train from Weston-super-Mare to Bristol—apparently on a pleasure trip, and by favour of that special source of abuse—the free ticket system.

G.—*We thought enough had been said by ourselves and others on the subject; that was our only reason. We shall be always glad to hear from him.*

Mr. Herbert's *suggestion is very good, but not easy to be carried out with entire impartiality.*

*** It is requested that in future all communications intended for the *Railway Times* be addressed, "To the *Editor*," and not to any individual by name, now or recently connected with the establishment.

THE RAILWAY TIMES.

SATURDAY, JULY 24, 1841.

As far as we are yet informed, no denial or justification of the conduct of Mr. Alderman HUMPHERY, M.P., in relation to the sale of Blackwall shares has been attempted. If we are to assume that the case does not admit of denial or justification, the punishment administered by the proprietary of that undertaking was as appropriate as it was prompt. It is not to aggravate either the offence or the punishment, that we proceed to suggest what we think would be an effectual preventive of future misconduct of the same kind.

The existing railway Boards may not generally consist of men capable of committing a breach of trust like that charged upon the ex-Director of the Blackwall Company. Indeed, we feel thoroughly convinced that of the five or six hundred persons who have undertaken the most important and confidential trust implied in the office of Railway Director, and of the equal number who as officers of railways bear an equal responsibility, and have equal opportunities of abusing it, there is but a very small proportion, on whose personal integrity, the proprietary may not rely with the most perfect and well-grounded confidence. And well it is, that this state of things prevails: else, what would be the condition and the prospects of the tens of thousands who have in these great works their chief property, nay, perhaps their sole estate?

Nevertheless, Railway Boards and Railway Officers are not all purity. Mr. Alderman HUMPHERY is neither the first offender (assuming from his silence that he is so), nor the first who has been found out. Instances not a few have occurred—some of them of great notoriety—and they may occur again, in which the standing and qualities, thought by shareholders sufficient to justify their confidence, have not proved sufficient to preserve their trusted representatives, from injuring the interests committed to them, for the sake of benefiting their own. Whether this has happened through failure to see the precise bearing of the act done, or through desire of gain so insatiable as to be restrained neither by conscience nor by prudence, matters little. It has in some way or other happened more than either once or twice, that when a real holder of shares in a railway has desired to sell, he has been met to his grievous prejudice by a *fictitious* competition (*i. e.* a competition founded on sales of shares not in the possession of the party selling at the time of the sale, and only to be delivered at some future day), created by the speculations for a *fall* of some one or more of those very Directors, who were placed in office for the express purpose of upholding the credit of the stock in question by every legitimate means in their power, and under every possible change of circumstances. Some how or other, it has also happened occasionally, that when a great and sudden decline has taken place in the price of a Company's stock, in consequence of a rush of sellers into the market, it has turned out that a Director or two has been first and foremost in the race. Worse than the Cornish parson who only asked for a fair start for the wreck, the delinquents seem to have thought, that there was no sin in the act, provided only they had their hand first in.

Nothing can be imagined more strongly calculated to spread distrust and dismay among railway proprietaries than conduct like this. The access that a treacherous official or selfish Director has to the sources of information, by which he may time his measures with surest profit to himself, and therefore, with most fatal loss to those who confide in him—the extent to which this competition between real and sham holders of railway stock may be carried—the certain conclusion that when once a man has so far broken through the most binding engagements as to enter on such a course, there is nothing to which hope of profit may not tempt, or the necessity of sustaining his enterprise may not force him—these and many similar considerations, together with the fear, half thought out, and half suppressed, that "perhaps, the board of *my* railway contains such a man, though I know not whom to suspect," may for a time and often, diffuse fear, discontent, and positive disaster.

Few, a very few men of this dishonest stamp, are sufficient to unsettle the confidence, and destroy the peace and prospects of the owners of the sixty millions of money invested in railways. We venture to affirm, that less than one such man in each railway now at work, would suffice to throw the whole railway interest into confusion; and unhappily not even the testimony afforded by repeated popular choice to conspicuous offices, seems now to be a sufficient guarantee that such a man may not exist in each.

It is not unimportant to observe that on any subject whatever, an exceedingly small amount of actual injury, comparatively considered, is sufficient to induce alarm, and its consequences. Take for instance the hackney carriages of London: they carry, probably, 15,000 persons per day, over a distance of 40 or 50 thousand miles; if one person were killed in each month by the use of them, there can be no doubt that they would be considered most dangerous vehicles, and would scarcely escape suppression; and yet, in that extreme case, it would be nearly 450,000 to one against any individual passenger sustaining injury in his ride, and more than a million to one against his receiving it on any particular mile. Look further at the railways themselves; when the late concurrence of many accidents had depressed the probability of safety to its lowest point, it was probably much higher than in the case supposed above, and yet this remote contingency very sensibly affected the use of the railways by the public. Many persons, it may be remarked, at that time preferred the stage coaches, although the risk by them at the best was greater than that by the railway at the worst; but then that risk in the case of the coaches was old and partially forgotten, while in the case of the railways it was not only new, but vividly and at once set before the public. There are many thousands of clerks employed in the city of London; if it were publicly known that six of these had absconded with property in one week, every employer without exception would feel his confidence shaken, although the chance that his own would, in like manner, prove unfaithful, would be but as one to thousands. The murders in England may amount to 12 or 15 per annum: if they were to rise to 50 or 100, there can be no doubt that universal consternation would be the consequence; and yet the chance of safety for twelve months would be much more than a hundred thousand to one.

Similar instances might be adduced to an indefinite extent. They all tend to show that it is not the remoteness of the chance, but the consequences which would ensue, if the event, however improbable, should take place, which in such cases, unsettle the minds of persons in general. Each without calculating thinks—"what! if it should happen to me?" And the effects of alarm, however unfounded, daily instances point out with terrible distinctness.

We give these illustrations, because we wish to justify our proposal of a measure which, though made only for the sake of an unworthy few, might otherwise be taken for a censure on all the rest. We are desirous of not being misunderstood on this point. There are Directors and officers also who, by the extraordinary efforts they have made, and the extensive personal liabilities they have incurred in promoting the interests of their respective lines, have acquired a right to the entire and grateful confidence of their constituents; there are others, who though not entitled to equal honour are equally proof against the peculiar temptations of their trust; and there may yet be others, whose grasping ambition of Directorship, and intense longing for patronage and jobbing, can let no line rest where a chance of intrusion can be conjured up, upon whom we should nevertheless be sorry to charge the flagitious necessity for the check we are about to propose; but with all these it can hardly be doubted, there are mixed up persons dangerous, because they are unsuspected, and successful, because they are few—to whose love of gain no restraint is superfluous, and to whose feeble honesty no safeguard is unnecessary.

Nor is this any new danger peculiar to

Digitized by Google

Railway Companies. To cite a familiar example—experience has shown, in the Bank of England, the necessity of some device for at least obviating the suspicion to which the possibility of foul play always gives existence. Each Director, during his term of office, holds neither more nor less than two thousand pounds of stock. The possibility of using his official knowledge to his private advantage as against the other shareholders, is held, it would seem, to outweigh even the additional zeal he might derive from increasing his stake.

For many reasons, which we need not stop to detail, such a provision would be inapplicable to Railway Managements; but that by which we propose to arrive at the same result is, *to require at each half-yearly meeting, a copy in detail of the share accounts of the several Directors and officers.* We think that though this exposition might for a time be evaded or mystified by desperate ingenuity, yet the cases would be very few in which it would not destroy in the bud the temptation to fraud. The knowledge that every transaction must be exposed to public view, while it would be hailed with pleasure by conscious integrity, would deter nine-tenths of those whose weaker virtue might under other circumstances fail. Nothing, obviously, could strengthen more effectually the confidence of railway proprietaries, than to see the possibility of this insidious species of fraud being thus compressed within such narrow limits.

Specially devoted though we are to railway interests, we do not restrain ourselves from a more general view of this subject. It cannot be doubted that there is a strong tendency in the circumstances of the times to produce and extend joint-stock enterprises. The extent of the information gained as to the condition of all classes of society—the access which a long peace has given to all parts of the world—the possibility of supplying all known wants by substituting great aggregate arrangements for the detailed efforts of former generations—the certainty now attained that the ready supply of one desire produces immediately in civilized society the craving existence of some other—the accumulation of capital in the hands of multitudes who are incapable of directing its use—these and like facts lead to the belief that this corporate kind of effort will rather increase than diminish. But then the system rests on the assumption, that integrity and skill united in the same persons can be found to an extent sufficient for working it out; failing this, there is an end of it. We are not advocating the intrusion of such undertakings into affairs within the grasp of individual means; we are not asserting, for we do not believe, that a Company, however well managed, can compete successfully on its own ground with the energy, the alertness, and the close consciousness of interest in the result, which distinguishes the efforts of a man for himself; nor do we mitigate or blink the harshness, the cold and legally exact injustice, the Board-covered spite, and the shuffling intrigue with which the proceedings of Companies are too often deformed, and to which their constitution gives unhappy opportunity. But we do say, that few greater misfortunes could happen to the interests of society, than a general conviction, that it is impossible to conduct satisfactorily this associate form of commercial enterprise; and we say further, that few greater public services could be performed than the devising of means, for maintaining and improving the self-sustaining confidence and energy required by these associations—the only associations capable of undertaking the many gigantic improvements which the world still wants.

Just in proportion to our confidence in this belief is our regret at the misconduct which occasioned these remarks. The actual injury to the Blackwall shareholders (no thanks to their ex-Director) is not sufficiently extensive, we hope, to require us to consider it the chief feature of the case; and probably the self-condemnation of the delinquent himself, has inflicted whatever of punishment remained due to him, after the severe vote of the meeting.

In connection with this subject we may venture to give utterance to a thought or two often forced on us by observation of the ways of the world. The devising of schemes of knavery and injustice—the intellectual effort necessary for comprehending and arranging their complications—the precautions required for avoiding detection or keeping up appearances—the anxious anticipation of consequences, alternating violently between exultation and dread—appear to us to consume in the aggregate of society, a much greater amount of mental effort, than the sum total of that which is employed in planning and executing all the great and splendid improvements of the age. We apprehend, too, that it not unfrequently occurs that more mind is wasted by an individual in sustaining such meretricious schemes than would have sufficed if rightly applied, to place him in the first ranks of intellectual eminence.

Since the preceding observations were written our attention has been drawn to the following correspondence which has appeared in the *Morning Chronicle*, and from which it seems that Mr. HUMPHERY is at present in Ireland, but pledges himself when he returns to prove the accusation against him to be "a great falsehood." We agree, however, with Mr. RENNIE, whose spirited conduct in relation to the affair deserves great praise, that it is difficult to "conceive any engagement of sufficient importance to justify Mr. HUMPHERY in leaving London until he had refuted and cleared himself from the imputation under which he now stands if he has power to do so."

To the Editor of the Morning Chronicle.

"SIR,—The malicious and cowardly attack which has been made upon Mr. Alderman Humphery, in the shape of a resolution of a meeting of the Blackwall Railway Company, on Friday last, in which that gentleman is charged with trafficking in shares, to the detriment of the property of the Company, of which he was a Director, for his own individual profit, has induced me to entreat that the public will not condemn Mr. Humphery in his absence upon an *ex parte* statement, and without affording him an opportunity of replying to it.

"Mr. Humphery left London on Friday for Dublin, and will not return until the early part of next week, when he will, I have no doubt, be able to give a decided refutation to this malevolent attack. In the meantime I beg to hand you an extract of a letter from Mr. Humphery to his clerk, Mr. Hare, in which he says, 'I shall answer the paragraph in the *Times* when I return, and prove it a great falsehood.'

"I remain, Sir, your obedient servant,
"GEORGE R. CORNER.
"20, Dean-street, Southwark, July 21, 1841."

"SIR,—The charge made against Mr. Alderman Humphery the other day, by Mr. Rennie, M.P., at a special meeting of the Blackwall Railway proprietors, accusing him of acts inimical to the interests of the said Company, were made without his knowledge of the intention, and during his absence in Ireland; the meeting was held to consider and determine on the raising of additional capital, and not to inquire into the acts of the worthy Alderman. I beg leave to state, that before a vote of censure was proposed and carried, it would have been more worthy a meeting of gentlemen to have allowed Alderman Humphery an opportunity of justifying himself, and not to condemn him prematurely and unheard.

"I am, Sir, your obedient servant,
"FAIR PLAY.
"London, July 20."

"SIR,—In your paper of this morning's date is a letter signed by Mr. George R. Corner, of 20, Dean-street, Southwark, in which he alludes to the resolution passed at the meeting of the Blackwall Railway Company, regarding Mr. Alderman Humphery, M.P., and designates it as 'the malicious and cowardly attack which has been made on that person.' Mr. Corner further informs the public, that Mr. Humphery left London for Dublin the same evening on which his conduct was discussed at the above meeting, and concludes his letter by an extract from one written by Mr. Humphery to his clerk, in which he states 'When I return I shall answer the paragraph in the *Times*, and prove it a great falsehood.'

"I moved the resolution in question, and I did so from information given to the meeting by the Chairman of the Directors, who distinctly affirmed before the assembled body of proprietors, that Mr. Humphery's resignation as a Director in the Blackwall Railway Company, took place in consequence of his being discovered to have sold a large amount of *shares which he did not possess*, and which had depreciated the property of the shareholders.

"If Mr. Humphery can prove the paragraph in the *Times* to be a great 'falsehood,' and that the information given to the meeting by the Chairman was a misrepresentation, there is no satisfaction or apology which can be required from a gentleman which I shall not most willingly make to him for the step which I considered it my duty to take under the circumstances, and the communication from the Chairman to the shareholders.

"But, Sir, I shall take no further notice of any letters which may come from individuals who undertake to comment or offer opinions on a charge of so grave and serious a nature; and I must be permitted to say that I cannot conceive any engagement of sufficient importance to justify Mr. Humphery in leaving London until he had refuted and cleared himself from the imputation under which he now stands, if it be in his power to do so.

"GEORGE RENNIE, Jun."
"1, Chesham-place, July 22, 1841."

THE excitement being now over which necessarily attended the outlay of the enormous amount of railway capital, and the main peculiarities of railway travelling having now taken familiar places in the thoughts of men, it is quite in course that discussion should arise on points of detail. Our correspondence shows that among these points attention is strongly fixed on the kind of accommodation provided for those persons who cannot afford to pay first class fares, and who constitute in fact the bulk of society. In addition to former communications on this subject, we have to call the attention of our readers to a letter in our present number, defending, with commendable moderation of manner, the existing arrangements.

There is much truth in the assumption on which the letter of "G." is founded, "that some distinction in point of comfort, &c., ought to be made between those who pay much and those who pay comparatively little;" but it remains to be shown that the distinction is made in the manner and to the extent the circumstances of the case require and justify. The parallel drawn by "G." does not quite

Digitized by Google

hold. Exposure to the weather at 10 miles an hour and at 30, are very different things, both as to comfort at the moment and the subsequent effect upon the health. It may therefore be quite true that, as in the days of stage-coach travelling, there ought to be distinctions of comfort according to the fares paid, and yet it may not follow that the distinctions should be such as can be expressed in the same words. We say "expressed in the same words," for in the two cases the same words do not mean practically the same thing. Besides, it is not enough, either for the interests of railways or the rights of the public, to prove matters merely by comparison with what existed in the time of stage-coach travelling. We are to look solely at things as they are.

The purpose for which different classes of fares are instituted is this,—that from a part of the passengers the owners of the railway may receive a greater extra sum than is necessary to provide the extra accommodation for them. The inducements to pay that higher fare are manifold; the absence of unpleasant or dangerous exposure to the elements is only one of them; the greater positive comfort of a lined carriage is another; the gratification of the taste in being associated with objects of a class with those to which the passenger is accustomed in his domestic life is another; the wish to avoid the risk of mixing even temporarily with any other than persons of some apparent standing in society, is yet another; and if out of these, and similar considerations, force of motive enough can be mustered to bring to the railway treasury the extra profit of the first class carriages, it is a useless as well as an unfeeling device to make travelling by second class carriages, a thing of such discomfort and hardship that no one will encounter it who can possibly do better. In no country in the world do the inducements we have hinted at operate so strongly as in England.; the *class* feeling, aristocratic in its very nature, here pervades all ranks, from the highest to the lowest; and the prices paid for physical enjoyment of all kinds, and by large sections of the population, show clearly the high relative estimation in which it is held. We gravely opine therefore, that as long as there are higher and lower classes in this country, and every body is for climbing the ladder of life as high as he can, the putting of plain or glazed slides to second class carriages, where common folks herd together, would not entirely ruin railways.

A great fallacy, however, lies at the bottom of the argument, which should not be overlooked. It is assumed that a certain number of passengers will travel, and that it depends on the arrangements made by the Company how many of these shall choose the better and how many the cheaper carriages. Now, the first part of this assumption, that of an unalterable number of passengers is unfounded: it may, nay, it certainly would, happen that if second-class carriages afforded better defence against the weather, a greater number of persons out of those who can only afford second class fares, would travel; and particularly so in winter. It is not merely the valetudinarian of small means who is now deterred; but with many other persons the incipient cogitation, which would end in deciding to go, is nipped in the bud by the anticipation of a shivering ride. The very contrivance therefore by which it is intended to induce passengers to take the more profitable seats, in all likelihood diminishes the number of passengers; and it is very probable that the small gain on the small number who pay more than they would otherwise expend for the use of an enclosed carriage, is more than counterbalanced by the loss occasioned by the diminution of second class passengers. As far as we can judge from the imperfect accounts hitherto published, this view is borne out by the declension of travel in the winter months being greater, and in some cases *much* greater, in the second class than in the first.

If, however, we argue thus calmly, and as about a matter of mere profit, the case of first and second class carriages, we confess we cannot do so as to those of the third class. We believe, indeed, that railway Boards generally miss their way very widely on this subject—that a large source of profit is left almost untouched in not providing cheap and speedy means of transit for the working classes—and that among the many benefits to the proprietaries we anticipate from fuller published accounts and more careful and general investigation of the principles of railway management, there are few greater than that of the profit to be derived from a systematic and general provision for the cheap conveyance of the millions.

Connected with this subject however there are thoughts of a different kind which we cannot repress, and dangers, serious social dangers, which a wrong course in this case may tend greatly to aggravate. We do not allude here to the necessity under which the legislature may some day be laid of inquiring how it is that all old modes of travel being abolished, none remains by which the labourer may seek the market which needs his energies, or may re-visit the home of his fathers. We stay not now to ask how it is to be proved that the public good is promoted by enterprises which after destroying all competitors, shut out more than one-half of the public from the use of the supplanting structures. Nor do we seek now to explain the grounds, or define the extent of the right by which these things are done. We take now a different view.

It is a calamity great enough when there is diffused through labouring classes of the community a general and steady distrust of the Government; but this is light evil in comparison with that which supervenes when that distrust is directed to the classes above them. A Government can after all touch but few interests, and perhaps fewer feelings, and there is always a hope that time and chance may work the wished-for changes, and leave the general fabric of society unscathed; but when it is believed that whoever possesses *property* is inimical to the enjoyment, or begrudges the convenience, of those below them, the main structure of social life is in danger, and in the day of trouble it will be no defence to say that for profit it was done.

Let us imagine a demagogue desirous of inflaming the resentments of a multitude, perhaps a hunger-driven multitude, against the classes in their own neighbourhood who are better off than themselves. By what argument more specious could he do so than by pointing to the train filled with persons in comfort, and saying—"You see there twenty times a day, a proof that those above you despise and would degrade you: they govern that road: they will not admit you to the common use of it, though you or your fellows made it. No! only wealth goes there. Do you want to see your dying mothers?—Walk! Are you worn out with seeking labour?—Walk. Do you need to save your scanty hours that your toil may, at least, feed your children?—Walk. You made the roads; that was all very well; but on no terms are they for you to ride on. It is for you to labour without alleviation, and toil without hope. Tell us not of the faults or wickedness of the Government: bad it may be, but the cause of all lies nearer to us; it lies—and the railway proves it—in the pride and hatred wealth always engenders; it is not in the distant Government which we cannot reach; it is in those among, above, and exposed to you."

We know, indeed, the hollowness of the arguments here used, but we do not the less dread their effect. It is not by logic the world is governed, but by the constantly repeated instance and impression; and nothing to our apprehension can, with so dreadful effect, furnish such impression, as the coarse and visible exclusion of the masses from participation in public improvements. We look indeed with delight on the many instances which have occurred of late years, in which the enjoyments of the operative classes have been visibly and sensibly improved, and in which they have fully participated in the benefits procured by invention and capital; and we look upon the multiplication of such instances as amongst the surest as well as the most graceful bonds of social life. But we confess we contemplate with some alarm the irritation of innumerable minds, which may result from such a system as we have pictured—a system which would revive, in nearly all its primitive rigour, that state of slavery, when a person in the condition of a working man, could not move beyond the spot of his birth, without the leave of some petty despot or other, whom the law for the time being has constituted his lord and master.

The third class carriages of the English railways, even where they do exist, are of a character to make a deep and degrading impression on those who are compelled to use them. Mr. RATHBONE says very truly in his evidence before the Committee of the House of Commons, "They are taken as the pigs are;" exactly in the same kind of carriage. The cunning of the plan lies in compelling all who can to pay second class fares. But winking cunning commonly sees only one side of a question. And here, as in the other case, it does not see how many its disgusting scheme prevents from travelling at all.

Let us, for the sake of relief and instruction, contrast the principles here acted on with those avowed by the Belgian Government.

"From the opening of the first section in May, 1835," says the Minister in his late Report, "the principle was adopted, that this national work, effected at the cost of all, and worked under the care of the Government, ought to be accessible to all classes of the community on terms appropriate to their respective conditions. The berlins and diligences supplied comfort and luxury to persons of fortune; the cheapness of the waggons" (covered and seated by the bye) "rendered them accessible to the working classes; the middle classes, not forgotten, found the chars-à-bancs cheaper than the old conveyances. *All, without difference, enjoyed in common the benefit of great speed.*"

Which best helps to hold together the fabric of society, the English or the Belgian maxims?

We are encouraged to advocate these views by a full persuasion that the measures to which they would lead are precisely those which would best promote the pecuniary interest of the railways. We believe that imperfect as are the published railway accounts, they show, as do also general principles properly applied, that a careful accommodation of railway arrangements to the convenience of

Digitized by Google

the public, including its larger half, the owners of small purses, is the course which will produce the best dividends as well as the most pleasurable recollections.

Our readers need not be informed, that we have made some efforts to promote the use of railways for pleasure excursions. We believed that by so doing we were promoting as much the interests of the railways as the rational enjoyment of those who thus used them. We have had occasion to remark, however, that of the many jaunts which have taken place, scarcely any have occurred on what may be called the metropolitan railways, a fact which has somewhat puzzled us. Whether or not this remarkable exception of the metropolis from the general movement is to be attributed to the London Directories being unwilling to afford the necessary accommodation in point of cost, we cannot certainly tell. We have now, however, a case to notice which seems to favour the affirmative supposition.

It is probably known to many of our readers, that among the multifarious societies of the present day, is one whose very laudable object is the "Encouragement of Vocal Music," and that it is indebted to a great promoter of the improvement of the humbler classes of our countrymen, Mr. Hickson, for very zealous support, if not for its foundation and prosperity. The members of the society, according to the custom of such associations, wished to enjoy a social day, to arrange for which, Mr. Hickson applied to the Directors of the Croydon Railway for a cheap journey to Penge Wood and back. The fare proposed was 1s. each for the trip and return, to which there was only one objection, namely, that out of this sum, 6d. per passenger (*i. e.* 3d. each way) would be payable to the Greenwich Company as toll, for passing over only a short distance of the line, which would leave to the Croydon Company a very disproportionate remainder not only for their much larger share of road traversed, but for the expense of transit also. Application was accordingly made to the Directors of the Greenwich Railway for a proportionate reduction of their toll; but this they positively, though not uncourteously, refused. The Croydon Company nevertheless afforded the trip on the terms proposed, and, we believe, barely without loss.

We do not doubt the Greenwich Directors believed they were acting for the interests of their constituents; and for the sake of clearing the ground, we may at once admit an argument often much abused on such occasions, that they were not as Directors to look to anything else—far less the promotion of vocal music or the gratification of its amateurs—than the profit of the railway.

We mean, however, to say, and shall try to prove, that as to the interests of the railway, simply considered, they have made a blunder.

It is true that in this particular case, by the favour or the courage of the Croydon Company they have got their sixpence per passenger; but they have done nothing towards promoting the future use of their road; nay, they have in this instance done all they can to discourage it. It must be remembered, that innumerable other resorts for such parties exist in the neighbourhood of London, as well as that the Greenwich line is not the only means of access even to its own rural terminus. It is, therefore, in a very extended sense, a question of competition.

Besides it is well-known that in the metropolis there exist hundreds, if not thousands, of societies of all kinds, from the religious or charitable association to the "free and easy," and from the gathering of hundreds to the contents of the contracted and smoky public-house parlour—and that these not only have each their annual or more frequent excursions, but that in many cases the profit arising from them supplies an important reinforcement of their general funds. It is obvious that under such circumstances, these societies will generally choose out of the many suitable spots for their holiday making, only such as can be reached at an expence which will still leave a profit on the trip, and that if that profit can be better made in any other way, it will require much greater attractions than are to be reached by the Greenwich line, to outweigh the difference. In the majority of these cases the price of a ticket is half-a-crown, ; one-third of this is often reckoned on for profit. It is very obvious that to insist upon nearly one-third of the remainder for the use of a mile and a half of road, will leave the Greenwich Company but little chance in the market.

Now, in the case of the Greenwich road, nearly all that was received from such a source as this would be clear gain; not a farthing of additional expense would be incurred beyond the infinitesimal wear of the rails. All that is missed by holding out for full toll is so much clear loss, and we believe that is not a trifle.

One objection, a baseless one, may indeed be urged; viz. that it is impossible to foresee to what extent these reduced tolls may be called for. A clear and ready rule avoids that difficulty: let the reduction be conceded only in those cases where the excursion has a distinct object in view—where the party is definable and has responsible representatives with whom alone the dealing should take place—and where the number of persons is such as to justify the employment of a special train. With these restrictions the oftener the Company were called on to reduce their toll the better.

In the country these things are well managed. We scarcely remember a case in which Railway Directors have not promoted at once the pleasure of their neighbours and the profit of their railways by lowering the fares—to the extent even occasionally of one-half. We have known not a few instances in which the railway would not have been used at all but for this reduction: and in these cases all that was gained was clear, unanticipated, extra gain. The reasons on which they proceed apply still more strongly to the Greenwich case, where there are literally no expenses to deduct from the receipts.

We trust that if another opportunity should occur, the Greenwich Company will follow the example of the country Railway Directors, and thus remove the difficulty they have now unwisely put in the way of the use of their line for pleasure excursions.

Manchester and Birmingham Railway.—On Thursday last, at Stockport, Aaron Hough was fined 1*l.* for leaving a barrow in such a situation on the Manchester and Birmingham Railway, that on a passenger train passing, the step of one of the carriages caught the barrow, and dashed it into a thousand pieces. 700,000 persons have passed along this line since its opening, without a single accident to any passenger.—*Eastern Counties' Herald.*

MR. WYLLIE'S AFFIDAVIT IN SUPPORT OF THE PROSECUTION AT THE INSTANCE OF THE EASTERN COUNTIES' DIRECTORS AGAINST THE "RAILWAY TIMES,"—MR. DUNCAN IN EXPLANATION.

To the Editor of the Railway Times.

Sir,—I have only to say in reference to the comments and communications in your paper of Saturday last, in which my name is freely used, that the affidavit of Mr. Wyllie is strictly accurate and true, in every word, and that it was altered and realtered at Mr. Wyllie's request several times, and had his final and deliberate sanction before he swore to it in the form printed in the *Railway Times* of Saturday week last.

I am, Sir, your obedient servant,

J. DUNCAN.

19, Great George-street, Westminster,
22nd July, 1841.

Railway Pleasure Excursions.—Monday, the 2nd of August, is to be signalised by the good people of Birmingham. The members and friends of the Athenæum, and those of the Teetotal Society of that place, intend on that day to visit—or rather we suppose, to set out to visit—Tamworth Castle, Derby, Belper, Matlock, Nottingham, Loughborough, and Leicester. From the space of ground covered by the towns to be seen, and the numerous and varied objects of interest with which they abound, we presume that the trip is to be of more than one day's duration. The Derby Arboretum, as usual, is a great point of attraction; Kedleston Hall, Mr. Smith's Picture Gallery, the manufactories of Derby, angling on the Derwent, &c. &c., are to add to the pleasures of the jaunt. We claim for the railway system the credit of having created the possibility of such enjoyments.

—o—

Taff Vale Railway.—On Friday the 16th instant, as a train of empty coal waggons was proceeding up the line, it came in collision with the down train of empty iron ore waggons. In consequence of their meeting upon a curve, notwithstanding the exertions made by both drivers and the breaksmen, the collision proved fatal to one of the engine-drivers who was killed on the spot. The others fortunately all escaped without injury. The unfortunate deceased proceeded up the line nearly an hour after his time, although conscious of being behind time and warned at starting that he must not proceed beyond a certain point where the trade of iron ore waggons would stop.

—o—

Great North of England Railway.—This Company have, we are glad to notice, introduced third class carriages, and have reduced the charge by the second class carriages. By the first class carriages, the fare from Darlington to York is 12*s.*; the second class is 8*s.*; and the third class is 5*s*. This is a great improvement, and we hope it will be duly appreciated and receive from the public the extensive patronage it deserves.—*Leeds Mercury.*

—o—

Immense Goods' Traffic.—On Wednesday morning week a train of 52 goods' waggons, containing upwards of 180 tons of goods—the gross weight with the waggons being actually more than 300 tons—was brought down from Selby to this place by the Company's engine *Liverpool*, in the short space of 1 hour and 50 minutes, a distance of 31 miles.—*Hull Packet.*

THE QUESTION OF SUNDAY RAILWAY TRAVELLING.

To the Editor of the Railway Times.

SIR,—The number of your journal has just been put into my hands, in which you state that "the challenge", you "threw out a fortnight ago to the Anti-Sunday Transitarian party, to prove the existence of the Divine commandment, on which they profess to take their stand, having remained to this hour unanswered," you think yourself "fairly entitled to take it now for granted that no such proof can be adduced."

I will not waste words by expressing my surprise at so speedy a conclusion. It might have been well to have supposed it possible that during the fortnight of extreme excitement which has intervened, good Christians and honest patriots, of whatever party, might have been too much absorbed in this great struggle of antagonist principles, to find leisure to respond to, or even to become acquainted with, your appeal. I write not, however, to pass sentence on your precipitancy, but to enter a calm and decided protest against your conclusion. Had you not referred to arguments you have yourself employed on this subject, and of which you profess "the strongest possible conviction" that they are unimpeachable, I would have applied myself at once to the evidence you call for. I deem it well, however, to see, first, what you have advanced: and as this cannot now be done without further delay, I must be content to pledge myself to furnish, in your next forthcoming number, a concise statement of the grounds on which I hold the authority of the Christian Sabbath.

I am the more reconciled to the delay, since it will enable me, before entering on a series of proofs, the conclusiveness of which to individual minds must, like all moral reasoning, be much affected by personal pre-dispositions and habits and interests, to make a few observations on the article now before me. The grave importance of all that lies at the threshold of such a subject, moves me to do this. The fact, alone, of your having mooted the question, warrants me. And I trust that my remarks will not prove me undeserving of the liberty, nor identify me with any to whom you can fairly impute "a wild and senseless clamour."

First, then, you argue that, since "Christianity has been held by the judges to be part and parcel of the common law of the land," and there are notwithstanding, special acts of human legislation relative to the Lord's Day, the judicature has demonstrably recognised the opinion that the observance of a Sabbath is not one of the essential parts of Christianity, "for otherwise, there could have been no need of human legislation on the subject." Now, Sir, you will admit the prohibition of theft, murder, and adultery, as an essential part of Christianity. You will admit also that on these points there has been human legislation notwithstanding. How then can you deny the compatibility of a divine commandment and human enactments as regards the Sabbath. "Whether the law is in all these respects what it ought to be, is not," as you say, "within the scope of our inquiry." For myself, I am willing to subscribe your exposition of facts, as indicative of its arbitrariness, irregularity, and inequality. The subject is very intricate. Our laws regarding it require revision. I am under no obligation to defend the general character of the statute book. But I must at least vindicate it from this reproach, and clear the investigation of the Divine command from the prejudice that the national legislature has assumed its non-existence. The discrimination between murder and justifiable homicide, or the special enactments regarding divorce, do not proceed on the non-existence of a Divine law, that "whoso sheddeth man's blood, by man shall his blood be shed;" or that "whoso putteth away his wife and marryeth another, committeth adultery." The Sabbatian law, in a special degree, involves discrimination, modifications, and exceptions. It is surely within the province of a Christian legislature to determine what it shall make punishable by the civil power, and what it shall leave unguarded by human prohibition. At all events this has been done by our own; for it has punished theft, and passed by idolatry, though it is certain that both are alike forbidden of God. We approach the inquiry, therefore, unencumbered by any decision of this judicature.

There is another argument, the force of which it is important that I should test: you plead that "it is better for a few of the community to have their weekly day of rest abridged, than that the whole should be deprived on that day of the usual facilities of intercourse, or any work of necessity and mercy be in the least obstructed;" and you take special credit to railways for diminishing "the number of the few here sacrificed for the many." I know not how this word *sacrifice* may strike on the hearts and consciences of others, but I must freely tell you, Sir, that it falls on mine with a very ominous significancy. I must very respectfully, but very urgently, entreat you to weigh it. Remember that you are arguing for a distinct legalised arrangement—an express protection of the railway and every other system of Sunday transit. Now, Sir, I need not surely remind you, that in a world like ours, at a high pressure of secular engagements, during six consecutive days of every week, the public ordinances of religion are of indispensable importance, in order to preserve in men's minds that practical sense of their duty to Almighty God, which is at once so essential and so easily obliterated. Nor need I remind you, any more of what is equally obvious, that the actual enjoyment of those Divine ordinances on the one day of rest must, in the nature of things, be critically dependent on the settled, sensible, and influential segregation of that day, as far as may be, from all pursuits that are uncongenial with them. Man does not seek religion in proportion as it is removed from view. On the contrary, his natural disposition to shrink from its demands, is stimulated by every motive to be otherwise engaged. If there be one great moral fact more established by experience than any other, it is that the observance or non observance of the Sabbath is an infallible index of religion or impiety; and that the worst evils that can befal man, in his individual or social capacity, have been almost uniformly coexistent with a neglect of the Sabbath. It follows by as strict a moral process as can be laid open to demonstration, that the loss of the Sabbath is the loss of religion. You know that this is equivalent to the loss of the soul. I ask, then, what a sacrifice is the one you propose to render legal—the "sacrifice," not of pecuniary interest, or bodily comforts, or personal liberty, or even animal life, but of that which all together can neither buy nor bless—the loss of his soul—the loss of an immortal soul, to whose capacities of enjoyment or suffering the wealth of a universe can bear of course no assignable proportion!

You talk of a *few* such sacrifices. Were it only one, what compensation will you offer? To the individual, I need not tell you, it were mockery to talk of compensation: for you know who has asked, "What shall it profit a man if he gain the whole world, and lose his own soul, or what shall a man give in exchange for his soul?" Nor will I suppose you capable of placing in the scale, the return of railway dividends as a compensation elsewhere. I doubt much if immmortal spirits emancipated from the body could feel a pulse of their interest moved by the success or failure of a railway speculation; but I know from a source no human wisdom can controvert, that "there is joy in the presence of the angels of God over one single soul that is saved from destruction." How many such objects of angelic sympathy is it proposed that we should "*sacrifice*" to "the usual facilities of intercourse:"

But are we warranted in speaking only of the servants of the Company, whilst calculating the sacrifices o Sunday transit? You talk, Sir, of hundreds being then enabled to perform a journey on the Sunday. I might ask whether, before the existence of such conveyances, these hundreds were under any call, whether of mercy or necessity to leave his quiet home on which the day of rest was made to smile? That desultory hundreds did leave it, I deny not: but this is not the point at issue. Their doing so was not the object of the express enactment you call for. It was their own act; for which, if culpable, they were personally responsible. I am engaged at present with what you make your's. But why talk I of hundreds? You have kindly furnished us with statistics more commensurate with this useful truth. It is plain from tables in this very number of your journal, that on Whit-*sunday* last there travelled along the Great Western line alone, some thousands, I believe I might say, many thousands of God's accountable creatures. Will any man in his senses presume to tell me that it was mercy or necessity that brought these thousands from their homes—that this enormous amount of inattention to the peaceful privileges of the Sabbath is to be provided for amongst the ordinary facilities of intercourse? Or that it is an object worthy the sacrifice of a few servants of the Company that these tens of thousands should have the means of leaving their pastors and their God? I know his reply. You, Sir, have thought worth while to volunteer it—that "they may travel to and fro, and yet attend their respective places of worship with as much regularity as ever." *May* do so? Is this possibility, then, of virtue, sufficient ground for legislation? Can a law-giver grant express sanction to the most demonstrable temptation, because the subject for whom he legislates may avoid it if he pleases? What, I ask, is the natural, what the direct and calculable consequence of such facilities? How many of those thousands of railway travellers on Whit-Sunday can be deemed actually as devoutly disposed as they might be? How many can be fairly supposed to have attended on that day either at their own or any other place of worship? How long may their attendance be expected to continue with such *more than* "*ordinary* facilities of intercourse?" And what effect is likely to follow their attendance whilst it lasts? He who "knew what is in man" has drawn a fearful picture of the ineffectualness of too much attendance at the best. You know, Sir, that for *one* class of hearers who bring forth the good fruit, he has described no less than *three* in which the sowing utterly fails. And you know to what causes he attributes the failure. Will any candid man duly pondering that significant parable, defend Sunday railway travelling on the plea, that of the thousands implicated in your statistics, there was not one but might have been, if he pleased, a way-side hearer? Will any man, not grossly and wilfully ignorant of his own heart, believe that, so far as second causes can be estimated, he could be anything better?

But we have not done with this calculation. Here are so many individuals. Suppose them, also—so far as the proposed enactment is concerned—*sacrificed*, or if you will, "justified" by Act of Parliament," in sacrificing themselves—nay, provided with special facilities for self-devotion. Do they fall alone? Are they not members of families? parents—brothers—husbands—sons! Suppose those families left behind. Do they attend their parish church? Are the wholesome solemnities of the Sabbath unbroken in this case by the bustle and excitement of the railway system? Will the irreligion of the "way-side hearers," leave those uncontaminated? Are the ordinary consequences of social intercourse—the most constant relations of cause and effect—to be suspended in behalf of railroads? Will the children be content with the benefits of the Sunday School, while the parents are sporting along some 20 miles upon the rail? Will not every locomotive propensity be brought more than ever into play, and *restlessness* become the principle of the *day of rest*?

But we are still incalculably below the due estimate of the sacrifice. The only real safeguard of natural religion is in the public preservation of a national Sabbath. Let there be no restrictions on the ordinary habits of social life, and who is so blind as not to see what must follow? Let the Sunday cease to be in England what it has hitherto been. Let the barriers—partial it may be, yet presenting a grave protest against desecration—be withdrawn. Let equal license for secular employ-

Digitized by Google

ment be the rule. Let the legislature legalize the no-Sabbath principle by express enactment, and what a prospect will dawn on our once happy native country! Time was when the poorest mechanic in the land, the humblest drudge of an exacting public, could claim at least one day for his own; and, emerging from the noise and filth of his prison-house of toil, sit down, like God's free man, to hear "good tidings of great joy." For such liberty his human charter, was the sanctity of the Sabbath. Let that sanctity be set aside, and *his doom is sealed*. He lives already beneath the gentle dynasty of trade. To undersell is found to be the great secret of selling at all. Foreign markets keep no Sabbath. Avarice knows no Sabbath. Pleasure wants no Sabbath. The question is not far to seek. How can trade afford a Sabbath? I will not weary you, Sir, with the items of this very calculable account. It has been gone through on the continent; and we have seen something of what it comes to. Our singular preservation from evils that have devastated Europe, has been owing, under God, to the *moral* strength of the nation. It is the *soul's* muscle that has made England the Thermopylæ of the world. You will not hesitate, any more than myself, to attribute this to its proper cause. You cannot refuse to admit that, if national religion be the palladium of national safety, strength and happiness, the "sacrifice" we have been considering is a sacrifice indeed. That such a sacrifice is at stake when the national observance of the Sabbath is mooted, I hold to be a fact that cannot long be called in question; and that railway transit on the Sunday has a fearful bearing on that observance is at least to my mind no less self-evident, nor that inroads on the day of rest become objects of national alarm in proportion to their being systematized and recognized by the law. I could say much on this point, as well as on the responsibility of those who put forth claims to such recognition. But I must conclude. This may with the greatest propriety be left to the Editor of the *Railway Times*. I have not assumed, Sir, as you perceive, the divine law on the subject, so as to urge the penal consequence of a direct breach of what the Great Law-giver has laid down. I would not seem to foretel what you call on me to prove. I pledge myself, however, with God's permission, to essay proof in the coming week, and I confidently rely on your plighted candour to give full and fair insertion of what proof may demand—subscribing myself meanwhile, a very sincere friend to all that can give due play and impulse to the national energies, though what you have not inappropriately termed

AN ANTI-SUNDAY TRANSITARIAN.

Bristol, July 12, 1841.

LONDON AND GREENWICH RAILWAY.

LETTER V.

To the Shareholders.

GENTLEMEN,—I am happy to find by the Report of your Directors at your late general meeting, that the suggestions in my second letter of 8th May last, have been attended to, and that after all the vapouring about the third-class carriages not paying, your Directors have been obliged to confess that these are the only carriages that have paid, since on fair days and Sundays, when they have not been used, there has been a falling off of 1,202*l.* 19s. 9d., and on the days when they were in use an increase of 550*l.* 5s. 11d.; and that accordingly the third-class fares are to be retained and the second-class abolished, and the first reduced. This is a step in the right direction, although forced upon your reluctant Directors at the eleventh hour, by the very intelligible hint of a falling off in their receipts. But how comes it that their experience did not carry them a step further. Is it their pride only forbids? They have said, that the rate of the toll should not be reduced. In their misapprehension of the nature of these charges, which now I am happy to observe is in course of correction, they have fancied that it was only to demand a high rate of toll and to obtain a large income therefrom; and they cannot bear to confess that they have been mistaken, the more especially as they have induced you to a very large outlay, upon the expectation that a still higher toll would be still more productive. In this likewise they will be lamentably mistaken; but in spite of their present experience, they still cling to the hope that it is only the obstinacy and niggardly spirit of the Croydon proprietors, and the Croydon travellers that refuses to pay this exorbitant toll, and that the more generous or heedless Brighton proprietors, and Croydon, *(viâ Brighton!)* travellers will pay it with pleasure, or at all events without "grumbling."

Accordingly we find in the Report, "The toll on the Croydon Railway traffic shows a deficiency of 685*l.* 17s. 10d." (for half a year), "as compared with the same period of 1840. *This result, however, is only of temporary importance, as there can be little doubt that the ample accommodation now afforded by the Brighton Railway Company,* CONVEYING PASSENGERS TO AND FROM CROYDON *will cause an increase and diversion of the traffic.*" Indeed, most prophetic Directors! Pray, in what manner? Is there any want of "ample accommodation" on the Croydon Railway? Is that Company so overloaded with passengers, who do *not* pay toll to the Greenwich Company, as to be unable to find sufficient accommodation? Certainly not. The accommodation that is wanted is the *lower fare*, which the Greenwich Company will not allow by reason of its excessive toll. Oh! but the great, generous, liberal Brighton Company does not mind paying a paltry toll of 3d. or 4½d., and will, perhaps, notwithstanding carry people to Croydon at a lower fare. Indeed! And if the Brighton Directors should be so indifferent to such small matters, will there be no keen proprietor to ask some day, what profit there is in carrying passengers to Croydon at less than 1s. 6d. (say 1s. 5d.), by a Company which pays for these same passengers 1s. to the Croydon Company, and 4½d. to the Greenwich Company, or 1s. 4½d. to the two? Or perhaps the Brighton Directors having found out their mistake, will nevertheless consent to work this part of their journey at a loss, to oblige the Greenwich Company; or rather than the latter Company should be disappointed, perhaps the Croydon Company will kindly forego some part of their 1s. in order to make up the 4½d. toll! Really, Gentlemen, one of these things must be done, or the Croydon traffic must be abandoned; and the Greenwich Company may perhaps do as well upon the Brighton traffic alone, as upon the Brighton and Croydon traffic together; or else, *horribile dictu!* the pride of the Greenwich Directors must come down, and they must consent to take a lower *rate* of toll in order to get any toll *income* at all—at least from this source.

But there is to be a "*diversion*," as well as an increase, of this Croydon traffic. Pray, in what direction? It can be but in one—that is, out of the pockets of the Croydon proprietors into the pockets of the Brighton proprietors. And are the Croydon proprietors so very helpless, or their Directors so imbecile, as to resign all the profits of working their line into the hands of the Companies who traverse it? Surely, gentlemen, you are not so gullible as to believe this. If the toll which they can demand shall not be equal to the profit to be obtained by working the line, the Croydon Company will work the Croydon line themselves, and in either case they will take good care that the Brighton and Dover Companies shall not be in such a position as to enable them to throw away an excessive toll to the Greenwich Company, for the sake of so much of the Croydon traffic as they can obtain.

In short, gentlemen, it comes to this: your Directors finding the Directors of the Croydon Company determined not to resign quietly to the Greenwich Company the great proportion of their legitimate profits, have been buoying themselves up with the hope that when the Brighton Railway was opened, either they, the Greenwich Directors, should be able to do without the Croydon traffic, or that the Brighton Company would absorb this traffic, and finding a profit upon their general business would not inquire too particularly as to the profit of carrying passengers to Croydon with a uniform tax of 1s. 3d. or 1s. 4½d. per passenger. Let us discuss as shortly as possible the probability of either of these results.

The Croydon Company brought over your line in the year ending July, 1840, nearly 500,000 passengers, paying a toll of nearly 6,000*l.*, which is at the rate of nearly 1,400 passengers per diem. The Brighton Company is reported to have carried about 2,500 passengers in the first *week* of its opening, or at the rate of 350 per diem. The Croydon Company carried in the first week of its opening more than 14,000 passengers, or at the rate of 2,000 per diem. But the Brighton Railway is not yet opened in its whole length. Let us quadruple the numbers on this account; yet they will be nearly a third short of the numbers brought by the Croydon Company. How then can the Brighton traffic compensate to the Greenwich Company for the loss of the Croydon traffic? We are thus driven to the next hope, that the Brighton Company will wipe up the Croydon Company—and, carrying all its traffic, consent willingly to pay the toll at which the Croydon Company makes so much "grumbling." Do you forget, Gentlemen, that the Croydon Company has the *right* of levying a toll, as well as yourselves? That this toll is only limited by agreement to 1s. per passenger, and that whatever notions the Croydon Directors may have as to the policy of levying a high toll against *low* fares, they can never be expected to reduce it against *high* fares—least of all while your toll continues to be imposed—and that the levying of this toll of 1s. per passenger is not likely to improve the disposition of the Brighton Company to pay, likewise, a toll of 4½d., and that the consequence must be sooner or later, an abandonment of the Croydon traffic by both Companies, or what is more likely, a combination between the three Companies to avoid the Greenwich Railway altogether.

Are you prepared for this consummation of the unwise policy of your Directors? If not you are doomed to a severe disappointment.

I am, Gentlemen, your well wisher,

EXPOSITOR.

21st July, 1841.

LONDON AND GREENWICH RAILWAY.

To the Editor of the Railway Times.

SIR,—For some time past you have been urging the railway proprietaries to publish their accounts in greater detail. I think your advice on this subject is highly salutary; they will not, in my judgment, do the best for their own interests if they do not follow it.

Going to instance, however, I should like to put a question or two in respect of the Greenwich accounts published in your last. I am no shareholder of that line, and therefore have no claim as such to an answer. I ask the questions for public purposes and on public grounds entirely. The confidence shown in the Directors by the shareholders, and especially the cordial approval of nearly all parties of the conduct of Mr. Akerman, the Secretary, lead me to hope that things are so managed on that line as that answers to my questions can be very readily furnished.

My principal object with the current cost is to get it separated into two main divisions—that which is constant with any number of passengers, and that which is proportionate to their number. I have roughly endeavoured to do this, and omitting the 1,000*l.* paid off the cost of relaying the line, I should guess that the sum of 15,107*l.* would be composed of 8,059*l.* of constant, and 7,048*l.* of proportionate expenses. But this is as to several of the most important particulars merely a guess. I look upon this division as one of the most important steps towards the discovery of the best fares as well as that it is of great consequence in other points of view. I am therefore very desirous to see it done on as many railways as possible, and should be very glad to see the Greenwich begin. The attempt I have made above to divide their cost is

Digitized by Google

much too loose and imperfect to be admitted as the basis of an argument.

As to particulars—oil, cotton waste, repairs and depreciation of locomotives, are put together in one sum. The two last should be separated from the former and from each other. Could Mr. Akerman tell us what has been the cost of repairs of locomotives in the successive years—or still better, quarters—since they began to use them? He would do further service if, besides this, he could trace the cost in successive quarters of any one particular engine. From these data, with needful explanatory particulars, we should be able in all probability to deduce the average durability of the engines, and therefore the sum to be set down for depreciation.

The coaching contract, I apprehend, includes depreciation. Pray is it a fixed or a proportionate expense? Is it so much per annum, or so much per carriage per annum, or so much per passenger?

Does the experience of the Greenwich line show an annually increasing or diminishing cost of maintaining way and works? or does increased use of the way materially affect this amount?

As to the next head, I presume that if ever so little business were done on the line, an establishment of police, collectors, &c. must be kept up; but probably with the least possible quantity of business this establishment would be only of a certain extent, and its increase would be proportionate to the increase of the business. Is then this expense capable of being divided by probable conjecture into two portions, one fixed, the other proportionate, and if so, what sum would be assigned to each?

The remaining items of this side of the account require little remark, since either their nature is obvious, or the considerations above mentioned will show what would be wished respecting them.

As to receipts, it is of the greatest importance to know what were the numbers of each class of passengers for every month, together with such particulars (for such I perceive from the Report exist) as will serve to separate extraordinary circumstances and their causes from the ordinary traffic. Observing that in the Reports of the House of Commons, Returns on this subject are made for every month, from January, 1838, to January, 1840, inclusive, I am sorry that they were not followed by similar returns in the late Report; for as changes have taken place in the fares, we might have learnt something important on the relation of fares to numbers. I learn that further changes are to be made in the fares: may I express a hope that care will be taken to note the results, and that the Directors will publish them? If I rightly understand the remarks in the Report, it appears that the Company has this year suffered on particular occasions by insisting on high fares. The shareholders were probably well enough informed as to the previous fares, &c. to understand the statement in the Report, but persons out of doors have not the same knowledge. Is there any objection to giving such a statement as will show more fully the bearing of these facts on the general argument of the pitch of fares?

I trust the Directors and officers of the Greenwich Railway will not mistake my object; I hope I have given them no reason to disapprove of the spirit with which I pursue it. I have not the slightest design to raise a controversy, or find fault: I simply wish to ascertain facts which are I think of public importance, from the bearing they have on public results. Nor do I select the Greenwich line for any other reason than that it is a recent and convenient instance. One great end will be answered if these inquiries should assist in directing the attention of other Directors and officers to the same subjects; and I, for one, should be glad to receive like information from other lines also.

I have presumed, and correctly I have no doubt, that the several officers of the Greenwich line have much more public spirit than is necessary to carry them through the trouble of furnishing this information; nor do I suppose the Directors will refuse them permission to do so.

HENRY EUSTACE.

GREENWICH AND CROYDON RAILWAYS.—TOLL QUESTION.

To the Editor of the Railway Times.

SIR,—Your correspondent, "Modus," argues the question in dispute between us in so reasonable a manner, and with so evident a desire to arrive at the truth, that I cannot resist the temptation to ask for a further space in your columns for a few observations upon his last letter. I beg this favour with the greater earnestness, because there seems to be very little difference between us—and if he could agree, and persuade any influential proprietors in our two Companies to take our view of the matter, I am persuaded a very great good might be effected for both. What makes me think the difference between the two Companies likewise more reconcileable just now than heretofore, is the fact displayed at the late meeting of Greenwich proprietors that their Directors are become converts to the principle of *low* fares—one advance, certainly, to the principle of *low* tolls.

"Modus" endeavours to draw a distinction between fares and tolls, but I hope to be able to convince him that this a "distinction without a difference." What is the object in lowering the fares? To obtain a large gross income. What should be the object in lowering the toll? The same. Unless the Greenwich Company were to obtain a larger income by lowering their toll, I should not think myself entitled, as a Croydon proprietor, to ask them to do so. The only possible excuse for their lowering their toll must be either to retain their present income, which they cannot otherwise do, or to increase it. This is precisely the argument which the Croydon Company held out to them a twelvemonth ago. The Croydon Company said; "If you will not lower your toll, so as to make us to lower our fares, and thus to bring you more passengers, at that lower toll, so as to make up the difference—certainly not to diminish—and perhaps to inceease your present income—we must *raise* our fares, which *will* certainly diminish your present income." The Greenwich Company were incredulous as to this result, and refused any alteration. The conqseuence has been, as the Croydon Company foretold, that the fares having been raised, the toll paid to the Greenwich Company has diminished from 5,900*l.*, in the present year, to 4,700*l.* in the past year, a difference of 1,200*l.* All that the Croydon Company can reasonably say to the Greenwich Company is, lower your toll and we will lower our fares, for the benefit of both parties, or in other words make such an arrangement with us, that if we keep up our fares you shall be entitled to demand the present, or even a higher toll, but if we lower them you shall be content to desire your profit, as we propose to do, by *larger numbers* at *lower rates*.

Your correspondent "Modus," admits that "it may be an established rule, as between a Railway Company and the public, that first cost has nothing to do with the rate of fare," but he contends, "that between one Company and another the case is different." Now, there must be some reason why the cost of construction has "nothing to do with the rate of fare," and if I can show that this reason applies equally to both cases, I think I shall have a right to consider that I have proved the cases themselves to be *pro hâc vicé*, identical. If a railway be constructed at a great cost, such cost ought to be paid for, or the speculation is ill-founded. As I am not about to contend thai the speculation of the Greenwich Railway is ill-founded, I am prepared to admit that if this railway shall have cost more than the Croydon, or the other railways coming upon it, such a superior cost ought to have a superior payment. So far then your correspondent and myself are, I apprehend, agreed. We only differ as to the *modus operandi*. He contends that this superior payment is to be made in the shape of a higher toll—I contend that it can only be fairly made by a *greater number of passengers*. Your correspondent seems likewise to be aware of this fact, for he says, and truly, that "It is only on the well-founded expectation that *several* railways from the south-east would make use of the Greenwich Railway to win their way into London, that the enormous expenditure upon this work can be justified." He here points out, most correctly, the legitimate source from which the payment of the *extra* cost of the Greenwich Railway is to be derived. When therefore this payment is looked for from *another* source, in the shape of a *high toll* upon all this traffic, is not the process somewhat like that which has long been agreed to be impracticable, of *eating* your cake and *having* it too? Moreover, the object is *not* to be attained in the one case any more than in the other; for if these "several railways" are to be useful, it can only be by bringing great *numbers* of passengers; great numbers of passengers can only be brought at low fares; low fares can only be charged by parties having to pay low fares. This will be found out sooner or later by the Brighton and Dover Company, as well as by the Croydon; but if the former should be able to bring considerable numbers at high fares, it is manifest that the Croydon will not; and why throw away the Croydon traffic? This cannot be for the interest either of the Croydon or Greenwich Company, and particularly the latter, although both may derive the greater part of their profits from the tollage of the other Companies. If I am right then, and if it be for the interest of the Greenwich Company to charge low fares, as its Directors appear to begin to think, so likewise must it be for its interest to charge low tolls, where the parties paying these tolls will consent to adopt low fares—and this whether the railway shall have cost 100,000*l.* or 1,000,000*l.*, or whether 20,000*l.* or 200,000*l.* shall have been added to its original cost, no matter for whose accommodation, since this cost has been incurred—is past—and the only question now is, how to make the most of the result—a question the Greenwich Company would have been equally entitled to discuss if their railway had cost them *nothing*. This then is the reason, and the only reason, why cost of constsuction "has nothing to do with the rate of fare"—namely, that the rate of fare should be always that which will *produce* ihe most, let the cost have been what it may; and this reason is equally applicable to the case between Companies and the public, and between one Company and another.

Your correspondents seems to think that his *small sum* per passenger in addition to a fixed rent, would not be objectionable; and certainly the diminution of the evil would lessen its intensity, but it would be an evil still, An evil, because it is objectionable, in principle, to have any charge upon a railway increasing in precise ratio with the number of passengers—ihe almost unlimited increase of which numbers, *without a corresponding increase of expenditure*, is the main element and true secret of railway success. The Government tax amounts to exactly 1d. upon Croydon passengers, and less in proportion for less distances, and yet there is no doubt but that this would be found a very heavy tax upon very low fares, which could only answer upon the supposition of enormous numbers. Nevertheless, the prsposition of "Modus" for a fixed rent, and a toll of ½d. per possenger and 1d. per ton of goods (for I read the "1½d." as a misprint), would be great improvement upon the present system, as it would leave the Croydon Company a much larger discretion for the lowering of its fares, and waild hold out some temptation to the other Companies to follow its example.

For the last sentence of your correspondent's letter, he will see that "additional outlay" cannot be compensated if cost of construction is to be *no* element of charge; and that if the new line be devoted specially to the use of the three Companies and they are to be charged a toll in respect of such use, it is difficult to conceive upon what p lea they can be charged likewise for the *old* line which they do not use. This question, however, merges in the other, if it be once conceded that it may be more profitable to the Greenwich Company to charge a *low* toll than a *high* one. There are other weighty considerations which might be urged in favour of a low charge by the Greenwich Company for its own sake, which it is not necessary to dwell upon here,

Digitized by Google

but which are comprised in the worldly advantage to this Company of making the other three Companies satisfied with their position, and inducing them by every temptation to draw their traffic on to London Bridge rather than allow it to diverge elsewhere. I am sorry to have troubled you at so great length, but the question is of great importance to the railway interest generally, and cannot be too much discussed, since by discussion only can we arrive at the truth.

I am, Sir, your obedient servant,
A CROYDON SHAREHOLDER.

19th July, 1841.

GREENWICH AND CROYDON RAILWAYS —THE TOLL QUESTION.

To the Editor of the Railway Times.

SIR,—Though a Croydon Proprietor myself, and, therefore, as anxious as "Modus" can be for an amicable and equitable settlement of the differences between the two Companies—I am not that "Croydon Proprietor" to whom he has addressed the letter published in the *Railway Times* of Saturday last; but the remarks contained in that letter have suggested the few observations I am about to make.

So much space has already been devoted in your valuable columns to the consideration of what has been termed the "dogma" of the Croydon Chairman, but which has been placed by your decision in the rank of *principles* in railway science, viz., "that cost of construction is no element in the charge for fare made to the public," that I will only just hint that "Modus" will find it more difficult to satisfy others than himself, that any connection really exists between the cost of the Birmingham Railway and the high fares taken upon it. For the fare is regulated solely by the capability of that line, to command a high price in respect to the superior advantages it offers in regard to speed and economy, compared with every other means of transit.

Now, although according to "Modus" it may be doubtful if the local traffic of Greenwich and Croydon alone would ever produce an adequate return to the shareholders for the money laid out, yet, surely, if the Croydon Railway be mainly dependent on the Brighton and Dover traffic, how much more dependent must the Greenwich Company be upon all these three Companies for compensation for the cost of the *new line*, seeing that if the traffic of the Croydon Railway be diverted or destroyed, the Greenwich Company will lose that of the other two besides. I cannot therefore see anything preposterous in the idea that, supposing the Greenwich Railway not in existence, any possible traffic between Croydon and London would warrant the formation of an approach to London Bridge at the cost of 400,000*l.*, for it must never be lost sight of that Brighton and Dover traffic is in fact Croydon traffic between Croydon and London Bridge; and "Modus" has himself furnished a very ample return for such an outlay—in the toll he demands for the use of the Greenwich Railway by the three Companies contributing this traffic.

Let us then take the figures on which "Modus" founds his "equitable settlement," and we shall have a good Parliamentary estimate to justify a Bill in the next or some future session, which I feel assured will ultimately be the course that the united Companies will find it their interest to pursue, if the Greenwich Directors persist much longer in a policy which cripples rather than expands their traffic.

	Passengers.
The number of Croydon passengers carried over the Greenwich Railway, (a number be it remembered, far below the maximum) was, in 1840	474,573
Suppose the traffic increased by a like number of passengers brought beyond Croydon by the Brighton Company	474,573
And a like number by the Dover Company	474,573
Total passengers	1,423,719

For these 1,423,719 passengers "Modus" demands for the Greenwich toll, as things now exist, 5,000*l.* from each of the three Companies, and one halfpenny for every passenger, or 5,988*l.* 13s. 10d. × 3 = 17,966*l.* 1s. 6d.

	£.	s.	d.
And, on the same principle, an advance of 50 per cent., when the new Greenwich line is completed, would give	26,949	2	3
Now, as the interest on 400,000*l.* at 5 per cent. is only	20,000	0	0
There would still remain, after paying the interest on this outlay, a surplus profit of	£6,949	2	3

Besides a free passage for all goods. And, as I contend, a very large increase of traffic would take place by a judicious adaptation of the fares, the halfpenny toll would be saved on all this increase.

But surely "Modus" must be aware that 400,000*l.* is an outrageous estimate for such an approach from Corbett's-lane to Dean-street in the Borough. And it is in respect to the use of such portion of the Greenwich Railway and the inclined plane to Joiner-street, that the present toll of 3d. (and that of 4½d. *in nubibus*) is demanded.

The estimate of the Greenwich Engineer for the construction of the new line between these points was (And the Directors in their Report to the shareholders on Friday last, assured them that "the whole of the new works will be done within the estimate.")	£150,000
The other item of cost would be the land,* which may be estimated at	50,000
Making a total cost for this approach of	£200,000

Let "Modus," therefore, reflect on the terms he is demanding for the use of the Greenwich Railway, when an ample substitute could be obtained at the cost of 200,000*l.*

Notwithstanding these observations, I do not see any great objection to the principle laid down by "Modus," of a rent and a small toll per passenger, provided the details could be equitably settled; and I would therefore urge him to use what influence he may have with the Greenwich Board, to make some advance towards a speedy settlement of this vital question to the interest of both Companies.

I am, Sir, your obedient servant,
EQUITY.

London, July 20, 1841.

GREENWICH, CROYDON AND BRIGHTON RAILWAYS.

To the Directors of the Greenwich Railway.

GENTLEMEN,—Having purchased some of the original shares at 2½ premium, I have been naturally anxious to seize every hope held out from time to time in your reports and statements as to the ultimate prospects of the Railway—and I think there would, at last, be some chance of realizing a good result, if the following statements made in your last report had a solid foundation, viz:—

"The toll on the Croydon Railway traffic shows a deficiency of 685*l.* 17s. 10d., as compared with the same period (six months) of 1840. This result, however, is only of temporary importance, as there can be little doubt that the *ample accommodation now afforded* by the Brighton Railway Company carrying passengers to and from Croydon, will cause *an increase* and diversion of the traffic."

Will you then allow your excellent Secretary, whose honour and integrity every one may depend on, to inform me—by what means the present deficiency in the Croydon toll is to be repaired?

Your report says by an *increase* and diversion of the traffic, by the *ample accommodation now afforded* by the Brighton Railway Company.

1st. Does the Brighton Railway *now*, or have you any assurance that it will, run trains as the Croydon Company does, every hour throughout the day; and every half hour on the Sunday?

2nd. Do the Brighton trains now, or will they henceforth, stop at all the intermediate stations on the Croydon line—as those of the Croydon Company do?

3rd. Will the Brighton Company continue to carry passengers at the *same fares* which are now charged by the Croydon Company?

And provided they do all these things what advantage is the Greenwich Company to gain by the Brighton Company doing so, instead of the Croydon Company?

Now without anticipating the answer of your organ, it would appear to me that unless the Brighton Company does now, or has pledged itself hereafter to run an equal number of trains and at equally convenient hours, the boasted *ample accommodation* will rather be a *diminished* accommodation—and a consequent *decrease* in the numbers carried, and a *further depreciation* of the amount of the Greenwich toll.

Again, if the Brighton trains do not stop at all the intermediate stations on the Croydon Railway there will be a *still further depreciation* of the Greenwich toll; seeing that at present about *one half* of the passengers carried by the Croydon Company over the Greenwich Railway stop at *these stations*.

Then as to the fares now charged—Can the Brighton Directors, if they look at all to the interests of their shareholders, consent to carry passengers at these fares having to pay a double toll—first 1s. to the Croydon Company, and then threepence to the Greenwich Company? Or, instead of three-pence, would a four-pence halfpenny toll be cheerfully paid by them as Mr. Deputy Corney assured the meeting?

Now, even supposing the Brighton Directors should be so mad as to attempt a speculation with no chance in their favour, but with a certain prospect of loss, what advantage shall we Greenwich proprietors gain thereby? We can only have the *three-pences* we get *at present*, and so far from our present *decrease* being only of temporary importance, I fear it will be *permanent*—and increase in a fearful ratio with any further toll attempted to be charged on passengers between London and Croydon.

Now as I cannot doubt, Gentlemen, that you had duly weighed all these points before you decided on publishing our report of Friday last, will you, as I said before, enlighten us as to the meaning of the paragraph above quoted,

And oblige your suffering brother,
HONESTUS.

London, July 20th, 1841.

SECOND CLASS FARES.

To the Editor of the Railway Times.

SIR,—Two letters have appeared in the *Railway Times* within the last fortnight; the one with the signature "Viator," and the other with that of "A Traveller;" both these letters are written for the avowed purpose of condemning the comparatively little protection against the elements, or the effect of currents of air, when travelling in second class carriages at the rate which is now common on railways.

I beg to make one or two remarks on these letters, because I am of opinion that *their averment* is not borne out by any principle of equitable reasoning; and the latter letter, more particularly, conveys the belief of the writer that these carriage are made thus uncomfortable for the purpose of compelling passengers to travel by the first class, and he moreover designates them "death carriages."

Let us, Sir, in a few words, calmly examine the real state of the case; and I do assure *you*, and your two correspondents whom I now address, that I desire in every respect to treat their opinions with the greatest courtesy. I take it for granted, that some distinction in point of comfort, &c., ought to be made between those who pay much and those who pay comparatively little: such is the case in the arrangements of life generally, and such it must also be in travelling. Was it not so, as respects outside and inside travelling per coach, and in every sort of conveyance, down even to the waggon? The inside traveller had speed, and protection against the inclemency of the weather; the outside, speed,

* The land required for this purpose is only one-third of the width for one mile and three quarters of the space purchased by the Greenwich Company. The whole amount paid by them for the purchase of land and compensation for the whole railway and stations being under 300,000*l.* 50,000*l.* for the quantity required must be considered a very liberal allowance.

Digitized by Google

but with exposure to the elements. Again: the traveller per waggon had some protection against the weather, but with a decrease in the rate of travelling, in proportion to the decrease in expense; and so in all modes of conveyance, the comparative advantages vary in the ratio of the expense.

Now, with all the disadvantages and inconveniences charged against the second class carriages, what do we usually find the proportion of passengers by them, as compared with the first class? Ordinarily, as far as I have examined, about 2½ or 3 to 1. I know many, very many persons, who can well afford to travel by the first class, but who habitually use the second—and not a few of such (for short distances) the third. Now, Sir, if these second class carriages were so destructive of human life, I can scarcely imagine a person so careless of self-preservation, but that he would pay the extra charge to escape such perilous risks; and if being able to afford it he did not do so, I think he would excite and deservedly, but little sympathy. But do not, I pray you, misapprehend me in my application of these remarks; for I believe that to the majority the difference of fare is an important consideration, and I value, I prize, I respect such persons quite as much as their more wealthy neighbours; and I would do everything in my power to administer to their comfort, and, in reason, to meet their views.

But we must take human nature as it is, and legislate accordingly. Railways have been constructed at an immense outlay to the shareholders, and are attended with great risk and uncertainty, and surely they have not generally been productive of "very golden harvests;" but, on the contrary, with a few exceptions, are they not, I ask, at a fearful and ruinous discount? Well, then, were we now to enclose entirely second class carriages, and make them as comfortable as the first, with the exception of a soft seat, how many, think you, would pay an extra price to travel in the latter?

The third class carriages are on a par with the out-side travelling by coach, the expense altogether not more than one-third, and the quickness of transit unapproachable. Let not the public then expect too much; let them consider themselves in the light of shareholders; let them suppose their property embarked in railways, and then ask themselves whether they would not expect a fair return for their outlay. But more than this, when such outlay or speculation (for speculation it was) gives to almost every member of the community a boon of such value, surely it may be ceded to the railway public that they are justified in adopting such measures as may protect their own property; and in making the distinction and difference of accommodation, &c. between first and second class carriages, I contend that they have not in the slightest degree overstepped the power with which they were invested, nor acted harshly or unjustly to any class or individual member of society.

I sign myself, as usual, an occasional correspondent and an habitual reader of the *Railway Times*.

G.

July 20, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—In offering a few observations on the letters of your correspondent "Ignotus," my object is not to try to convince him—that I feel would be a hopeless task, but to endeavour to shew that the Shareholders—"that most helpless class" as they are so pathetically termed by your correspondent, are really less deserving of pity than would appear from his letters. It is all very well for this gentleman to talk of an "array of facts," but when asked for proof, why does he not state the grounds on which they rest? At present they are no more than *assertions*, and I think it will not be very difficult to shew how hollow is the foundation on which they are based.

From the last Report of the Directors it appears that the payments up to 31st December, 1840 were 5,288,000*l.*; the line was then completed with the exception of a distance of 25 miles between the Wootton Basset Road and Bath, and this part was so far advanced as to be within six months of completion. Now this being the state of the case, will "Ignotus" tell us on what the additional 2 millions he talks of are to be expended? We have too, the assurance of the Chairman that no more capital will be required than that already raised, and I put it to any candid reader, whether this assurance is not more deserving of credit, and more borne out by the fact I have mentioned than the mere assertion of "Ignotus."

"Ignotus" further says "that the expence of working if "*fairly stated*, will exceed 50 per cent. upon the gross receipts." With no wish to form a harsh opinion of the writer, I may yet ask him upon what grounds he brings this implied charge against the Directors? One thing is I think pretty clear, that if he knew the expences to be *unfairly* stated, he would not have scrupled to show in what the unfairness consisted. To meet however his assertion, let us go to *facts* again, and we shall find that the expenses have hitherto been as follows:—

For the Half-year ending	Dec. 1838....	58·27 per cent.
"	June 1839....	57·53 "
"	Dec. "	48·82 "
"	June 1840....	48·04 "
"	Dec. "	47·69 "

The expences have thus been gradually diminishing, even with the disadvantage of having two detached portions of the line open, involving many heavy additional charges, inasmuch as they have four terminal stations instead of two, and consequently extra establishments to keep up, besides having to procure the whole of their fuel of the most expensive kind, and at much beyond the average cost.

But another disappointment it seems yet awaits the unhappy shareholders—the amount of *traffic* is to fail altogether to realize their fond expectations! According to "Ignotus," all is deception and gloom; there is not one sunny spot or bright ray to gladden these unfortunates amidst the general darkness, and despair is their only resource. But let us see if we cannot gather for them a few crumbs of comfort, and before they yield themselves up to the fell monster, let me ask their attention to a few more *facts*, and perhaps some gleam of hope may yet be found to remain; let us in short see what has been the result of the opening of other railways with which their own may be fairly put in comparison:—

The London and Birmingham was opened throughout in September, 1838, and for the first six weeks, the amount taken was

£64,111 or £10,685 per week.

For the corresponding six weeks of the two succeeding years, the amount taken was

In 1839 £80,725 or £13,454 per week—increase 26 per cent.
In 1840 £96,735 or £16,125 per week— " 51 "

And the tables for the present year continue to show a progressive increase, leading to the belief that in a few years the traffic will be double what it was at the opening of the line.

The Grand Junction may be adduced as another instance of the gradual increase of traffic, the takings for three years being as follows:—

In 1838.....	£266,584
In 1839.....	401,132
In 1840.....	445,000

These are facts, and serve sufficiently to show how far advantage is taken by the public of increased means of communication, and how much it is in the nature of railway property to increase in value. Looking then at these facts, can we doubt that the Great Western, whose returns *nearly doubled* that of the London and Birmingham when both were partially open for the same distance, will ultimately realize every reasonable expectation that has been formed of it? I might further ask "Ignotus" if he can point to any other railway that in addition to paying interest regularly on a large amount of borrowed capital, has given its shareholders a dividend long before the completion of the line.

I have trespassed sufficiently on your space, and in conclusion will only express a hope that if "Ignotus" again takes the field, he will come more closely to facts and figures.

I am, Sir yours very respectfully, but

NO OFFICIAL.

July 13, 1841.

GREAT WESTERN RAILWAY—TRAFFIC RETURNS.

To the Editor of the Railway Times.

Sir,—It is much to be regretted that the Great Western Company do not furnish you with their weekly traffic returns properly separated. The consequence is, that being enabled only to employ the divisor of 169¼, the apparent result is much less favourable than a proper separation would exhibit; for instance, for the week ending 11th July, 1841, the gross traffic of the three lines being 12,826*l.* when divided by 169¼ gives a result of 75*l.* per mile per week. If it were separated, the following would be about the result:—

Gross traffic, on 169¼ miles.....	£12,826
Deduct receipts on 51 miles, conjectured (in the absence of a proper return) to be about.	2,000
Remainder	£10,826

Calculated on 118¼ miles would give 91*l.* per mile per week.

Until the Company consent to give the returns for the 118¼ miles separately, I beg to suggest the addition of a note to your traffic table, stating the result, also, according to the latter mode; and that in your table you allow the three lines to appear together in succession thus—

	Miles.
Great Western	118¼
Bristol and Exeter	33
Cheltenham and Great Western	18
Total	169¼

It is no more than fairly due to the shareholders of the Bristol and Exeter, and the Cheltenham and Great Western Companies, not to withhold from them the information that would be afforded by a proper separation, and it is especially due to the former, who have an immediate interest in the information, as a large proportion of their present income arises from a mileage which is wholly dependent on the quantity of traffic realised.

The *excessively* low terms on which these leases were obtained, strengthens the claim of those shareholders to all reasonable information to relieve the anxiety they must naturally feel to know the results as early as practicable.

Yours respectfully,

F.

Bath, 21st July, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—On referring to some of the early numbers of your journal, for the weekly receipts of the London and Birmingham line during the first few months after its entire opening, in order to compare them with the present receipts of the Great Western Company, I find that the returns were not then published in your journal.

I am however informed, by what I consider a competent authority, that the receipts of the Birmingham line, from the middle of September, 1838, when its final opening took place, to the 31st December of that year, fell *considerably under* an average of 10,000*l.* per week. Perhaps some of your readers may be able to state its precise amount.

Of the half-year's revenue of that Company, from 1st January, to the 30th June, 1839, I am however enabled to speak positively from the Report, and find that it amounted to 270,241*l.*, which for 26 weeks affords a weekly average of 10,394*l.* If, therefore, we compare this average amount with the weekly receipts of the Great Western line during the past seven weeks, some of which period was previous to its through opening, the result will be found brilliantly favourable to the latter, even after deducting 1,200 per week, as rent and tollage for the two branches.

Digitized by Google

GREAT WESTERN RECEIPTS.

Week ending 6th June	£12,261.
Week ending 13th June	11,890.
Week ending 20th June	12,547.
Week ending 27th June	12,001.
Week ending 4th July	11,902.
Week ending 11th July	12,826.
Week ending 18th July, about	13,800.
Total	£87,027.

Which for seven weeks affords an average of £12,432.

It may be further remarked, that during the latter period of this return the weather has affected the receipts to the extent probably of from 1,000*l.* to 2,000*l.* weekly. As the rainy weather referred to came, however, very opportunely for the interests of agriculture, it may yet cease equally opportunely, and all the great interests of the country be thus preserved.

I am, your's, &c.

C.

London, July 22, 1841.

REYNOLDS'S PERMANENT WAY.

To the Editor of the Railway Times.

SIR,—A very careful consideration from time to time of the best and most economical method of constructing railways, appears to be of the utmost importance to parties interested in undertakings where so large an amount of capital has been and is still being invested. The attention of such is therefore respectively invited to a description of road combining the following advantages, and which is, with some modifications, and a more practical developement, the same in principle as that patented a few years since by Mr. Reynolds:—

1. The material of the bearer is of cast iron, and may therefore be considered as indestructible.

2. Any figure or description of rail may be adapted to the bearer with equal facility.

3. The bearer is continuous, and presenting consequently no rigid points of support is calculated to prevent, to the utmost possible extent, the wear and tear of engines and carriages passing over it.

4. An inspection of the section will show that the bearer posseses in practice nearly double the bearing surface of any other description of road, and the gauge and level of the rails may be far more firmly and accurately preserved, since in the process of repair, the ballast has never to be disturbed to the extent of more than a couple of inches from that surface.

5. The first cost is less than most, and the cost of maintenance at least 100*l.* per mile per annum less than any method hitherto adopted.

Upon portions of road laid down in 1838, upon the London and Birmingham line; upon the Great Western, in 1839; and upon the Birmingham and Gloucester, in 1840, to the extent of six miles of single way, the respective engineers have reported as follows:—

(COPY.)

London and Birmingham Railway, Engineering Department, Camden-station, January 28, 1839.

DEAR SIR,—Referring to Mr. Reynolds's letter to the Board, requesting a Report on the rails laid down near Kilburn in July last, I have to state that they have for some time past remained in very good order, and without any extraordinary attention or expense of repairs, the line and level of the rails have been accurately preserved, and little or no difference can be perceived between them and the ordinary rails. I consider them more rigid than ordinary rails laid on stone block, and consequently more so than ordinary rails laid on wooden sleepers. The absolute quantity of motion experienced when in a carriage, is less than on other parts of the railway laid on wooden sleepers, the additional rigidity gives to the motion a feeling of hardness, but certainly not to the extent which can be considered objectionable.

Your's, truly,

(Signed) ROBERT STEPHENSON.

R. Creed, Esq.

(COPY.)

Great Western Railway, 18, Duke-street, Westminster, March 8, 1839.

MY DEAR SIR,—In compliance with your request that I should give you a Report of "the behaviour of the portion of your permanent way" laid on the Great Western Railway, I have to state that the rails appear to be kept in good order with but little labour or expense; that they present a level and rigid surface, upon which the engines and carriages run very steadily, but whether from the principle of construction, or defective workmanship of the rails, which are certainly very roughly rolled, there is a harshness and vibration which I think objectionable.

I am, my dear Sir, yours truly,

J. K. BRUNEL.

To J. Reynolds, Esq.

In allusion to the remark of Mr. Brunel as regards harshness and vibration, and of too great rigidity, as complained of in some instances by others, it may be necessary to observe that since those lines were laid, the improved modifications above alluded to have been practically applied and tested upon the Birmingham and Gloucester Railway, and the result has proved that those objections are thereby fully and satisfactorily obviated, as shown by the following Report of their Resident Engineer:—

(COPY.)

Birmingham and Gloucester Railway, Way and Works Department, June 30, 1841.

Dear Sir,—With reference to your request for my opinion as to "Reynolds's Permanent Way," I have no hesitation, so far as my experience of its use on a portion of this line, extends, in bearing testimony of its efficacy. The rigidity complained of has been much decreased by the late attestations made and when those contemplated are carried into effect, I have no doubt, of its being extensively adopted.

The simplicity of construction, durability of the materials and quality of repair, give it a decided advantage.

I am, dear Sir, yours truly,

(Signed) F. H. P. WETHERALE, Resident Engineer.

To S. W. Dawkes, Esq.

In the case of the Birmingham and Gloucester line the road has been adopted with a view to substitution of baulks and sleepers when decayed, and extensive contracts are being entered into for its construction, at little above the price of sleeper roads, and for maintenance for any number of years at one-half the cost of any hitherto in use.

I am yours very respectfully,

S. W. DAWKES.

Gloucester, July 12, 1841.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—Understanding that a considerable increase has occurred in the receipts of the Manchester and Leeds Railway, you will perhaps allow me to say a few words in regard to the future prospects of that concern: which until its branches are made, and its union with the Liverpool and Manchester line completed, is only to be considered as a line *partially opened*.

The district through which it runs being one of the greatest lines of industry, and population in the kindom, is a sure mine of future wealth to the proprietory, for to use mining language, it is only the surface stratum of the ore that has yet been made available. As to the horse coaches which still frequent the common roads of the district, I confess I cannot coincide with one of your late correspondents, in feeling any anxiety in regard to them, but on the contrary, consider it to have been abundantly proved by all our past experience, that no such competition with a parallel line of railway can permanently exist.

In railway matters it is sometimes necessary to look forward for a season, and perhaps there is no line in regard to which this is more necessary than the partially completed Manchester and Leeds.

Assuming that the branches which are now in progress, coupled with a junction with the Liverpool line, would increase the revenue in future seasons by 1,500*l.* per week, the calculation of revenue and dividend for those seasons would stand thus:—

52 weeks at £5,500 per week		£286,000
Deduct interest on 1¼ million	£75,000	
Ditto, working expenses 40 per cent.	114,400	
		189,400
Net		£96,600

which, on one million and a half of paid-up capital is 6*l.* 8s. 9d. per cent. taking the shares at par, or 9*l.* 0s. 3d. per cent. on their present price of 50*l.*

I am, Sir, yours, &c.

A SHAREHOLDER.

London, 22d July.

DANGER FROM TOO CLOSE APPROXIMATION OF RAILWAYS TO THE COMMON HIGHWAYS.

To the Editor of the Railway Times.

SIR,—Your paper being the communicating medium upon all matters connected with railways, I beg to call your attention to what appears to me to be either a singular oversight, or else a highly culpable disregard of the public safety—I mean the dangerous approximation of the Great Western Railway to the turnpike-road about half-way between Bathford and Box, without any fence or boarding of any description to prevent the serious accidents which might arise from the effect which the passing of a train produces on many horses. At the part I allude to, the railway passes on an exact level with the road, and the rail itself is not more than three yards from the edge of the road, with nothing intervening but the common railway fence. You may easily imagine the effect a train passing at speed might produce on many horses of mere ordinary spirit. I nearly met with an accident to-day; and with many persons I have no doubt it would have been attended with loss of either life or limb. I was unfortunate enough to meet the train at this critical point, and my horse, which is really a quiet one, became so terrified that had it not been for the aid of a man working on the road, who ran to my assistance, it would have been impossible to have prevented him rushing over the low stake fence on the opposite side of the road. "Public safety" is a great word in the mouths of Directors; and in my humble opinion the provisions for it ought not to be confined merely to persons travelling by their conveyance. In the present case, a fatal accident might happen in one minute; and the probability of such being the case is so apparent, that the neglect of some precautionary measures must really imply an utter disregard to the safety of persons passing on the road.

You will oblige me by inserting the above remarks in your intelligent paper, that the attention of the persons concerned may be directed to the evil.

I am, Sir, your obedient servant,

A COMMERCIAL TRAVELLER.

P. S. Since writing the above, I am informed by a gentleman that there is a similar place near Swindon.

Bath, July 19, 1841.

BATH, SOMERSETSHIRE.—To be Sold for £900, or exchanged for approved Railway Shares, a Substantial Freehold Dwelling House, in good repair (now void, but recently let on lease at £65 per annum), with garden, being No. 4, Rochfort-place, consisting of entrance hall, kitchen, servants' hall, Butler's pantry, scullery, wine, beer, and coal cellars, water-closet, dining, breakfast, and drawing rooms, with 10 bed rooms, with an uninterrupted view both at the front and back part thereof.

These premises are subject to a ground-rent of £3 per annum, are well supplied with water, and are within five minutes walk of the principal buildings in Bath.

Apply to Mr. Salmon, No. 1, Brunswick-square, Bristol.

FOR SALE BY PRIVATE CONTRACT.—A new Iron Steam Boat of 269 tons register, inclusive of Engine Room, and of 146 tons, exclusive length on deck 125 feet, breadth over the paddle box wing wales 37 feet. Propelled by two engines of 80 horses power. This Steamer is ready for immediate use, and is particularly well adapted for navigating a river of some length, or for short sea passages. Draught of water when loaded, 36 inches, and sails very fast with the lowest consumption of fuel.

Has a neat finished saloon, ladies and dining cabins, and stewards pantry, aft, and dining and captains cabins, stewards pantry and other apartments forward. For further particulars and terms apply to James Robinson and Co., Engineers, 150, Fenchurch Street.

LONDON AND BRIGHTON RAILWAY.—ALTERATION of TIME on and after SUNDAY, July 25.—This railway is now open from London to Haywards-heath, near Cuckfield, for the conveyance of passengers, parcels, horses, and carriages. The trains will run as under :—

Down Trains will leave the station at London-bridge at half past 9 and half past 11 a.m., and at half-past 1 and 5 p.m. A Down Train to Croydon only at 9 p.m.

Up trains will leave the station at Brighton at 7 and 9 a.m., and at half-past 12 and half-past 4 p.m. The first train on every Monday morning will leave Brighton at half-past 6 o'clock.

Sunday trains, down, will leave the Station at London Bridge at 8 a.m., and at 2 and half-past 5 p.m. A Down Train to Croydon only at half-past 9 p.m.

Sunday trains up, will leave the station at Brighton at 7 a.m., and at quarter past 5 p.m.

Passengers will be conveyed by coach between Hayward's heath and Brighton, and the fares throughout from London to Brighton, or from Brighton to London, will be—for the first class carriages, 10s., and for the second class, 11s. Children under 10 years of age half price. The whole journey will be completed in four hours. Passengers will not be conveyed from Brighton to Hayward's heath unless proceeding by the trains. Fares to or from Croydon, first-class carriages, 4s., second-class, 1s. 6d.

In order to insure conveyance between Hayward's heath and Brighton, passengers for the whole distance must book their places on the preceeding day at either of the following offices :—

Griffin's, Oxford-street, Green Man and Still; Hatchett's, Piccadilly; 41, Regent-circus; Spread Eagle, ditto; Golden Cross, Charing Cross; George and Blue Boar, Holborn; Old Bell, Holborn; White Horse, Fetter-lane; Cross Keys, Wood-street; Spread Eagle, Gracechurch street; or at the station, London-bridge; at all of which places parcels may also be booked; and in Brighton at the Blue, the Red, and the Spread Eagle coach and railway offices, Castle square.

Bills containing the time of departure from and the fares between the intermediate stations, the terms for conveying horses and carriages, with every other requisite information may be obtained on application at the termini at London-bridge and Brighton; at the respective booking offices; or at the offices of the Company, 10, Angel-court, Throgmorton-street.

By Order,

THOMAS WOOD, Sec.

July 24, 1841.

LONDON AND BRIGHTON RAILWAY.—CROYDON TRAINS—ALTERATION OF TIME on and after Sunday, July 25.

DOWN TRAINS

Leave London for Croydon at half-past Nine and half-past Eleven a.m., and at half-past One and at Five and Nine p.m.

UP TRAINS

Leave Croydon for London at half past Eight and 28 minutes past Ten a.m., and at 28 minutes past Twelve, 58 minutes past Three, and 58 minutes past Seven p.m.

SUNDAY TRAINS DOWN

Leave London for Croydon at Eight a.m., and at Two, half-past Five and half-past Nine p.m.

SUNDAY TRAINS UP

Leave Croydon for London at Seven and 28 minutes past Ten a.m., and at 3 minutes past Seven and 43 minutes past Six p.m.

Fares.—First-class carriages, 2s.; second-class, 1s. 6d.

By order,

THOS. WOOD, Secretary.

10, Angel-court, Throgmorton-street,
July 24, 1841.

LONDON and BRIGHTON RAILWAY COMPANY.—Notice is hereby given, That the next Half yearly General Meeting of the Proprietors of this Company, will be held pursuant to the Act of Incorporation, on Monday, the 9th August, 1841, at the London Tavern, Bishopsgate-street, at One o'Clock, precisely, at which meeting certain shares upon which the 8th and 9th calls remain unpaid, have been, in consequence thereof, declared forfeited under minutes of the Board of Directors of 13th November, 1840, and 13th May, 1841, will be submitted for confirmation of such forfeiture.

The Transfer Books of this Company will be closed 26th July, and remain closed until after the meeting.

JOHN HARMAN, Chairman.
THOS. WOOD, Secretary.

London and Brighton Railway Office, 10, Angel court, Throgmorton street, July 16, 1841.

MALLEABLE IRON RAILS.—TO IRON MASTERS, RAILWAY CONTRACTORS, COLLIERY AGENTS AND OTHERS.—The Great North of England Railway Company propose to sell by PRIVATE CONTRACT, the following quantities of Iron Rails and Chairs, viz :—

23 tons of 22lbs. Parallel Bar.
350 tons of 56lbs. of Flange Rail.
18 tons of 56lbs. of Flange Rail.

with 5870 Chairs, from 7 to 14lbs. each, suiting to the above Rails.

For further particulars apply to Henry Whitwell of Darlington, the Company's Resident Engineer.

Darlington, 14th July, 1841.

NORTHERN AND EASTERN RAILWAY.—Opening of the line to Harlow.—The Public are informed, that this Railway will be Opened to the Turnpike Road, near Harlow, on Monday, the 9th of August, and for the first fortnight the Trains will run as follows :—

DOWN TRAINS from London to Harlow.	UP TRAINS from Harlow.
Eight Morning.	Half-past Eight, Morning.
Half past One, Afternoon.	Half-past Eleven, Morning.
Half-past Four, Afternoon.	Half-past Four, Afternoon.
Half-past Seven, Afternoon.	Half past Six, Afternoon.
And on SUNDAYS.	
Half-past Nine, Morning.	Half past Eight, Morning.
Half-past Five, Afternoon.	Half-past Three, Afternoon.
Half-past Eight, Afternoon.	Half-past Seven, Afternoon.

The fares to Harlow will be 2s., 1s. 6d., and 1s.; and to Roydon, 1s., 9d., and 6d.; in addition to the Fares now charged to or from Broxbourne, for First, Second, and Third Class Passengers respectively, making the whole Fares to or from London as follows :—

	1st Class.	2nd Class.	3rd Class.
London to Harlow.....	5s. 6d.....	4s. 0d.....	2s. 6d.
London to Roydon.....	4s. 6d.....	3s. 3d.....	2s. 0d.

Third Class Carriages will be run with the First and Last Trains only in each direction on Week-days, and with all the Trains on Sundays.

WILLIAM BOURNE, Secretary.

Shoreditch, London, July 21, 1841.

STAFFORD AND RUGBY RAILWAY COMPANY.—Notice is hereby given that a General Meeting of the Subscribers will be held on Tuesday the 10th day of August next, at twelve o'clock at noon, at the Company's Offices, for the purpose of considering and determining, in pursuance of the provisions of the agreement constituting the said Company, whether, and upon what terms, the same Company shall be dissolved, and the affairs thereof wound up; and to adopt such resolutions in the premises as to such meeting may appear expedient.

By order of the provisional Directors,

RICHARD FOSS, Secretary.

Company's Offices, No. 23, Bond-street,
Manchester, July 12, 1841.

WANTED TO PURCHASE, immediately, one or two LOCOMOTIVE ENGINES, that have not been used, and in good working order; they must be 4 feet 6 inches in gauge, and from 11 to 12 inch cylinder.

Any communications (post-paid) stating particulars, addressed J. W., care of Johnston and Co., Eden Quay, Dublin, will meet immediate attention.

TO CONTRACTORS.—THE WISHAW AND COLTNESSS RAILWAY COMPANY want TENDERS for lengthening the present Tunnel, constructing a new one, and making excavations and forming a portion of the double line of said Railway.

The above works are situated on the lands of Carnbroe, near Orchard Farm, in the parish of Bothwell and county of Lanark.

The new works extend to about nine hundred and eighty lineal yards, and the length of the new or additional Tunnel will be about four hundred and seventy-three lineal yards, and it is to be fifteen feet ten inches above the level of the finished Railway to the soffit of the arch, and thirteen feet wide within the finished masonry, as the said works are more fully described in the Plans, Sections, and Specifications of the same prepared by John Macneill, Esq., Civil Engineer. The maximum distance for depositing the stuff to be removed from the excavations is one and a half miles.

Persons desirous to Contract for the Works are to state a slump sum for executing the whole. The Company will not be bound to accept of the lowest offer for the works

The Plans, Sections, Drawings and Specifications, will be ready for inspection on and after Monday, the 2d day of August next, at the office of Mr. Macneill, 9, Whitehall-place, London; the house of Mr. Robert Dodds, at Woodend, by Bells hill; and at the office of the Clerk of the Company, No. 36, Miller street, Glasgow, with the last of whom Tenders for the work must be lodged on or before the 23d day of August next.

Mr. Robert Dodds, the Company's Resident Engineer, will be on the line of Railway at the south end of the Tunnel on the Lands of Carnbroe, by Bells hill, on the Monday, Wednesday and Saturday in each week, on and after the 2d proximo, from 10 o'clock a.m. to 12 o'clock noon, to give such explanations regarding the work as may be required by intending offerers.

36, Miller-street, Glasgow, July 19, 1841.

A SINGLE SHARE of £100 in the POLYTECHNIC INSTITUTION, to be disposed of.

Apply to Mr. Sibson, No. 18, Wellington Road, St. John's Wood, Marylebone.

TO THE SHAREHOLDERS IN THE EDINBURGH, LEITH, AND NEWHAVEN RAILWAY. The History and Mystery of the *so-called* Edinburgh, Leith, and Newhaven Railway Company, containing a full exposure of the delusions practised from the period of its projection in 1835 to the close of 1840 will be sent *gratuitously* to any Shareholder previously to the next General Meeting, to be held in Edinburgh on the 29th July instant, on his forwarding in the meantime his name and address to A. B. Box. 266, Post Office, Bristol.

WOOTTON BASSETT, WILTS.—FORTY HORSES AND FIFTY SETS OF HARNESS FOR SALE.—TO WAGGON MASTERS, CARRIERS, FARMERS AND OTHERS.—C. HUNT has received instructions from the Proprietor, Mr. Bedborough, to SELL, without reserve, on Thursday, the 29th instant, FORTY useful Cart and other HORSES in good working condition, together with about Fifty Sets of Capital Thill and Trace Harness.

The sale will take place close to the Wootton Bassett Station, and commence precisely at one o'clock.

Catalogues may be had of the auctioner previous to the sale.

July 13th, 1841.

STEAM SUPERSEDED.—An account of the Electro Magnetic Engine, which has been applied with complete succes to the propulsion of locomotives, ships, mills, and every species of mechanical movement. With drawings of the machinery and necessary apparatus.—Price 2s.

Sherwood and Co., Paternoster Row; and Roake and Varty, Strand.

TO ENGINEERS, SURVEYORS, CONTRACTORS, and OTHERS.—WANTS EMPLOYMENT a PERSON to Design, Estimate, take Plans, Superintend or Keep Accounts, the whole or part of the Week.

Address (post paid) T. B., No. 1, George-street, Cambridge Heath, Mile End, London.

SPECIFICATIONS OF RECENT PATENTS.—The MECHANICS' MAGAZINE, No. 987, price 3d., contains abstracts of the following patents recently enrolled, specificating—Day's, for certain improvements in the construction of collars for horses and other draught animals; Child's, for improvements in the manufacture of bricks and tiles, part of which improvements are applicable to compressing peat and other materials; Gunter's, for improvements in preserving animal and vegetable substances; Swindell's, for certain improvements in the manufacture of artificial stone, cement, stucco, and other similar compositions; Thompson's, for improvements in the construction and mounting of various kinds of brushes and brooms; Lacey's, for certain combinations of vitrified and metallic substances, applicable to the manufacture of ornaments, and the decoration and improvement of articles of domestic utility, and of household furniture—also applicable to church windows and ship lights; Uzielli's, for improvements in impregnating and preserving wood and timber for various useful purposes; Hancock's, for certain improved means of preventing accidents on railways.

This number also contains a copy of the correspondence between Sir Joseph Banks, Bart., President of the Royal Society, with the plan of steam navigation Mr. Oxley forwarded to the Royal Society eight years before the general introduction of steam vessels in England; Mr. Pilbrow's remarks on his condensing cylinder steam engine; Mr. Scott's solution of "I. O. N.'s" 4th mathematical question; Remarks by Mr. Baddeley on the comparative durability of zinc; Chloride of zinc—an inquiry; Directions for the preservation of boots and shoes; Rotation of the Sun; Population of Birmingham; Appointment of Mr. Vignoles to the professorship of civil engineers in the London University; Advice to shavers, &c. &c.

Mechanics' Magazine, Vol. 34, illustrated with nearly two hundred engravings, is now ready, price eight shillings, in boards.

Published at the Mechanics' Magazine, Patent, and Designs Registration Office, 166, Fleet-street, and sold by all Booksellers and Newsmen.

, Intending Patentees, or Patentees of unspecified inventions, may have every needful information and assistance on moderate terms, by application to the office of this journal; where also may be consulted the only complete Registry extant, of patents from the earliest period, (A. D. 1617,) to the present time.

Just published,

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.

Published at the *Railway Times* Office, 122, Fleet-street, and sold by all booksellers.

Just published, price 6d.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London, and correct Railway Time Tables,

Also by the same person, price 6d.,
TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, with a Map, &c.

Published at the *Railway Times* Office, 122, Fleet-street Bell, Fleet-street, and sold by all Booksellers.

Just published, a new Edition of ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Maps, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

Published at the *Railway Times* Office, 122, Fleet-street,

The Third-Class Carriages convey passengers with the Trains only from New Cross to Croydon and back, stopping at all the intermediate stations, at the above hours.

OMNIBUSES leave the British Booking Office, Cockspur-street, Charing Cross, proceeding over Westminster Bridge, to the Elephant and Castle, by the Kent Road, for New Cross Station, daily (including Sundays), Morning at 25m. past 8, and 25m. past 9; Afternoon at 20m. before 4, and at 20m. before 5; to meet the Trains from London to Croydon. And start from New Cross Station for Charing Cross, in the Morning on the arrival of the 5m. past 9, and 5m. past 10 o'Clock Trains; in the Afternoon on the arrival of the 20m. past 4, and 20m. past 5 o'Clock Trains from Croydon.—The journey between New Cross and Charing Cross will occupy 45 minutes only. Fare, 6d.

R. S. YOUNG, Secretary.

205, Tooley-street, July, 1841.

SOUTH-EASTERN RAILWAY COMPANY.

—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven, or Ten Years, at the option of the Lender, and to grant mortgages of the rates and tolls of their undertaking, as security for the same, bearing Interest at the rate of 5 per cent. per annum, payable, half yearly, at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and the term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary, at the Company's Office, 10, Coleman-street, London.

By order of the Board of Directors,

J. S. YATES, Secretary.

YORK AND NORTH MIDLAND RAILWAY.

—NOTICE is hereby given, That the Half-yearly General Meeting of Proprietors of Shares in the York and North Midland Railway Company, will be held, in pursuance of the provisions of the Act of Incorporation, in the Offices of the said Company, in Tanner-row, in the City of York, on Tuesday, the 10th day of August next, at 12 o'Clock at noon, precisely.

GEORGE HUDSON,
Chairman of the Board of Directors.
GEORGE BAKER,
Clerk to the Company.

York and North Midland Railway Office,
York, 21st July, 1841.

BRISTOL AND EXETER RAILWAY COMPANY.

—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200. for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 80, Broad-street, Bristol, 5th Feb., 1841

SHEFFIELD, ASHTON-UNDER-LINE, AND MANCHESTER RAILWAY.—CALL FOR ELEVENTH INSTALMENT.—The Directors of this Company having resolved to make a CALL under the provisions of the Act of Parliament for an Instalment of Seven Pounds Ten Shillings per Share, Notice is hereby given, that the several Proprietors in the Capital Stock of the said Company are required to pay the said Call or Sum of Seven Pounds Ten Shillings on each of their respective shares on or before the 1st day of September next, to one of the undermentioned bankers, viz.:—

Sheffield—Messrs. Parker, Shore, & Co.
Manchester—The Manchester and Liverpool District Bank.
London—Messrs. Rogers, Olding, & Co.; and Messrs. Smith, Payne, & Smith.

Interest after the rate of 5 per cent. per annum will be charged by the bankers on all such sums as shall remain unpaid after the said 1st day of September next until payment thereof.

The Directors take this opportunity of stating that £5 per cent. per annum is allowed on all sums paid in advance.

By order of the Directors,
JOHN PLATFORD, Secretary.

15, Piccadilly, Manchester, 16th July, 1841.

TO RAILWAY CONTRACTORS, BUILDERS, &c.—SALE of RAILWAY PLANT.—Messrs. SAMUEL PATTESON and CO. having completed their contract, near Stockport, on the Manchester and Birmingham Railway, announce their intention of Selling by AUCTION, about the middle of August (if not disposed of by private treaty previously), the whole of their Railway Plant, consisting of 200 tons of flange bottomed rails, 35 to 40 lb. per yard; a great quantity of sleepers; 80 earth waggons, 2½ yards each, 4-8 gauge, 2-6 wheels, and 3 inch axles; 20 horses and geers, eight carts, an excellent four-wheeled stone lurry, a large quantity of centering, timber, smiths' tools, &c. &c., the whole of which may be seen on the works, Edgeley, near Stockport.

Also, a Crane, suitable for the erection of bridges or viaducts, &c. with traverse motion, single, double and treble geering, and blocks and chain complete, capable of lifting from 10 to 15 tons, and is now standing near the station, Fairfield-street, Manchester.

Previous to the Sale by Auction (of which due notice will be advertised), further particulars may be obtained from Mr. Samuel Patteson, Manchester; or Mr. John Worsley, on the works at Edgeley.

ULSTER RAILWAY COMPANY.—In compliance with a resolution of the Directors this day entered into, I hereby give notice, that they have made a Tenth Call for the sum of Two Pounds Ten Shillings sterling on each and every Share of the Company's stock, payment to be made on or before the 1st day of September next to the Northern Banking Company, Belfast, or any of their branches, to Messrs. Boyle, Low, Pim, and Co., their agents in Dublin, or to Messrs. Brown, Shipley, and Co., of Liverpool.

Dated at the Railway Office, Belfast, this 1st day of July, 1841.

JAMES GODDARD, Chairman of the Directors.

In tendering the money as above, it will be necessary to state the number of each share on which the instalment is paid.

Interest at the rate of five per cent. per annum will be allowed to the 1st of September on all sums paid of this call in advance.

NORTH MIDLAND RAILWAY.—The Directors will meet at the Railway Station, Derby, at Ten o'Clock, on Saturday, the 7th of August, to receive Tenders for the maintenance of the Way and Works between Masborough and Leeds, being a distance of 33 miles, or thereabouts, divided into four or more separate lengths, for one or more of which parties may tender.

Drafts of the contract, with a specification of the work, will be ready for inspection on and after the 28th of July, at the Engineer's office, in Chesterfield, where parties may obtain orders, allowing them to walk along and inspect the line.

A printed form of Tender may be had after the above date, at the Engineer's office, in Chesterfield, and no others will be attended to.

The Tenders must be delivered at the office of the Secretary, H. Patteson, Esq., at the Railway Station, Derby, on or before 10 o'clock on Saturday, the 7th of August, under a sealed cover, addressed to the Secretary, and indorsed "Tender for Maintenance of Way and Works," and the parties tendering must be in attendance at the time of meeting.

The parties, whose tenders are accepted, will be required to enter into a bond, with two responsible sureties, for the due performance of their contract; and the names of the proposed sureties are to be specified in the tender.

The Directors do not bind themselves to accept the lowest offer.

Engineer's Office, Chesterfield, July 16, 1841.

NORTH MIDLAND RAILWAY.—THIRD SHARES.—SECOND CALL OF £5 PER SHARE.

NOTICE is hereby given, That in pursuance of a resolution of the Board of Directors, the Proprietors of Shares in this Company are hereby required to pay a Second Instalment of £5 on each of their respective Shares, on or before Friday, the 30th day of July, to any of the undermentioned Bankers.

Interest at £5 per cent. per annum will be charged on all such sums as remain unpaid after the day above appointed.

London—Messrs. Glyn and Co.; or at the office of the Railway Company, 6, Warnford-court, Throgmorton-street.
Leeds—Messrs. Becket and Co.
Derby—Messrs. Crompton, Newton, and Co.
Liverpool—The Bank of Liverpool.
Manchester—The Union Bank of Manchester.

By order,
G. C. GLYN, Chairman.
H. PATTESON, Secretary.

Offices, 6, Warnford-court, Throgmorton-street,
London, July 5, 1841.

ANDREW SMITH'S PATENT WIRE ROPES,

for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, TINNING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad-street, City; 69, Princes-street, Leicester-square; Manufactory, Mill-wall, Poplar; and also of the following Agents:—

Robertson and Co., 12, Goree Piazzas	Liverpool,
Mathias Dunn	Newcastle-upon-Tyne
Joseph Bothway	Plymouth.
John Thompson and Co.	Wigan.
J. T. Tregellas	Truro.
Thomas Mooney and Son	Dublin.
Coates and Young	Belfast.
James Kibble and Co.	Glasgow.
James Gunn	Leith.
John M. Beatts, 14, Clement's-lane, High-street,	Dundee.

This rope has been in use for standing rigging in her Majesty's navy, and in a great number of merchants' ships for upwards of five years, and is giving the highest satisfaction; the rope is also employed in various mines and railways in different parts of the kingdom, but reference is especially made to the Blackwall Railway, where its capabilities have been most severely tested, for although it has been in use upwards of ten months, and has travelled a distance nearly equal to the circumference of the earth, it is to all appearance as good as when first applied.

hours; was there any subsequent meeting held upon the same day?—Yes, in the same room.

878. Have you any objection to state what the object of the second meeting was?—The object of the second meeting, which certainly appeared to me much the more rational one of the two, was to appoint a Committee in London to watch the proceedings of the House as to the proposed measure.

879. Was that attended by the same parties as attended the previous one?—It was; in the same room; the same meeting of the same people.

880. What was the object of separating the two meetings, that is to say, having two distinct meetings, when the same parties were to attend both, and the one meeting was immediately to follow the other? The first meeting was called expressly in consequence of the circulars for a meeting to consider something connected with the public safety. It was then thought by several, I think before that meeting broke up, that it was desirable that some central body should be formed in London to watch the proceedings; and it was said, that of course there must be a separate meeting, and therefore the Chairman rose from his chair, and was re-appointed.

881. Then the first meeting was not called with the idea of constituting, by the appointment of a Committee or otherwise, an opposing body in London, but that arose out of what took place during the first meeting?—Yes.

882. Then, in strictness, it was felt that the first meeting, being called for a specific object, could not fairly take that question into consideration?—Yes.

883. The same Chairman presided at the second meeting?—Yes.

884. Mr. Fresfield—Were the subjects of discussion at the first meeting reconsidered at the second meeting?—No; it was simply the appointment of a few gentlemen in London, who were to communicate to the railways generally anything that occurred that affected the interest of the railways.

885. Did you find a growing doubt whether the objects of the first meeting could be carried out?—The majority certainly at the first meeting were of opinion that the objects could not be carried out; that it was a failure.

886. Did you find that same feeling growing even at the first meeting, from the beginning of the meeting to the end?—Decidedly.

887. Mr. Labouchere—At the second meeting, you have stated that a Committee was appointed to come to London, and to watch the proceedings of the Government and of the legislature upon this subject?—Yes, and anything that affected the interests of the Railway Companies.

888. Do you know whether the gentlemen appointed by that meeting expressed to the House and generally in which you have done to this Committee, in the communications which they had with the Government, their intention to oppose altogether the principle of any discretionary power to issue regulations upon points affecting the public safety upon railroads?—I do not suppose that they would, as a matter of policy, have stated it in that manner. I am called here and asked and allowed to state my opinion plainly, and therefore I have done it; but I should not imagine that it would have been either politic or wise, or that it would have been thought right, that the Committee thus appointed should volunteer to state to the Government or to the Members of the House of Commons, that they should oppose directly with their whole strength any Bill that was brought forward. I am quite sure of this, that one member of that Committee (the Committee consisted of three) felt exactly as I have expressed my feelings upon that point.

889. Have you seen the clause which has been drawn up on the part of the railways, and which has been proposed as a substitute for the 11th clause in the Bill now before Parliament?—I have.

890. What is your opinion of that clause?—I think it is a degree better than the 11th clause; but I think it was unwise to propose any such modification, because I am quite sure that those who proposed it consider that that also is very objectionable.

891. You conceive that the proposing that clause was rather a concession to what the Railway Companies considered to be the sense of the public and the legislature upon that subject, than as expressing what they really believed would be for the public advantage?—I know that it was actually proposed as a concession; and I know that if it can be admitted for a moment that the Companies were, as it were, treating for concession with the Government, they consider that that concession not having been at all granted, and they having been expressly informed, on the contrary, that there could not be a concession, I know it to be their view, that it should be considered that they oppose the whole clause altogether.

892. Do you believe that there would be any material advantage in adopting the clause proposed by the Railway Companies, but which you have said they now desire to withdraw, rather than the clause, as proposed by the Government in the Bill before Parliament?—In reading them, I have always considered them both so objectionable that I have not gone into the question of comparison between the two.

893. Your objection is to giving any discretionary power at all?—I have stated so.

894. Lord Granville Somerset—You were understood to say that the same parties appointed this Committee of Management as were at the first meeting?—Yes.

895. Consequently this Committee of Management, appointed by the vote of that meeting, represents about 50,000,000 of capital in railroads?—Not exactly; because it was understood that this Committee should call the Companies together upon any important point.

896. Practically speaking, who do these three gentlemen represent at this moment; do you believe them to represent all the parties who were at that meeting, or have any signified their dissent?—I do not consider them practically as representing that meeting.

897. Then what would satisfy them might dissatisfy others?—I think very likely.

898. Then, in fact, do you conceive that those gentlemen represent anybody but the three Companies with which they are individually connected?—Only to that extent, that they must feel some responsibility placed in them; and if they all three committed themselves to agree to anything on the part of the other railways, I think the other railways would feel themselves bound by that; but I am sure those three gentlemen would not commit themselves to any concession.

899. Sir James Graham—Who are the three gentlemen?—Mr. Glyn, Mr. Charles Russell, and Mr. Chaplin.

900. Mr. Glyn is Chairman of the London and Birmingham?—Yes; Mr. Russell is Chairman of the Great Western, and Mr. Chaplin is Deputy-Chairman of the South-Western.

901. Mr. Labouchere—Was the amended clause which has been referred to adopted by those gentlemen?—I do not know.

902. Sir James Graham—Is your view of the amended clause this, that it might be less pernicious than the other, but would not be generally useful?—They are both so objectionable, that I hardly know which is the best.

903. On the balance of the two, you find it difficult to say which you think would be most pernicious?—I think that any such power will lead to such mischief, that at the end of six months the Board of Trade will be heartily sick of the power; I think they will have got into such difficulties in the exercise of that power, that the only remedy to all these difficulties must be, if they will do such a thing afterwards, as to give up a power they once possessed; I think the difficulties arising from it will be so complicated, and, in plain English, they will get into such a mess, that the thing must be dropped.

904. Although the performance of a public duty may be painful to the officer who exercises it, may it not be very salutary to the public?—When I say painful, I mean because he will see that he fails entirely in the object; when I say that the Board of Trade will be sick of it, I mean because they will find, that while they are daily attempting to exercise the power, they do not attain the object for which it was sought; I mean that a disagreeable feeling would arise from every day being aware that they did not, and could not attain the object they sought for.

905. Mr. Freshfield—Do you happen to know that several of the Companies which attended that conference have sent special deputations to oppose the Bill altogether?—I think pretty nearly all but one have in one way or other sent deputations, or sent petitions, or joined in the opposition; and to balance that one, another has come which was not at the meeting. The Grand Junction Railway Company was not at this meeting; they, I believe considered that the meeting could lead to no good, and therefore they expressed that opinion by not attending; they, however, are just as opposed to this measure as any Company can be.

906. Do you understand that they also object to the proposed substituted clause?—Decidedly; I believe they were no parties to the proposal of it.

907. Lord Granville Somerset—Can you explain to what extent these three gentlemen were deputed by the body of gentlemen composing that meeting, and to what extent that body considered themselves bound by their decision?—No, because the thing was not very well done. It was done in a confused manner, and in a hurry. Those three gentlemen were appointed for the purpose of watching any proceedings which might affect the railway interests, and of course therefore had a certain degree of power and trust reposed in them; how far exactly that might extend, and how far exactly the other Companies might feel themselves bound, I do not think they can tell.

908. Are all the parties who were present at the second meeting, when the Committee was appointed, expected to contribute to their share of any expense which either the investigation here or the opposition in Parliament might occasion?—Yes; there was no idea of incurring any expense in Parliament at that time; but it was stated that there must be a Secretary, and that there must be some small expenses incurred, and it was agreed that all those present would pay their share, and that any Companies not present should be written to.

909. Sir James Graham—Do you hold that all the parties who were present at the meeting at Birmingham, and who consented to the appointment of the Committee, are bound by the acts of the Committee, saving only the Grand Junction, which was not present?—Not by any act; the Committee have not unlimited power.

910. Supposing that they had framed a clause as an amendment to the 11th clause, and that had been adopted by the Government, should you hold that those Companies would be at liberty to oppose that clause, when those three individuals delegated by them had drawn the clause?—If the three individuals delegated by them had agreed that that clause should be adopted, I do not think the Companies would oppose it; some one or two might, but the body of the Companies, I presume, would not; but that is a case which it is almost unnecessary to suppose, because I am sure those three individuals would not recommend this clause. They may have said, "If you are determined to pass a clause giving the power that you propose, do modify it in some way like this;" but they did not for a moment offer this clause as a clause which would satisfy them at all.

911. Supposing they had tendered that clause as a clause which they would recommend in lieu of the 11th clause, do you hold that the parties who delegated them would be bound by that Act?—I think they would, but I am sure that those three gentlemen never did, and never would, advance this clause as a clause they would recommend; they may have said, "Reduce it, at all events, to this; limit our punishment or our difficulties to 19 instead of 20."

912. Lord Granville Somerset—Do you know under whose management this clause was drawn up, and with whose cognizance?—I believe I know how it was drawn up. The printed clause I believe to have been drawn up by parties not being this Committee of Management.

913. Were you consulted in the drawing up of that clause, previous to its being produced?—No.

914. Mr Greene—From your constant communication with the parties, do not you know they object altogether to the principle of any interference at all?—Most decidedly.

915. Mr. Labouchere—Was it not the case that, conceiving that they would not be able successfully to resist, in the then state of public feeling, the adoption of something like the principle contained in the 11th clause, their object was to give that discretionary power to the Board of Trade, with such limitations as would, in their opinion, make it less objectionable?—Thinking they could not successfully equal the strength of the Government in bringing forward a clause of that sort, they thought it would be better to get it a little reduced, rather than have it to the full extent to which it was proposed.

916. Are you aware that the London and Birmingham, the South Western, the York and North Midland, and other Railway Companies, have adopted, as part of their code, the regulations recommended by Sir Frederic Smith?—No, I am not aware of that; I believe that suggestions have been made by Sir Frederic Smith to one or two Companies, which have been adopted, but I do not know the extent.

917. How do you reconcile that with your statement that all general regulations that are worth adopting have been adopted long ago?—I believe that still; general regulations, I said; suggestions may have been thrown out of particular regulations by Sir Frederic Smith, which may have been adopted in each particular case, but certainly the general regulations have long since been known and adopted.

918. You have said that the accidents referred to in the reports of the officers of the railway department

Digitized by Google

arose from a number of minute causes conspiring together, and not from any cause that could have been foreseen and prevented; do you recollect the accident on the York and North Midland Railway, at Taylor's Junction?—Yes.

919. Do you think that accident would have happened if the system of signals at stations, which you have described upon your own line, had been used there?—There would have been less chance of its happening, but I do not know the arrangements of their stations, or the arrangements of their line; I do not know that the signals that we use at our stations would be applicable to them; I find in the Report, that from the want of certain signals the accident occurred, of course if that is the case, some more signals had better be given.

920. Is there anything else which you wish to state to the Committee?—The day before yesterday I stated that there were some other points upon which I conceived considerable objections existed. I am sorry that my examination has occupied the Committee so long, but will the Committee permit me to say I have not yet volunteered a single observation upon any of those? With the permission of the Committee, I will state one or two objections which have occurred to me as very strong against the proposed measure, upon two points. First of all the impossibility of distributing equally, justly and impartially, the regulations upon the different Companies, and the mischief that must arise from the inequality of the effect of those regulations upon different Companies, if it were only indirectly, by leading to opposition and absence of co-operation on the part of the Railway Companies. Even in the recommendations that have been made, there are several evidences of this. In fact, I believe it would be impossible to draw the line as to the extent to which public safety is to be attended to, in comparison with expenditure and other difficulties, or how far expenditure is to be sacrificed exclusively to public safety. It will vary from day to day, according to the state of excitement produced by accidental circumstances, or by the press, or by other causes. One or two instances I think will make it appear very striking. Sir Frederic Smith refers particularly to the question of six wheels to carriages. Now, I believe that there is no one single thing that perhaps is a larger element in the whole question of safety than having six wheels to the carriages; but Sir Frederic Smith very properly does not venture to recommend that you should call upon all the Companies which have four wheeled carriages to change to six. Probably, what with the alterations which would be required in the stations, and other indirect alterations, a million of capital would be thrown away by calling upon all the Companies to make that alteration. Therefore there a line is drawn. That expenditure is not to be incurred, because it is too large. And yet, take the London and Birmingham and the Grand Junction, and suppose you were to call upon them to change to six-wheeled carriages, I think it would be very unjust. But suppose they were called upon, perhaps a quarter of a million would do it with them; a quarter of a million upon their 36,000 shares, the interest of that at 4 per cent. (at which rate they could borrow the money) would only be 6s. per share, to attain that which it is admitted would add very much add to the safety of the public. Now, why is the line to be drawn exactly there? and why are they not to pay 6s. per annum out of their hundred pound shares, to attain greater safety, while another Company, a smaller Company, may be driven to a much larger proportionate expense for a less object? A diminution in the number of trains, or an increase of the police, or various charges of that sort, might produce a loss of two or three thousand a-year upon a small Company, and that might be more to them than the 6s. a share upon the London and Birmingham. How would it be possible for the officers to draw the line? They must either make up their mind to require everything whatever the cost might be, which could conduce to the public safety, or they must leave it to the public and to experience to point out what expense is worth incurring and what is not. You would impose upon the Great Western Company breaks to all their carriages, although we say it is not only useless but mischievous, and we would rather be without them; but you would not call upon the London and Birmingham and Grand Junction to adopt six wheels, because the expense is too great. It would be impossible that you should fail, in any order of that sort, to commit an act of injustice to some party or other, and probably to do that which would be ruin to a small Company, because you are obliged to order it upon a large Company.

921. Mr. Labouchere—Would not the Board of Trade, supposing the Bill now before Parliament were to become law, be enabled to take those circumstances into consideration with reference to the different Companies, and to frame their regulations so that they would not produce the effect you have described?—I believe it to be quite impossible, unless you put perfect faith in the recommendations of the parties which you shall have before you, which I need hardly say it would be very dangerous to do. How are you to judge of the facts except from the representation of those parties? Then again, if you are really disposed to receive the representations of parties, you will never pass a single order; because I am convinced that, with our knowledge of circumstances of detail, we can memorialise you in a shape and give reasons which it would be impossible for you to combat. Every single order that you made against a Railway Company, they could, if they were driven to it, make such representations to you, in answer, as would make it impossible for you to adopt it.

922. When you say, "if the Railway Companies were driven to it," you mean if the Railway Companies did not act in a spirit of fairness and good faith?—No; and I think the evidence of the officers of the Board of Trade shows that they are disposed to do so. When you stated that you wished to supervise the railways, and officers were employed to obtain information for that purpose, the Railway Companies proved their willingness to assist by making unlimited communications; any question that was asked was answered, and every information given. But you cannot assume for a moment that that will be the case when that is to be followed by a regulation to shackle that very Company. It would be absurd to suppose that they shall be giving evidence to your officers, the result of which in all probability is to shackle the Company, by imposing some regulation that will embarrass them, and which they believe will be mischievous.

923. If a regulation proposed by the Board of Trade is mischievous and unreasonable, is it not desirable that the Railway Company should have the means of opposing serious obstacles to the adoption of such a recommendation?—At one moment it is assumed that the Railway Companies are persons whom it is necessary to control by the fear of penalties and by laws, and at another moment it is assumed that they are such reasonable men, so devoted to the public good, that they will always actually take the trouble to keep you from going wrong, although some, if not all of them might say, I think very naturally, "No, let them get into difficulty, and then they will see how impossible it is to legislate upon it." I do not mean to say that they would say so, but that you will be exposed to that.

924. Supposing that the Railway Directors would be actuated by the motives and feelings which are generally found in gentlemen of their class and condition in life, is it not fair to suppose that if they found that the powers entrusted to the Board of Trade were exercised in a moderate and reasonable spirit, they would be disposed to co-operate, in order that those powers should be fairly carried into effect, and if, on the other hand, they found that the powers entrusted to the Board of Trade were exercised either injudiciously or intemperately, then is it not natural to suppose that they would strenuously resist the operation of any such powers on the part of the Board of Trade?—It is exactly that last case which, I believe, will arise. Not that the Board of Trade will act injudiciously and intemperately, but from the nature of things they will act injudiciously, that is to say, they will constantly propose regulations which cannot in practice be carried out, which unfortunately will be advanced on the plea of public safety, and it will be very awkward, therefore, for any Railway Companies to object to them, although they may feel that they will produce mischief. I can fortunately appeal to the conduct of Railway Companies up to the present time, as a proof that they are disposed to communicate in that manner, and to give information and receive suggestions. But I have no hesitation in saying, that I do not believe it will be so hereafter. I cannot believe that with a power held over them, which is to inflict upon them penalties for their admissions of faults, because that is what it practically amounts to—if I give full information, showing that there is any defect in our management, I shall know immediately that it will not be left to me to cure the defect, but that a regulation will be at once enforced, and which I cannot resist, as I have given the evidence upon which it is enforced. Is it reasonable, therefore, to suppose that I shall in future communicate freely? I have no hesitation in saying that I cannot, and that the Railway Companies are perfectly justified in saying this: "What reason have we to suppose, that when you have the power you will receive our evidence so liberally?" because I must say that they may be perfectly justified in saying, "You have already made a law as far as in your power lay—it has passed the House of Commons, or nearly so—enforcing a system which we believe will be most prejudicial. You have not heard us upon it; on the contrary, you have refused to hear us upon it—I refer to the licensing system—If that has been the case already, why should we suppose that when you have the power to do just what you please with us, and when you state that you intend to pass a certain regulation (although it is true you give us leave to memorialise) what ground have we for supposing that you will listen to our objections when you have full power to enforce anything?"

925. When you say that you had not an opportunity of fully stating your objections to the clause with regard to the licensing system in the Bill, do you mean that a Committee of the House of Commons was not appointed to investigate that part of the subject, or do you mean that you found any difficulty in stating your objections upon that point to the Board of Trade?—I never found any difficulty in stating my objections to the Board of Trade upon that or upon any other point, but it was then too late to raise objections to the licensing system; I volunteered my opinion upon it upon one occasion lately, but it was then too late.

926. Sir James Graham—The Bill was introduced?—The Bill was introduced, and practically it was too late.

927. Do you think it would be a bad example that, when the legislature shall have delegated a discretionary power to a branch of the executive Government the parties to whom that power shall be applied shall exercise any discretion whether they shall obey it or not?—I think, when a power is once vested in any branch of the executive Government, unquestionably the parties upon whom the power is to be exercised ought to have no power to disobey.

928. Presuming that before any regulation is ordered by the Board of Trade it has been well considered, your opinion is that, when once issued, it should be promptly and instantly obeyed?—Decidedly; and I believe, should the Bill pass, such would be the case with most of the Railway Companies.

929. You do not think it would be expedient, that when an order was issued there should be demur and correspondence with the Executive Government which issued the order, as to whether it should be obeyed or not?—I think that would be very bad.

930. You think it would be highly inexpedient, and would furnish a very bad example?—I think so.

931. Lord Granville Somerset—On a former day you stated that, supposing this power were given to the Board of Trade, you would then be mixed up to some extent in the fault of your servants, and that you would not exert the same scrutinizing power in sifting out and tracing the fault to the right man, when you were yourselves exposed to blame for it?—I think that would be the practical result.

931.* But supposing the Directors were able to show that it was not the fault of their system, but the fault of their servants, would not they have the same motives then as they have now for showing it?—I think not.

932. Is it not an object for persons at the head of authority, to show that they themselves are not individually responsible for any accidents which may occur, that it is from the fault of their subordinates, and not from their own, that the accident occurred?—The question immediately arises, what care did they take in the selection of their subordinates?

933. Would they not be anxious to show that they had taken proper care?—Unquestionably.

934. Supposing they can show that they took proper care, would there be any motive to them to take the blame of the misfortune, instead of casting it upon those individuals who were practically the cause of it?—No; only, unfortunately, there is another upon whom they can throw it, in the shape of "perfectly unaccountable accident," which would be the case in nine cases out of ten, unless the Directors and officers of the Company were most anxious to ascertain the cause; in fact, there would be an absence of any explanation: an accident occurs (accidents will occur in spite of every precaution, and in spite of all the care possible of the officers), but at present it is the interest of the Company, and of the officers of the Company, to try to ascertain whether any blame did attach to anybody, and to punish that individual; but, of course, to enforce regulations you must have penalties; in fact, as it stands in the Bill, a penalty of 20*l.* a day is inflicted upon the Company if any one regulation is not carried into effect; if the Company's servants neglect a regulation, the Company therefore is liable to a penalty of 20*l.*; can it be supposed that that will increase the desire of the Directors to ascertain whether their servants have neglected the regulations?

(To be continued).

GREAT NORTH OF ENGLAND RAILWAY —TRIBUTE TO THOMAS STOREY, ESQ. C.E.

[Abridged from the *Durham Chronicle*, July 23.]

On Wednesday last a splendid silver dinner service was presented to the above gentleman by a number of his brother engineers resident in various parts of the country, by different manufacturing firms, by contractors for the works of the Great North of England Railway, and by private friends—all of whom united in this flattering testimonial to the engineering merits and private worth of the gentleman on whom it was conferred.

The service consisted of a silver epergne, elegantly and elaborately chased; a full-sized soup tureen; two do. sauce do.; four double vegetable dishes, with handles to remove, and form eight dishes; two 12-inch salvers; four salt-cellars, gilt inside; four spoons do. to match; two gravy spoons; one fish slice; one soup ladle; two do. sauce. On the epergne, the tureen, and six other pieces, the following inscription, surmounted by Mr. Storey's crest, was beautifully engraved:—"This service of plate was presented to Thomas Storey, Esq., C.E., by a number of his friends, as a sincere, though inadequate tribute of the esteem and regard they entertain for his professional talents and private worth."

The weight of the whole was 642 oz., and the value 312*l*. The honour of supplying the service was conferred on Mr. Anthony Binks, silversmith, Blackwellgate, Darlington.

The presentation took place at the house of Mr. Britton, Fleece Inn. A dinner was given to Mr. Storey on the occasion, which, with the dessert, in every respect reflected the highest credit on Mr. Britton's establishment. Nicholas Wood, of Killingworth, Esq., C.E., presided; and the vice-Chair was occupied by John Harris, of Darlington, Esq., C.E. Among the Company (which comprised about 50 gentlemen) we likewise noticed the Rev. M. Chester, of St. Helen's, Auckland; W. A. Brooks, Esq., C.E.; John Green, Esq.; John Appleton, Esq.; Thomas Macney, Esq.; Joseph Stephenson, Esq., C.E.; John George Quelch, Esq.; J. R. Gray, Esq.; George Pickering, Esq.; Dr. Kilburn; James Hogg, Esq.; James Thompson, Esq.; Mr. Wm. Lister; Mr. L. Wanlass; Mr. Henry Dowson; Mr. Wm. Hutchinson; Mr. Wm. Booth (Sec. to the Presentation and Dinner); Mr. George Robinson; Mr. W. Shanks; Mr. Counsellor Dunn; Mr. Arch. Paxton, &c. &c.

When the cloth was drawn,

The Chairman gave, in succession, the customary toasts.

The Chairman then called for a bumper, and said—The gentleman whose health I mean to propose is known to you all—(cheers)—and I think it does not require any eulogium on my part to make known to you all that he deserves. I believe that most of the gentlemen here have known him for a very considerable time. I myself can claim his acquaintance for nearly 30 years. I have seen him from that time to this, I believe continually, in business, and as a private gentleman; and I am quite sure that I express the sentiments of every one present when I say that the occasion which has brought us together is a very inadequate one to express our feelings for his talents and his private worth. (Loud applause.) Gentlemen, I do not know that I need say much more upon Mr. Story's abilities and excellence of character. I shall, therefore, proceed to perform the task that has devolved upon me as Chairman of this meeting, which is, to present to Mr. Storey the very splendid piece of plate which has been subscribed by his friends. If the intention of presenting Mr. Storey with a testimonial of the regard of those who are acquainted with him, had been more fully known, I believe that instead of the service of plate before us being of the size that it is, it would have been very much larger and more valuable. I am quite sure that it is not known to one-hundredth part of his friends that the presentation of such a testimonial was intended; and therefore I can only say to Mr. Storey, that whatever he may consider the magnitude of the present we are about to make him, he must accept it as the best proof of our regard for his worth that we are capable of affording. (Applause.) Gentlemen, it is quite unnecessary for me to point out at any length the causes which have induced us to present this piece of plate to Mr. Storey. [One of the company said, "It speaks for itself;" followed by much applause.] Recently there has been a very rapid improvement in the communication between one place and another, by the establishment of railways. I believe that Mr. Storey has promoted to a very considerable extent the great work of more rapid communication by the means which I have pointed out. I speak, more particularly, of his connection with the details of railway communication; and I beg to observe, that I believe he has laboured more in detail to perfect the system than any of my brother engineers. (Very great applause.) Every one of us is capable of appreciating what he has done. It is not that his abilities have been taken from this district, and spread over an immense extent of country. We have seen him labouring, in this description of work, to perfect the construction of the railway, which I believe is a most tedious process, and one that requires the utmost talent and perseverance. It has, however, been Mr. Storey's lot to extend his services beyond the immediate district. Of the great line of communication between England and Scotland—the great chain of communication—he has had the good fortune to execute a link;—and I may add that it is a pretty long link. Now when I call to remembrance that it is 45 miles, I venture to say that this link will bear a comparison with any other link in the chain between London and Darlington. (Immense cheering.) Gentlemen, I have heard only one opinion of that link, which is, that it is the smoothest and best piece of road between London and here. (Cheers.) When I mention a "chain," I speak of the great lines of communication—the great public railways; and when I allude to the railway from Darlington, I do not refer to the various local lines which are more immediately connected with the transmission of coals; but I allude to the line between York and Darlington, which I think will bear comparison with any of the great lines that lie between this place and London. (Cheers.) Gentlemen, I have also seen Mr. Storey engaged in parliamentary business to a very considerable extent; and I know that the feeling of every one towards him, whether they were his opponents, or engaged in assisting him, was a feeling of respect for his conduct on all such occasions, which was that of the utmost urbanity and good-will towards every one with whom he became connected. (Cheers.) I need scarcely go on to say that he has observed the like demeanour to every one who has been concerned in the great works which he has executed. I think this free, though still inadequate, expression of opinion, is the best proof that we have but one feeling in the matter: and I believe that feeling to be universal among all whom Mr. Storey has had under him, or been connected with in any way whatever. (Applause.) I think the manner in which he has conducted these great works—the mode in which, in detail, he has carried them out—and his uprightness of conduct, have fully entitled him to any mark of our esteem which we had it in our power to bestow. Gentlemen, as I said before, I am afraid you must excuse my inability to do justice to the subject; but I think, after thus referring to Mr. Storey's public conduct, it is scarcely necessary for me to enter into any particulars of his private life, and of his demeanour as a family man. I believe he is a pattern to every one who has the feelings of a father; and his kindness as a husband and a parent, and his worth as a private individual, are well known to every one who resides in this district. (Applause.) And now I must beg Mr. Storey, on behalf of the friends who surround me, to present you with this piece of plate as a very imperfect expression of our feelings of respect towards you; or, to adopt the words of the inscription, as a sincere, though inadequate, tribute of the esteem and regard we entertain for your professional merits and private worth. (Loud cheers.) I have only one observation to add—which is, that you may long live to enjoy it. (Great applause.) I must simply beg of you, Sir, to excuse the very inadequate way which I have expressed the feelings of this company, which I am quite sure you will attribute, not to any want of feeling on my part in the subject of the day's proceedings, but to the imperfect manner in which I am able to express my sentiments. Gentlemen, I think the only thing that now remains for me to do at this moment, is to request that you will drink Mr. Storey's health with three times three.

The toast having been drunk accordingly,

Mr. Storey rose, and was received with renewed cheering. He said, Gentlemen! I feel a want of words to express my gratitude for the very warm manner in which you have been pleased to respond to my worthy friend's address to you, and to the toast with which he concluded; and particularly for the splendid—the magnificent memorial of your esteem which you have this day presented to me, through him. (Applause.) I experience a want of words to express my feelings towards the many friends around me, and to the several gentlemen whom I have never seen, perhaps, before this day. I am no speechifier, nor any speech-spouter; and on this occasion I must really confess to you, that of all the difficulties, engineering and otherwise, with which I have had to contend, that of making a speech to you this day is the greatest. (Laughter and applause.) For the splendid memento of your kind affections and regard for me whilst I have been, with most part of you, on the Great North of England Railway, I can only say that it shall be handed down to those who follow me as an heir-loom in the family; and I hope and trust they will endeavour, as I have done, to deserve the good wishes of all with whom they are connected. (Loud applause.) Gentlemen, I might, perhaps, on this occasion say a word or two why I so abruptly left so many of my friends around me, in connection with the Great North of England Railway. I would say as little upon the subject as possible. I would merely observe, that certain circumstances arose between the Directors—or, rather a portion of them—and myself, which, under the circumstances in which they occurred, made me feel that I could no longer, with credit to myself, or advantage to the railway, continue to act as their Engineer. I feel very thankful, after all, when I see so many friends around me, who not only gave me their very valuable assistance in carrying on that undertaking, but who have, in addition, conferred upon me the flattering indication of their approval which I have this day received at their hands, and which I am but too sensible I do not at all deserve. (Loud cries of "Yes, yes," and much applause.) Permit me to observe, that I have done my best to make as satisfactory as possible the line of railway to which I have alluded. I endeavoured all I could to make it perfect; and I hope the company who travel over it find themselves go smoothly and easily along. (Cheers.) In the formation of that railway I derived the most valuable assistance from the several contractors, architects, and builders, who appeared to vie with each other in facilitating the work, and rendering it satisfactory to myself and others. In conclusion, gentlemen, allow me to state, that in accepting this kind memento of your regard, I feel greatly obliged by the manner in which you have been pleased to express your feelings towards me in the situation which I lately held, in conjunction with yourselves. I shall endeavour to inculcate the like good feeling upon all with whom I am, or may be, associated—wishing we may frequently be as comfortable over a glass of wine as we have been to-night;—and to induce those who follow me to act as I trust I have done, so as to deserve similar feelings being entertained in their favour, to those you have expressed towards me on this occasion.—Mr. Storey sat down amidst very great applause.

Mr. Storey gave the healths of his assistants, and of the contractors for the various works on the Great North of England line; and said he embraced that public opportunity of returning them many thanks for enabling him to execute the railway in a

Digitized by Google

manner which had deserved the encomiums passed upon it by their worthy chairman.

Mr. Jos. Stephenson returned thanks. He felt very proud when he considered that he had been engaged in promoting this small token of esteem for his friend, Mr. Storey, with whom he had laboured for the last 18 years, and had always found him one of the kindest and dearest friends he ever met with.

Mr. Storey proposed the health of Mr. John Green, architect, and the builders of the various works between Darlington and Thirsk. He might add the healths of Messrs. Dawson and Robinson; for he had not found better work than they had made on the Bishop Auckland and Weardale Railway.

Mr. J. Green and Mr. Dawson returned thanks.

The Chairman observed, that while he was not about to repeat his eulogium on the Great North of England Railway, he must remark that no line deserved to be more successful: and he thought its prolongation northward to Newcastle deserved their warmest wishes. (Applause.) He spoke it without disparagement to the town of Darlington, but he certainly did covet the prolongation of the railway to Newcastle. He trusted their friends in Darlington would not be jealous of them there; because he was quite sure that if the line were extended, it would contribute to the prosperity of Darlington. (Applause.) He begged to propose success to the Great North of England Railway. He did not know that any of the Directors were present, but they had the Company of a shareholder (Mr. Brooks) who, he was glad to think, agreed with him in opinion that the prolongation of the line northward would be beneficial, because he had projected a junction line from it to Sunderland, South Shields, and Newcastle.

Mr. Brooks said, he believed so much had been done towards ensuring the success of the North of England Railway that no shareholder need doubt it. It was one of the straightest and best-laid lines that had yet been formed, and he could have no doubt of its prosperity. He wished to add that he quite agreed with the Chairman that the prolongation of the line northward would prove advantageous to the town of Darlington; and whether it were so continued by the junction line which he had projected, or by any other line, he cared not, so it were carried into effect.

Mr. Stephenson proposed the health of the Chairman, which was received with very great applause and cheering.

The Chairman said, he could not sufficiently express the gratitude he felt for the manner in which they had drunk his health. He must say, that he felt extremely awkward in accepting the invitation to preside on that occasion, knowing his incapacity to fill such a situation with propriety. However, after the manner in which they had drunk his health, he could no longer suppose that he had not, at any rate, fulfilled it to the best of his ability. (Applause.) He did not know anything that would have prevented him from being present on that occasion. He felt it to be a duty which he owed to his friend Mr. Storey, to set aside all other engagements, and come to contribute his mite of duty towards the day's entertainments. (Cheers.) Before he sat down, he trusted they would excuse his remarking, that there was a railway in this district which he believed above all others demanded their approbation. He alluded to the Stockton and Darlington line. (Loud applause.) He believed, as a friend had just suggested, that it was the mother of them all. He could recollect an interview that his friend Mr. George Stephenson had with the elder Mr. Pease, with respect to the formation of that railway. He (Mr. Wood) accompanied him to that interview, and he was quite sure that if his friend Mr. Stephenson had now been present, he would have borne his testimony to the pleasure which they felt on the occasion, and to the long walk which they had together on leaving the town; for the fact was, they lost the coaches, and had to walk the greater part of the way between Darlington and Durham. (Laughter.) From so early a recollection of the Stockton and Darlington Railway, and knowing the effect which that railway had produced on other railways, he did think such an occasion ought not to pass without the company drinking to its success. The example of that railway produced the Liverpool and Manchester line; and then followed a succession of others, which put an end to all doubt of the success of railway undertakings. Considering, then, the effect produced by the establishment of the Stockton and Darlington Railway, he begged to propose continued success to it; and he could not help coupling with the sentiment the continued good health of the venerable Mr. Pease, who, if he could have been present that day, would have enjoyed the occasion above all things. He had pleasure in likewise joining with the toast the good health of Mr. Harris, the Company's Engineer. (Loud applause.)

Mr. Harris, in returning thanks, said, he felt they had placed him to-night in a position which he was scarcely entitled to occupy, seeing that he had been connected with the Stockton and Darlington Railway for only a comparatively recent period, while there were gentlemen present who had been associated with it for a much longer term; and he believed that, with the exception of a few years, Mr. Storey had been connected with it almost from its commencement. He was sure he spoke the sentiments of all present when he said they were not then assembled on an every-day occasion; for when they saw the gentleman who occupied the chair, and when they knew the researches he had made, and the works he had written upon railway communication; and when they saw the effects which his writings had produced, and the high estimation in which they were held, he must say that they were especially honoured by the presence of Mr. Wood, and ought to be thankful to him for the tribute of esteem he had paid their common friend, Mr. Storey. (Great applause.) Connected, as these two gentlemen had been, with railways, from their commencement, he was happy to see them united on an occasion like the present. Mr. Wood, he might add, had been concerned in the first establishment of locomotives—for he believed that it was on the Killingworth Railway that he and Mr. George Stephenson first laid the groundwork for the subsequently improved and altered locomotive which had effected such mighty results in this vast empire, and throughout the world. He (Mr. H.) was gratified by the flattering manner in which they had received the mention of his name; and he assured them it gave him sincere pleasure to join in paying this tribute of respect to his friend Mr. Storey. He had seen that gentleman working day and night. He knew the laborious work which he had to perform, for he was with him when he commenced the surveys of the Great North of England Railway, and knew the sacrifices it was necessary to make for its completion. He thought it was on the 5th November, 1835, when they commenced the survey at Newcastle, and on the 30th day of that month the plans of the survey were lodged in the Clerk of the Peace's office. (Loud applause.) Mr. H. concluded by returning thanks on behalf of the Stockton and Darlington Railway Company.

The Chairman observed, that following the toast of success to the Stockton and Darlington Railway, he thought it would be a sad omission if they neglected to drink the health of a gentleman who might justly be termed the father of railways—he meant Mr. George Stephenson. (Applause.) Mr. Harris had been so kind as to mention his (the Chairman's) name in connection with railways, and with some little labours which he had performed in endeavouring to promote them. [One of the company remarked, "Not a little, Sir."] It would be too much in him to claim almost any merit in that respect uncoupled with Mr. George Stephenson. He believed it was nearly 30 years since he first knew Mr. Stephenson; and during the whole time that Mr. S. remained in this district, he (Mr. Wood) was not only in frequent, but, he might say, in daily communication with him. He knew the whole of his proceedings, with respect to railways, he believed, from first to last, so long as he was in this part of the country; and he also knew the up-hill work which Mr. Stephenson had in establishing them; for at the outset, like every other branch of art, they were met in a very hostile manner. It was then when he believed the greatest difficulty existed in promoting anything of a similar nature. That Mr. Stephenson had lived to see railways in their present state of perfection, must be a source of great gratification to himself, as well as to his friends. (Applause.) He begged to propose health, long life, and happiness to Mr. George Stephenson, with all the honours.

Mr. Brooks gave the health of the Directors of the Great North of England Railway Company, which, at the suggestion of the Chairman, was drunk with the honours.

The Chairman then proposed the health of the Committee to whose hands the management of the testimonial to Mr. Storey had been entrusted; and, in return,

Mr. George Robinson expressed his acknowledgments on behalf of himself and brother Committee-men.

Mr. Storey next proposed the health of a gentleman who, he said, had the ability, and who possessed the kind feeling and urbanity of manners, necessary to carry forward the works of the Great North of England Railway. He was glad that the interests of the friends who had been connected with him (Mr. Storey) on the line, had been entrusted to a gentleman in whom they would find a friend who would not be surpassed by their late engineer. Mr. Stephenson's experience in railways in England and upon the continent—in France, and other parts—warranted the expectation that they would have a line of railway northward from Darlington, not only as good as the engineer expected, but probably an improvement upon his highest hopes. He therefore begged to propose the health of Mr. Robert Stephenson, the Engineer for the Great North of England Railway, and long life and prosperity to him. The toast was drunk with three times three.

The Chairman gave—Prosperity to the coal trade; which, he observed, first involved the necessity for railways.

The Rev. M. Chester then, in neat and affectionate terms, proposed the health of Mr. Edward Storey, a pupil of his own, whom he taught his catechism, and to whose professional abilities and activity (in his father's line) he paid a high compliment.

Mr. E. Storey briefly returned thanks.

The Chairman gave the Auckland and Weardale Railway, with the health of its Secretary, Mr. Macnay.

Mr. Macnay returned thanks at some length, and expressed a conviction that the railway would be an advantageous undertaking, both to the shareholders and to the districts of country into which it passes. Works of this nature, he observed, were subject to be overshadowed, for a time, by clouds. That might be the fate of the railway with which he had the honour to be connected; but he trusted the hours of darkness, if they came, would soon pass over; and he had sanguine expectations that the railway would ere long equal the Stockton and Darlington, of which it would be a continuation, in prosperity. Mr. M. then went into some details to show that the Great North of England was one of the cheapest railways that had been formed in the kingdom; and he had no doubt that it would soon become one of the most profitable, for its receipts had already been increased by about one-half.

The Chairman and Mr. Storey then left the room amidst repeated cheers; after which Mr. Brooks was called to the chair, and the harmony of the company was maintained to a late hour.

The proceedings throughout, combined with the gratifying circumstances attending the presentation of a testimonial so substantial, were of the most satisfactory character.

CLARENCE RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL MEETING of the proprietors of the Clarence Railway Company, was held on Tuesday, at the George and Vulture Tavern, Cornhill; HENRY BLANSHARD, Esq., in the Chair.

There were about thirty gentlemen present.

The CHAIRMAN said, the Directors had convened the present meeting for a two-fold purpose—in the first place that they might lay before the proprietors the Report of the deputation appointed to examine the state of the works; and secondly, because, greatly to their regret, they had once more to appeal to the shareholders for a further advance of money. He trusted, nevertheless, that the undertaking was not in a worse position than when they last met, but rather that they were advancing steadily, although slowly. It was true that an unexpected increase of expense had arisen under two or three heads, but such increase was not greater than had been deemed necessary by the Committee of Inquiry twelve months ago. Of the 15,000*l.* then proposed to be raised by a subscription of 5*l.* per share, not more than 8,000*l.* had been realised, and although the remaining 7,000*l.* would not, under existing circumstances, have proved sufficient to meet the entire amount of the Company's liabilities, it would be seen, from the statement account to be submitted to the meeting, that it would have gone far towards the accomplishment of that object.

The SECRETARY (Mr. C. BENSON) then read the advertisement calling the meeting. The minutes of the proceedings at the half-yearly meeting held at Stockton-on-Tees, on the 1st of June last, and also a Report from the deputation above referred to were next read. The following Report was then submitted:—

REPORT.

In accordance with the promise made at the general meeting held in London on the 23rd day of last November, your Committee have called the shareholders together for the purpose of submitting to them the Report laid before the meeting at Stockton on the 1st June last, as also the present state of the works of the Company, and the position of its finances.

In continuation of the above mentioned report, your Committee would now further beg to state, that the extended line to connect the Westerton and other pits with the Chilton branch, has, by their exertions (and advances made from their private funds) been completed, and the coals from the Westerton pit are now daily coming down for shipment at Port Clarence, by means of your railway.

Your Committee have also reason to expect that other pits will shortly be sending coals down this branch.

Your Committee have the pleasure of informing the proprietors that the following pits, viz.:- the Whitilee, Stanley and Woolley, Newfield, and Whitworth, in addition to the Wellington and Hunwick, all in the line of the Byers-green branch, and West Durham Railway, have sunk to good coal, which is now being conveyed down your railway from the collieries first opened out, and a few weeks are only required to enable the remainder to be in a position to do the same. The Byers-green branch has been for a considerable time in a state to allow coals to be conveyed by means of horses along it, but from the heavy cuttings required to be made to render it a locomotive line, the expense has far exceeded the calculations made; it is, however, now so near completion, that the estimate of your Engineer—that the work remaining to be done can be finished at a cost of from 800*l.* to 1,000*l.*—your Committee consider may be looked upon as the final expense.

In bringing this work so nearly to a close, your Committee have had to contend with numerous difficulties, and have been obliged to make themselves responsible for large sums of money, arising partly from the shareholders having only partially responded to the calls made upon them, and from the absolute necessity of providing further locomotive power to carry on the additional traffic about to be brought on the line from the various pits before enumerated, as well as from others now in course of sinking.

Your Committee have also had to relay part of the line with new rails, required to ensure the safe conduct of the passenger traffic, which subject your Committee would here beg to bring before the notice of the proprietors, as they consider it would be highly advantageous had they the funds requisite for so doing, and taking this legitimate branch of the business of the Company into their own hands, and which they now have the opportunity of doing, the lease granted by them to an individual for three years having expired.

Beyond what has been stated, the Company have no new works to execute but the bridge over Saltholm Creek, the cost of which it is estimated will not exceed 300*l.*, but which is requisite on account of its connecting the present works with the land at that place, the value of which to the Company is daily increasing.

Your Committee further beg to call the attention of the meeting to a statement of the finances, now laid upon the table, by which the liabilities of the Company, and those entered into by the Committee on behalf of the shareholders, will at once be seen.

In conclusion, your Committee earnestly trust that those proprietors who have not advanced the subscriptions on their shares will now come forward and second those who have already done so, in assisting the Committee to complete finally the little now required to be done on the works, and at the same time afford them a sum by which they will be enabled to carry on the affairs of the Company at once with interest to the shareholders and with satisfaction to themselves, as without such support on their part your Committee feel it is in vain of them to attempt the further management of the concern, and taking, as they have, upon themselves the sole responsibility of finding money for the Company at their own personal responsibility.

Your Committee also beg leave to state that their opinion still continues favourable as to the ultimate success of the undertaking, provided the sums of money already stated as needful to be advanced, in order to cover the various liabilities of the Company, to complete the works and carry on the passenger traffic, be raised by the body of the shareholders to whom the appeal is now urgently made.

The financial statement laid before the meeting showed that the Company's liabilities amounted to 28,476*l.*, including a loan of 12,000*l.* advanced by Messrs. Williams, the Company's bankers, and the assets to 21,866*l.*, including unissued bonds to the amount of 11,000*l.* lying in the hands of the bankers as part security for the above loan.

The CHAIRMAN then entered into various explanations relative to the branch lines, the most material of which were, that the estimate for the Byers Green branch would be exceeded by about 800*l.*, and that arrangements had been entered into with the owners of the Westerton colliery, and a sum of money advanced on loan by the Committee for the purpose of forwarding the extension of the Chilton branch, whereby the coals from the Westerton and other pits would be brought upon the main line.

A very desultory conversation ensued of which the following are the main points.

The CHAIRMAN, in answer to questions, stated that when two new and very superior engines now being made for the Company were delivered, the total number of locomotives on the line would be 15. The engines were valued at upwards of 9,000*l.*, and would be quite sufficient for the conduct of any amount of traffic likely to come upon the railway.

A PROPRIETOR inquired if the revenue of the Company sufficed to meet the expenditure.

The CHAIRMAN said, it did. The expenditure was about 18,000*l.* per annum, and taking the average of the last twelvemonths, the revenue exceeded 20,000*l.* In the first six months of the present year the receipts had exceeded those of the corresponding period of last year by upwards of 1,600*l.* Every month showed an increase over the corresponding month of last year with but two exceptions. The first was in January, when in consequence of the extreme severity of the frost, the rivers Thames and Tees were impassable, and the coal business at a complete stand still; the other in June last, when owing to some difference among the coal owners, and a glut in the London market, the supplies were temporarily discontinued, thus reducing the Railway Company's receipts very considerably. He should be greatly disappointed and deceived, if when the branch lines came to be brought fully into operation, the annual revenue did not reach 30,000*l.*

A PROPRIETOR enquired if the cost of repairing the engines was included in the 18,000*l.* stated to be the amount of the Company's current expenditure.

The CHAIRMAN said, the total expenditure, including wear and tear of engines, &c., fuel, and every other outlay, amounted to about 20,000*l.*

A list of shares was produced upon which the subscription of 5*l.* per share above alluded to had not been paid, whereupon

Mr. JAMES MORRIS complained that his name appeared in the list as a defaulter, whereas in point of fact, he had previously lent more money to the Company than his quota of the subscription would amount to. Looking at the state and prospects of the undertaking, he did not feel disposed to advance any farther sum.

Mr. RAYSON enquired if the locomotive power paid its expenses.

Mr. MORRICE (a Director) said, it did not.

The CHAIRMAN said, they were likely to have a large increase of traffic, and better description of engines, so that he had no doubt the locomotive power would ultimately pay; but when the business was small and the engines were compelled frequently to wait at the pits for a considerable time, in consequence of the irregularity of the supply, it was not to be wondered at that much additional expenditure should be involved.

Mr. RAYSON wished to know whether there had not at times been a deficiency of engines to accomplish the work.

The CHAIRMAN said, their engines had suffered during the late frost in common with those of neighbouring Companies, and several of them had in consequence been rendered temporarily unserviceable. Mr. Child, the superintendent of the locomotive department was now present, and would be able to state whether traffic had ever been lost to the Company from want of engines.

Mr. CHILD said, such had been the case more than once, and had been occasioned principally by the extensive repairs which many of the locomotives required. They would soon have thirteen good engines on the line, so that two could at all times remain in the shed, leaving eleven for the daily working of the line. At times he had been compelled to work the line with only two engines.

Mr. RAYSON thought it somewhat extraordinary that thirteen engines should now be deemed necessary to perform the work which it appeared had been accomplished with two.

The CHAIRMAN said, it should be remembered that the frost which disabled the engines, likewise in a great measure stopped the trade.

In answer to questions, the Chairman stated that the Company contracted with certain parties to supply oil, fuel, &c., and to work the engines, paying them a certain proportion per ton of the money received from the coalowners for the conveyance of the coal. There had at first been considerable misapprehension on the subject of haulage. They had been told by the coalowners that it could be done with profit for one farthing per ton per mile, and they had originally fixed it at that rate, but finding that it did not answer, they had now raised it to three-eighths of a penny per ton.

Mr. CHILD was quite satisfied that no loss occurred to the Company from the haulage. At present they were compelled to work the Byers-green branch by horse power, part of the line being an inclined plane, at a cost of fifteen pence per waggon. When the branch should be in a condition to receive locomotives the cost of carriage would be very materially reduced.

The CHAIRMAN added, that the Company had been under an agreement with the coal proprietors to receive their coals upon the Byers-green branch by a certain day, and that in consequence of the failure of two contractors, the branch could not be completed for the passage of engines by the time stipulated. They had in consequence been compelled to adopt horse power for the present, at considerable extra cost, but he was satisfied that with good engines the haulage could be rendered profitable, since the coal owners had agreed to pay ½d. per ton, on coals entered for exportation, and ¼d. on those destined for home consumption.

Mr. CHILD said, that when the engines were not at work, the parties who contracted for the conduct of them were paid nothing, but when they came to be fully employed in consequence of the opening of the branch lines, these parties would increase the per centage allowed by them from 25 to 30 per cent on the gross receipts.

In answer to a question, Mr. Child stated that the thirteen engines would be sufficient to work the main line and all the branches.

A PROPRIETOR inquired how it happened that their engines had stood in need of repairs so very extensive.

The CHAIRMAN replied, that when these engines were made (namely, about six or seven years ago) it was generally believed that any description of iron would answer in their manufacture. It had, however been since found by experience, that there were but two kinds of iron in the country which could be employed with effect in those parts of the

Digitized by Google

engines exposed to the action of the fire, and it had become necessary to have these parts altered, and other modern improvements introduced into the locomotives of this Company.

Mr. RAYSON inquired whether an arrangement had not been entered into with Mr. Nicholas Wood, that the Clarence Company should perform the haulage on their own line, and the Stockton and Hartlepool Company do the same on theirs.

The CHAIRMAN said such an arrangement had been made.

Mr. MORRICE then went at considerable length into an exposition of the Company's position and prospects. He stated that he had given great attention to the financial details of the undertaking, and he was satisfied that a sum of 15,000*l.* would complete the undertaking and relieve them from all their embarrassments. The Directors had incurred not only great trouble, but serious personal liabilities on behalf of the Company, and if the sum referred to were not raised in some way or other it would be totally impossible for them to go on any longer with the management. Their faith was pledged to their bankers, who had kindly assisted them upon an emergency when only three days' notice was given by a northern bank for the re-payment of an advance previously made. In fact, the Directors had promised that a portion of the loan granted by Messrs. Williams should be repaid during the present month, as they had confidently anticipated that funds would be forthcoming. The Company's bonds were as good an investment as could be made, and in short the proprietors had no alternative but to advance a small additional sum or to surrender the undertaking altogether into the hands of the Exchequer Loan Commissioners. He and his colleagues were, as they had always been, perfectly willing and anxious to aid their fellow-proprietors, but it must be manifest that without the support of the general body, it was wholly impossible to proceed.

Mr. BAILDON inquired what the probable value of the shares would be, supposing this 15,000*l.* to be raised forthwith.

Mr. MORRICE said, it was very difficult to answer such an inquiry; but his own opinion was, that the value of the shares would be doubled. The importance of the Clarence line was fully appreciated by some of their neighbours, who would not be sorry to gain possession of it.

The CHAIRMAN thought it would at least be admitted that the line had been constructed with great economy. Notwithstanding the difficulty of the country through which it passed, it had not cost more than 12,000*l.* a mile, including buildings; and when they heard of 60,000*l.* per mile being expended on the Birmingham, Great Western, and other lines, he thought they had reason to congratulate themselves on the smallness of their own expenditure.

A PROPRIETOR—And yet these lines produce a handsome dividend, while ours return nothing!

The CHAIRMAN would remind the honourable proprietor, that it took a longer period to develope fully the resources of a mineral district than those of a manufacturing or agricultural one.

A conversation ensued relative to the amount raised by the 5*l.* subscription. It appeared that none of the money was to be appropriated, unless 10,000*l.* out of the 15,000*l.* then deemed necessary were subscribed for. The subscription stopped at 8,030*l.*, whereupon the Directors, rather than not have it in their power to apply this amount to the settlement of very urgent claims, made themselves responsible for the balance of 2,000*l.*

Mr. MILTON (a Director) enforced the propriety and policy of raising the amount required, stating his conviction that the annual revenue would speedily amount to 30,000*l.* If the money were not raised, the Loan Commissioners must take possession of the line. The question of haulage had nothing to do with the subject before the meeting. Supposing that a loss were incurred in the haulage, which, however, he did not believe, it was but one part of their outlay for the prosecution of a profitable business. If they lost 1d. by the haulage, they secured 11d. in dues.

Mr. BAILDON inquired whether the 15,000*l.* would pay the bankers as well as all other liabilities.

Mr. MORRICE said it would, when the surplus of revenue over expenditure was added to it.

Mr. BAILDON urged the propriety of endeavouring to gain time from the bankers and other creditors of the Company, so as to apply the surplus revenue to the gradual liquidation of all claims without making any further call upon the proprietors.

In answer to this it was stated that many of the claims were exceedingly pressing and could not be put off without serious detriment to the interests and credit of the Company.

Some discussion followed as to whether the bankers would give up the bonds in their possession until the 12,000*l.* should be paid, but it seemed to be generally understood that little practical difficulty would arise on that score.

Mr. FARQUHAR expressed his determination to make no further advances of capital, when they had no data from which to judge of their future prospects, save vague assurances of success.

It was stated in answer to a question, that the number of shareholders in the Company was 370.

Mr. SAVAGE suggested that an earnest appeal should be immediately sent to every shareholder, setting forth the present position of the undertaking, and informing them that unless they stepped forward at once to the rescue, all the capital already embarked would inevitably be lost. It was impossible for the present meeting, even allowing every one in the room to subscribe his quota to effect the object in view without the concurrence and co-operation of the great body of proprietors.

Mr. RAYSON inquired whether the possibility of reducing the current expenditure had been under the consideration of the Directors.

The CHAIRMAN said, the subject had been fully considered. It was proposed to reduce the salaries, and with the improvements now introduced into the locomotives, there could be little doubt that a considerable saving would be effected in that department.

Mr. KEY (a Director), strongly and at some length urged the necessity of making one effort more. It would be a thousand pities to be shut out from so promising a prospect as well as lose all that had been invested, from want of a sum so small comparatively as 15,000*l.*

Mr. BAILDON reiterated his views as to the application of the surplus revenue, and alluded to a similar case in another public body with which he was connected. A considerable portion of the 15,000*l.* was not wanted, it appeared, till next spring, and he thought the Directors might have contrived to work through, without having recourse to a further subscription, which would tend to create alarm in the minds of the Company's creditors.

Mr. RAYSON said, although he was connected with a neighbouring line (the Stockton and Hartlepool), he had not put any question to-day with a view to embarrass or find fault with the Directors. It was in order to pave the way for a resolution which he had intended to submit to the meeting, but unless something definitive were agreed to respecting the raising of the 15,000*l.*, it would be useless to go into details. His plan had reference to a considerable saving which he thought might be effected in the locomotive department.

Mr. WILSON thought it would be desirable that the proposed plan should be explained, as it might encourage them in coming to a decision respecting the 15,000*l.*

Mr. RAYSON then submitted his plan, which was in effect, that the locomotive power on the Clarence, and Stockton and Hartlepool Railways should be amalgamated under one responsible management.

Mr. BAILDON thought the plan very feasible, but it was impossible for parties not acquainted with the locality, and the peculiarities of the two lines to come to any proper decision on the subject. It had better be left to the Directors, who, he had no doubt, would give the subject their best attention.

This seemed to be the general opinion of the meeting, and here the matter dropped, after several gentlemen had thanked Mr. Rayson for bringing it forward.

Mr. FARQUHAR inquired what the Exchequer Loan Commissioners would do with the line supposing the 15,000*l.* not to be raised?

The CHAIRMAN said, they would unquestionably sell it by auction to the highest bidder.

Mr. KEY referred to the great drudgery the Directors had undergone for the Company without emolument, and thought the proprietors ought to place confidence in them.

Several gentlemen expressed themselves in high terms as to the ability and honour of the Directors, and the great labour they had undergone.

Mr. RAYSON thought it might be satisfactory to those gentlemen who were not locally acquainted with the line as he was, to state that a very considerable accession of traffic might reasonably be looked for from the branch lines.

Mr. SAVAGE again urged the propriety of appealing strongly to the shareholders, and moved a resolution to that effect.

Mr. WILSON supported the same views, and seconded the resolution.

After some further conversation, in which the propriety of offering a bonus on the sum to be raised was suggested, but which it was stated could not be done, in consequence of the Company's position with the Loan Commissioners, the resolution was carried unanimously.

It was understood that as soon as answers shall be received to the letters which are to be sent immediately to the proprietors, another meeting will be held—probably about three weeks hence.

A vote of thanks was then passed to the Chairman, and the meeting separated.

A paper was handed round the room, and signed by most of the gentlemen present, subscribing certain sums conditionally that 10,000*l.* be raised forthwith.

YORK AND NORTH MIDLAND RAILWAY COMPANY—SPECIAL MEETING.

ON Monday last a Special General Meeting of the Shareholders of the York and North Midland Railway Company was held in the Company's offices, Tanner Row, in this city, for the purpose of submitting to the proprietors a draft of the proposed lease of the Leeds and Selby Railway Company. As the business was of merely a formal character, the attendance of shareholders was not numerous. GEORGE HUDSON, Esq., was in the Chair.

Mr. BAKER having read the notice calling the meeting,

Mr. NEWTON then read the draft of the proposed lease. By this it appeared that the Leeds and Selby Railway Company agreed to lease to the York and North Midland Company, the Leeds and Selby Railway Company, for a term of 30 years, the latter Company binding themselves to pay to the former 17,000*l.* annually to the former.

After a few unimportant questions had been asked, the Chairman proposed the following resolution:—

"Resolved—That the draft of the proposed lease of the Leeds and Selby Railway to the York and North Midland Railway Company be approved of by this meeting, subject to the settlement by counsel in matters of form, and that the Direction be authorised to take the necessary steps for completing that lease."

—*Yorkshireman*, July 24.

COACH ACCIDENT.—On Thursday evening, the 15th instant, as the Blackburn and Bolton coach, belonging to Mr. Charles Briggs, was on its way to the latter place, on arriving at Sharple's toll bar, within a mile and a half of the town, one of the hind wheels came off, and the coach went over. The horses continued to drag it along until the coach became disengaged from the four wheels, and the horses then ran on with the wheels alone. There were two inside passengers and about six at the top. Those inside escaped uninjured, but the outside passengers were much shaken, and some of them very much hurt.—*Manchester Courier*.

LIVERPOOL AND MANCHESTER RAILWAY COMPANY—GENERAL MEETING.

On Wednesday last, at one o'clock, the annual meeting of the shareholders of the Liverpool and Manchester Railway Company was held in the Cotton Sale Room. Charles Lawrence, Esq. president of the Board of Directors, in the Chair.

Mr. Booth, the Secretary to the Company, read the Report, setting forth the result of the operations for the six months ending 30th June last. The receipts in the coaching department were stated to be about 700*l.* less than those of the corresponding period last year, and those in the merchandise department 1,000*l.* more. The disbursements have been considerably diminished as compared with the corresponding period last year. The improved means of communication with Leeds and Hull, and with the great manufacturing districts of the West Riding of Yorkshire, consequent on the opening of the Manchester and Leeds Railway throughout, is expected to bring an accession of business to this Company, which the Directors will endeavour to promote, by affording every practicable dispatch to attract goods along the new line of railway rather than by the older and slower means of transit afforded by canals.

The accounts exhibited a net profit for the half year of 64,019*l.* 2s. 11d. The Directors recommended a dividend of 5*l.* per share, amounting to 60,450*l.*, and payment of a second instalment of the reserved interest to which shares created before the opening of the line in September, 1830, are entitled, as follows:—

On the 5,100 original 100*l.* shares, 1*l.* per shares....	£5,100
On the 5,100 first quarter shares, 2s. per share	510
Total.....	£5,610

the above total being deducted from the available fund, will leave a balance of 6,731*l.* 17s. 4d. to be carried to the next half-year's account.

The Chairman said, the Report was brief, but he hoped it would be satisfactory, and he hoped the conduct of the Directors would be approved of by the proprietors. The railway had been carried on without any accident to travellers, and he believed the works were never in a more satisfactory state than at present.

Mr. Arnaud supposed the debt was between 2,000*l.* and 3,000*l.*

Mr. Booth—A little more than 200,000*l.*

Mr. Arnaud—After the present payment will there be much more to disburse on the original shares?

Mr. Booth—This will make about 15,000*l.* or 16,000*l.* of interest paid out of 70,000*l.*

Mr. R. M. Benson moved that the report of accounts be approved, printed, and circulated. He thought the Liverpool and Manchester Railway was an example to all railways in the country. It was the best conducted railway in England.

Mr. Taylor seconded the motion, which was carried unanimously.

Mr. Arnaud, seconded by Mr. R. M. Benson, moved that a dividend be paid at the rate of 5*l.* per cent. for the half-year ending 30th June last. Carried unanimously.

Mr. Jamieson, seconded by Mr. R. M. Benson, moved that a second instalment at the rate of 20s. per share on the 100*l.* shares, and of 2s. on the original 25*l.* shares, being a portion of the interest to which those shares (only) are entitled, be also paid. Carried unanimously.

Mr. Alexander Kay, of Manchester, said, he some time ago stated to Mr. Booth that it was desirable to state to the Directors, that they ought to follow the example of the conductors of the railways in the midland districts, in giving such directions to their servants that the influence of the Company, as a Company, should not be exercised in any way for the purpose of influencing Parliamentary elections. He did not wish to make allusions to individuals, but he wished to have a general direction given to that effect.

The Chairman said, he did not believe any such influence had been used. At a former election, as it was known that a great difference of opinion existed amongst the Directors, it was notified that all persons connected with the Company might vote as they pleased. No such order was given at the last election.

Mr. Booth said, the order was passed four years ago, and it had remained in force ever since.

Mr. Kay wished Mr. Booth to take a minute of his observations, in order that the attention of the Directors might be again drawn to the subject.

Several members expressed their disapprobation that anything of a political cast should have been introduced.

Mr. Kay said, he could speak particularly on the subject if he pleased, and therefore wished that the order of the Directors should be generally known, in Manchester as well as Liverpool.

Mr. Booth said, as he was well aware of the wishes of the Directors on the subject, he would take care they should be generally known in Manchester.

Mr. Blain moved a vote of thanks to the Chairman, and the meeting separated.—*Liverpool Mercury.*

DUKE OF CORNWALL HARBOUR, AND LAUNCESTON AND VICTORIA RAILWAY COMPANY—GENERAL MEETING.

The Half-yearly General Meeting of the Proprietors of this Company was held at the London Tavern, on Thursday the 22d inst., John Ramsbottom, Esq., M.P., in the Chair.

The advertisement convening the meeting having been read, the minutes of the last half-yearly general meeting, and those of the two subsequent adjournments, were read and confirmed.

The Chairman stated, that in consequence of the award not having yet been made by the arbitrator, to whom all matters in dispute between the Company and Mr. Ross had been referred, it would be necessary that another meeting of the shareholders should take place, and which should be specially convened as soon as circumstances would admit.

The usual vote of thanks having been passed to the Chairman for his services, the meeting separated.

MANCHESTER AND BIRMINGHAM RAILWAY—TRIAL OF THE STOCKPORT VIADUCT.

This magnificent viaduct upon the Manchester and Birmingham Railway, which was completed in December last, is now declared perfectly safe and ready for all the purposes of the railway. The permanent rails have been laid, and the first or trial trip was made on Friday afternoon. The Company's superintendent of the carriages having examined the vehicles, about twelve of them were attached to two engines—a union jack mounted in the breese at the rear and aft—small cannons were placed on the top of the last carriage, and at two o'clock, amid the volleys of firing, the shouts of the passengers, and the shrill notes of the steam whistles, the whole train was propelled from the shed, and proceeded steadily to the centre of the viaduct; and having moved across this stupendous piece of architecture, measuring one-third of a mile in length, the train returned before three o'clock, amidst the repeated firing of cannon, the congratulatory shouting of the inhabitants, and the cheering acclamations of passengers. The experiment was made with every possible success, and without the slightest accident or occurrence calculated in the least degree to mar the character or the gratification of the trip. In the course of the day other trips were instituted by several of the Directors of the Company, and their friends from Manchester, for the purpose of testing the solidity of the permanent road, all of which, we are happy to add, terminated to the entire satisfaction of all parties connected with the undertaking. The extreme length of the viaduct is 1,780 feet, or as we have already stated, about one-third of a mile, and the width of the road between the parapets is 28 feet, affording ample space for two lines of railway. It has 22 semi-circular arches, each 63 feet span, for of 20 feet span, and two at each abutment. Its height to the surface of the rails is 106 feet from the bed of the river, or 111 feet to the top of the battlement, being six feet higher than the celebrated Menai Bridge, Wales. The foundation stone was laid on the 10th of March, 1839, and the work was completed on the 21st of December, 1840. The quantity of stone used in the erection is above 400,000 cubic feet, whilst the number of bricks consumed exceeds 11,000,000. These bricks laid endways would describe a distance equivalent to 568 miles and 32 yards, equal to the measurement by turnpike from the remotest place in Northumberland to London and back again! It is a noble viaduct, a work of great stability and firmness, and does infinite credit to the designer, Mr. G. W. Buck, and to the enterprising character and masterly execution of Messrs. Tomkinson and Holmes, the contractors, of Liverpool. The cost was about 70,000*l.*—a saving of 50,000*l.* having been effected in the whole line to Manchester, by increasing the altitude of the viaduct to the present plan. The line between this town and Manchester was opened on the 4th of June, 1839, and the whole length to Crewe will be ready for passengers in March next. —*Manchester Guardian.*

Edinburgh and Glasgow Railway.—This line of railway is getting forward at a rapid rate. The gigantic buildings at the entrance of the tunnel are now nearly completed. A long range of stone sheds have been erected for the carriages and engines. The long tunnel, commencing at the head of Queen-street, and terminating at Keppoch Hill, will, it is said, be finished in a short time—a person can walk through it from end to end. The tunnel is strongly arched with brick and has a fine appearance, and the neatness of the workmanship does credit to the contractors. The booking-office is completed, and all the other operations at the depot are going forward at railway speed. Immediately after leaving the tunnel a number of fine-looking bridges are to be seen, and here the permanent rails are laid down. At Cowlairs large buildings are erected for workshops, &c., besides a handsome engine-house for the stationary engine. Further on, the permanent rails are laid for a great distance. Should the weather keep favourable, we have no hesitation in saying that the line will be opened from end to end in the course of a few weeks, and we heartily wish it may be the case.—*Scottish Guardian.*

2. Toll to London and Birmingham 159*l.* 16s. 10d., to be deducted from gross receipts.

3. The receipts are exclusive of those for the mails; on Sunday mails only are carried.

7. Receipts include the Northern and Eastern toll, &c.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

12. The 5,331,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

14. The 23*l.* 1s. 5d. from goods, &c. is for toll only.

15. Ten per cent. is the maximum dividend allowed by the Company's Act.

16. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station.

20. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed.

21. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.

23. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

24. The 4,531*l.* 17s. 10d. are the receipts after deductin the toll to the North Midland Company, and exclusive of receipts from carriage of mails.

25. The receipts for goods, &c. include, carriages, 19*l.* 19s. 0d.; horses, 18*l.* 10s. 6d.; dogs, 4*l.* 19s. 6d.; parcels, 193*l.* 7s. 9d.; cattle, 19*l.* 2s. 0d.; corn, 5*l.* 14s. 9d.; heavy goods, 509*l.* 8s. 9d.; coal, 90*l.* 10s. 2d.—Total, 866*l.* 12s. 5d.

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

A North Midland Shareholder *If he really be such, must know that a great deal of "good" is expected and reasonably so, as we think, from the source referred to.*

A Traveller.—*Has our correspondent stated the particulars of his complaint to the Directors of the South Western Railway? This ought clearly to be preliminary to any public animadversion.*

An Original Proprietor in the London and Birmingham Railway—*We are satisfied that the (alleged) contemplated alterations in regard to the Camden and Euston station, &c. cannot have been decided upon without due consideration. Our correspondent must furnish us with some more valid reasons than mere assertion before we condemn them.*

Modus *and* A Traveller *next week.*

*** It is requested that in future all communications intended for the *Railway Times* be addressed, "To the *Editor*," and not to any individual by name, now or recently connected with the establishment.

THE RAILWAY TIMES.

SATURDAY, JULY 31, 1841.

We have so repeatedly urged upon Railway Managements the propriety of entering more into detail than is customary in their periodical statements of accounts, that we should not at present have reverted to the subject, had not an instance come under our notice, in which the Directors of a joint-stock body, so far from giving further explanation upon this all-important branch of their business, seem determined to withhold from the great bulk of their constituents every degree of information whatsoever. The Company alluded to is certainly not a Railway Company, but the same plea has been put forth even by Railway Directors, and if valid in one case, is equally so in another. It appears that the Directors of the Macclesfield Canal Company have till recently been in the habit of circulating a statement of the finances of the undertaking along with their annual Report, but on the occasion of their meeting last week, the practice was discontinued, and a question having been asked on the subject, the Solicitor of the Company replied, that "it had been found in many concerns of this description, that the publication of accounts had been the means of furnishing information to other Companies, and of enabling different townships to make a higher assessment upon the property." He added, however, that any proprietor was at full liberty to inspect the accounts at the Company's offices. Now, can anything be more absurd than to suppose that the non-publication of such accounts will in the smallest degree preclude parties, whose *interest* it is to scrutinize them with hostile views, from gaining access to them? Directors *dare not* shut out proprietors from a sight of their periodical balance-sheets, (nor in general from an inspection of the original documents), and what is to prevent the "other Companies" referred to, or the representatives of the "different townships," from purchasing a share (and it is to be observed that one single share is for this purpose as good as one hundred), and thereby acquiring a *right* to demand the information which it is now attempted to withhold? It appears that in this very Canal Company the shares are at a discount of about 75 per cent., so that no great outlay would be required to render all the precautions as to non-publication totally abortive. This is strikingly illustrated in the journal from which we have copied the Solicitor's argument (the *Macclesfield Courier*); for within twenty lines of the report of the learned gentleman's speech, appears "a statement of accounts laid before the meeting and passed!" The assertion that proprietors may inspect the accounts at the "Company's offices," is a mere pretence, seeing that in nineteen cases out of twenty, shareholders in public works are not resident in the locality, and if they were, ought not to be compelled either to put up with a cursory examination, (and at "Company's offices" nothing more can be done,) or to incur the trouble of copying out voluminous statements in order to sift them at their leisure, and compare them with previous representations.

As already said, it is not the Directors of Canal Companies alone who make use of such an argument as that to which we have referred. It is not very long since we heard a similar plea put forth by one or more Directors of the Greenwich Railway, but although it availed for a time, we are happy to find that the Managers of that Company, in common with all others who conscientiously strive to do their duty, now give full publicity to their accounts. We entirely agree with Mr. T. Wardle, one of the speakers at the meeting of the Canal Company, who "thought the publication of accounts was a most salutary check upon the expenditure and management of all public Companies, and would more than counterbalance any injury that might arise from their publication."

There are various reasons why the approaching meetings of the Companies cannot fail to be looked forward to with more than ordinary interest. Several lines which, at the corresponding period of last year were only in partial operation, will, before these meetings take place, have been opened throughout for a sufficient length of time to afford some indication of their probable results, while the capabilities of others then newly completed will have been more fully developed. The experience of the last six months will have tested to some extent the correctness of the expectations held forth at previous meetings of proprietors, and we sincerely trust that these expectations will not in general be doomed to disappointment, although from the over-sanguine character of some of the predictions which such occasions usually call forth, we should be in no way surprised to find our worst misgivings more than realized. It is natural enough that Directors should seek to represent matters in the most favourable light, more especially when they have a murmuring constituency before them; but these too flattering anticipations of future prosperity only tend to cause those who have confided in them, and been deceived, to despair more of the present and become more distrustful of the future. The lethargy into which railway speculations fell immediately after the popular mania of which they were some years ago the object, was attributable to nothing so much as to the grossly exaggerated representations in which the prospectus framers and bubble schemers of these days so largely dealt. Intentional misrepresentation is scarcely less prejudicial to the true and permanent interests of an undertaking than those highly-coloured statements which the parties who put them forth rather hope than believe will eventually be found to be not greatly overcharged. The actual results of working, which Boards of Management, however much some of them may strive to soften down their disagreeable features, cannot altogether prevent from telling a very intelligible tale, too often present a most unpleasant contrast to the confident assurances of success with which but a few months before they were preceded; and it is almost incredible that railway proprietors, who have been so frequently (we will not say duped, but) disappointed, should continue apparently to place as much reliance as ever in vague promises of prosperity at some indefinite period, each more fallacious than the last. Let us hope, that at the coming meetings predictions as to the future will be based upon the only sure foundation—the experience of the past.

We look with very considerable interest for the indications which these meetings will, we trust, present of the growing vigilance of Boards of Management in matters connected with the every-day business of their several lines. We are far from thinking the existing system of Directoral superintendence perfect; on the contrary, we believe that it has inherent defects, which nothing can possibly remedy; but at the same time there can be no question that, of late, a visible improvement has taken place in the mode in which the Companies' affairs are conducted by the officials in chief—and this not merely as regards the wants and wishes of the public, but in respect of the pecuniary interests of the proprietors. The consciousness that the eyes of the public are more than ever fixed upon their movements may, in some measure, account for the improvement which has taken place in travelling arrangements—it certainly is a remarkable fact, that although railways have recently been greatly extended, there are at this moment far fewer complaints heard against them than at any former period in their history. The dread, too, of external interference may have put the Managers upon their mettle; and something is undoubtedly attributable to that perfection which practice alone can pro-

Digitized by Google

duce; but as regards the internal management, so to speak, of these vast undertakings, there were fewer incentives to that laudable course of action upon which the leading Boards have now entered in striving to economise the resources of their constituents. Deeply interested as Directors for the most part personally are in the profitable working of their several undertakings, they have one of the strongest motives to exertion that could be supplied; but self-interest alone is not sufficient. An ambition to do the best they can for those who have honoured them with their confidence, must have a powerful influence in regulating the official conduct of the members of a Railway Board, and so likewise must that commendable feeling of generous rivalry which has sprung up among the principal Companies in the kingdom. It matters little to proprietors who are anxiously looking for a reasonable return for the risk they have incurred, whether a reduction in the current expenditure arises from a desire to work the line if possible at a smaller per centage than a neighbouring concern, or whether it proceeds from some other motive. The tangible result is all *they* care about, and so that temporary advantage be not secured by the sacrifice of permanent benefit, they are perfectly indifferent as to the means. We would fain believe that in the essential matter of economy the results of the forthcoming Reports will prove particularly gratifying.

The indispensable necessity of studying economy the most rigid in the administration of railway affairs is indeed becoming more apparent daily. It is not a question whether a sum larger or smaller shall be subtracted from an enormous dividend through the negligence or recklessness of the Management, but whether there shall be a very moderate return of interest on the capital invested or no return at all. Some of the Companies have still, we suspect, a good deal to learn on this most vital point. They have regulated their arrangements on the supposition that railway profits were to be large profits, whereas all that has yet transpired tends to prove that for at least some time to come the contrary will be the case. Much yet remains to be done on not a few lines in getting rid of superfluous offices and officers. The spirit of imitation has in this instance led to very disastrous results. Because some of the main lines of communication necessarily require a large staff of servants, and can to a certain extent afford to indulge in needless display, every second or third rate management must forsooth follow their example. Nothing can prove more fatal to the prosperity of a struggling Company than these attempts to rival the profuse expenditure of a powerful and wealthy neighbour. Economy should now be the watchword of all; it will be easy to extend the expenditure when better days arrive.

That such a period *will* arrive we have very little doubt. Probably no line of railway in the kingdom has as yet nearly reached its maximum of traffic, and certainly a considerable number are still far from having gained that point of prosperity which may be reasonably and speedily expected. As one railway after another has its capabilities developed, the whole system will be benefited both directly and indirectly, and to an extent which it would be impossible at present to conjecture. When this takes place, railway property will rise to something like its real value, and all parties will reap the advantage. In the mean time it must remain depressed greatly below its proper estimate—offering no great attractions to the speculative or the covetous jobber, but constituting a safe and solid species of investment. We do not believe that railway share-lists were ever in a more healthy state than now. The immediate results are not such as to tempt mere temporary holders, while the prospects are sufficiently promising to satisfy the sober-mind permanent investor. The share-lists required a thorough weeding, and the present depreciated state of this species of property has so far accomplished that object.

THE Directors of the Great Western Railway deserve credit for the pains they take to attract passengers to their line on the occasion of any popular assemblage in its vicinity. Races, regattas, or other public sports are no sooner announced, than advertisements and placards point out to intending visitors and to the public at large the readiest means of reaching the scene of action, and not unfrequently arrangements are made by the officers of the railway for the dispatch of trains with this special object. Such a mode of conducting the business of the railway is in the highest degree judicious, and we are happy to find that it has been imitated to some extent, although not carried so far as it might be, by the South-Western, Eastern Counties', Croydon, and other Companies.

It is a very dangerous error to act on the notion that railway business does not require "pushing." It is true that wherever railways are established, and decently conducted, they ultimately absorb the entire traffic of the district, but this does not take place all at once, and unless means be adopted to keep the public well apprised of the facilities which are thus offered to them, much business may for a considerable time pass through the ancient channels. But it is not with reference so much to the *business*, as to the *pleasure seeking* portion of the public that frequent notifications of railway arrangements are desirable. The sight of such announcements as the authorities of the Great Western Railway are in the habit of putting forth will oftentimes suggest and decide the undertaking of an excursion of pleasure, which else had not been thought of, and thus the expense incurred by the Company be reimbursed tenfold.

A great deal remains to be done not only in the mode adverted to, but in various other ways, to give the public the full benefit of railway communication, and consequently and necessarily to promote, in a proportionate degree, the interests of the proprietors. For instance, there is in general a woeful lack of accommodation in regard to *ultra-terminal* conveyances. The leading metropolitan lines are tolerably well supplied in this respect at their extreme ends, but frequent complaints reach us of a deficiency at intermediate stations. You reach a particular station in two or three hours, and are detained double the time before you can proceed to your destination which is distant probably but a few miles. We are aware that this is in many cases unavoidable, from the scantiness or irregularity of the traffic at certain points, and we have no desire that Railway Managements should incur loss by any active attempt to remedy the defect. Much more might, however, be done in the way of *encouraging* others to do so, but when as in some cases (we are happy to say they are but few) we find impediments thrown in the way of enterprising coach proprietors, and favouritism persisted in at the expense of the interests as well of the proprietors as of the public, where is the wonder that dissatisfaction should arise, or that some should sigh for the return of "the good old times," when locomotion, if less swift, was at least more sure!

WE are glad to find that the question of railway communication with Scotland is beginning to attract considerable attention. In our advertising columns will be found certain resolutions passed at an influential meeting in Liverpool in favour of the west coast line; and elsewhere we give a communication from a correspondent, whose views are altogether on the other side. It is for the public to judge between the two schemes; but for ourselves, we must be permitted to say that it will require much stronger arguments, and more indisputable facts, than have yet been brought forward, to shake the confidence of Parliament and the public in the decision to which, after due deliberation, the Commissioners felt it their duty to come. There is every probability that ultimately *two* lines will be formed into Scotland; but in the present state of railway speculations, it would not be prudent to attempt anything of the kind, and therefore we are anxious that no injudicious opposition on the part of opponents may prejudice the scheme which has so far received official sanction. We know very little of the merits of the competing projects, save from the Commissioners' Report, but looking at the question in a national point of view, it were much better that the worse of the two route should be selected, and carried forward, than that the formation of both should be perilled by contentions in Parliament or out of it. If the legislature had done its duty, it would not have rested satisfied with the mere appointment of Commissioners to determine and report upon the preferable route; it would have taken active measures to carry these recommendations into effect. When we find, however, that even a formal (although we admit, a most judicious) regulation of the House cannot be dispensed with, to forward a work of so much national importance, we fear that the promoters of the several schemes must trust wholly to their own exertions.

We learn from an esteemed correspondent, that the landowners upon the west coast line will act most liberally in reference to the land required for the railway. It is anticipated that the land will not cost more than 300*l.* per mile, whereas on the Grand Junction Railway the cost was at least 3,000*l.*, and upon other lines even in a higher ratio. It is to be hoped that the extortions of landowners are at an end. In this case we are convinced there will be no disposition evinced by such parties to avail themselves of their local position.

THE half-yearly meeting of the Liverpool and Manchester Railway Company was held on Wednesday, and a brief notice of the proceedings will be found in another column. Next week we shall publish the Directors' Report and balance sheet in full.

It is gratifying to find that the prosperity of this line (to which, from a variety of circumstances, a peculiar interest is attached) remains unabated, for although from the great depression of trade in the manufacturing districts, the gross receipts have in a very trifling degree fallen off, the deficiency is more than counterbalanced by the saving which has been effected in the current expenditure of the Company. There is every reason to believe that as soon as the traffic of the Manchester and Leeds line comes to be fully developed, the effect upon

Digitized by Google

this its neighbour will be very considerable; and we only regret that *any* circumstance should have so long delayed (if not absolutely put an entire stop to) the formation of the proposed junction line between these two important links in the chain of railway communication. We trust this matter will be carefully and dispassionately re-considered.

Some conversation occurred as to the impolicy of any interference on the part of the railway authorities in questions of general or local politics, and we are glad to find that the Directors deprecate all attempts to control their servants in the practical expression of their political sentiments. Any other course would be as unwise as it is unjust.

ELSEWHERE will be found a correspondence on the subject of the charges brought against Mr. Alderman HUMPHERY, in connection with the Blackwall Railway. We cannot say that the honourable gentleman's attempted exculpation is to us at all satisfactory, but as the matter will shortly be placed before the public in a more complete form, we refrain for the present from farther comments. It is quite clear that *much* yet remains to be developed, and it would have been far more to the purpose had the accused addressed himself to his own vindication, instead of throwing out vague (and, we believe, unfounded) insinuations against some of his late colleagues.

WE learn from the *Worcestershire Chronicle* that on Tuesday last the members and friends of the Birmingham Mechanics' Institution, to the number of nearly 800, made a second railway excursion to Cheltenham and the ancient city of Gloucester. The train was a very lengthy one, consisting of 28 carriages drawn by two engines. The cathedral at the latter place, as on their previous visit, was an object of especial interest and attention. Robin Hood's Hill, in the immediate vicinity of the city, was also visited by numerous parties, and the extensive landscape from thence, the river meandering beneath, and the slight glimpse of the Bristol Channel in the distance, gave a lively character to the enchanting scene. The other attractions were severally visited by the Company in parties, and they returned after a day's enjoyment of the highest order, whilst not the slightest accident of any kind occurred to discompose the pleasures of the day.

The *Derby Reporter* of Thursday states, that arrangements are making in Birmingham to bring a large number of persons by railway, at a cheap rate, on Monday next, to visit the principal attractions of Derby and its neighbourhood. Permission has been granted for them to inspect some of the largest silk manufactories, and to visit the attractive spar and variegated marble museums, the principal public edifices, the lofty shot tower, the exquisitely beautiful porcelain manufactory, the picture gallery of Joseph Strutt, Esq., and the splendid and princely Hall of Kedleston (the far-famed seat of Lord Scarsdale), with its magnificent collection of sculpture, paintings, and various other curious works of art. Free admission to the recently opened and most beautiful Arboretum is secured to all the purchasers of tickets. Tea is to be provided in the Pavilion, and a band of music will be engaged to play in the garden at intervals throughout the day. Such excursions as these (adds our contemporary) are quite the order of the day. The rapid and cheap transit afforded by railways induces the desire of recreation of a rational and gratifying kind in great numbers of persons, who, but for this convenience, would never think of leaving their own neighbourhoods.

ALL the railways have shown a considerable augmentation of traffic since their opening, but the following statement, perhaps, affords as remarkable an instance of increasing business as any that can be produced:—

YORK AND NORTH MIDLAND RAILWAY.

		£	s.	d.
Traffic for the week ending	July 21, 1839 ..	540	11	0
Ditto	July 19, 1840 ..	965	6	6
Ditto	July 19, 1841 ..	1965	7	7

Though the railway was not opened throughout at the first mentioned period it was at the second, when there was a direct communication with London, Hull, Sheffield, Birmingham, &c.; but notwithstanding the line was complete in July, 1840, the traffic for the week in July, 1841, shows an increase of upwards of 100*l.* per cent.

IT will be seen, by reference to our Traffic Tables, that the receipts upon the London and Birmingham Railway, last week, touched upon the enormous sum of *Twenty Thousand Pounds!* Every day's experience shows, that well-managed railways *create* traffic, but in this case the increase must be amazingly great, for we question whether under the old system a tithe of the business necessary to return so large an amount of revenue was ever carried on, even on this important route.

THE defective state of railway fencing has repeatedly been animadverted upon in our columns. It is truly surprising to us that more accidents do not arise from this cause. We learn from the *Bristol Journal*, that a horse, which by some chance got on the railway, in the neighbourhood of Brislington, on Wednesday, was literally cut to pieces by the protruding iron steps of the train, which, owing to the sudden and unexpected rencontre, could not be stopped in sufficient time to avoid the accident. A paragraph has recently appeared in some of our daily contemporaries intimating that "a person allowing a horse to stray on the turnpike road is subject to three months' imprisonment with hard labour, and that the magistrates have no power to mitigate the sentence." Some such enactment with respect to railways might have a good effect.

AT Durham, on Tuesday, Mr. Crawford, son of the late member for the city of London, obtained a verdict of 150*l.* damages against the Durham and Sunderland Railway Company, for injuries received while travelling on that line on the 3rd of November last. His cheek-bone was broken and forced into the socket of the eye; and though he had not a grey hair in his head at the time of the accident, within a month after the whole hair became perfectly white. A report of the case will be found in another column.

A PARAGRAPH has been going the round of the newspapers to the effect that English labourers may readily find employment on the French Railways now in the course of formation, at wages amounting to 10s. per day, and we understand that a considerable number of workmen have been misled by the paragraph in question to cross the Channel. We are assured, however, by a most competent and respectable authority—Mr. John Jones, at present of the Railway Office, Maison Lafitte—that there is no truth whatever in the representation referred to—that not more than 2s. 6d. per day is given—and that even at these low wages thousands apply for, but are unable to obtain, employment. An announcement on this subject will be found in our advertising columns.

A "FAST DAY" was appointed by the authorities of the Kirk of Scotland to be held on Thursday week, and if no other parties profitted by it, the Glasgow, Paisley, and Greenock Company at least had no right to complain. We understand that one of the morning trains consisted of no fewer than 45 carriages, and that three engines were required to take them forward. This certainly is "doing business."

WE learn that another horse coach has discontinued running between York and Darlington on the route of the Great North of England Railway, and that the Directors of that important line, in order still farther to secure the patronage of the public, have recently reduced their fares to a very considerable extent.

THE very excellent example set by the Railway Companies in doing away with the "fee" system among their servants, is beginning to be followed in other quarters. It appears that by a recent regulation of the Post-office, guards of mail coaches are prohibited from receiving fees from passengers, under penalty of dismissal; and their salaries have consequently been increased to a scale which is graduated by length of service. It is said that the lowest rate of remuneration is fixed at 70*l.* per annum, and that the highest salary does not exceed 120*l.* The new arrangement will be beneficial to the passenger traffic on the mails.

IT is announced that the Blackwall Extension Line will be opened for traffic on Monday next. This will, doubtless, develop the capabilities of this short but important railway to a very great extent.

So little are the rights and privileges of Railway Companies understood by the public at large, that a correspondent of one of the leading provincial journals (the *Leeds Mercury*) gravely asks, and is gravely answered, how it happens that a certain Company charge passengers at the rate of 1½d. per mile, seeing that on the boards placed in front of their stations, the "rates and *tolls*" are fixed at ½d. per mile!

THE *Perth Courier* states, that in spite of the great commercial distress prevailing in the locality, the traffic on the Arbroath and Forfar Railway is prospering. The average daily intercourse by passengers is nearly 1000 a-day. The ease and cheapness of this mode of communication are inducing many families from Perth and Dundee to take summer lodgings in some of the villages on the seacoast.

THE principal traffic returns for the present week show the following results:—London and Birmingham, 19,069*l.* 11s. 5d.; Great Western, 14,196*l.* 11s. 5d.; London and South-Western, 6,802*l.* 9s. 3d.; Grand Junction, 15,060*l.* 17s. 3d.; Liverpool and Manchester, 6,599*l.* 9s. 5d.; Manchester and Leeds, 4,531*l.* 17s. 10d.

Digitized by Google

RAILWAY OFFENCES AND OFFENDERS.

We have more than once had occasion to notice the extraordinary differences which are to be found in the decisions of the local magistracy in cases which are almost identical. The following may be taken as additional illustrations. The two lines are immediately contiguous to each other, and as far as we can see, the offences were very much alike; or if there were any difference, it assuredly was not in favour of the party whose punishment was the slightest:—

On Saturday last, Hugh Hamilton, jun., Kilmarnock, trespassed on the Glasgow and Ayr Railway, at the Troon crossing, at Barrassie, at the time the 11 o'clock train from Ayr was passing, and disobeyed repeated orders to go off, and was ultimately pushed off the line by the policeman stationed there, *to whom he used insulting and threatening language*. Hamilton was yesterday brought before Thomas M. Gemmell, Esq., Justice of Peace—convicted on Lord Seymour's Act, and fined in 2*l*. 10s., failing payment to be confined in Ayr gaol for one month.—*Ayr Advertiser.*

On Monday evening, in the half-past six o'clock train from Greenock, three passengers commenced smoking and otherwise conducting themselves in a disorderly manner, *to the great annoyance of their fellow passengers*. When warned by James Pollock, guard of the train, to desist from such improper conduct, instead of complying they *gave him the very grossest abuse*. Upon arriving at Paisley, the Manager then had them taken into custody, and the following morning brought befor Bailie Murray, who, having addressed them upon their highly improper conduct, and taking into consideration their being persons of a poorer class, fined two of them, James and Wm. M'Fie, in the mitigated penalty of 5s.—*Glasgow Journal.*

We can match the last case in these southern parts, where it appears that felony joined to railway trespassing entails no higher penalty than the payment of a few shillings. We quote from the *Derbyshire Chronicle*:—

On Friday last, Samuel Smith, of Little Chester, was summoned before the magistrates at the County Hall, Derby, by Inspector Churchill, for trespassing upon the North Midland Railway, and taking a hat from off the line. In consequence of his master, with whom he had lived for two years, coming forward and giving him a good character, he was fined in the mitigated penalty of 10s., and 15s. costs.

Perhaps the Derby magistrates in inflicting a fine of only 10s. for this twofold offence took into consideration the extravagant sum which the accused would have to pay in the shape of costs; and certainly a more monstrous *imposition* (in every sense of the word), than these same costs cannot well be conceived.

Under the head of "offenders"—offenders against every dictate of humanity—we may justly class one individual, at least, if not more, in the service of the Great Western Company, if there be any truth in the following paragraph which we extract from the *Salisbury Herald* of Saturday last:—

On Monday, a porter of the railway station, Chippenham, while crossing the line, had the misfortune to fall, by which his leg was broken. The agony thus occasioned drew from the poor fellow bitter moans, for which he was *humanely* reprehended by the person then superintending the works. Several persons who witnessed the accident, kindly volunteered their services, in order, if possible, to alleviate his sufferings; but for their interference they were treated so roughly by the policeman, as to call forth bursts of indignation from one or two gentlemen of the town.

We trust that the foregoing statement is overcharged. If it be not, we have to regret that our contemporary should have omitted to give the names of the "person then superintending the works," and the "policeman." They deserve to be held up to the execration of the public.

GLASGOW AND GREENOCK RAILWAY.

One of the trains from Greenock to Glasgow on Thursday night consisted of 45 carriages. It was drawn by three engines, and occupied from a quarter-past ten till near twelve o'clock, thus maintaining only about half the usual rate of speed, no doubt to prevent accidents. On a rough calculation there must have been well nigh a thousand passengers in the train. The Company's servants deserve great credit for the coolness, regularity, caution, and civility they evince on all occasions, and especially when they are almost overborne, as they have frequently been of late, by multitudes of people. The Monday morning train from Greenock to Glasgow, as well as the down train of Saturday afternoon from Glasgow to Greenock, are at present regularly crowded with sea-bathing folk, all the disposable carriages being put in requisition, and seldom carrying less than 500 people. Few sights are more imposing than one of these enormous trains moving at the usual rate of speed. Already everybody has become so familiar with railway travelling as to experience not merely a feeling of perfect security and confidence, but of lively pleasure in being whirled along at a speed little short of 30 miles an hour. We are glad to find that the steamboats, by dint of reducing their fares, continue to carry great numbers of passengers up and down the river. When the weather is favourable, and the saving of an hour no object, nothing is so agreeable in the way of travelling as a sail down the river in one of our trim, comfortable, well-managed steamers; and much as we rejoice at the almost unlooked-for success of the railway, we should, in common with our fellow-citizens generally, feel sorry indeed should it affect the prosperity of the river steamers. But the experience of other places proves that the demand increases with the supply; and we may therefore hope that, in the long run, both railway and steamers may be found mutually beneficial to each other, by inducing

Those to sail who never sailed before,—
And those who sailed, to *sail* and *rail* the more.

—*Scottish Guardian.*

BRISTOL AND EXETER RAILWAY.

To the Editor of the Railway Times.

Sir,—Having had occasion to address you a short time since on the above railway, I have since heard that it has been suggested to terminate the line at Taunton in consequence of many difficulties, besides a very dangerous tunnel to overcome, in the proposed line to Exeter. These difficulties might, I am firmly convinced, be obviated by the line being now carried on from Taunton to Wellington, and thence by the side of the Great Western Canal, direct to *Tiverton* (at all events), being a complete level throughout. Great advantages would be derived from this arrangement, in consequence of the increase of the trade there; and Tiverton being in a central direction to the towns of Bideford and Barnstaple, and many other places in the north of Devon, the railway, should it be deemed requisite, might hereafter be carried on in the same level to Exeter. B.

London, July 29, 1841.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

Sir,—The following is a statement of the traffic on the Manchester and Leeds Railway for nineteen weeks ending the 12th July, 1841. The figures speak for themselves, and may be some answer to those who have of late so unjustly assailed this railway. In a very short time, it may be expected the traffic will be DOUBLE what it was at the time of the opening throughout in March last:—

March 8, 1841	£2,898	10	10
March 15	2,954	12	3
March 22	3,075	8	1
March 29	3,080	19	10
April 5	3,116	19	4
April 12	3,664	4	6
April 19	3,459	13	0
April 26	3,172	6	1
May 3	3,096	16	10
May 10	3,092	19	1
May 17	3,290	6	8
May 24	3,325	2	11
May 31	4,180	3	4
June 7	4,543	1	4
June 14	3,539	8	7
June 21	4,013	6	9
June 28	4,070	10	2
July 5	4,194	6	7
July 12	4,626	14	6
Total	£67,395	10	8

I remain, your most obedient servant,
VERITAS.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

Sir,—I observe in your last paper a letter dated Edinburgh, from "A Shareholder," written for the purpose of informing your readers that the resolutions of the proprietors of the Edinburgh and Glasgow Railway, passed at the meeting in February, are illegal. After some remarks, the writer goes on to say, that the Manchester and Liverpool shareholders will see what a slender reed they choose to lean on. True it is, as I see by reference to another part of your paper containing the law proceedings that have taken place on this question, we are beaten; but does "A Shareholder" fancy because we are defeated through the fault of having a bad Act of Parliament, that we shall allow the matter to rest where it does. Can it be supposed that any Railway Company in these days will be allowed to have two Boards of Management for the sake, as the Edinburgh shareholders in one of their letters said, to have their share of the *patronage*. Look at the Grand Junction, the London and Birmingham and Liverpool and Manchester and the Manchester and Leeds. Those are well conducted railways, the managers acting for one common good, and not squabbling about *patronage*, and they have only one Board. It matters little whether the management be at Edinburgh or Glasgow, but whichever is proved to be the best, there ought the head quarters to be established.

I hope the meeting of proprietors which must be held shortly will order in the next application to Parliament for an amended Bill that powers be sought to place the management of this railway upon the same principle as the large railways in England, and do away with the absurdity of a divided management.

There is no doubt of the success of such an application, as members of Parliament understand railways too well not to support it, besides its being the wish of the majority of the shareholders.

I am, Sir, your obedient servant,
A LIVERPOOL SHAREHOLDER.

Liverpool, 27th July, 1841.

Edinburgh and Glasgow Railway.—In reference to the interdict which has been granted by the Court of Session against the Board of Directors of this Company proceeding to act under the resolutions of a meeting of the shareholders, held on the 22nd of February last, by which difficulties in the future management were intended to be removed, we understand that the interdict is restricted to the two first resolutions; the first authorising the Board to take upon itself the superintendence of the whole affairs of the Company, remitting only matters of a purely local character to the Edinburgh and Glasgow Committees; and the second authorising the appointment of certain Committees to expedite the business of the Company. The Court has not extended the interdict to the other resolutions of the shareholders, one of which is to erect all the workshops at Glasgow, instead of dividing them between Edinburgh and Glasgow. The decisions of the Court, and the opinions of the judges, as reported, leave still undefined the powers and duties of the two statutory Committees, as distinguished from the powers and duties of the Board of Directors, and leaves uncertain whether the interdict refers to the Committees as deliberate or executive. The Act of Parliament on the points in dispute it would seem, like most Acts of Parliament, admits of two interpretations; meanwhile, we understand, that in order that no obstruction be made to the opening of the line, the Board, at a meeting held this week, consisting of most of the Edinburgh and Glasgow members, unanimously agreed that the Superintendent and other officers of the line be immediately appointed by the Board, and that it proceed to enact the regulations for the management of the whole affairs of the Company—*Glasgow Herald.*

THE QUESTION OF SUNDAY TRAVELLING.

LETTER II.

To the Editor of the Railway Times.

SIR,—Having since my last communication seen the terms of your challenge, and the arguments which accompany it, I sit down with all readiness to the fulfilment of my promise; in doing so, I must be allowed one or two preliminary remarks.

To your indications of contempt for "the pharisaical squad," and "the eminent spiritual Quixote at their head," I shall make short reply. When you know somewhat more of these men and their principles, you will I trust treat them with more respect. You will find them on better acquaintance neither Pharisees nor fanatics, neither knaves nor fools, but honest men, who are content to do what they have reasonable ground for believing to be God's work, through evil report and through good report, and, at all events, indisposed to render railing for railing.

As for the arguments you deem to be unimpeachable, I must at least tell you that they have been often in the balance. They do not indeed profess to be new. But when, in marshalling your authorities for them, you include Bishop Horsley, I feel bound to present you, at the very outset, with an apposite sentence from his third sermon on the Sabbath—"From this text [the one you quote, Col. 2, 16,] no less a man than the venerable Calvin drew the conclusion, *in which he has been rashly followed by other considerable men*, that the sanctification of the seventh day is no indispensible duty in the Christian Church." I mean no offence by this breach in the line of your authorities. It may serve to show you that your outworks are not quite what you take them for. These, however, are no objects of attack with me. Be Calvin's opinion rash or otherwise, and be Horsley's animadversion of it sound or unsound, I believe that *you*, Sir, will not allow the question before us to rest on mere human authority. I shall not: else we well know on which side authority would preponderate.

Another preliminary I must not omit, as it is your own. You speak of being forced into a "theological discussion, by the onward march of fanaticism, which, if triumphant, will absorb in one fell swoop, *one-seventh of that property* which it is your business to protect." I must not, Sir, allow myself to be diverted from my object into any counter calculations, as to the fractions of this property. To me, your fears sound like those of him who "fleeth when no man pursueth." But I must say, that to suffer such a preface to stand on the threshold of such an inquiry, will be as little consonant with your reputation as with mine. All your readers are, I trust, well established in the conviction, that in the kingdom of God's providence *truth* is the *safest* thing, and *duty* the *cheapest*; and that calculations of profit and loss are but an ominous item in the simple question,—has God issued a command, or has he not? It was very natural for you, having *first* come it seems to the conclusion that anti-Sunday transitarianism is "rank and rampant bigotry," to advert to its probable effects, if not duly convicted. But you would, I am persuaded, deprecate the formal announcement of a theological inquiry by such an appeal to the sensibilities of the pocket.

And now I must mark, with some precision, what is before me. For the present I have nothing whatever to do with any question as to the manner, or degree, or even *day*, of Sabbath observance. You demand a proof of the existence of a Divine commandment on the subject. To this demand I shall confine myself in this letter. All my arguments will go to this simple point, that there is binding on Christians an obligation to keep the Sabbath—an obligation which does not leave man to his own sense of what is beneficial, much less to the freedom of his own will, or the conventions of society, but which is of Divine authority—binding as such in all times and places, and not to be wilfully broken but at the peril of the soul. With this abstract statement it would almost seem, from some of your expressions, that you agree. I cannot, however, assume this. The magnitude of the cause at issue makes it imperative on us both, that before entering on the details, or the interpretation of the law, it should be fairly and fully ascertained whether the law exists. We assert it, and call you to obey it; and are humbly resolved, that if God prosper us, it shall be obeyed. It may surely be tolerated by the most enthusiastic devotee of railway profits, that we give a formal exposition of the ground on which we act. Leaving, then, for the present, all consideration of the particular day—or conceding, if you please, that the seventh day is the Sabbath, let us look at the great Sabbatic institution.

First, in its Divine origin.

I open the most ancient and venerable Book extant—a Book confessedly written beneath the inspiration of God; and I read in one of the first pages the following words:—"Thus the heavens and the earth were finished, and all the host of them. And on the seventh day God ended his work which he had made, and he rested on the seventh day from all his work which he had made. And *God blessed the seventh day and sanctified it*, because that in it he had rested from all his work which God created and made."—(Gen. ii. 1, 2, 3.) This is the first intimation of the Sabbath—not wearing, indeed, the precise form of a law, for it occurs in a narrative, and that brief and sketchy—but declaring as a thing then done what involves a law, and declaring it in terms which are actually introduced into a law when God's will on that and other subjects come to be formally written. "Remember the Sabbath day, &c., for in six days the Lord made heaven and earth, &c., and rested the seventh day, wherefore the Lord blessed the seventh day and hallowed it."—(Exod. xx. 8–11.) Here is the historical announcement, not only inserted in the law but made the very ground on which the law proceeds, that the Lord made the seventh day his Sabbath by ceasing then from his work, and that having then rested, he then blessed it, and made it sacred.

Now, it is not to be disguised that some have attempted to elude the obvious consequences by arguing that such a statement of the grounds of the law does not necessarily prove the original sanctification of the seventh day. Your friend Paley has ingeniously insinuated that this law ordaining to the Jews the observance of one particular day, it was natural that the choice should fall on the seventh, and that the cessation of the Creator from his work on that day should be given as a reason why his creatures in due time should cease from theirs. Against the plausibility of this argument, I have nothing to object; against its employment, as he employs it, I appeal to the narrative. If language be capable of conveying a simple fact, it is plain that God's resting on the seventh day and blessing it were co-eval. The law does not say, as in Paley's hypothesis, it should say, "wherefore the Lord (now and henceforth) blesses the seventh day and sanctifies it, but rested the seventh day, *blessed* and *hallowed* it." There is no escape from the conclusion. The seventh day was set apart from the beginning. Into what absurdities, then, are we precipitated by the hypothesis that the Sabbatic institution was first announced to the Jews,—that so significant a circumstance as the Great Creator ceasing those manifestations of his power and goodness which must have filled the new-born faculties of man with rapture, when "every beast of the field and every fowl of the air was brought to Adam by its Creator to see what he would call it,—that the cessation I say of this, and the solemn and benignant sanctification of the day in consequence should be unheeded—unbeneficial—or absolutely unknown—that Adam and Eve, basking in blissful innocence beneath the creative smile should not know it—that the breath of the divine complacency pronouncing blessings on that happy day, should not so much as waft one vocal whisper through the bowers of Paradise—that whilst the first Sabbath was kept in heaven, God himself keeping it, and the "sons of God" keeping it in choral hymns and symphonies and shouting for joy,* man, living then in pristine honours, man, rich in the unforfeit immunities wherewith exuberant goodness had invested him, man, for whom God in flesh has told us, that "the Sabbath was made" man should not then, no, nor when the curse of drudgery for bread fell on him, and mercy had provided this mitigation beforehand, man should not hear a syllable about the matter, but go blindly on for 2,500 years, ignorant of the best, and brightest, and most essential line of all his charter, and desecrating, amidst glorious discoveries of the divine will concerning him, and illustrious proofs of obedience, through divine grace afforded him, habitually desecrating a day which it was subsequently discovered had been thus solemnly and benignantly hallowed of God. Were it permitted me by your limits to expatiate on the patriarchal ages, and unfold the amount of privilege as to light and holiness which before the Mosaic dispensation was vouchsafed to the saints of God, I could show with considerable aggravation the monstrosity of the hypothesis. But I forbear. Let the considerations I have glanced at be taken into account; and let candour pronounce on the probability of the supposition that God should thus keep Sabbath at the beginning and only make his having done so a reason for one ten-thousandth part of his creatures keeping it during perhaps one-third of the period alloted for man to sojourn on the earth.

But I must not pass without notice another argument from the same quarter. You, Sir, have not quoted it, but Paley has urged it, and I hold myself responsible for all that bears directly on my object. The argument is, that it is inconceivable for the Sabbatic institution to have existed from the beginning, and no notice to have been taken of it in any historical record of the first ages. That it was a primeval institution, so far at least as its appointment is concerned, we have seen in the inspired narrative of the creation. That no direct mention of its observance should occur in the patriarchal records, may indeed excite a momentary surprise. Whether any inferential indications of its existence are therein traceable, we will see anon. But in order to estimate the force of the non-existence of direct proof of its observance as an argument that it was not observed, or not so much as ordained, we have only to weigh the following undeniable facts. The Sabbath was at all events an essential part of the Mosaic economy; and the records of the people of God under that economy are, to say the least, as circumstantial as those of the "grey fathers" of mankind. Now, the very first mention of the Sabbath after the delivery of the law is in the 23rd chapter of the 1st book of Chronicles, that is to say, after an interval of nearly 500 years. Not one word about its observance, not one hint of its existence during the very circumstantial histories of Joshua and the Judges, and Samuel, and Saul, and David. The first recorded reproof for its non-observance is in the prophecy of Isaiah, 730 years after its Mosaic enactment on Mount Sinai. So much for the argument from its non-appearance amongst the irregular, though, in particular instances, minute histories of the patriarchal ages. That it is nowhere traceable by inference is denied. I, for one, think it appears with a most beautiful distinctness in the conduct of Noah imprisoned in the Ark, looking out on three successive seventh days (or, as I should call them, days of grace) for release. I will not press the fact as an argument, *ratcat quantum*. At all events, it is a coincidence well worth serious remark that these intervals of patient expectation, like those between the visits of the risen Saviour to his disciples, should be so exactly conformable with the Sabbatic institution, the blessing of that seventh day which was hallowed of God.

But there is another fact having the same bearing, on which I lay stronger stress, and challenge anti-Sabbatarians to explain on their own hypothesis—I mean the division of time by weeks, which was unquestionably of patriarchal date, and the observance of which by nations having no alle-

* Job xxxviii. 7.

Digitized by Google

giance to, respect for, or connection with, that singular people to whom you would confine the Sabbatic law, is to my mind conclusive proof that the Sabbath was from the beginning. There is no natural ground whatever for such a division of time. It does not harmonise with any of those great revolutions of the seasons which have given rise to the larger divisions of the year, amongst all nations. It is, for ought that the science or ingenuity of man can suggest, a purely arbitrary mark of time, and it is so closely connected with all God's revelations to his creatures, that our infidel neighbours in their madness deemed it essential to get rid of it, and made the miserable attempt to count days by tens instead of sevens. Now ancient history informs us that, though immediately on the establishment of the Mosaic ritual it was prophesied of this Jewish people that they should "dwell alone, and not be reckoned amongst the nations," (Numbers, xxiii, v. 9,) this Sabbatic mode of reckoning obtained amongst nations the most remote—not only Greeks and Italians (both despising the Jew), but among Scythians, Celts, and Indians, lying far and wide on every hand. You may say this might be posterior to the delivery of the law. Then I beg you to open the Book of Genesis, and in the 29th chapter at the 27th verse, you will find proof of this custom long before the enactments of Mount Sinai, not amongst Jewish ancestries only, but in the land of the Chaldeans. Will you tell me that this may have been the result of the earliest tradition?—dispersed families wandering from the parent stock and carrying along with them parental customs? I answer, you have touched the cause. Explain it—or let me explain it; and see whether the explanation does not involve the Sabbatic institution. Granted that the wanderer carried with him the primeval tradition. Granted that the custom so handed down had its birthplace in Paradise. Granted also that it bore testimony to the world's creation—*as it did and does*. But tell me whence such testimony got the number of *seven*. The world was not created in seven days. The cycle of natural things was not in seven days. Six days was the eventful period. How is it that six days was not a week to all mankind? Whence came that arbitrary intercalation of the seventh day? What was the seventh day to those who, on your hypothesis, had nothing to do with the Sabbath, that they should add it without a shadow of necessity to the other six, and so destroy, if there were to them and all Gentile nations, no Sabbath, the beautiful symmetry and devout remembrances of the real birth-day of creation? I need not demonstrate the truer view of the subject. I will only say, Sir, that you yourself, every Saturday you have put forth your weekly journal to the public, have been furnishing (it seems unconsciously) a proof of the universality of the Sabbath. What will you say when I tell you, that ancient Heathen documents testify that this weekly division of time was interwoven with religious observances—that Hesiod and Homer, the most venerable uninspired poets of antiquity, call the seventh day, no less than the Hebrews, a *holy day*—and that subsequent poets and historians give the same significant testimony amongst nations, who would have been more disposed to desecrate that which the Jews called holy, than to have taken a lesson from their laws as to what they should revere.

But, before we dismiss this part of the subject, I must ask you to examine another page of history, because, whilst it affords, as I think, influential proof that the Sabbath was of primeval date, it has to my apprehension been tampered with by Paley. It occurs in the 16th chapter of the book of Exodus. We there read, that before the promulgation of the Mosaic ritual—before the writing of one single syllable of the Decalogue, the Lord was pleased to feed his people with a miraculous supply of food; which they were to gather every morning, and which was to suffice but for one day. On the sixth day, the people gathered twice the quantity, in evident anticipation of the Sabbath, and as it should seem, without any distinct issue of a general command; for the rulers of the congregation, who (if any ought to have known it) came and told Moses, evidently in surprise, inasmuch as Moses replied in explanation, "This is that which the Lord has said" (to him, undoubtedly—*see* v. 4, but not it seems to them) "*To-morrow is the rest of the Holy Sabbath unto the Lord*; six days ye shall gather it, *but on the seventh day which is the Sabbath*, in it there shall be none.....To-morrow *is the rest of the Holy Sabbath*." What Sabbath? The word itself signifies rest. What was the meaning of such expressions as these, to a people as yet in total ignorance of the Sabbatic institution, that the morrow was the *rest of the Sabbath*, and that the seventh day is the Sabbath. Paley would have us believe this the first authoritative announcement—the first indication of an institution that was to make the great machinery of social life stand still one whole day in every seven; and absorb, as some of that thrifty and not over toward race might have murmured "one seventh part of their property at one fell swoop."

I must do Paley the justice to notice that he strives to strengthen his cause by laying stress on the words, "See for that God has given you the Sabbath, therefore he giveth you on the seventh day the bread of two days." My simple reply is, that, in the first place, this no more explains what the Sabbath is, nor what constitutes it, on Paley's evident notion of it—a gift: and, in the second, that whether the Sabbath had been given from the beginning, or was then only for the first time made a day of grace and mercy—whether struggled for till it was practically extinguished in Egyptian bondage, or then granted, as an altogether unlooked-for boon, these words do not in the smallest degree decide. In one case, or the other, it was *giving* them the Sabbath. Whether invested or re-invested it was by God's own right hand.

On the whole, then, and to close this first point of our inquiry, I call on you, Sir, and on every honest and candid reader, to determine whether we have not sufficient evidence thus far, for the maintenance of the Sabbath, inasmuch as its Divine origin, whilst it assigns to it a super-human authority, distinguishes it from anything merely Mosaical and Jewish, and makes it an institution intended for all mankind.

This is my first argument in proof of the existence of a Divine command: and here, that I may not trespass on your valuable limits, I will stop. You will not oblige me to solicit space for my next communication, seeing that you have held me responsible for my reasons on the subject. It only remains that I subscribe myself, as before, Sir,

Your obedient servant,

AN ANTI-SUNDAY TRANSITARIAN.

Bristol, July 23, 1841.

[We should be sorry to interfere with our correspondent in his statement of his views, but we beg of him to be as concise as the nature of his argument will permit in any further communication with which he may favour us.—Ed. R. T.]

SUNDAY TRAVELLING ON THE GREAT WESTERN RAILWAY.

The following sensible letter on this subject appeared in the *Bath Herald* of last Saturday, signed "A Bathonian:"—

An address has lately been presented to the Directors of the Great Western Railway Company, signed by the Rev. Lewis Purbrick, Vicar of Chippenham, and several other parochial ministers of the neighbourhood (as repeatedly inserted in the Bath papers) "protesting against habitual Sunday travelling on the said railway," which practice they consider as a "marked and flagrant defiance of God's Holy Law," as a "Sabbath desecration," as "sinning with a high hand," &c., and calling for a discontinuance of the same.

I beg to state, that, as a member of the British public, and in no way deriving one single shilling from that "*present advantage*" which these reverend gentlemen insinuate is the only motive for continuing this "breach of the Divine law," I would very respectfully offer a few reasons for dissenting from the general principles maintained in their declaration.

In the first place, had not a reciprocal benefit been conferred on the projectors and the public, the legislature would not have sanctioned so formidable an undertaking as the Great Western Railway; that gigantic road was from the first *intended* to be traversed every day in the week, not only to afford a remuneration to the subscribers (with whom good faith will be broken as well as with the public if it be not so traversed), but also to give that facility for travelling thereby which is absolutely needful after the discontinuance of other conveyances. I give full credit to these gentlemen for the purity of their intentions, but I must (with all due deference to their sacred calling) think, that they have assumed too much, when they take on themselves indiscriminately to condemn all Sunday travelling as being a "defiance of God's Holy Law." I have no doubt that many of these divines are scantily provided for by their *professional* income, yet, it is probable, that any one of them could obtain a conveyance, in case a beloved parent at a distance was seized with palsy on the Sabbath. Some of these clergy have very ample incomes. Very easy it would be for such to order their carriage out; but what is a poor man to do? The clergyman might say, "I would not order my carriage but from necessity;" granted, but what law of God or man, what ordination service constituted him as the arbiter of what is, or is not, the work of necessity in others? If railway conveyance on the Sabbath be stopped, how is the less opulent man to reach the bedside of one whose spirit may be departing for its everlasting rest? These gentlemen in their well meant zeal, would cut off the possibility of fulfilling "God's Holy Law" in many other ways amongst the great majority of their fellow subjects; the living God levels his poor frail creatures by disease on the Sabbath as well as on other days; they are sometimes rendered helpless even in his own sanctuary; and his own sacred temple he will strike with lightning on that blessed morning. When Streatham church was so struck some few months ago, was it said that an immediate departure to London for engines, and assistance by railway, would be "sinning with a high hand?" Again, if the bodily disease of a sufferer at one of their villages required the superior medical advice which Bath affords, would it be called "Sabbath desecration," to send by railway for it? These are strong cases, but such do happen, and must be provided against, either by stages or otherwise, for those who cannot obtain other conveyances. Most proper would it be for these parochial ministers to exhort their congregations against *unnecessary* Sunday travelling, and against a waste of the Sabbath by inspections of the railway, the novelty of which will very soon die a natural death, as it has in this place already; let them not at the same time forget the words of the Bishop of Norwich, who, when it was suggested that a petition to the legislature should be presented against the delivery of letters on Sunday, most truly said, that "objectionable consequences might be anticipated even to the most religious individual from an unqualified adoption of such petitions;" but above all, let them remember the example of our blessed Lord himself, who could on any other day (had he chosen so to do) have cured the woman who for eighteen years had been bound by "a spirit of infirmity;" or the man "which had the dropsy," but it was his Almighty will to heal them on the Sabbath Day, and his revilers "held their peace."

Grand Railway Match against Time.—Mr. J. K. Brunel, the Engineer on the Great Western Railway, will shortly perform a match from Bristol to London, by the engine which is termed the "Hurricane," within two hours, for 1000*l*.—at as nearly as possible, sixty miles an hour.—*Chelmsford Chronicle*. [The performance is possible enough, but we hope the Directors will not be consenting parties to the trial.]

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Confident both in my premises, and in the deductions from them which I have submitted through your columns, I am content to see them assailed by the sanguine holders, and by the swarm of officials, being satisfied that the results of this great line, will be as I have stated. My positions were that this railway would cost, including its adititaments, and the expenses necessary for its development, within the next eighteen months, more than 7,000,000*l*., that the expense of working the line to Bristol would exceed 250,000*l*., or somewhat more than 2,000*l*. per mile, and that the weekly receipts also to Bristol would not exceed 10,000*l*. to 10,500*l*., for the average of the first two years.

First as to the cost.—The sum expended up to Christmas, 1840, as stated at the last meeting, was 5,288,043*l*. 17*s*. 2*d*. As however the heavier works on the line are those between Wootton Basset and Bath, which were in vigorous prosecution during the present half year, it cannot excite surprise that these works, together with the payments in arrear up to the 31st December, should have far exceeded the balance to be raised by shares or upon bond, as empowered by the Company's Act, amounting to 4,500,000*l*. in shares, and the usual 1-3rd by bond, or very nearly 6,000 000*l*.

As to statements made by any Chairman as to the finality of cost, I can only observe that such remarks are very unseemly, and not calculated to raise our respect for the judgment of such functionaries, or reliance upon any future statements proceeding from the same quarter. Of this the best proof will be furnished by the accounts for this and the following half-yearly meetings, which will disclose a vast further payment, and a very considerable arrearage—an arrearage which can no longer be concealed—to the extent of 500,000*l*., besides still further expenditure which is necessary, but which will not perhaps now be avowed—an expenditure much understated at 300,000*l*.

Next as to the expense of working this line.—In the statement first made I confess there is an error into which I was led by the vehement assertions of the extraordinary economy with which this line was worked, as compared with the Birmingham. I have since had opportunities of testing these statements, and have ascertained that there is grievous error; the expense of working this line being at least 2,500*l*. per mile all the way to Bridgewater. It is easy even for the uninformed in these matters to see how it must be so. The Birmingham, a line which has been in partial operation for five, and in complete operation nearly three years, has not been able, as shown in the last returns, to reduce the expenses below 40 per cent. upon their immense receipts, or about 2,810*l*. per mile expenses upon a receipt of 7,200*l*.. Now, adopting the present arrangement of the Great Western, of amalgamating all the lines worked by this Company into one, and taking the highest present receipts to be the average of the six summer months, and a moiety as the average of the winter season, we shall have a mean of less than 10,500*l*. per week, or a gross receipt per mile upon 170 miles of 3,200. That this sum may be exceeded by its own natural increase I hope will be the case, as on the Birmingham, South-Western, and other lines, but I trust that these statements, based upon incontrovertible facts, will lead those who are interested in forming only *great*, to correct, conclusions.

It is further asserted, that this line and its extensions can be worked with less expense than the Birmingham. How are the facts? To obtain their present receipt of 7,200*l*. per mile, the Birmingham trains travel 1,216 miles per day, whilst the Great Western, to obtain their receipt of 3,200*l*., are obliged to travel 1,819 miles in each day, as per present train bills, reckoning the down week-day trains—taking the Birmingham line at 112 miles, and the Great Western at 170. Thus the Great Western are obliged to expend 50 per cent. more in time, labour, and locomotive power than the Birmingham, to obtain a receipt of 3,200*l*. per mile, which, as compared to the Birmingham receipt, is as 4 to 9. In other words, whilst the Birmingham line, with an expenditure of 10, obtains a return of 90, it takes the Great Western (calculated by the miles travelled) 15 to bring a return of 40. That the results as here shown may be modified in practice to some extent is certain, else this line would be ruinous alike to all concerned with it; enough has been here shown to correct the unsound views and opinions entertained by those who are buoyed up by their hopes, or who mistake the crowds hurrying to Windsor and Reading, using only a small portion of the line at cheap fares in the summer, for a traffic which will pay a good dividend.

The views here given are not based upon any abstract principle of the amount of population, or of their greater or less use of this line, but upon *unquestioned and undoubted facts*. I repeat as the result of my information and inquiries, that the receipts will fall short of 12,000*l*. for the whole line, or about 3,660*l*. per mile, which is less than half the proceeds of the Birmingham, worked, as is shown, at a far less expense; and that upon these grounds it is manifestly impossible that any dividend of 5 per cent. can *fairly* be divided from *profits* for years to come.

I am, Sir, your obedient servant,
IGNOTUS.

[We have allowed the disputants full scope to set forth and enforce their several views, and here the discussion must for the present terminate. *Time* will determine which of them is right.—ED. R. T.]

THE MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

SIR,—I have observed several letters of late in your excellent journal reflecting on the Directors and attacking the Management of this railway; but generally concealed under such dubious language, and couched in such ambiguous terms, as would prevent the great mass from understanding to what railway they alluded, and which only those tolerably well versed in railway matters would clearly understand; I refer to a letter signed "G." and others.

Now, Sir, my object in writing this present letter is to ask for an explanation of this squeamishness, this false delicacy on the part of your correspondent. I confess it is beyond me to fathom it. Are not Railway Companies public bodies? are not the Directors of those railways public men? And are not the characters of public men, public property? Undoubtedly they are; then if the Midland Counties', or any other Company, is badly conducted, if the Directors are guilty of venal and corrupt practices, (which was more than insinuated in some of these letters,) surely it is the duty of every honest man, surely it is your duty as Editor of a public journal professing to watch over the interests of the railway public, openly to expose, and hold up to the scorn and detestation of the public, such conduct. But mark my words, I do not charge the Directors of this railway with any malpractices; I only wish by this letter to draw your attention and that of the public to the ineffectuality (if I may be allowed the expression) of these charges, couched in ambiguous and doubtful terms. For we know that human nature is inapt at appropriating such charges, is unwilling to believe itself attacked except when there is no escape, and although in some cases to

"Just hint a fault and hesitate dislike,"

may succeed, and "damning with faint praise" be more successful than open and direct attack—in the case of Railway Directors such insinuations are passed by "as the idle wind which they regard not."

I would, Sir, I again say, impress upon the minds of your correspondents both about this and other railways, the propriety, the expediency of pointing out to the public, who are not generally so well versed in these matters as to catch a hint, clearly and distinctly the railway that is mismanaged, and the Directors who misconduct themselves; and also the inefficiency of such attacks as contained in the letters of "G." and others, upon the "directorial public." I think it a false delicacy. To compare small things with great, it I, or I dare say any of your correspondents, were dissatisfied with the conduct of a minister, we should not be found attacking him by inuendo, carefully abstaining from mentioning his name, or even the country which he inhabited, we should not be found designating him by ambiguous terms, but openly and boldly speaking of him by name, as a corrupt or inefficient minister, as the case might be. Then why should not the same language be applied to the Director of a railway. They are both, I contend, public characters, the one responsible for the well-being and good management of a country; the other of a railway; and as such, are amenable to the public for their uprightness of conduct, and integrity of character, in their respective capacities and conditions of life. Trusting that you will agree with me in the spirit if not the terms of this letter, and that you will give it a place in your journal,

I am, Sir, a frequent reader of the *Railway Times*.
P. Z.

July 28, 1841.

[When *proofs* of malpractices can be given, we see no reason why the charge should not be made as boldly and unequivocally as possible. When proofs *cannot* be adduced, open attacks and covert insinuations are equally discreditable to those who make them.—ED. R. T.]

RAILWAY COMMUNICATION WITH SCOTLAND.

To the Editor of the Railway Times.

SIR,—Having lived for nearly 30 years in the neighbourhood of the line selected by the Government Commissioners as the best for the railway communication with Scotland, viz. the one from Lancaster past Kendal and over the mountains to Carlisle, I have often wondered how any one can suppose a sufficient number of subscribers are to be found willing to enter into an undertaking offering such very slight inducements, the more particularly as our experience hitherto, as regards railway dividends, has been of the most disheartening kind, no greater proof of which can there be than the quotations weekly given in your paper, where all may see that of the 35 English railways, either completed or in the course of execution, no fewer than 14 are at a more or less serious discount. Besides, it must be known, or it may be known to all who will take up the Government Commissioners' Report, and follow it *carefully step by step*, from Lancaster to Carlisle, that the works along this line are of quite a gigantic kind, very like those on the Manchester and Leeds Railway, a continual succession of heavy excavations and embankments, of viaducts and bridges, of the very deepest cuttings in rock and long tunnels, such as might well be expected in a difficult country like this. Now, I happen to be a shareholder in the Manchester and Leeds Railway, and do therefore know to my sorrow that that railway has cost double the estimate or thereabouts, or 68,000*l*. per mile! I know, too, that the Summit Tunnel has cost more than double (80*l*. per yard forward!) what it was estimated to cost, or 108,000*l*. more than that estimate, the original contractor having paid a penalty of 3,000*l*. to escape from his contract!!!*

I therefore come to this conclusion, that the Government Commissioners' Report will be of no service to this line of railway unless the Government themselves will undertake the work, or some much less expensive method of constructing railways shall hereafter be found out. In the meantime, *so much nearer Scotland* are the railway lines completed on the East coast, that the stream of traffic has left the western parts of the kingdom and now passes by the North Midland and Great North of England

* "Tunnels of all engineering works involve the greatest uncertainty in the cost, and which on this line in particular *has exceeded all previous conception*."—See Manchester and Leeds Railway Report.

Digitized by Google

lines of railway to Darlington and Newcastle, and thence to Scotland, and to such an extent has this taken place, that Kendal, Lancaster, and the towns on the Great North Road, are all *in alarm*, and are making the greatest endeavours to recover their lost traffic, receiving some *cold* assistance from the London and Birmingham, Grand Junction, North Union, and Lancaster and Preston Railway Companies, being those railway lines which will more or less suffer by this transfer of the Scotch traffic from the west to the eastern parts of the kingdom.

I am, Sir, your most obedient servant,

OBSERVATOR.

RAILWAY ADJUDICATIONS.

THE SHEFFIELD RAILWAY COMPANY *v.* GEORGE VENNER.

Insolvent Debtors' Court, July 29.—In this case Mr. NICHOLLS appeared for the Company, and Mr. COOKE, with whom was Mr. WOODROFFE, appeared for the insolvent. The Court was much crowded, and the hearing excited very considerable interest, it being a rare instance of an opposition in this Court by a Railway Company against an insolvent. The learned counsel (Mr. Nicholls) proceeded in the first instance to call the solicitors for the Railway Company who put in the record of the action by the Company against the insolvent, brought 25th January, 1841, which was brought in debt for seven Calls, to which the insolvent pleaded that he never was indebted, and upon which issue was joined. The cause was tried at Liverpool Assizes, when the Company obtained a verdict for 841*l.* 14s., costs 149*l.* 16s. which had judgment gone (what is technically called by lawyers by "default") would not have amounted to more than 10*l.* (the assignment of the shares to the insolvent was produced) dated 4th December, 1837.

The insolvent, on his examination, stated, that he had carried on business in Stockwell-street, Greenwich, that he had nothing to give up to his creditors except his book debts, the property he had formerly possessed having been taken under a deed in the lifetime of the insolvent's father in 1828. The object of the deed being to allow the insolvent's father 100*l.* a year out of the business during his life, and to the wife after the father's death (a copy of the deed was produced). An action was subsequently brought by the mother against her son (the insolvent) under which action the sheriff seized the entire of his property on the 22d March last. The amount he could not state. He had signed a deed conveying to his mother in February of the present year. The lease of the house had been valued at 110*l.*, and the fixtures at 42*l.*, which he had done at the "pressure" of his mother, he owing her 900*l.* which was due to her for nine years annuity, he saw, he said, that he was ruined by the Railway Company. He had carried on the business since he had been out on bail, but it was in her name. He contended that the Railway Company had no claim upon him, as he had taken the shares in trust, but he admitted that he had offered the Company 300*l.* to exonerate him—he considered that he had been victimised. He attributed his insolvency to the Company, by which his credit had been stopped. Among some witnesses who were examined, was Mr. Charles Vignoles, who stated on his examination that he was an engineer, and resided in Trafalgar-square, Charing-cross. He had been employed by her Majesty's Government, and had been appointed Engineer to the Company. There had been a great number of shares in the market, and had purchased, in 1837, a great number of the shares (1000), which was to obviate the breaking up of the Company, which had prevented the breaking up of the railway, &c.

Mr. Commissioner BOWEN asked, if any of the evidence was given at the trail?—The Judge said, it was an Equitable Case, and that evidence could not be gone into.

Several letters were put in and read, of resolutions by the Board of Directors, which took up considerable time in the reading of the shares. The insolvent had 20. At the meeting it had been agreed that proceedings should be taken against the defaulters, of which Lord Wharncliffe was the Chairman.

Mr. George Hudson proved the valuation of the lease and fixtures, and Sarah Venner, the insolvent's mother, confirmed her son's statement, and stated she had a bill of sale from the Sheriff of Kent.

Mr. Morris, officer for the county of Kent, proved the levy.

Mr. NICHOLLS addressed the Court, and contended that the insolvent had vexatiously defended the action, and that the evidence of Mr. Vignoles was not to be taken, he being an adverse witness and a servant of the Company.

Mr. Commissioner BOWEN said, a good many things might be produced in equity but not in a court of law.

Mr. NICHOLLS—The mother got everything, which was a friendly proceeding on her part—it was a preference. But should the Court think there is no ground for a reward, I hope it will give the Company the costs of the opposition.

Mr. COOKE—I think my learned friend has done a great deal for the Company by not praying a remand.

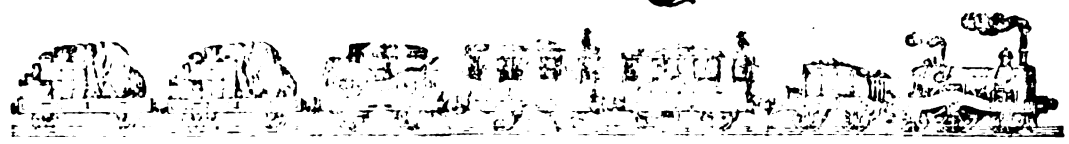
The insolvent was discharged.

CRAWFORD *v.* WILSON AND OTHERS.

Northern Circuit—Durham, July 27.—This was an action brought by the plaintiff to recover damages for an injury received by him while going as a passenger from Stockton to Sunderland in a railway carriage.

Mr. Knowles, assisted by Mr. Udall, conducted the case of the plaintiff, and Mr. Dundas, with whom was Mr. Watson, that of the defendants.

It appeared from the statement of the learned counsel for the plaintiff that the defendants are Directors and shareholders of the Durham and Sunderland Railway, which commences at a short distance from Durham, and terminates at a place called Haswell-bridge, where it is connected with other railways, one of which communicates with Stockton. The Durham and Sunderland Railway Company were incorporated by Act of Parliament, but they were not now sued in their corporate capacity, the place where the accident occurred not being a part of their line nor a branch or siding of it, but an extension of the line, belonging, in fact, to the Haswell Colliery Company, over which the defendants carried passengers for hire. In this respect they were, therefore, merely carriers at common law, liable to all the incidents of such an undertaking, one of which was that they undertook to carry the party who paid for his transit safely and without injury during the whole of the journey; but if from their neglect or default any injury did occur to such passenger, they were bound to make such compensation in damages as a jury in their judgment, under all the circumstances, thought right. It was under these circumstances, and not in their corporate capacity, that they were sued. They seemed determined, however, to raise the question whether they could be so sued or not, for they had put every species of plea upon the record which was calculated not only to raise that question, but to throw every obstacle possible in the way of the plaintiff. The plaintiff is a gentleman of fortune, residing at Silton-hall. He is the son of the late member of Parliament for the City of London. He was formerly in the army, and was greatly distinguished both for his mental and bodily powers. On the 3rd of November last he took a place by the railway, to be conveyed from Stockton to Sunderland. The passengers were conveyed in an omnibus from Stockton to a place called the Foundry, where they got into carriages on the Haswell Railway, and proceeded to Haswell-bridge, the terminus of that end of the Durham and Sunderland Railway. The Haswell Railway is at a much greater elevation than the other; so much so, that the carriages from Stockton arrive on the top of the bridge, beneath which the Durham and Sunderland Railway runs. To effect the junction the carriages are run down an inclined plane by the force of their own gravity in a north-west direction till they reach a point where a branch from the Haswell-road runs down an incline in a south-east direction into the Durham and Sunderland road. When the inclines run into each other, it is necessary to turn a switch, so as to direct the wheels into the one or the other of these lines as might be desired, the proper position of the switch being such as would direct the coal-waggon from the Haswell branch into the Durham and Sunderland road. The carriage in which the plaintiff came was run down the first incline, and passed the switch, where they waited for the train to come up on its way from Durham to Sunderland to take them onward. They had been standing there about three quarters of an hour, when, it being then between six and seven o'clock, and there being neither light, signal, nor bell, to give warning, a train of twelve loaded coal waggons, weighing together upwards of 40 tons, was discovered rapidly approaching on the same line, the switch not standing in a proper manner, so as to conduct the coal waggons down the line they should have gone, but so as to bring them directly on the carriages. The alarm was given to the two nearest carriages, and the passengers had just time to get out, and escaped unhurt; but before warning could be given to those in the carriage in which the plaintiff was, a fearful collision took place, by which the carriages were forced up the inclined plane, at the top of which two of the waggons got off the rails, and were overturned. When the plaintiff got out he was so mystified, that in answer to a question, he insisted that he was going to Stockton, while, in fact, he was on the road from that place. The extent of the injury he received did not appear at the time, but blood was upon his face. When things were put to rights he entered the carriage again, and was conveyed to the Sunderland station, when an omnibus received the passengers, but when it got on the rough road he was obliged to be taken out, not being able to bear the motion. A Mr. George Moon, a shipowner, of Sunderland, who knew him, conducted him to the town, and, surgical aid being procured, it was discovered that his cheek bone was broken and forced into the socket of the eye, and he had received a violent concussion of the brain, and was, generally speaking, shaken to pieces. He lay in a precarious and most helpless state till the end of December, when he was removed home, but soon after suffered a relapse, and found it necessary to return to Sunderland for the benefit of surgical and medical advice. From a strong man he was reduced to a state of great weakness, in which there was every probability he must continue to the end of his days, and from being a person of very vigorous intellect was reduced to comparative imbecility. One remarkable effect was produced, which would alone speak for the severity of his sufferings. At the time of the injury he had not a grey hair in his head; within a month after the whole head of hair was changed perfectly white, and still continues so. It might be thought, said the learned counsel, that after such an occurrence, the defendants would at least have tendered their aid towards his recovery, and have so far shown that they possessed the common feelings of humanity as to have inquired from time to time after his health and state; but no—no such inquiry was ever made, and when the plaintiff seeks compensation at their hands for an injury for which, indeed, money can never repay him, he is put at arm's length, he is set at defiance, and a doubt is pretended to be thrown upon the fact of his having ever existed. The learned counsel concluded his address by a powerful and eloquent appeal to the jury to mark the case by their verdict in the manner which it deserved.



The necessary evidence being given to prove the case,

Mr. DUNDAS submitted to the Court that the plaintiff must be nonsuited, and contended that they were a corporation, and could be sued only in their corporate capacity. He read from the Act of Incorporation the several clauses constituting the Company, empowering them to purchase lands, make the railway, with bye-ways, side-ways, and all things necessary for their purposes.

Mr. KNOWLES replied, that the Act incorporated

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 188. Vol. IV.—No. 32.] SATURDAY, AUGUST 7, 1841. [Price, 6d.

MIDLAND COUNTIES' RAILWAY.—Notice is hereby given, That the General Annual Meeting of the Proprietors of the Midland Counties' Railway Company for the present year, pursuant to their Act of Incorporation, will be held at their Station, in Derby, on Saturday, the 14th day of August next, at 12 o'clock at noon, for the purpose of proceeding in execution of the said Act.

The Books which are kept at this Office for the registration of the Transfer of Shares in this Company, will be closed, in pursuance of the provisions of the Act of Incorporation from Wednesday the 4th to Saturday the 14th of August, both days inclusive.

By order,

J. F. BELL, Secretary.

Dated, Leicester, July 27th, 1841.

SOUTH-EASTERN RAILWAY COMPANY.—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven, or Ten Years, at the option of the Lender, and to grant mortgages of the rates and tolls of their undertaking, as security for the same, bearing Interest at the rate of 5 per cent. per annum, payable, half yearly, at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and the term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary, at the Company's Office, 10, Coleman street, London.

By order of the Board of Directors,

J. S. YEATS, Secretary.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—TENDERS FOR LOANS ON MORTGAGE. The Directors of the Birmingham and Derby Junction Railway Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £300 each, and for a term of not less than Three Years, and to grant Mortgages of the Tolls and Works of their Undertaking as security for the same, bearing Interest at the rate of 5 per cent. per annum.

The above Loans are in substitution of others heretofore advanced to the Company for a term of years, the Debentures granted for which are now expiring.

Interest Warrants, for the whole term for which the Loan is made, payable half yearly, on the 1st January and 1st July, at the Company's bankers in London and Birmingham, will be delivered to the Lender with the Mortgages.

The Tenders are to express the sums, and the term of years for which they are proposed to be lent; and are to be addressed to the Secretary, at the Company's Office in Waterloo-street, Birmingham; to H. Patteson, Esq., at the Office of the North Midland Railway Company, No. 6, Warneford-court, Throgmorton-street, London; or to Messrs. Laurence, Cazenove and Pearce, Auction Mart, London.

By order,

THOMAS KELL, Secretary.

Dated this 21st day of July, 1841.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—Notice is hereby given, That the Half-yearly General Meeting of Proprietors of the Birmingham and Derby Junction Railway Company will be held, in pursuance of the provisions of the Act of Incorporation, at the Waterloo Rooms, Waterloo street, Birmingham, on Tuesday, the 10th day of August, 1841, at Twelve o'Clock at noon, for the Election of Three Directors, in the place of the same number who will retire by rotation, and for other purposes.

The Chair to be taken at One o'Clock precisely.

HENRY SMITH,
Chairman of the Board of Directors.

Waterloo-street, Birmingham, July 7, 1841.

Extract from the Act of Incorporation, Section 93.—"And be it further enacted, that no proprietor of any share on which any call made shall be unpaid, shall at any meeting of the proprietors of the said Company be allowed to vote, either personally or by proxy, until the money called for in respect of such share shall have been fully paid."

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price: and to these points, as constituting the best data of value, T. Allsop has directed particular attention.

REMOVAL. TO COMMERCIAL and Other GENTLEMEN VISITING the METROPOLIS.—Mrs. WATSON, late of 59, Fleet street, respectfully informs the Public she has REMOVED to more spacious Premises, 31, Arundel-street, Strand, a situation long known for its quietude, while its proximity to the Theatres and easy access to every conveyance by land and water, form a no less important feature. Visitors will find the charges moderate, and the comforts second to none but their own homes.

Observe, 31, Arundel-street.

Terms—Bed, Breakfast, with attendance, 3s.

SURREY ASSIZES.—CROYDON RAILWAY.—An Extra TRAIN will leave the London Station for Croydon at 5 minutes past 8 o'clock every morning during the Assizes, commencing on Tuesday next, the 10th August.

The daily trains are as follow:—

FROM LONDON.	FROM CROYDON.
MORNING.	MORNING.
5 minutes past 9, 10, 11, and 12 o'clock.	5 minutes past 8, 9, 10, 11, and 12, and a quick train of first class carriages only at half-past 9.
AFTERNOON.	AFTERNOON.
20 minutes past 2, 3, 4, 5, 6, 7, 8, and 9.	20 minutes past 2, 3, 4, 5, 6, 7, 8, and 9 o'clock.
SUNDAY.	
FROM LONDON.	FROM CROYDON.
MORNING.	MORNING.
5 minutes past 9 and 10 o'clock.	5 minutes past 8, 9, and 10 o'clock.
AFTERNOON.	AFTERNOON.
10 minutes before 2 o'clock, and every half hour until 20 minutes past 9 o'clock.	10 minutes before 2 o'clock, and every half hour until 20 minutes past 9 o'clock.

R. S. YOUNG, Secretary.

ULSTER RAILWAY COMPANY.—In compliance with a resolution of the Directors this day entered into, I hereby give notice, that they have made a Tenth Call for the sum of Two Pounds Ten Shillings sterling on each and every Share of the Company's stock, payment to be made on or before the 1st day of September next to the Northern Banking Company, Belfast, or any of their branches, to Messrs. Boyle, Low, Finn, and Co., their agents in Dublin, or to Messrs. Brown, Shipley, and Co., of Liverpool.

Dated at the Railway Office, Belfast, this 1st day of July, 1841.

JAMES GODDARD, Chairman of the Directors.

In tendering the money as above, it will be necessary to state the number of each share on which the instalment is paid.

Interest at the rate of five per cent. per annum will be allowed to the 1st of September on all sums paid of this call in advance.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—Notice is hereby given, that the BOOKS kept at this office for entering the memorials of the Transfer of Shares in the Sheffield, Ashton under-Line, and Manchester Railway Company will be CLOSED, in pursuance of the Act of Incorporation, from the 16th to the 23rd of August inclusive.

By order of the Board.

JOHN PLATFORD, Secretary.

14, Piccadilly, Manchester, August, 1841.

SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY.—Notice is hereby given, that the Half Yearly General Meeting of the Sheffield, Ashton under-Lyne, and Manchester Railway Company, will be held on Monday, the 23rd day of August instant, at Twelve o'Clock at Noon, at the Cutlers' Hall, in Sheffield, in the county of York.—Dated this 4th day of August, 1841.

JOHN PLATFORD, Clerk and Secretary.

15, Piccadilly, Manchester.

YORK AND NORTH MIDLAND RAILWAY.—Notice is hereby given, That the Half-yearly General Meeting of Proprietors of Shares in the York and North Midland Railway Company, will be held, in pursuance of the provisions of the Act of Incorporation, in the Offices of the said Company, in Tanner-row, in the City of York, on Tuesday, the 10th day of August next, at 12 o'Clock at noon, precisely.

The Report of the Directors, and a statement of the Accounts, will be ready for the inspection of the Shareholders at 9 o'clock, a.m. on Tuesday, the 10th of August.

GEORGE HUDSON,
Chairman of the Board of Directors.

GEORGE BAKER,
Clerk to the Company.

York and North Midland Railway Office,
York, 21st July, 1841.

YORK AND NORTH MIDLAND RAILWAY.—Call of Second Instalment of £5 per Share.—The Directors of the York and North Midland Railway Company having in pursuance of the provisions of the Act, resolved to make a call of £5 per Share, payable on or before Wednesday, the 1st day of September next. Proprietors of £25 Shares in this Company are hereby required to pay on or before that day to any of the undermentioned bankers, the sum of £5, on each of their respective shares, viz.—

London—Messrs. Barnett's, Hoare, and Co.; Sir R. C. Glyn and Co.

York—City and County and Union Bank.

The Bankers have been instructed to charge interest after the rate of 5 per cent. per annum, on all sums paid after the 1st day of September next.

GEORGE HUDSON,
Chairman of the Board of Directors

GEORGE BAKER,
Clerk of the Company.

Railway Office, York, 4th August, 1841.

REPORT OF THE SELECT COMMITTEE OF THE HOUSE OF COMMONS ON 11TH CLAUSE OF THE RAILWAY REGULATION BILL.

MINUTES OF EVIDENCE.

(*Continued from page 790*).

935. Do you suppose that a collision can take place, and that everybody concerned in the collision, either passengers or servants, can smother up the case so much as to prevent the possibility of its being ascertained how far the regulations have or have not been complied with?—Very easily, most unquestionably. Besides, collisions are not the only circumstances; there are a number of intermediate cases; it is as common as can be, for instance, that in moving about a station inconvenience and sometimes accident arises from a switch (which is part of the rail that moves to turn off into another line) being put wrong; it is as common as possible for the policeman stationed at that switch to declare, and for him to bring evidence, that he put it right a few minutes before; and we never discover the way in which it was put wrong. The Directors very often, in such cases, are obliged to decide apparently against the evidence, and to punish the man still for the accident, believing in their own mind that he had caused it. Now, if that were one of the cases which were to be punished by a penalty upon the Company, can it be supposed that the Company would use the same exertions to discover that there was anybody to blame?

936. Do you suppose that, because the Company would have to pay a 20*l.* penalty, in addition to any damage they might have now to pay, they would not be equally anxious to make those switchmen do their duty? They would be equally anxious to make the switchmen do their duty; but they would not be equally anxious to take such steps as to show to the Board of Trade that it was the fault of that switchman.

937. Is it of any importance to the Board of Trade or to the public to know the individual whose fault it was, if the Directors only take care to know it?—Then I would say, why not leave us to do it.

938. Suppose the Directors do not choose to exert their power to ascertain it, and that they are careless about it?—If they do exert the power, they are not careless about it; and if they are such a set of individuals as to be careless about it, you would not make them more careful by inflicting a penalty upon them if they are discovered.

939. Your proposition is, that they would be less careful?—My belief is, that they would be placed in this awkward dilemma: if they exerted themselves upon every occasion to discover the causes of accidents, they would be exposing themselves not only to penalties, but to fresh penalties and more stringent rules, and it would necessarily lead to their passing over many things which they now punish; and it would also have a bad effect in lessening the officers' authority over the men, because they would be in fear of a still higher tribunal, instead of being immediately answerable to the officers.

940. Take, for example, your present regulation as to the examination of the wheels of carriages, the tires, and so forth; there is, of course, some system upon which you act invariably as to that; will you state what that system is?—We make the contractors responsible for the result, and that we conceive to be the best as regards the tires of the wheels. As regards the carriages, we make a great many ourselves; the rest are made in such shops as can be brought under our inspection.

941. Will you explain in what way you ascertain from day to day that the wheels of the carriages are in working order?—There are persons whose business it is to examine that. With respect to that also, there is a positive suggestion that they should be examined every time they come in and go out; it is impossible.

942. Why is it impossible?—Because the carriages come in constantly, just in time to go out.

943. Is not there now sufficient examination to ensure safety?—Not every time they go out.

944. You do not allow them to travel a month or six weeks without examination?—No; but they have that constant regular examination which we in practice find sufficient.

945. What is that?—I cannot define it.

946. Is there no system by which every carriage is to be looked at, according to the number of miles it travels?—No, there is a man whose business it is to examine them, but as to pretending that he examines every carriage that comes in and every carriage that goes out, I should be deceiving the Committee if I stated that.

947. Mr. Labouchere—Who is that man?—A man belonging to the Company.

948. Is it left to his discretion to examine or not, as he may think fit?—Just the same as it is left to the discretion of any man to do his duty when he is set upon it.

949. Is he a man of a superior description?—He is a good carriage fitter.

950. Sir James Graham—Is the order that he should examine the carriage each time before the train starts?—No, certainly not.

951. What is the order to the man to whom you entrust this duty?—A trustworthy man is appointed thoroughly to examine the carriages, and to keep his eye upon them, but as to giving him a specific order to examine them every time they go in and out, we are practical men, and we know that it is of no use to give an order of that sort. The order is simply that he is to take care that the carriages are in good order, and it is his business to find out if they are not.

952. And, practically he does not examine them before each journey?—Certainly not.

953. Lord Granville Somerset—Supposing an accident happens to a wheel, that a tyre comes off, or a spoke breaks, do you not call upon that man to account for the accident?—If anything happens which he could have perceived, we should.

954. As a first step, should not you ask this person, whose business it is to take care that the wheels are in good order, how this happened?—Most decidedly we should.

955. Then, if he told you that he thought it was in good order when it went out, should not you say, "when did you examine this wheel last?" And if he told you that he had not examined it for six weeks or two months, should you be content with that?—Of course not.

956. Supposing that he said he had examined it within a week, would you be content with that?—It would depend upon circumstances. If it was a carriage upon a long train which had come from a distance, and which he ought to have examined, we should not.

957. If it was a carriage that had performed a great deal of work you would say a week was too long an interval between the examinations; if, on the other hand, it had done very little work, you would think that sufficient?—It might be a carriage that had not been out for a week. I would observe, that during this examination I have rather gathered that it has been assumed, that on the Great Western Railway we manage pretty well in these matters, yet we know it would be impossible to lay down a written rule that a man should answer for having examined it within two days. This is very good on paper, but it would be impracticable to carry out such regulations. We appoint in the first place, a man whose duty it is to look after those carriages and to see that they are in good order; but there is no particular time fixed for the periods at which he is to examine that carriage.

958. Sir James Graham—You say there is no rule binding upon any one at the terminus, which enjoins upon him the duty of looking at all the wheels of all the carriages before each journey?—Certainly not; it would be impossible to carry such a rule out.

959. And yet that is recommended by Sir Frederic Smith, is it not?—I so understand the regulation.

960. Why do you say it is impossible? If one man might not do it, more than one might do it?—Practically, it is impossible to trust a thing of that sort to a dozen men, because every man would say, "I did not examine it, because I thought so-and-so did." Although we get nominally less examination by trusting to one man, we get practically a much better one.

961. Can you fairly punish a man for any accident which happens upon any journey, if it is not the party's duty before each journey to make inspection?—If an accident happened which it was evident arose from want of examination of that carriage, and if upon inquiry of that man it did not appear that he gave sufficient attention to the carriages, he would be fined or punished in some way. But as for hoping that we could have a man who could answer for having examined every carriage before it went out, it is impossible. The only result of the attempt would be, that the men would swear that they had done so, and we should be unable to punish them at all.

962. Your arrangement is satisfied by occasional examination. Then if he only examines occasionally, how can you hold him responsible, at any particular time, for a particular accident?—For this reason, that that occasional examination we know by experience to be sufficient, and to be the most certain way of getting any examination. If we attempted to get more, we should not get it. We appoint a man whose duty it is to give that occasional examination. I do not mean to say that in one case of failure we should punish that man, but if by our knowledge and our daily seeing what is going on, we found that man was not doing his duty, I believe he would be fined or dismissed, or punished as circumstances justified. But as for defining exactly what is the amount of examination with which we should be satisfied, it is out of my power, and out of anybody's power.

963. Are you aware that, under the old mail coach system, no mail coach was allowed to leave London without close inspection of the wheels and axles, and all the important parts of the coach?—I am aware that there was intended to be a close inspection, and most likely there was; but there was not a close inspection at every stage that it came to, at every 10 miles. That arrangement of working the mail-coaches led, in practice, to this result, that a frequent cursory examination was more easily given, and led to better results, than occasional thorough examinations, and that is the case with railway carriages; they are not liable to sudden changes of state like a mail coach, which gets shaken upon the road, and gets a spoke loose, or gets the axle cracked, and requires that minute examination. But, from our experience of railway carriages, we find that a frequent cursory examination of them is much more likely to detect slight changes in the parts than occasional general ones, because such an occasional general examination of a railway carriage, to do it at all effectually, would require a few hours.

964. Then the result of your experience is, that in the examination of carriages upon railroads, the rule should be the converse of that upon turnpike roads; that slight occasional examinations, but frequent, are most conducive to safety on railroads, whereas constant daily complete examination of mail coaches was held to be the rule of safety?—If I were to answer that simply in the affirmative, I should be doing what I maintain is impossible, namely, generalizing in that manner. Taking into consideration all the circumstances attending the working of a railway, and we are, of course, very anxious indeed to ensure the carriages being in a good state, we find that mode of examination to be the best. With regard to the system of stage coaches, and the difference between the two, I would rather not attempt to draw a general distinction between them.

965. Lord Granville Somerset—Without defining precisely the amount of examination, do you not consider that some competent person at least should be held responsible by each Company for the proper maintenance of the carriages?—No, I do not think so, I think that each Company will adopt a certain system of arriving at that end; but as to a third party saying, "You shall appoint a man to do this, and he shall be responsible;" if a railway Company does not consider that the best way of obtaining the end, the law will not make it a good way. The law cannot make a man a trustworthy man, and although that arrangement might be very good for a Company which has 40 or 50 carriages coming in and going out every day, in a smaller Railway Company, where such a man would have very little to do during the day, it might be better that some person having other duties should also examine the carriages.

966. The proposition is not that any individual should be occupied in that alone, if that occupation would not suffice for his employment during the whole day; but is it not essential to the safety of the passengers that some person or other should be considered responsible for the carriages being in proper order?—That appears a very good mode of arriving at a certainty of the carriages being in good order; but I cannot take upon myself to say that it is always essential, and always the best way, that some one person should be responsible in that manner.

967. Supposing upon a railroad all the carriages are contracted for, would you rely upon the contractor and nobody else, for their being in a proper state for travelling?—No, I would not.

968. Upon whom, then, would you rely?—On the Great Western Railway I would appoint a man on purpose for it; if it were a small railway very likely it would be the duty of the inspector of the station; he is responsible also now.

969. Do not you think that a carriage should be examined sufficiently often for the public safety, by some responsible person?—Unquestionably, they ought to be examined sufficiently often.

970. Supposing railways were conducted upon a different principle, namely, that examinations should take place by the officers of the Company, but that all the reliance should be placed upon the contractor; do you think that would be satisfactory?—I think such

Digitized by Google

conditions might be made with the contractor as would be satisfactory, just the same as with the mail coaches.

971. Would not that involve the contractor, having a person to inspect?—It would involve his being responsible, and taking such means as he thought best for securing it.

972. Mr. Labouchere—Are there any other points to which you wish to call the attention of the Committee?—I am almost ashamed to occupy the time of the Committee any further. I was referring to the impossibility of any central authority of the sort proposed, distributing all the regulations with anything like justice to the different Companies, because it would operate so unequally upon different Companies. It has been supposed that such a controlling authority could determine whether the police upon a line were sufficient, and that if they could, they ought to have the power to order accordingly. I was asked whether I knew a Company in which the workmen employed upon the line acted also as police. With respect to that, I dare say such an officer as would be appointed would not feel justified in allowing that system if it were adopted, and yet in the case of a Company, that is not a wealthy Company, but one of the smaller Companies, great saving is effected by adopting that system; and if it were given up, I think it very possible that no improved system of watching might be carried on; but that is, I know, regarded by the persons connected with the Board of Trade as a dangerous course; in such case you would probably compel them to appoint police, and thereby to incur great expenses.

973. Do you mean to state that there are any railways upon which the duties of the police are mainly performed by workmen, and not at all by policemen?—No, they have a night police; but during the day time what are called plate-layers, the men responsible for the state of the road, act also to a certain extent as police on the road.

974. Supposing one of the poorer Companies, under the pressure of financial difficulties, to reduce extensively, or altogether to do away, the policemen upon their railway, and to substitute workmen either altogether or in certain parts for policemen, do not you think such a state of things would be dangerous to the public safety?—No, and for this reason, that I assume of course that the Company have common sense, and know something of their own interests; and I know, from my own knowledge of the working of the thing, that long before they would have reduced their police to a state in which it would be justifiable for the public officer to interfere, they would have found that it was not profitable to do so, on account of the inconveniences arising from the want of proper watching on the roads, and from the want of proper communication of signals, and other causes.

975. Do not you think it possible that a Company in financial difficulties might yield to the temptation of effecting an immediate saving by reducing the police to a degree that would be inconsistent with the public safety?—I do not think so; but even if they did, no legal power could really compel that Company to expend the money which they could not afford to spend, in a beneficial manner; as I said before, I believe that the necessities and wants of the Company will compel them to keep a better police than you can possibly feel justified in enforcing by regulations, and therefore I do not think the case can arise of reducing it below that. If you suppose a company so utterly regardless of their duties (because I must say that both Directors and officers feel that they have duties to perform), if they were such a set as to do what is supposed, in order to save a few pounds in the current expenditure, they could easily evade any regulation that could be passed to compel them, if they do not choose to do it. You cannot fix the wages of the persons they are to employ; then how can you fix the qualifications of the persons they are to employ as police? They might to the letter obey the law, but you cannot compel them to obey it in the spirit. Their interest will operate far more strongly, because it is the case, fortunately, that on every point you can refer to, either as to police for the management of the line, or as to the maintenance of the way, the daily receipts are so closely connected with the daily expenditure, that you will find that their own interests, even in the case of the poorer Companies, will drive them to adopt as large an expenditure for beneficial purposes as you could be justified in compelling them to make by law.

976. Sir James Graham—Have not you stated that the real difficulty is, to strike the balance of expense in such a manner as on the one hand to incur any expense which is really necessary for the public safety, and on the other hand to avoid expense which, though apparently necessary is not really so?—I do not think there is any difficulty with the Companies in striking that balance.

977. Is not that the difficulty?—No; I stated that as a difficulty with any public officers, that I do not see where they are to draw the line, and to say, "Although that would conduce to the public safety, we cannot call upon the Companies to incur such an expense as this."

978. Is it not the honest endeavour of the Directors of a Company, and of the servants of a Company, to diminish the expense as far as they think safe, with a view of increasing the profits of the proprietors for whom they act?—Yes, but in going as far as they think safe, you will find that they stop very far short in the descending scale of where you would be obliged to stop in exercising a controlling power of that sort.

979. In striking the balance, you say that there is no difficulty on the part of the Directors of the Companies in so doing; is it not in human nature that they should have a strong leaning to reduce the expense, and increase the profits, in which they are in a manner interested?—They have a strong feeling that way, but the feeling is stronger of avoiding the risk consequent on reducing it too low.

980. The risk is contingent and speculative upon accident; the profit consists in the daily economy of avoiding expense which they think unnecessary; the one is, therefore, a remote motive, the other is a constant daily operation. Reflecting upon those circumstances, do not you think that in a matter entirely within their control they must be disposed to save expense, and to exercise a severe judgment with respect to any increase of expense necessary for safety?—I say most honestly, that I believe the fear of evil consequences operates more strongly than the desire to save, and that the desire to have a character with the public for accommodation and for safety, and for every other point which is likely to bring them traffic, is stronger with them, merely from motives of interest, than the mere desire to save upon these points; and the proof is in the result.

981. Even if that should be the liberal and wise view of the Directors and Managers, are not the proprietors disposed to urge upon the directing body economy to an extent which may not be consistent with safety?—I do not think they are; and I think I can refer to every public meeting which has taken place to prove that they are not. I never remember or heard of a case of the proprietors calling upon the Directors to stint any expenditure connected with the police, or connected with the safety of the line; and I do not think you can find a single instance.

982. Mr. Freshfield—Do you think that the motives to undue economy is likely to be more operative upon Railway Directors than upon stage-coach proprietors?—No.

Letter to the Right Hon. Lord Seymour, Chairman of the Select Committee on Railways.

Bristol, Saturday, 27 March, 1841.

My Lord,—I am informed that an erroneous impression has been created by that part of my evidence which relates to the examination of carriages; and that it is supposed that I meant to express an opinion that some examination of the carriages between each journey was unnecessary, and in practice unattainable. Although I never intended to advance such an opinion, yet, upon reading over the minutes of my evidence, and having my attention called to it, I perceive that my words admit of this construction, and therefore trust your Lordship will excuse my addressing this letter to you as the means of correcting my evidence upon this point.

The misapprehension, if it exists in the minds of the members of the Committee, must have been created by my not expressing properly the distinction, which I drew in my own mind, and referred to in my answer No. 963, between "a frequent cursory examination" and "an occasional general one," which, as I stated in the same answer, would require a few hours, and which, as I was going to explain at the time, would require that the carriage should be lifted off the wheels, to examine the bearings properly, and that each pair of wheels and axles should be turned round, to ascertain if they were bent or strained; that they should be cleaned, in order to be able to detect if any part was getting loose, and many other things which I could not enumerate. It was this description of complete examination which I had in my mind, when the questions, particularly No. 943, were put to me, and which I confounded (by using the same word) with the "constant regular examination," which, in my next answer, No. 944, I stated was practised, and which I referred to also in my answer No. 953, wherein I stated, that if any accident happened from a cause "which could have been perceived," the man appointed to look after the carriages would be "called to account;" and as, in nearly the last question put to me on this subject, No. 964, this distinction was drawn between the "frequent but slight examination" of a railway carriage, and the "daily complete one" of a mail-coach, I was not sensible of having confounded the two together.

With your Lordship's permission, I will now state more clearly and exactly than I did when replying to the questions put to me in different shapes by three different members of the Committee, the opinion which I meant to express, using the word inspection as distinguished from examination.

I consider that a general examination of a railway carriage, according to any routine that could be defined, and safely laid down as directions really to be followed, cannot be effected daily, and still less between each journey; but, that the same purpose is practically effected by a more frequent, but more superficial inspection, by which any change is almost sure to be detected; and I consider that such frequent inspection should be constantly kept up at one terminus, or at both if the journey be long.

That I have always entertained this opinion, is proved by the circumstance that I have myself introduced a system, peculiar, I believe, to the Great Western Railway, of having a pit or sunk passage between the rails, on the arrival and departure lines of the principal stations (as commonly adopted in locomotive engine-houses), to enable a man to walk under the carriages as the train is made up, and thus more easily to see the most important parts.

This inspection affords a sort of negative evidence only that nothing wrong is observed; but by its frequency in the hands of a trustworthy man, it affords more security in its result than any attempt at a periodical and systematic examination of all the parts of the carriage in detail, similar to that practiced with the mail-coaches, and which alone can afford positive evidence of the parts being perfect.

I trust your Lordship and the Committee will allow this explanation to be appended to my evidence.—I have, &c. I. K. BRUNEL.

James Chapman, Esq., called in; and examined.

983. Chairman—With what railway are you connected?—The North Union Railway.

984. What are the termini of the North Union?—Preston at one end, and the Liverpool and Manchester Railway at the other.

985. What length is the railway?—Twenty-two miles.

986. How long has it been opened to the public?—Nearly three years.

987. What situation do you hold in connexion with that railway?—I am Secretary, and general manager.

988. You have had your attention called to the 11th clause of the Bill now before Parliament?—I have.

989. With reference to the discretionary power there given to the Board of Trade, do you wish to make any observations to the Committee on the subject?—The North Union Company, and I believe all the others (certainly all that I am acquainted with), consider the clause as very injurious to their interest, and they think that it will inevitably divide the responsibility between their Boards and the Board of Trade, and they do not think that it will produce any increase of confidence on the part of the public. It will be injurious because it will make us liable to orders which, whether applicable or fitting to our respective cases or not, we must direct our men to obey implicitly. I dare not disobey an order that I should receive from the Board of Trade. And if, under any circumstances, there was a large expense attending obedience to those directions, we must bear it. As our relations stand at present with the Board of Trade, when any suggestions come to us from the Board of Trade there is a great anxiety and a great wish to attend to them and carry them out, if possible; if, however, they become orders, I cannot help thinking, and firmly believe, that that feeling would be changed. The Directors, I am sure, would feel it their duty to obey implicitly the orders they might receive, but they would, as a matter of course, divest themselves of any responsibility attending the result. The rules and regulations which we make for the government of our line, fit as closely as we can make them to the cases that we have under contemplation, but on sudden emergencies the Company's servants frequently break them on their own responsibility, because, in the first place, they have considerable experience, and they know very well that a blind obedience to such an order might occasion great mischief, and therefore they break them; that discretion to break an order is founded upon experience and a knowledge that they would be able to justify themselves; but if the orders of the Board of Trade are to be so dealt with, that is, if they are to be avoided or disobeyed whenever the

Digitized by Google

parties carrying them out see fit, or whenever they think they have a good excuse for doing so, I apprehend they had better not be issued; while, on the other hand, if they are to be closely attended to and implicitly obeyed under all circumstances, it is easy to see that great mischief and danger might occur, the responsibility of which it would be unjust to place upon us. If, indeed, the orders were to be so very general in their nature as to have nothing special or particular in them, it is obvious that the Companies would have no great difficulty in concurring with and obeying them, but if made to apply closely by parties who (I speak it with great respect) cannot have the requisite knowledge to enable them to foresee and provide for the occurrences that are continually varying upon a railway, they must be accompanied by a dispensing power, in order to avoid dangerous results. If that dispensing power were to be exercised by the Directors, or even by the heads of the executive department next in authority to the Directors, there might be something in it; but I have been myself some ten or twelve years connected with railways, and I know that the emergencies are so sudden, that the power to dispense with the rules must be left with the engineman and switch-man: so that in fact, in this view of the case, the rule would be one which the Companies would be bound to obey if no inconvenience was likely to follow it, otherwise they would avoid it. With the permission of the Committee, I would go on and make some observations about the peculiar recommendations laid down in the 11th clause. If I assume that the six suggestions made by the officers in their Report are to become orders, then the first and second, which relate to time tables, would not be applicable at all to us; they would not suit our line at all. And with reference to that, I have a letter which, if I may be allowed to read it, I should be glad; it is from Mr. Booth since he returned to the county, showing how inapplicable such an interval of 15 minutes is. This letter I know to be Mr. Booth's handwriting, and it is as follows: "Dear Sir,—The Liverpool assizes are just now affording instances where the public convenience calls for those extra trains, which it is quite impossible to provide for in any system of time-table regulations. I have this moment received a despatch from Preston, informing me that the high sheriff and his retinue are coming from the north to Liverpool, and I have barely time to send off an express engine to bring on the train from Parkside. I had previously given orders for an extra engine to be in waiting tomorrow for the Judges, but at what hour they will come we know not. Not many days since the high sheriff, with a large retinue and 24 horses, requested a special train to move in the other direction, which was at once granted. I have thought that possibly these occurrences (not very important in themselves) might yet help to show the impracticability of any regulations issued from a distance being adapted to the varying emergencies of our railway traffic. Should you be detained many days, we shall be anxious to learn the probability of success, in what I think we may properly designate a good cause." If no train were allowed to start or to succeed another on any part of the line at an interval of less than 15 minutes, we should be thrown into inextricable confusion upon many occasions. For instance, when the Judges pass through our part of the country, I have always felt it to be my duty to offer their lordships a special train to go at their own time, whenever they think proper. We could not do so if that regulation were made.

990. Mr. Labouchere—Is the mention of 15 minutes in that clause compulsory, or is it merely in the way of limitation upon the discretion proposed to be given to the Board of Trade?—I believe it is discretional; but I think time ought not to be the measure of the interval at all, as it could be no guide whatever. It could not be any guide whatever, unless the speed of all the trains was uniformly alike. In fact, for such a regulation to be at all intelligible, it must be supposed that the relative distances of the trains can be preserved by an uniform rate of travelling, like those on the Blackwall Railway, where a continuous rope, to which the trains are attached, is the medium of application of the power. There you can keep the trains at an equal distance, but we cannot. The trains are frequently unequal in weight, which must necessarily make them unequal in speed, and besides the inequality in weight, there are many other disturbing causes which would make them at all times unequal in speed; and therefore time would not be any just measure of the interval to be preserved in any case. I believe that the effect of requiring always an interval of fifteen minutes would be to take away time from those trains that do want it, such as the second-class trains, heavy-goods' trains, and cattle trains and so on, and to give time to the first class and light trains, which do not want it. For these reasons I apprehend that the discretionary power of issuing regulations in these respects can be nowhere so desirably lodged as with the responsible and deeply interested Companies themselves, upon whom in almost all cases the greater part of the loss, damage, and obloquy of any mischance or any bad management always falls. There are other recommendations in the Report, one with respect to not allowing ballast waggons to remain on the line within a certain prescribed time of the trains passing; I know that it is the case with our Company, and I believe with all others, that all those waggons are forbidden to be upon the line within half an hour of the train time, under very heavy responsibility, and in such case the contractors for the maintenance are responsible for all the damage that may accrue, in the event of any, if their waggons are upon the line within half an hour of our trains; and I believe all the Companies do the same. Then follow some recommendations with respect to signals; those, it is suggested, should be as nearly alike as circumstances will permit; we concur quite in that. And again, that the carriages should have buffer springs, and also that in every train one carriage in four should be provided with a good and sufficient break. We do not object to that; in fact, we are far beyond that rule now. I should however, for the regulation of these points, still prefer the experience of the parties themselves, as the arrangements and precautions necessary for public safety and convenience must be better known and understood by them than they can by any possibility be by comparative strangers. I have already observed upon the responsibility that we are under at present. We are deeply responsible to public opinion, and I may add to law also. If, however, this clause passes, and afterwards is not left a dead letter altogether, but is put into active operation, I am persuaded that its effects will be alike mischievous to the Companies and to the public. It would create a divided responsibility, the respective shares of which cannot be defined, in lieu of the single one now existing, and which, after what has taken place before this Committee, I am sure will be much more deeply felt by us than even it has been yet, great as our anxiety has been. Besides, with very great respect to the officers employed (I am sure Colonel Smith is a gentleman I have the highest respect for), I think they cannot proceed safely with their present stock of experience and knowledge, and that when they shall have acquired that which might entitle them to advise the Board of Trade, they will assuredly come to the conclusion that general rules will not be applicable to all railways, long or short, with various gradients. Almost every railway requires some particular rule, only applicable to its own case. Any general rule made for all Companies, except in some few unimportant particulars, would in all probability be productive of great danger, if implicitly obeyed; while I submit that if the Companies are to have discretionary power to dispense with the rule of obedience when they see fit, it is almost a mockery to make or promulgate any rules whatever, if we are to obey them or not just as we think proper. There is another reason with which I would trouble the Committee, and that is, that I think every practical improvement which has taken place on railways has sprung from the officers of the railways themselves, and I believe that such a rule as is laid down in the 11th clause would damp and clog that very much; and I believe also that it may be safely doubted whether, if this power of interference with us had been made a condition with us at first (for I was one of the original proprietors of the Liverpool and Manchester Railway) these enterprises, opposed as they were by almost every one in the kingdom but those immediately concerned in them, I do not believe they would ever have been carried out. And finally, I think that public safety will not be increased by vesting in the Board of Trade an undefined discretionary power to issue such regulations as they may deem necessary; but that it is manifest that such a power, if really brought into operation, would have a contrary effect and tendency.

991. You have stated that you think it would be impossible for the Board of Trade, with any advantage, to issue any general regulations applicable to all railways?—I think it would be.

992. Are you aware of the resolutions which were passed at a general railway conference held at Birmingham, in last January, upon the subject of railways?—I am.

993. Were you present at that conference?—I was.

994. Were you a party to the resolutions then passed?—I was, I attended in my official capacity.

995. At that conference were not resolutions agreed to, of which the following is one—"That this meeting considers it desirable that there should be an uniform system of signals recognised and applicable to all railways, and they recommend that the following rules and regulations be submitted to the consideration of each Railway Company." Appended to that resolution were a series of rules and regulations proposed to be observed by enginemen, guards, policemen and others upon all railways, and also a code of signals recommended to be observed on all railways; was not that the case?—That was the case.

996. How do you reconcile the opinion you have just expressed, that it would be impossible to frame any general regulations applicable to all railways by the Board of Trade, with the circumstance just adverted to, that you were a party in the month of January to recommending the adoption of general regulations upon this subject to all railways?—With submission, I think I have hardly stated so much. I have said that general rules would not be applicable to all railways, long or short, with various gradients; that is, that a set of general rules so made would not be likely to be applicable to all railways. Those rules that were issued are very general, in fact they were a transcript pretty nearly of the rules that we observed on the Liverpool and Manchester, and North Union Railways. We run into the Liverpool and Manchester, and therefore we observe the same rules. The rules that were recommended for the consideration of the Companies were a transcript of those rules; they were merely recommended for consideration.

997. Was any distinction drawn in those rules between short and long railways, or were they all agreed to as applicable more or less to all?—No, but a door was left open for discretion, by stating plainly, as I think it was put, that they were submitted to the consideration of each railway, and each railway would naturally take such parts as were fitted to their peculiar line, and would reject others.

998. Still, does not the fact of the resolution which has been read, and the regulations which accompanied it, having been agreed to at that general meeting, and submitted to the consideration of all the railways, seem to imply an opinion on the part of the meeting that there were some regulations at least which it would be desirable should be adopted as a general rule upon all railways?—Some very general ones.

999. Are the rules and regulations which are appended to the resolution just read to you of a very general, or are they of a particular nature relating to signals?—I think they are very general, they are principally calculated to prevent collision.

1000. In the code of signals which is recommended to be observed upon all railways, are the regulations proposed of a very general nature, or do they enter into considerable detail?—I think they do not enter into much detail. If I remember rightly, there are only three signals.

1001. Are there not special signals by night, and others by day?—Yes; but they are for the same purpose. Of course the signals we use by day would not do for night, but they are for the same effect.

1002. Is your objection, then, to regulations being issued and enforced on the part of the Board of Trade, founded upon a fear that the Board of Trade would go too much into detail, or is it founded upon the opinion that it would be impossible that the Board of Trade should suggest any general rules, of any kind whatever, that would be applicable to all or almost all railways?—I think I have stated that the rules to be made must be very general, and have nothing special or particular in them.

1003. Do you think that the Board of Trade would act safely if they were to enter as much, and no more, into particulars, as is done by the general railway conference in the rules and regulations which they recommended for the adoption of all railways?—I do not think they could.

1004. Why not?—Because I do not think they know how.

1005. But supposing the Board of Trade, for the sake of argument, to be sufficiently instructed upon the subject, and supposing they had issued the identical rules and regulations which were issued by the general railway conference upon this occasion, do you think that that which was a wise step on the part of the railway conferrence would have been an unwise and dangerous one on the part of the Board of Trade?—If I could suppose that which is not, and which I think cannot be, I might answer in the affirmative.

1006. Then your objection is not to its being impossible that proper rules and regulations should be formed applicable to all Railway Companies, but it is founded upon the fear that the officers of the Board of Trade are not sufficiently acquainted with railway management to be able correctly to form an opinion as to what such rules and regulations should be?—Precisely. *(To be continued.)*

PROCEEDINGS OF THE INSTITUTION OF CIVIL ENGINEERS.

March 2, 1841.

On a new form of Railway Chairs and improved Fastenings. By Charles May, Assoc. Inst. C. E.

At the suggestion of Mr. Cubitt, V. P., a series of experiments was instituted at the works of Messrs. J. R. and A. Ransome, of Ipswich, for the purpose of determining the most advantageous form of the chairs, and most secure mode of fastening them upon the sleepers of the South Eastern Railway. The result of these experiments has been to produce the cast-iron chairs, and wooden treenails as fastenings, which were exhibited at the meeting, and described by the Author.

In the event of a chair breaking, it is desirable that the fracture should occur in such a manner as to prevent any of the loose pieces being thrown into situations where they would interfere with the passing trains; to ensure this, the weakest part of these chairs is across the seat—they are, however, stronger in that part than any other chair now in use. In order to ascertain the proper relative proportion between the strength of the jaw and that of the seat, many experiments were made by varying the forms, and wedging the chairs, until they broke, sometimes in one and at other times in the other part; it was then easy to add so much strength to the jaw as would, without waste of metal, cause the fracture to take place invariably across the seat.

For the purpose of ensuring perfect accuracy of form, with a smooth internal surface, so that wedges of a uniform shape and size might be used, the chairs are cast upon metal cores; the joint-chair has an upper piece, overlapping the wedge, to keep the rail in a perpendicular position, and to prevent the end of it from being thrown up or forced away laterally, if the wedge should accidentally be removed. This form of chair was originally planned by Mr. John Harris, the engineer of the Stockton and Darlington Railway, where it has been in use above twelve months, giving perfect satisfaction. The rail is so placed in the intermediate chairs, that when it receives the pressure of the wedge, it is held firmly down on the seat, against the lower part of the jaw, and at the upper part against a slightly projecting rib, which bears against the neck of the rail.

The holes for the fastenings are so arranged as not to be in the same line; a large portion of the current expense of the maintenance of way on railroads arising from replacing the sleepers which have been split by the spikes being driven in the same line in the grain of the wood.

The mode of fastening adopted in this case is, to use treenails of dry English oak, compressed into two-thirds of their original bulk, by being forced under a fly press, into metal tubes, in which they are placed in a chamber heated to about 180°, where they remain sixteen hours: the pressure upon the body of the treenail (the head not being compressed) is sufficient to materially increase the specific gravity without injuring the fibre, or diminishing the strength of the wood, and it retains the form thus given until it has been driven into a damp sleeper, when the expansion is sufficient to fix it firmly.

The ordinary mode of fastening chairs with iron spikes has been found disadvantageous, because one blow too many causes a reaction, and frequently loosens them, whilst treenails may be driven to any depth, and the heads subsequently split with small wedges if necessary.

Rails should be 'keyed-up' so tightly as to ensure security, still leaving a large amount of surplus strength in the chair to resist any shock to which they may be exposed:—with wedges of varying dimensions, the chairs, which are frequently of unequal quality, and carelessly cast, are liable to be brought nearly to the breaking point, and to give way as soon as they are subjected to any additional strain. This has been avoided in the chairs and wedges under consideration, by giving them exact uniformity of dimensions.

The wedges adopted are of English oak, cut out of square timber, so formed as to drive equally well with either side to the rail, and compressed into five-sixths of their bulk, by the same process as issued for the treenails.

Many advantages will result from this form of chair and wedge, with the treenails for fastening; the time occupied in laying the rails is diminished; the holes for the fastenings may be bored in the sleepers by machinery, at a diminished cost, and greater accuracy of gauge obtained at the same time; the required inclination of the rail being given in the chair, no cutting away of the sleeper is necessary; the sole of the chair is fixed horizontally upon the surface of the sleeper, and all of them may be placed accurately in the same plane, thus bringing to bear upon the hitherto roughly executed details of railway engineering, those mechanical contrivances by which the cost is diminished, whilst the dependance upon the skill and attention of the workmen is avoided; at the same time insuring the accuracy of the line, upon which so large a portion of the economy of working a railway depends.

Specimens of the chairs, wedges, and treenails, accompanied this communication.

Mr. Cubitt observed, that two modes of preparing treenails had been hitherto adopted: one was, by forcing the wood through a steel die, in which case neither the form nor the diminished bulk was preserved, as on leaving the die it swelled nearly to its original size. The other was by passing the wood between rollers: this latter process had been found to cause permanent injury to the fibre of the wood, by crushing the capillary tubes, and consequently depriving it of much of its strength. To the mode of preparing the treenails under consideration, neither of these objections existed. He anticipated many advantages from the use of this form of chair, wedge, and fastening. They would certainly be cheaper even in the first cost than the ordinary chairs, fastened down by iron spikes. The usual calculation for a double line of rail was 880*l.* per mile for the chairs, wedges, and spikes. The cost of these chairs, with the compressed wedges and treenails, would be 786*l.* per mile. The price of the compressed treenails for railway purposes would be 5*l.* 10*s.* per thousand; that of iron spikes was 6*l.* 5*s.* per thousand. The wedges, 2¼ inches square, cost 2*l.* per thousand for each inch of their length, so that those for the joint-chairs, which are 8 inches long, average 16*l.* and those for the intermediate chairs, of 6 inches long, cost about 12*l.* per thousand. Each joint-chair, with wedge and treenails, costs 2*s.* 10*d.*; and the intermediate ones, with their appendages, 2*s.* 1*d.* each.

One great cause of expense on railways was the fracture of the chairs during the laying. He knew an instance where in a length of twenty miles of railway 180 tons of chairs had been broken, either by wedging or in driving down the spikes. This was in the ratio of one chair in ten. In the ordinary mode the oak wedges are driven home by a 14 lb. sledge hammer, whereas with the new chair the compressed wedges and treenails are driven by a light wooden mallet.

Mr. Pim remarked that the wood fastenings used for the chairs on the Dublin and Kingston Railway had been compressed by rolling. He considered the present plan much superior.

Mr. Vignoles corroborated the statement of the cost of chairs of the ordinary construction. On the railways of the north of England oak treenails had been used as fastenings for a considerable period. The plan now proposed presented many advantages, not only in the construction of the chairs, which appeared well designed and excellently cast, but in the form and mode of preparation of both the wedges and the treenails.

In answer to a question from the President, whether the compressed treenails could be applied with advantage in ship-building—Mr. Mills was of opinion they could be so employed, provided the fibre was not injured by the process. He believed that sound wooden treenails were better fastenings for ships than iron bolts, and quite as good as copper, whilst by their use the expense was materially reduced. Turned treenails of locust wood were at present preferred to all other kinds.

Mr. S. Seaward understood that, at the Royal Dockyards, treenails which were crooked as much as three times their own diameter were preferred to straight ones. He believed that the late Mr. H. Maudslay had constructed some machinery expressly for turning them crooked.

Mr. Hawkins remarked that the treenails were frequently crooked, because the rending caused them to follow the direction of the grain of the timber. Twenty-two years since, Mr. Annesley took out a patent for building ships without ribs. He used for fastenings, treenails compressed by being forced through steel dies, just before driving them into the planks, so that their expansion fixed them firmly in the planking. He built a vessel of very light construction, the sides of which were formed of five thicknesses of ¾-inch boards, held together by compressed treenails, without any ribs. It has proved very stiff and durable.

In reply to a question from Mr. Vignoles, whether the swelling of the compressed treenails in the ribs would not have the effect of preventing the possibility of the "but end" of a plank starting—Mr. Mills believed that such an event was of rare occurrence; treenails were subjected more to a lateral strain; they were frequently "backed out" after the planks had been fitted into their places; when the latter were properly bent they retained their shape, and had no tendency to spring out.

Mr. S. Seaward, in support of the opinion that leaks did occur from planks starting, instanced the "Marquis of Huntly," East Indiaman, which was injured in the Downs, by a collision with another vessel; she proceeded on her way to China, but during the whole voyage out and home forty extra men were employed at the pumps. On being taken into dock, it was found that the "but end" of one of the bow planks had started for 8 or 9 feet in length, and nothing but constant labour and attention had kept the ship afloat, at an additional expense of 7000*l.* to the owners.

March 9, 1841.

Description of a Bridge for a Railway crossing above a Turnpike Road, where the depth between the soffit of the Bridge and the surface of the Rails is limited to twenty-one inches. By John Pope, Grad. Inst. C. E.

This bridge was designed by Mr. W. Cubitt, V. P., to meet the conditions of a clause in a Railway Bill, which required that there should be a clear width of opening for headway through the bridge in every part, 30 feet wide by 20 feet high, whilst at the same time the height of the embankment limited the space between the under side of the bridge and the surface of the rails to 21 inches.

The railway is carried on three cast-iron girders, each 3 feet deep at the centre, diminishing to 6 inches at each end, with a bearing of 2 feet on cast-iron wall-plates, supported by brickwork abutments. The flanches of the girders are 8 inches wide, and the metal every where 2 inches thick. Balks of Memel timber, 12 inches square, are laid transversely, close jointed, their ends bearing upon the flanches of the girders: on these timbers the chairs are fixed, and the rails are laid. The whole depth employed is—

The flanch of the girder	2	inches
Thickness of timber balks	12	„
Depth of the rail and chair	6¼	„
Total	20¼	inches

One of the girders on each side supports the parapet wall in which it is completely encased, and being faced with cut stone, assumes the appearance of a flat camber arch, 3 feet in depth.

A detailed drawing, showing minutely the construction, accompanied this communication.

(To be continued.)

LEEDS AND SELBY RAILWAY COMPANY —GENERAL MEETING.

On Monday, the Half-yearly Meeting of the Shareholders in this Company was held at Scarborough's Hotel, in Leeds, for the transaction of the general business of the Company. The advertisements convening the meeting also contained a notification that a resolution would be proposed, in conformity with the powers conferred upon the Company by an Act passed in the last session of Parliament for confirming an arrangement already made for leasing the Leeds and Selby Railway, and all the works belonging thereto, to the York and North Midland Railway Company.

In the absence, through indisposition, of John Gott, Esq., the Chairman of the Company, David William Nell, Esq., the Vice-Chairman, took the chair; and the meeting having been opened with the usual formalities, John Atkinson, Esq., the Law Clerk of the Company, read the Report of the Directors to the shareholders.

REPORT.

Since the last annual meeting a great and important change has taken place in the affairs of this Company, the effect of which has been to place the management of it for a term of thirty-one years in the hands of the York and North Midland Railway Company, who have accepted a lease of the entire undertaking for that term with power for them to purchase the undertaking at the original cost, securing to the shareholders of the Leeds and Selby, during the lease, a fixed rent of 17,000*l.*, which is equal to the payment of the interest on the borrowed capital, and a dividend of five per centum per annum on the shares. The circumstances which led to this arrangement were so fully explained to the shareholders at the Special General Meeting held for the purpose of submitting the proposal to the general body in October last that it cannot be necessary here to repeat them.

The Directors have now to report that the power which was not previously possessed for making the lease to the York and North Midland Company has since been conferred on the parties by an Act of Parliament passed in the last session—the performance of its terms having in the meantime been guaranteed by mutual bonds entered into by the Directors of the two Companies. Under that guarantee, the lease has in fact been acted on since the 9th of November last, and it now remains only to give to it that legal sanction which the recent act enables the shareholders to give.

With respect to the receipts of the latter half-year of 1840, the Directors had so far anticipated them by the order of an additional number of engines, coaches, and other necessary articles for the maintenance of an efficient establishment (the cost of which in the ordinary course of things would have been distributed over the present year), that when the agreement for transferring the management of the concern was made, it became necessary to apply those receipts to the payment of the debts thus incurred. The effect of this, however, while it prevented the payment of the usual dividend, was to increase by nearly the full amount of the cost that stock of engines, &c., which the lessees were to take and pay for at a valuation, and the produce of that valuation is now available to the purposes of the Company. The money arising from sale of the stock will be applied in the first instance to making up the deficiency appearing on the accounts up to 31st December, 1840, arising from the cause already named, and then to the discharge of the debt of upwards of three thousand pounds remaining on account of the construction fund, the balance being at the disposal of the shareholders; this balance will amount from 13,000*l.* to 14,000*l.* And the Directors recommend that this balance should be allowed to accumulate at interest during the lease, in order to form a fund which, by providing the means of resuming the trade at the end of the term (in the event of the York Company not purchasing the line), will secure the independence of the Leeds and Selby Railway at that time, and which, if not then required to be so applied, will be devisable as a considerable bonus among the shareholders.

The account for the last half-year shows a balance of 5,250*l.*, arising from the rent received from the lessees of the railway, and applicable to a dividend from which the Directors recommend a payment to be made of 2*l.* 10s. per share, for the half year ending 30th June, 1841. And in future the shareholders may confidently reckon on a like dividend of 5 per cent. per annum.

Thomas Charlesworth, Esq., moved that the report be adopted and printed for the information of the shareholders, under the direction of the Committee.

Joseph Sugden, Esq., seconded the motion.

Some discussion arose upon a suggestion of James Brooke, Esq., that the balance remaining in the hands of the Company after the sale of the old stock, and the payment of the floating debts, stated in the report at 13,000*l.*, should be now divided amongst the shareholders, instead of being put out to interest and allowed to accumulate during the lease of the Company's works, as recommended by the Directors. He said that many of the shareholders with whom he had conversed were favourable to that course.

The Chairman said, that if the course pointed out by Mr. Brooke were pursued, there would be considerable difficulty in raising the necessary capital (to purchase a stock of engines, &c.) to carry on the works, if at the end of the lease the York and North Midland Company should neither purchase the line nor renew the lease. The Leeds and Selby Company had already borrowed all the money authorised by its acts, and if this residue were now distributed, there would be no means of supplying the deficiency.

Mr. Brooke thought that at the end of the term, the then shareholders could apply to Parliament for further power to raise money, if such a power should then be required.

Mr. Atkinson observed, that if the whole of the 13,000*l.* were distributed, it would amount to little more than six per cent. upon the shares, but he thought that such a distribution would have the effect of causing the price of shares to fall more than twice six per cent. in the market. If the Company parted with this fund, it would be a most suicidal act; he did not think that under such circumstances Parliament would grant new powers to raise money; and in that case, if the York Company did not buy the line, it might be worth little more than old iron.

Mr. T. Charlesworth said, that that part of the report which he preferred to the rest, was that now under discussion, and that for the reasons stated by Mr. Atkinson. It appeared to him that this Company would be far better able to make a good bargain with the York Company if it retained this fund, than if it parted with it.

James Audus, Esq. said, that by retaining this fund, the Company might be kept independent of the money market for many years.

William Gatliffe, Esq. was also opposed to the distribution of this fund. He said that the Company had already borrowed 130,000*l.*, and that the creditors of the Company would be much more likely to call in their advances if no reserve were made.

Matthias Whitehead, Esq., considered that the proposal of Mr. Brooke would greatly depreciate the property of the Company.

Mr. Brooke said, that he had never moved an amendment in his life, and he would not do so on the present occasion. The shareholders were much indebted to the Directors for their services, and he wished affairs to go on pleasantly as heretofore. He had thought it only right to mention the subject. The report was then adopted *nem. con.*

Mr. Atkinson read the draft of the lease of the Leeds and Selby Railway to the York and North Midland Company, according to the terms originally agreed on. Our readers are aware that the lease is for a period of thirty-one years from the 9th of November, 1840, at a yearly rent of 17,000*l.*, payable quarterly, with a two months' credit upon each quarterly payment. The works and buildings are to be kept in the same state of repair as at present by the York Company, who are to be at liberty at any time during the lease to purchase the absolute property in the works, at the price which they originally cost, that is to say, on payment of the amount of the present stock of the Company, namely, 210,000*l.*, and such further sum as may be necessary to pay off the mortgages of the Leeds and Selby Company, which now amount to 130,000*l.*

Matthew Bloome, Esq., moved a resolution approving of the draft of the lease, and authorising the common seal of the Company to be affixed to that lease.

Obadiah Brooke, Esq., seconded the motion, and it was agreed to.

The Rev. C. Clapham moved, and James Brooke, Esq., seconded, that a dividend of 2*l.* 10s. upon the shares of the Company, to the 30th June last, be paid on the 17th August next, and that the transfer books be closed for fourteen days previous. Adopted.

Christopher Heaps, Esq., then moved "that the balance remaining in the hands of the Company after the sale of the old stock, and the payment of the floating debt, be put out to interest by the Directors, and allowed to accumulate during the lease, for the general purposes of the Company." Chas. Makins, Esq. seconded the motion, and it was agreed to.

On the motion of Samuel J. Birchall, Esq., seconded by W. Jackson, Esq., Thomas Davidson Bland, jun. Esq., Edward Ward, Esq., David Wm. Nell, Esq., and William Gott, Esq., the four Directors who retired by rotation were re-appointed. Thanks having been voted to the Directors and to the Chairman of the day for their services, the meeting broke up.—*Leeds Intelligencer*, July 31.

BOLTON AND PRESTON RAILWAY COMPANY—GENERAL MEETING.

The half-yearly general meeting of the Company of proprietors of the Bolton and Preston Railway Company, was held on Thursday week at the Swan Hotel, in Bolton; John Hargreaves, Esq., of Hart Common, Westhoughton, Chairman of the Board of Directors in the Chair.

P. Sinclair, Esq., Secretary, read the Report of the Directors, and the account of receipts and disbursements; and,

A. J. Addie, Esq., Engineer, read his Report on the state of the works. Since the partial opening of the railway, on the 4th of February last, to the 30th June, the total number of passengers conveyed by the Company amounted to 27,718 of whom 23,592 were railway passengers, and the total amount received for passengers and parcels was 2,387*l.* 3s. 5d. This, the Directors say, is satisfactory, and tends to confirm the belief which they have ever confidently entertained, that there would be ultimately an extensive business in passengers, as well as in coal and merchandise, upon this line.

After a conversation on the general affairs of the Company,

J. Lord, Esq., of Wigan, moved the adoption of the Report, which was seconded by H. H. Grounds, Esq., of Manchester, and carried unanimously.

The meeting then broke up.

LIVERPOOL AND MANCHESTER RAILWAY COMPANY—GENERAL MEETING.

Last week we gave a sketch of the proceedings at the late meeting, and an abstract of the official report. We now give that document entire.

REPORT.

The Directors, in submitting to the proprietors the result of their operations for the six months ending the 30th June last, have little to report beyond the usual statement of receipts and disbursements in the several departments of the concern. The receipts vary little from those of the corresponding period of last year, in the coaching department being about 700*l.* less, and in the merchandise department 1,100*l.* more.

The general depression under which the great mercantile and manufacturing interests have so long laboured, has been felt, if possible, with increased severity during the last half year. The temporary improvement which was experienced about Christmas was of short duration. After a few months, the previous stagnation returned, and has continued with little intermission to the present time. Were it not for this unsatisfactory state of our mercantile affairs, the Directors feel confident that the concern entrusted to their management would not merely have kept its ground, but that the aggregate receipts and net profit to the proprietors would have increased. But while the Directors are unable to report any important improvement in the aggregate receipts, they are happy to say that the disbursements have been considerably diminished, as compared with the corresponding period of last year, as will appear by the detailed statement which will shortly be read.

On the 1st of March last, the Manchester and Leeds Railway was opened throughout its whole length, both for merchandize and passenger traffic.

Digitized by Google

This improved communication with Leeds and Hull, and with the great manufacturing districts of the West Riding of Yorkshire, may be reasonably expected to bring an accession of business to this Company. But the short period during which the Manchester and Leeds Railway has been completely opened, and the depressed state of trade and manufactures for the same period, make it impossible to form any very accurate estimate of the value of this extended chain of communication to the Liverpool and Manchester line. The Directors will endeavour, by affording every practicable dispatch, to attract goods along the new line of railway, rather than by the older and slower means of transit afforded by the canals; and, no doubt, where increased expedition is an important object, goods will now be sent the whole distance (except through the town of Manchester) by railway. The quantity so sent, up to the present period, has been comparatively small; what will ultimately be attracted to the railway, it is impossible at the present moment to judge. The Directors, therefore, are still unable to recommend to the proprietors any definitive step in reference to the proposed junction line between the Manchester and Leeds and the Liverpool and Manchester Railways.

A Statement of the Receipts and Disbursements for the half-year ending 30th June, 1841.

RECEIPTS.

Coaching department	£70,288	2	11
Merchandize ditto	53,075	16	5
Coal ditto	3,908	0	4
Total	£127,211	19	8

EXPENSES.

Carrying ditto	13,930	10	10
Coal ditto	489	15	3
Cartage Liverpool ditto	97	5	10
Ditto Manchester ditto	1,959	15	1
Charge for Direction ditto	594	13	0
Compensation (coaching) ditto	5	4	0
Ditto carrying ditto	17	4	8
Coach-office establishment ditto	891	3	8
Engineering department ditto	848	15	0
Interest and rent, viz. interest	4,816	1	7
Less Cr. per Bank, &c., and balance to the credit of rent account	2,377	17	3
	2,438	4	4
Locomotive power ditto	15,289	13	9
Law disbursement ditto	195	1	5
Maintenance of way ditto	4,867	12	2
North tunnel disbursement ditto	796	13	3
Office establishment ditto	1,201	15	9
Police ditto	1,411	9	1
Petty disbursement ditto	70	0	0
Repairs to walls and fences ditto	1,291	11	8
Stationary engine disbursement ditto	665	19	7
Tunnel disbursement ditto	459	10	7
Tax and rate ditto	4,307	10	0
Waggon disbursement ditto	1,864	12	5
Total	£63,192	16	9
Net profit for half-year ending June 30, 1841	£64,019	2	11

Statement of Receipts and Expenditure on Capital Account, from the commencement of the Undertaking to 30th June, 1841.

THE TREASURER, DR.

To amount of joint capital in shares and loans	£1,435,085	0	0
Dividends not paid	1,804	17	7
Reserved fund and interest	4,322	6	4
Surplus in hand after payment of twenty-first dividend and first instalment of interest	8,772	14	5
Net profit for the half-year ending the 30th June, 1841	64,019	2	11
Total	£1,514,004	1	3

THE TREASURER, CR.

By amount of expenditure on the construction of the way and works	£1,434,725	1	2
Arrears on calls	179	15	6
In the hands of Moss and Co., bankers, viz.,—reserved fund and interest	4,322	6	4
Balance	60,932	4	10
Balance of book debts due to the Company	13,844	13	5
Balance	£1,514,004	1	3
From the foregoing statement of receipts and disbursements, it appears that the net profit for the six months is	64,019	2	11
To which must be added surplus balance from the preceding half year	8,772	14	5
Making a disposable fund of	72,791	17	4

The number of shares entitled to a dividend are, the old shares as heretofore, say ..... 7968 5/100 100*l.* shares.
New shares sold under the Act ..... 137 45/100 ditto
7968 *50l.* shares, equalling ..... 3984 — ditto
Making ..... 12090 100*l.* shares.

The Directors recommend a dividend of 5*l.* per share, amounting to 60,450*l.* and payment of a second instalment of the reserved interest to which the shares created before the opening of the line in September, 1830, are entitled as follows:—

On the 5,100 original 100*l.* shares, 1*l.* per share	£5,100	0	0
On the 5,100 first quarter shares (No. 5,101 to 10,200) 2s. per share	510	0	0
Total	£5,610	0	0

Which several amounts being deducted from the available fund as above, will leave a balance of 6,731 17s. 4d., to be carried to the next half-year's account.

CHARLES LAWRENCE, Chairman.

BLACKWALL RAILWAY—OPENING OF THE EXTENSION LINE.

THE extension line of the Blackwall Railway into the city was inspected by Sir Frederic Smith, on the part of the Board of Trade, on Thursday week, and was permanently open to the public on Monday last.

The railway itself is intended to form a complete communication between the city of London, the East and West India Docks, and Blackwall, one of its main objects being to induce the steamers to stop at the very splendid Brunswick Wharf at that place, and thereby prevent the fearful accidents which have constantly occurred in the crowded pool and higher parts of the river.

The railway was first opened from the Minories to Blackwall, in July of last year, and in the first year we are informed, from the Company's books, that the trains conveyed between two and three millions of passengers without accident.

The length of the railway from Blackwall to the Minories is three miles and a quarter; it is for about three quarters of this length a viaduct on brick arches. At the West India Docks it falls to the natural level of the land, and after passing under the main streets at Blackwall, rises again to the level of the Brunswick Wharf. At the Brunswick Wharf is the main terminus building, which is a very elegant piece of Italian architecture, the design of Mr. Tite, the architect of the New Royal Exchange. There are five intermediate stations, viz., the West India Dock Road from Poplar and its neighbourhood; the West India Dock gates from these docks; Limehouse, close to the church; White Horse-street; and Shadwell.

The railway crosses the Regent's canal and basin by arches of ninety-feet span, and the river Lea by an arch of ninety-six feet span; most of the other arches are about thirty feet in width.

The Bill for the extension from the Minories into the city was violently opposed by the corporation of London, from probably a mistaken apprehension that it would tend to encumber streets at its terminus in the city, but it finally received the Royal Assent in 1839.

The length of this branch to the point where it terminates is 1,000 feet, or about 330 yards. It crosses the Minories by a stupendous iron bridge, 66 feet span in the clear, and 18 feet from the surface of the street. The other main avenues passed over are Vine-street, Cooper's-row, and Crutched-Friars. All these are by brick bridges, and the last is an extremely oblique arch, sixty feet in width. The workmanship of this bridge has been greatly admired, and is fairly considered one of the finest pieces of brickwork of modern times.

The whole of this extension is roofed in; over the Minories-bridge with an iron roof, and the remainder is composed of timber, covered with slate and lead, lighted and ventilated by windows and skylights. The length of this roof, taking into account the station at the Minories, is certainly unparalleled in railway works, the total length of roofing being upwards of 1,500 feet.

The present terminus in London is a temporary building, the intention at first having been to bring the terminus to face Fenchurch-street, but it is now considered better that the line should finally terminate at Mark-lane, and application has been made for a new bill authorising the Company to exchange the property in Fenchurch-street for that between London-street and Mark-lane. Until these powers can be obtained, the present building will be used, and it is so placed and constructed that the works can be continued without interruption to the public uses of the railway.

This terminus building is approached from London-street and Fenchurch-street, and consists of a centre and two wings, the former containing the pay-office, and a bold wooden stair-case, leading up by three flights to the platform, which in this railway, contrary to the plan of all others, is in the middle. Each of the wings contains a staircase for the descent from the platform.

On ascending the staircase, the object of the long-continuous roof is apparent, for owing to the numerous trains (required sometimes to convey as many as 500 or 600 passengers at once) the platform occupies apparently nearly one-half of the whole extension into the city, and seems to be 500 or 600 feet long.

We are also informed that the roofing is intended to prevent annoyance to the neighbourhood from noise, and the running in of drains in inclement weather. This, however, leads to a remark on the mode of working this line, which is by fixed engines and a rope. The engines are double, of great power, and are erected at the Minories and at Blackwall, in both cases at some distance from the termination. At these points the carriages are detached from the ropes, and, as the railway ascends at both ends, they make this ascent by the momentum produced by their previously acquired motion. On returning, they descend these inclines by the mere effect of gravity, being started by a very slight push from the porters in attendance.

The cost of this railway has been perhaps greater in proportion than that of any other. The purchase of property on the extension line alone was estimated at the sum of 153,660*l.*; and it has cost, we are informed, very nearly that amount. The total cost of the whole railway will not be less than one million, raised by 24,000 25*l.* shares, debentures, and other means.

The present earnings are about 1,100*l.* per week on the average, but it is supposed that the amount will be considerably increased by the convenience afforded by the opening of the new line.

The shares are at a discount of about 9¼ per cent. This has been attributed by the Directors to anxiety about the success of the rope. The ropes at first were hempen cables, and they were found not to be able to resist the twist and strain to which they were subjected. Wire rope upon Smith's and other patents has been since substituted, and we believe this rope has never broken, but as it requires to be assisted by swivels to prevent twisting, these joints sometimes even now give way. No doubt, however, is entertained that the ingenuity of Messrs. George and Robert Stephenson, the very able engineers of this railway, will finally overcome all the difficulties alluded to. In the meantime, it is highly satisfactory to find that such accidents as may occur can lead to no injury of the passengers, and all that is likely to be produced by them is a little delay until the rope can be joined again. The work is considered by the scientific men of all countries as one of the most curious of the experiments of the present day.—(See also page 829.)

CHELTENHAM AND GREAT WESTERN UNION RAILWAY.—Contracts have been taken, and in some instances the works have been commenced for carrying on this line from its present terminus at Cirencester towards Stroud and Gloucester.—*Gloucester Journal.*

A Yankee gentleman, railing it, inquired what was the speed, and on being answered 40 miles an hour, replied—that if they didn't put on more steam, he'd "go a-head," and walk it.

FATAL ACCIDENT ON THE TAFF VALE RAILWAY.

THE *Cambrian* of Saturday last contains a long account of the coroner's inquest on the body of Joseph Bently, an engine-driver, recently killed on the Taff Vale Railway. The following extracts from the evidence will sufficiently explain the cause of the catastrophe. We have adverted to the occurrence in another column:—

The first witness called was Robert Fuge, who being sworn, said,—I am a labourer, and live in the parish of Llantwit Vardre, in this county. I recollect Friday last, the 16th of July, and was walking down the fields between Maesmawr and Treforest, directing my course towards the latter place. Maesmawr and Treforest are in the line of the Taff Vale Railway, between Taff's Well and Newbridge stations. I should say the time was about half-past twelve to one o'clock at noon—can't say positively to a quarter of an hour. I had no watch, but am satisfied it could not be later. When about a field off, or something more, I heard the whistle of a down train, and immediately afterwards that of an up-train. I saw the up-train first; it was near Maesmawr, perhaps 400 or 500 yards. I cannot exactly fix the distance at this time; both engines were whistling, and I at first thought they were answering each other. I then saw the down-train approaching, but at a slower rate than the other. I then considered they would meet, and I accordingly ran forward, but the collision took place before I could possibly reach the spot. I saw them meet before I could get to the railroad. The concussion was great, and the engines appeared to be raised upon each other. I saw two men as if jumping off one of the engines in the air, but I don't know whether they were blown up, or jumping off, they were enveloped with steam and smoke. I made every haste to reach the spot where the accident occurred, and before I reached the engine I saw the policeman, James Gilbert, running down towards me. I went close up to the engines—they were together, and the tender of one driven up on the top of its own engine. On my passing the nearest engine, I saw a man as if jammed. I took hold of one of his hands and moved it. I observed that he was crushed and was kept fast to the boiler, part of the tender being upon him. This was the tender of the up-train, which was forced upon its own engine, therefore it was between the two engines, and prevented my going to it. I saw the deceased so fixed that it was impossible for me or any one to extricate him; he (deceased) opened his mouth twice, as if gasping, but did not speak. The first person I spoke to was one of the men of the down-train, who stated to me that he was on the down tender when the accident occurred, but had held on. This man and I immediately set about raking out the fire, and throwing water on it. I speak of the engine now of the down train not being able to get at the other, because of the tender being upon it. Several persons were soon after on the spot, among whom was Mr. Crawshay, of the Treforest Works, who was extremely active. I helped to remove the deceased to the public-house nearest the spot, in the parish of Llantwit Vardre, and am sure life was gone before the body was extricated from under the tender.

James Brittain was the next witness introduced. He said, I live in little Frederick-street, in the town of Cardiff, and am a fireman on the *Dinas* engine. I perfectly well recollect Friday last, the 16th of July instant. I was on that day at my usual occupation, and was on the tender belonging to the coal train which brings the coals down from the Dinas Colliery to the Cardiff terminus at the Glass-houses. On the up trip, in which the accident took place, we left the Cardiff station at 10 minutes past 12 o'clock at noon; we left the Glass-house terminus about 20 minutes before—that is before we left Cardiff station. We stopped at the station to take in water and oil the engine, as usual. The deceased, Joseph Bently, was the engine-driver.

CORONER—Did you make any former trips, as you term them, for coals to the colliery at Dinas on that day? If so, state how many, and the time of your departure from Cardiff?—We made two trips before; the trip in which deceased lost his life was our third trip.

CORONER—Explain your transactions of that day up to the accident?—First, I went to Joseph Bentley's house in the morning; this was about four o'clock. I then called deceased up, and proceeded to the engine-house by the Glass-houses (this is called the Cardiff terminus), and cleaned the engine, which is part of my duty. I waited for some time for the deceased, who came there at 10 minutes past 6 o'clock. This was much after our usual time. The engine (the *Dinas*) was then taken on to the line, which is about 200 yards distant from the engine-house, whence we immediately proceeded with empty trams to the colliery—that is the Dinas terminus. We did not stop anywhere on the line. Our usual and proper time to leave the Cardiff terminus is 6 o'clock. I cannot say what the time was when we arrived at the Dinas terminus, but our usual speed with the empty trams is about 18 to 20 miles an hour. I do not know exactly the true distance from the Cardiff terminus to the Dinas: it may be, I should say, about 16 miles. When we arrived at the Dinas we stopped to take in water and to oil the engine, as is usual for us to do every trip. We then returned with the full coal train, and again reached the Cardiff terminus. Their usual time here was about 8 o'clock. I am speaking to a few minutes; but being late on the up trip occasioned our not returning exactly to our usual time. I cannot distinctly say at what time we did arrive at the Cardiff terminus on our return of the first trip, but think about 9 o'clock. Cannot say positively; it may be a quarter to or after 9 o'clock. I had a watch by me, but did not look at it. We certainly ought to have been down by 8.

A JUROR—Did any one say anything to you in consequence of your being late on your return trip? Yes; George Ellis asked Joseph Bently, the deceased engine-driver, why he was so late. He (deceased) made a reply, but I do not know what it was. George Ellis is fitter of the engines. We then got the empty trams for the second trip. Do not know what time we left the terminus at the Glass-houses on the second trip. We waited, perhaps, 10 minutes or a quarter of an hour. We oiled the engine, but did not take in water. We do not usually wait long for the empty trams, because they are generally ready for us. We took in water this trip at a new tank near the Treforest Works, and proceeded up at our usual speed. We stopped at the tank perhaps 8 or 10 minutes, but made no other stoppage between Cardiff and Dinas. We here oiled and watered again: we here also stopped about 10 minutes or a quarter of an hour, and then returned with the full train of coals. I think we arrived at the Cardiff terminus with the coal train about half-past 11. We waited there as usual to take on the empty trams, which we did, and on our return from the Glass-house terminus to the Cardiff station to oil and water as usual, deceased, Joseph Bently, asked me to go and get him a little dinner. I got off the train at the bridge which crosses the Whitmore-lane at Cardiff, to fetch the dinner for the deceased, who said he should stop at the Cardiff station to take in water, &c., during my absence. I then cut across to the Queen's Head for the dinner, and waited there about 10 minutes.

FOREMAN—Was it usual for you so to do?—No; I only did it on this occasion. I then took the deceased his dinner to the Cardiff station; the whole time occupied from my getting off the train at the bridge to my arrival at the station with the dinner was about 20 minutes, as near as I can say. We started immediately for the *third trip* (this is the fatal trip), the deceased having got everything ready. I am satisfied we did not stop at Cardiff station more than 20 minutes; we were then *much behind our time*.

CORONER—Have the goodness to explain the time fixed for your several trips to depart from the Cardiff terminus at the Glass-houses?—Our first trip is at 6 o'clock in the morning. I do not recollect the precise time of departure of the other trips at this moment, but am sure there is a fixed time.

CORONER—Have you any instructions as to the various times of departure?—Yes, I had a printed card, on which was expressly laid down the times fixed for departures, but I have lost it—it was furnished me by Mr. Gregory, who is the Company's fireman and chief fitter of the engines. I had the card at the last alteration of the trains. Have been a fireman and stoker ever since the opening of the line to Merthyr, that is about three months. The card was given me on the 1st of July, about three weeks since. When I lost my card, I told the driver, Joseph Bently, the deceased, of it, and he showed me his. I did not ask Mr. Gregory for another. I was perfectly aware that the card regulated the time of departures of *all* the trains. It was the duty of the engine-driver to work the line, and not mine. The card fully explained all the signals and the full minutiæ of working the line, and when to stop. The deceased and I had worked together about three weeks or a month. He instructed me by his own card, mine having been lost. I have been wholly on the *Dinas* engine during that time. We have occasionally taken up mine, that is the red iron ore to the incline at the Navigation House. These trams are of a different description to the coal trams. There is now an express train for the red ore, distinct from us.

FOREMAN—You have shown you were considerably behind time starting from the Cardiff station on this the third trip; now, can you say about what was the time you left, that is, as near as you can guess?—I have already said about ten minutes to twelve at noon, but our regular time I believe to be a little after eleven, or earlier. Our speed on this trip was as usual about eighteen or twenty miles an hour.

CORONER—Tell us all you know about the accident?—I first saw the engine of the red ore train coming round the sharp corner or curve near the quarry above the Maesmawr Works. I did not hear or see her before I immediately ran to the break—this was the act of a moment. The curve is about 10½ miles distant from Cardiff on the line. [Foreman, to Mr. Bush—Could the engines here be seen so easily at this point, to prevent collision, as at other curves on the line?—Certainly not. The high projection of the land forming a rock at this point prevents it. The greatest distance the two trains could possibly have seen each other was 160 yards, that is, from the two extreme points of the curve.] The Coroner to witness Brittain—What distance do you think it was when you first saw the red ore train coming down at this curve?—It was about 100 yards, the projection of rock prevented my seeing her before; it was upon us immediately—there was no time to prevent the collision. I put on the break, and deceased shut off the steam, but being so momentary, it had but little effect. Shutting off the steam tends to stop the engine—the putting on the break has also a similar effect. I was on the tender, and held on the break as hard as I could, until compelled to jump off. The break belongs to the tender. There is also a break with the trams; a boy or young man, from 17 to 18 years of age, has the care of it; his duty is to attend to it. On the present occasion, I do not know whether he had put on the break to the trams or not, perhaps he was too frightened.

FOREMAN—Is it your opinion that the deceased, Joseph Bently, the engine-driver, could have jumped off the engine with the same facility and safety that you did off the tender?—I am of opinion that deceased had an equal chance with myself.

CORONER—Was all done that could be done with respect to shutting off the steam and putting on the break, and so on, as calculated, under circumstances, to check or retard the collision?—Yes, but it was of no avail. We first saw the chimney of the down train coming round the curve. By we, I mean the deceased and myself; and after having done all I could, I was instantly compelled to jump off. I was scarcely on the ground when the collision took place. Our tender was before the engine, which is our usual manner going up with the empty trams. It was impossible that the breaksman in

Digitized by Google

the trams could see the chimney of the down train so soon *as I*, because the tender was as described, before the engine.

CORONER—Are there signals of danger, and signals to proceed, all being right?—Yes. The policeman holding out his right hand horizontally, signifies "all is right." The signal of danger is the waving a RED flag, of which every policeman is in possession, and always carries about him.

CORONER—Were you at all fearful of meeting the red ore train coming down?—Yes. The deceased and I had conversation about it. I asked Bently (the deceased driver), whether he thought that we had time to reach Newbridge before the red ore down empty train would pass. This took place at the Cardiff station, when he asked me what time it was. I said it was about ten minutes after twelve. Deceased replied, "We have plenty of time." I also understood that the deceased had otherwise been cautioned before leaving Cardiff. When we arrived at the Llandaff station, I again cautioned deceased, and begged of him to stop there and not go further. Llandaff station is the first on the line from Cardiff, and is between two and three miles. Deceased again replied, that we had plenty of time. There are three stations between Cardiff and Newbridge, viz., at Llandaff, Pentyrch, and Taff's Well. We were not cautioned at any one of the intermediate stations between Cardiff and the place of collision. There are two sidings or set-outs between Taff's Well and Newbridge, but we never had any occasion to go into them. I cautioned the deceased to whistle constantly along the line, and he did so. It is, however, not my province to interfere with the driver; he was my superior. I had no further conversation with the deceased until the collision.

CORONER (at the suggestion of Mr. Bush)—Did you show the deceased your watch at all?—Yes, both at the Cardiff and Llandaff stations. The deceased had no watch.

Frederick Hesketh was called, and said—I live near to the Whitmore-lane, in the town of Cardiff, and am an engineer or driver in the employ of the Taff Vale Railway Company. I have been in their employ ever since the line first opened, ten months ago. I am stationed on one of the engines of the passenger trains, between the station at Cardiff and the incline at the Navigation House. I did not witness the accident on Friday, the 16th instant; but I had conversation with the deceased, Joseph Bently, before he started from the Cardiff station. It was this—I told him at the engine-house, when he was taking in water from the tank, that he (deceased) was much behind his time. This was after I had arrived with the second down passengers' train. I called to the policeman, Lewis. This was ten minutes to twelve o'clock. I then told the deceased that he ought to have started at about a quarter past eleven, and he was therefore considerably *too late*, and said if I were him I would not go until the *down* iron ore train had come in with the empty trams, or he would certainly meet it. To this deceased said, "Oh, no, I have plenty of time; the red ore train has not got up yet." I replied, "Yes, she has, and is certain to be coming back before this time. It might be three or four minutes that this conversation occupied. Deceased then backed out, and proceeded to the Cardiff station. I did not see the fireman, but understood he was gone to fetch deceased some dinner. I then went to get my own dinner, and therefore did not see the deceased start from the station. The policeman, Lewis, must have heard my caution. This is all I know of the matter.

Thomas Lewis next followed.—He said, I am a policeman, in the employ of the Taff Vale Railway Company. I am living in Paradise-row, at the bottom of Crockherbtown, in the town of Cardiff. I well recollect Friday last, the 16th of July. I am stationed at the switch at the entrance of the Cardiff station. I knew the deceased Joseph Bently, he was driver to the "Dinas train"—this is a coal train. I saw him on Friday last, taking in water at the Cardiff tank; this was ten minutes before twelve o'clock. At this time I heard Hesketh, the last witness, caution him *not to start*, as it was too late. I also cautioned him, and on his afterwards leaving, showed him my chronometer time-piece, and told him he was an hour behind his time, and if he went on, the chance was he would meet the red ore train coming down. The deceased replied, I have plenty of time, as the red ore train would be half an hour at the incline. I then said, you had better stop at Llandaff or Taff's Well, and mind to keep whistling all the way. Notwithstanding my caution deceased proceeded, although I used all my persuasions to induce him to stop until the red ore train with the trams had come in. I turned on the switch to put him on the right line, considering that by prudence he might safely reach the Taff's Well station. I certainly did not like to take upon myself the onus or responsibility of shutting him off the line when I considered he might go on at least to Llandaff, and by caution to Taff's Well station. Deceased was perfectly sober and rational. My time of attendance at the Cardiff station is from six o'clock in the morning until six in the evening.

CORONER—Now, supposing the deceased, or in fact any other driver, had been so late that you considered he could not have reached Llandaff station without danger, would you have suffered him to pass?—No, not at any risk. I would then, and in such cases, have turned him off the line altogether, upon my own responsibility, rather than permit him to pass.

CORONER—Have you any particular instructions or printed rules and regulations, so as to guide you in your duty?—Yes, they are these: [The printed regulations for policemen, gatesmen, &c., embracing all the signals and other necessary information, forming and comprising altogether a strict and rigid line of discipline, under severe penalties, were then put in and read aloud to the jurors, who also looked over them.] If not in the power of a policeman or gatesman to read them, they were thoroughly explained to them by the Inspector. I well recollect the purport of these regulations without referring to the printed form.

A JUROR—Have you any other positive instructions from the proper authorities of the Taff Vale Railway, independent of those printed?—Yes, from our Inspector, and I am justified in exercising them whenever danger shall appear to me in any shape or form.

James Gilbert was sworn, and deposed thus:—I live at Treforest, in the parish of Llandwit Vardre, in this county. I am a policeman in the employ of the Taff Vale Railway Company. My *beat* is two miles and a quarter, from Treforest to Killoyle. Killoyle is just above Mr. Insole's coal works at Maesmawr. I well remember Friday last, the 16th of July. I went to the lower end or bottom of my beat at Killoyle, at half-past 12 o'clock at noon of that day. I had been for some time past expecting the up coal train with the coal trams which was at that time *a long while over-due*. I remained at the bottom of my beat for some time, expecting the *down* red ore train, and then returned again up the line towards Treforest. I had then *given up* the coal train, and considered, as it was so long overdue, that it was detained, and would not come up till after the red ore trains had passed Taff's Well, or arrived at Cardiff. I was aware of the coal train being late, because that train generally follows the red ore train. The up red ore train had gone up to the incline about an hour before, which was its right time. On my return towards Treforest, I stopped on the line at the upper end of the curve by the stone quarry. This was some distance from the bottom of my beat. When I reached the quarry I heard the down red ore tram train whistling. I then saw her coming, and held out my hand in a horizontal position, signifying the line was clear and all right. At the point I then stood above the curve I could not see very far down the line, whence I had returned in consequence of a projecting point. This was my usual place to wait. I am compelled to do so on account of the quarry, where trams take in stone. It is also my duty and practice whenever I expect a train, either up or down, to approach the furthest point I can, and there wait so as to meet it.

CORONER—Did you ever expect to see one train coming up and another going down the line at the same time?—No, Sir, certainly not. As soon as the down red ore train had passed me, I proceeded onward. I suppose she might have passed me 150 yards when I heard the collision. I did not see the accident, but immediately ran as fast as I could towards the trains, and passed them, for I was fearful of the passengers' train coming. I heard the collision distinctly, and the noise of the steam from both engines, but could not see the trains on account of the projecting point. I ran by the trains for more than three-quarters of a mile until I met the other policeman, and told him of the accident. He also ran forward to pass on the alarm so as to stop the passengers' train. I then ran back again towards the accident, and rendered every assistance in my power. On my return to the trains, the deceased, Joseph Bently, was not taken off the engine. There were a great many people by this time on the spot. I saw Mr. Francis Crawshay take the deceased off, assisted by some of his men. I stood by to keep the people back. Mr. Crawshay said if 50 or 100 men were wanted, they should be sent for—a great many of his men from the works were then present. After the deceased was extricated from the spot where he was jammed, Mr. Crawshay returned home, not liking to interfere with the trains until Mr. Bush, the Company's Chief Engineer should arrive.

A JUROR—How long have you been in the Company's service, and more especially on this beat?—I have been in the Company's service for some considerable time, and on this beat seven months. The coal train had been established about a month. When standing at the quarry I could not hear an up-train for half a mile, because there is the noise of Mr. Crawshay's works on the one side, and that of Maesmawr on the other. I cannot read, but understood thoroughly the time I had to expect the trains, both up and down. I always went to the furthest point I could in order to meet them, having first seen the line clear.

The room being cleared of all persons not on the jury, a verdict, after a lapse of about half an hour, was then given as follows:—

"We, the undersigned, having duly considered our verdict touching the death of Joseph Bently, are of opinion that it was occasioned by the collision of the two engines, called the *Merthyr* and *Dinas*, the latter of which he was the driver of, and that he was crushed between the tender of and the *Dinas* engine, and received injuries which caused his immediate death. It is also our opinion that the deceased was mainly the cause of the occurrence so fatal to himself, in not having obeyed the instructions given to him, and that his departure from which was the cause of the collision. We are also of opinion that the times for the departure of traffic trains from the termini should be strictly laid down and enforced, and the engine-drivers compelled to keep their fixed time. Our verdict therefore is—'Accidental death,' and we levy a deodand of five pounds upon the *Dinas* engine and tender, the property of the Taff Vale Railway Company."

(Signed) By the Jury.

The Jury earnestly recommend the Taff Vale Railway Company to place an extra policeman at the curve in the line where the accident took place, whose duty it shall be to remain there at the point, or at least 150 yards on either side, so that he may act in conjunction with the policeman at present on that beat.

ADDITIONAL TRAINS ON THE MIDLAND COUNTIES' RAILWAY.—We are glad to perceive that the Midland Counties' Company will start, on Monday next, additional and direct trains, to Coventry, Birmingham, Liverpool, and Manchester, without any delay taking place at Rugby, as hitherto; also an additional train (first class only) direct to London.

ATMOSPHERIC RESISTANCE ON RAILWAYS.

We extract from the *Devonport Telegraph* the following report of a portion of the proceedings of the "British Association for the advancement of Science," whose annual meeting took place at Plymouth last week:—

Section G.—Mechanical Science.—July 29.—President—John Taylor, F.R.S., &c.; Vice-Presidents—Professor Urmeley, J. S. Enys, J. M. Rendel.

The PRESIDENT informed the members of the Section, that a Report would now be read, which had been prepared by Dr. Lardner, on the result of a series of experiments made by him at the request of the British Association, with a view to ascertain the mean value of railway constants.

Mr. RUSSELL then read the Report, which was of a very voluminous description, detailing the result of the experiments made by the Doctor most minutely, and containing most elaborate particulars of each. Mr. R., in going through the Report, condensed many of the most lengthened particulars, but ably elucidated whatever required the least explanation. It was first explained to the section, that a Report of this subject had, at the former meeting of the British Association, been presented, of which this was a continuation, many points remaining for further consideration, and with respect to which it was desirable that further experiments should be made. The first point which Dr. Lardner considers is, whether the presence of the engine and tender in front of the train had any effect in rendering the progress of the train less fast than if it were moved forward as by the foremost coach, if the resistance of the air was consequently greater. As a corollary from the first question, the second arose as to whether the *form* of the front of the train had any effect in connection with the resistance of the air—whether that resistance would not be so great if in form it be pointed like the bow of a ship. These points had been attended to by Mr. Brunel. In order first to decide this, an engine was reduced as nearly as possible to the power of the ordinary carriages, by detaching the pistons, &c., and any working part calculated to create any mechanical assistance differing from that of the ordinary carriage. The engine and tender were placed on an inclined plane on the Liverpool and Manchester Railway, and allowed to pass from their own gravity, the space being divided into distances of 110 yards. Two coaches were also allowed to descend in the same manner, and the general results were—the distance passed over by one 4,710 yards, and that by the other 4,577 yards, being a difference of 133 yards only. The weight of the engine and tender was 11.39 tons, and of the coaches 11.33 tons, a difference between both of only 9. The time occupied by one in the descent was 4 minutes and 29 seconds, and that by the other 4 minutes and 24 seconds. Thus, the difference in the run amounted to only 133 yards in a distance little short of three miles, with a difference in time only of a few seconds—a difference which might reasonably be supposed to arise in experiments made at different times, even with the same coaches. An experiment was also made with an engine and tender and railway coaches, the object being to discover whether square end coaches, or the ordinary locomotive engine, from its form, suffered the greater resistance of air. The engine chosen was called the *Fury*, which, with its tender, was put against two coaches, plus a train of four coaches, the one weighing 27.45 tons, and the other 27.45 tons. The distance run by one was 5,068 yards, that by the other 4,850 yards, being a difference of 218 yards, and rather in favour of the 6 coaches. An experiment was also made with reference to the form of the coach—whether the resistance would be less if the coach were shaped like a boat; the sharp end of the coach on this occasion consisted of two boards united in front at a vortex angle of 5.6, and at the base corresponding with the width of the engine. The ordinary shaped engine, and the pointed one both moved down the inclined plane, the result being nearly as possible similar. To remove all doubts, another experiment was tried on the Grand Junction Railway, when the general result was only a difference of 50 yards in a distance of eight miles. In order to find the result of the magnitude of the front carriage being independent of the magnitude of the whole train, an experiment was made, when a sort of wings were formed, extending from the front coach; this, however did not produce any very considerable effect, an effect certainly not in proportion to the increase of the frontage of the train. Now as it was thought that as in water each of a number of boats experienced a resistance of that fluid, which would not be so experienced were they to be all entirely connected with each other, the same principle might apply with reference to the train, an experiment was accordingly made, the coaches were connected by canvass passing along the space between them, forming the train into a single unbroken column. There were eight coaches so connected, and the general result of the experiment proved that the open spaces had no sensible effect with regard to the resistance. But, whereas the size of the front coach was productive of no considerable difference, a change in the entire bulk or volume of the whole train would be productive of very great difference. Another experiment made with eight coaches also clearly showed that the first carriage having cleared a passage through the air, did not consequently lessen the resistance against the others. Dr. Lardner, in the report, points out why this is the case, and gives a satisfactory reason why the resistance of the air is kept up. The wheels of the carriages, the Doctor states, produce vortices of air, and operate as fanners or blowers. In a train of eight carriages there are 32 eight feet wheels, each revolving four or five times in a second, these, therefore, operating to such an extent as blowers or fanners, create extensive currents of air which move by the side of the trains, and these successive currents explain the resistance of the air alluded to. But it was evident that the resistance depended upon the weight of the train and the bulk of the coaches. The Report then alluded to the doctrine of gradients, which some engineers oppose, and which others firmly adhered to, for while some are favourable to rapid ascents and descents, others are advocates only of a dead level. Of one system the Grand Junction Railway is a specimen, and the Great Western Railway is a specimen of the other. Dr. Lardner supports the system of ascent and descent. On an experiment being performed, as we understood, from Liverpool to Manchester, the following were the results:—

At the rate of one in	Ascent.	Descent.	Mean of the two.
— 177	22.25	41.32	31.78
— 265	24.87	39.13	32.00
— 400	26.86	36.75	31,16

Dr. L. proposes to prove that the descent and ascent nearly balance each other, and that the advantage of a dead level, as compared with a moderate gradience, is nothing. The Report concluded by stating, in opposition to opinions which had been entertained to the contrary, that resistance was not independent of speed, the degree of resistance was in proportion to the square of the velocity.

The PRESIDENT remarked, that the report just read was one containing the result of a series of experiments made by Dr. Lardner, at the request of the British Association, whose experience had not arrived at the point to which it had since attained with respect to railways. The subject would be taken up on a future occasion, when a paper would be read which had much reference to those matters; but he thought enough matter had been laid before them to enable him to call on several whom he saw before him who were well acquainted with the subject, and whose observations on any of the various topics alluded to in the report he should be very happy to hear. Before, however, any discussion took place, a vote of thanks was passed by the section to Mr. Russell, for the luminous way in which he had elucidated the report he had read.

Mr. GRANTHAM was not quite sure that any of the conclusions drawn by the author of the report just read was altogether satisfactory. The speaker also alluded to the subject of sharp curves, and said he thought them no serious impediments to railway trains.

Capt. J. N. TAYLER, C.B., said it was certainly a novel thing for a sailor to express opinions with respect to railways. He considered that the action of a fluid was similar to the action of the air. Sailors who had to convey a spar through the water always put the larger end foremost, else there would be a greater pressure of the water. Now, with the air, he considered the pressure the same. It also struck him that the difference alluded to had been caused by the engine rarifying the air, lessening the dense pressure and creating a vacuum. He believed the best mode for prosecuting experiments which might lead to most satisfactory results had not always been adopted.

Mr. RUSSELL explained the reason why curves had not so great an effect on the speed of the train. However straight the line might be, there was invariably a lateral motion in the train. The question was then naturally suggested, whether any difference in the speed would be occasioned by the curves being in one direction than in both directions. In a curve the train in every oscillation left the outer rail, and was driven back again; this was the reason, in his opinion, why the curves had not such an effect as to the speed of train as they otherwise might. With reference to the point, he did not think that the experiment could be said to have been successfully performed, unless they had been adjusted to the velocity of the train. Mr. R. illustrated this by a diagram; they could not expect an experiment to be conclusive, unless the anterior formation of of any train be exceedingly acute; yet, having a fair proportion to the velocity, he therefore could not believe that the position was entirely settled—that the former could have no effect on the speed. From such a slight modification as that made use of in the experiment, no result of importance could be obtained, and therefore a *priori* he did not believe the question settled.

Mr. RENDELL stated that undulatory motion referred to principally arose from the conical form of the wheels. He alluded to the pressure and resistance of the air, and stated that this on some occasions made a difference of half an hour in the speed of the London and Southampton Railway. If even they got a railway west of Exeter, it must be effected on those principles which were now becoming fashionable, that of gradience, safely worked and curves safely passed, and the velocity which would best satisfy those who had an interest in the railway, and please those who travelled, would be 25 miles an hour. It must be very gratifying to the local members of the Association to find gentlemen from railway counties favourable to the principle which could best suit this part. After a few words from Mr. Roberts,

Mr. H. CHATFIELD considered it extraordinary that no allusion had been made to the form of the after part of the carriage. Mr. C. confirmed the justice of the observations of Captain Tayler; and in allusion to the resistance of the wind, pressed on the attention of the section, that something might be tried in this place, the result of which might be important in connection with this subject.

The PRESIDENT, as we understood, intimated that this matter was entertained by the Committee.

Mr. RUSSELL believed, that the shaping the coaches to a certain length, and pointing them like a boat, would be attended with more expense than appreciable gain. The object, he believed, was to carry the greatest number of passengers with the least possible weight. Railway proprietors required what was advisable in practice rather than what was desirable in theory.

Mr. ROBERTS said, by a letter received by his firm, from Baden, he learnt that they had put at the point of the engine some kind of plough, to be used in the winter season, which had eminently succeeded? though the snow had been more than five feet thick it had entirely thrown it aside, and the train

Digitized by Google

had passed along a distance of 11 miles without being delayed more than five minutes.

The PRESIDENT remarked, that there would be an opportunity of recurring to those matters to which the section had alluded.

RAILWAY COMMUNICATION WITH SCOTLAND.

To the Editor of the Railway Times.

SIR,—I have read with interest the letters that have from time to time appeared in your journal upon the extension of an Eastern or Western line to Scotland, a communication devoutly to be wished for, but from the present state of the share market, still far distant from realisation; for it is evident to any one who will consider the present price of shares in many of our leading railways, that if those which are paying a handsome dividend, and have been fairly tested by years of trial, bear not a proportionate price to their dividends, those that are purely speculative, like the extension lines alluded to, cannot, at present at least, find support with the monied interest.

The fact is, considering the millions embarked already in railways, the bulk of shares is still in comparatively few hands; and from some knowledge of Lancashire, I believe that from the continued depression of trade, and the immense sums locked up in railway shares, those who have always been foremost in supporting our railway and other national works, and through whose aid alone these extension lines could be carried out, are at the present time without the adequate means, and altogether unable to bear the brunt as they have heretofore nobly done, from North, South, East, and West, for such undertakings. If these premises are correct, then let us consider whether a line of country, either from Lancaster to Glasgow, or Darlington to Edinburgh, affords prospects of a cheap railway. If we are to judge from the reports, and your correspondents' statements, either line would be a very expensive one, with a scanty population, in comparison to the south. Then let us look to the probable traffic, and surely there we shall perceive each has to contend against steam-boats of superior class, low fares and economical travelling. (*viâ* Fleetwood to Glasgow travellers now go from London to Glasgow in 25 hours, and in first class carriages and chief cabin for 1*l.* 2*s.*); but supposing the railway secured the majority of passengers going north, (leaving goods out of the question, where water carriage can be so readily obtained,) I believe it would be found that the numbers would be comparatively small.

With such impressions, it might be supposed that I would put an extinguisher upon all attempts to connect the north and south,—not so, but I would urge here, as in Ireland, that we should bring down our wishes to our means, and rather attempt what could be done, than year after year strive after impossibilities, unless Government would assist, as it ought to have done from the first. Ireland was not content without her double line of rails, and everything in the expensive way of England; and where are her railways? So with the promoters of the extension lines to Scotland. Can no other mode then be chalked out? Let us look to the map. We shall there see a railway just formed from Carlisle to Maryport, an Act, I believe, obtained for extension to Whitehaven, and thence nearly a level line of railway of about 38 miles marked out by Mr. George Stephenson, along the coast to Rampside, in Furness, on the north side of Morecambe Bay, which, avoiding certain expensive works, there suggested, after the southern fashion, not throwing away money upon superior gradients and tunnels, and adopting a single line of rails, with turn outs and go-byes, this line might be constructed for 6,000*l.* per mile, if not less. At Rampside, a pier, it is stated, will be formed, from which steamers may ply hourly to Fleetwood, on the south side of the Bay, whence there is a continuous line of railway *viâ* Preston and Birmingham to London. The objection to this route is the embarking and disembarking, which is certainly not desirable; but as the railway runs now on the steam-packet wharf at Fleetwood, and will do the same at Rampside on the north side of the Bay, the delay and trouble would be but trifling. However, let us consider what would be thus secured—a railway to Carlisle, at a cost, including the 11 miles between Whitehaven and Maryport, of 300,000*l.*, whilst the cheapest line projected from Lancaster to Carlisle would cost a million or a million and a half. From Carlisle to Glasgow a similar principle should prevail; select the more favourable country, never mind curves, avoid expensive works, which only enrich the architect and contractor, and adopt a single line of rails, and London, Liverpool and Manchester may be connected with Glasgow and Edinburgh, not by the best possible railway communication, but by one offering facility of equal speed, and at one-fifth of the expense of those at present projected from either Lancaster or Darlington—and if poor shareholders are ever thought of in such undertakings, a prospect of a better dividend, and so much greater in proportion as the cost of construction is diminished; besides which, its construction would not take half the time of the extension lines proposed, an advantage which most of your shareholder readers will understand.

If, therefore, as I conceive, the ultimatum of such undertakings is to secure the object at the smallest possible cost, you can do much with your experience and practical knowledge to draw the public mind, especially as regards Ireland, to cheap single lines, and to show that by endeavouring to grasp too much we lose all.

Your obedient servant,
VIATOR.

London, August 5, 1841.

RAILWAY COMMUNICATION WITH SCOTLAND.

THE following appeared in the *Dumfries Times* of Monday last, in the form of a letter addressed to the Editor, and signed "S.":—

SIR,—In the last number of your paper, I observe the resolutions passed at the recent meeting of the Directors of the great English railways held at Liverpool, for the purpose of concerting measures for carrying into execution the line recommended by the Parliamentary Commissioners, from Lancaster to Edinburgh and Glasgow. The strenuous and persevering efforts you have all along made for securing the preference to the Nithsdale route have so identified your name with that line, that nothing short of a sincere wish for the public good could induce you to offer your services to support its rival; and, in common with many who have always been conscientious in favour of the Commissioners' line, I rejoice that you have the manliness to abandon the advocacy of a hopeless cause, and to stand forth to co-operate with the promoters of the only line which we have any chance of obtaining. I think it will hardly be maintained by those most conversant with railways as commercial speculations, that any line of railway beaween England and Scotland would yield an adequate return for the immense capital which the construction of it would involve; but it will surely be admitted, that if any line holds out a prospect of adequate revenue, that line must offer equal facilities to Edinburgh and Glasgow, and through them to the rest of Scotland. It is not to be expected that English railway speculators will embark capital in any project for connecting England and Scotland until the advantages likely to result from such a communication are submitted to them in detail. All the surveys hitherto made, as given in the Report and Appendix of the Parliamentary Commissioners, must be taken as mere pioneering and exploratory surveys, and as such must be insufficient for carrying conviction to the minds of those who are otherwise unacquainted with the country and its resources. The accessibility of towns and districts situated at some distance from the route must be proved by branch surveys, showing the physical obstacles to be surmounted, and schedules of the present and prospective traffic to and from each district, on which the Company may calculate. If local Committees were organised in the centre of every district to communicate with the principal Committee, and to obtain surveys and statistical information of the various branches required, we should shortly be in a condition to appeal to the English capitalists, or even to the Treasury, if that step should become necessary. Your exertions can do much in forwarding this, and from the observations with which you introduce the resolutions of the Liverpool meeting, I doubt not that your pen will be zealously and efficiently employed in this cause.

If you take the trouble to refer to the Appendix to the Commissioners' Report, you will find a section of the Nithsdale line through the Buccleuch estate, thus showing that the decision of the Commissioners was in no way influenced by the opposition of his Grace. No allusion to that opposition is found in the Report, and the preference given to the Beattock line rests on principles which his Grace's sentiments could not possibly affect. As I know that you would not willingly give currency to a vague and unfounded rumour, which might affect the justly acquired popularity of the Duke of Buccleuch, I am sure you will willingly remove the impression which your observations on the subject may have created, by giving insertion to these remarks.

RAILWAY PLEASURE TRIPS.

WE have great pleasure in informing our readers that arrangements are now completed for an excursive train of 1st and 2nd class carriages from Leicester on Thursday next, to visit the Derby Arboretum. The train it is expected will bring about 500 passengers, and will leave Leicester at one, and arrive at the Derby station at a quarter past two o'clock. Such is the march of steam, that our Leicester friends and *neighbours*, as we may now term them, will be enabled to pursue their avocations in the morning, and by partaking of an early dinner, will be enabled to visit us, and remain with us for six hours in the afternoon, and return to their homes to an early supper, after travelling 64 miles per railway for 5*s.* "Really this is prodigious!" as Dominie Sampson would say. We are informed, also, that a band will be in attendance, to enable the young and gay to maze the recreative dance.

On Monday, great numbers belonging to the Temperance Societies arrived in Derby, by railway excursive trains, principally from Birmingham, Tamworth, Burton, and Nottingham. After perambulating several of the principal streets in procession, they separated to view the various manufactories, &c. in the town; in the afternoon they visited the Arboretum, where nearly 2,500 partook of tea in the pavilion and lodges of those delightful grounds. Several hundreds from the town were also present, and it is computed that nearly 3,500 persons visited the Arboretum during the day. After tea, many eminent speakers addressed the assembled multitude upon the advantages of temperance. We understand that our visitors were delighted with their excursion. Large parties visited Kedleston Hall, and Mr. Strutt's Picture Gallery, with which they were highly pleased.—*Derby Reporter.*

NEWCASTLE AND SHIELDS RAILWAY.—It appears that the public is duly appreciating the accommodation afforded them by this useful and successful undertaking. The number of passengers continues to increase, and the trips to Tynemouth during the summer have procured for the Company a rich harvest. So great was the number anxious to be conveyed to Newcastle in the evenings on several recent occasions, that the convenience at the office at Shields was found inadequate for the public accommodation; but to meet a similar occurrence the Directors, with their accustomed spirit, have made a considerable addition to the office, and provided separate entrances for the different classes of passengers. This, combined with the trains running every half hour, or more frequently if necessary, may remove all fear on the minds of the public of future inconvenience being felt at the station at North Shields.—*Newcastle Journal.*

RAILWAY SHARE-LISTS.

The London Prices are taken from Mr. Wetenhall's List; those at Liverpool are furnished by Mr. C. J. Townley, Sharebroker, and are the closing prices on Thursday. The quotations marked * are the latest Edinburgh prices; those marked † the latest Glasgow prices. The former are supplied by Mr. Robert Allan, of St. Andrew-square; the latter by Mr. J. Watson, of Frederick-street.

2. Toll to London and Birmingham 157*l.* 13s. 6d., to be deducted from gross receipts.

6. The cause of the decrease being so large this week is that *Monifieith Races* happen a week later this year.

7. Receipts include the Northern and Eastern toll, &c.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

12. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

14. The 23*l.* 3s. 2d. from goods, &c. is for toll only.

15. Ten per cent. is the maximum dividend allowed by the Company's Act.

16. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

18. The amount given in the table includes the receipts from the horse coaches from Hayward's Heath to Brighton. The divisor, therefore, is 46, although only 37½ miles of the railway are open, including the Shoreham branch of 5½ miles.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station.

20. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the table is exclusive of Brighton or Croydon toll.

21. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.

23. Canal coat, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

24. The 5,028*l.* 9s. 2d. are the receipts after deducting the toll to the North Midland Company, and exclusive of receipts from carriage of mails.

25. The receipts for goods, &c. include, carriages, 16*l.* 3s. 0d.; horses, 6*l.* 18s. 0d.; dogs, 1*l.* 14s. 0d.; parcels, 193*l.* 15s. 3d.; cattle, 13*l.* 10s. 6d.; corn, 19*l.* 5s. 9½d.; heavy goods, 491*l.* 16s. 11d.; coal, 130*l.* 10s. 11d.—Total, 873*l.* 14s. 4½d.

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

H. B. Manchester.—*We have to acknowledge the courtesy of our correspondent, and to return thanks for the copy which he has been kind enough to forward of a work entitled the "Modern Sabbath Examined." So far as we have had time to glance at it, the book appears to be sensibly and judiciously written, and if necessary, we may hereafter give an extract or two from its pages. We quite agree with our correspondent that theological discussion in a journal such as this is to be deprecated, and assuredly we shall not encourage it. At the same time, it is but fair that, having challenged them to do so, the opponents of the views which he and we concur in supporting should have an opportunity of laying their arguments before the public.* Valeant quantum.

E. L. Bath, F. Bath, *and others*—*We cannot prolong the controversy further than to give the few "last words" contained in the present number. Our correspondent does us no more than justice in expressing an opinion that we have every disposition to steer an impartial course among the conflicting opinions of those who favour us with their communications.*

An Original Proprietor of the London and Birmingham Railway.—*Let the subject be mooted at the half yearly meeting by all means, when we have no doubt a satisfactory explanation will be given.*

A Midland Counties' Shareholder.—*What proof does our correspondent offer that he is really what he professes to be?*

S. C.—*The previous letter of our correspondent has unfortunately been mislaid. As a general rule we cannot undertake to return rejected communications.*

A Tourist.—*We quite agree with our correspondent that competition among coach proprietors ought to be encouraged rather than checked we noticed the subject last week; and he will find the particular case referred to in his letter, noticed elsewhere to day.*

A Workman.—*Quite enough has been said on the subject. Experience and not mathematics must settle the point. Our correspondent's letter, however, does him much credit, and we beg him to accept our best thanks.*

A Sunday Traveller's *letter is very much to the purpose, but we cannot allow a theological discussion to be prosecuted further than is necessary for the developement of the views of the party who is already in the field. The same answer to* C. D. *and several other correspondents.*

J. W. Torrington square.—*The system of Auditorship is certainly not carried so far as it might be, we believe it is merely nominal in the Company to which he refers.*

A Shareholder (Cambridge) *is referred to the note in the Traffic Returns. The amount did comprise the coach receipts.*

A Subscriber Manchester.)—*We would recommend for the one purpose* Fortune on the Funds, *or the works of* Fairman *and* Fenn, *on the same subject. These works will cost 6s., 11s., and 5s. respectively. For the other object, he should consult* Mr. Whishaw's *excellent work on Railways, the* Railway Times *for* 1838, 1839, *and* 1840, *and the Railway Map, published at the Office, 122, Fleet-street, corrected to* 1841;—*price a guinea.*

*** It is requested that in future all communications intended for the *Railway Times* be addressed, "To the *Editor*," and not to any individual by name, now or recently connected with the establishment.

THE RAILWAY TIMES.

SATURDAY, AUGUST 7, 1841.

Some particulars will be found elsewhere of a melancholy casualty upon the Taff Vale Railway, whereby one of the engine-drivers lost his life. Railway accidents have of late, fortunately, been of rare occurrence, and the one now referred to furnishes no further evidence that there is any danger inseparable from this mode of locomotion. Like almost all other accidents of the kind (perhaps it would be difficult to find one exception) it is clearly traceable to the negligence and inattention of an individual—he falling, as usual, a victim to his own recklessness. The evidence before the Coroner's jury (as well that part of it which want of space compels us to omit as that for which we have made room) proves most decidedly that the deceased had acted in a manner the most reckless, and perilled not only the property of his employers, but the lives of several of his fellow-servants. In so far the blame of the lamentable occurrence rests not with the Managers of the railway; but at the same time we cannot help thinking that there was a lack of sufficient superintendence over the practical working of the line at the period more immediately adverted to.

It appears, for example, that the deceased was late in the arrival of his train in no fewer than three instances during the day on which the sad catastrophe took place; and yet none of his *superiors* seem to have been at all cognizant of the fact, although undoubtedly on every well-managed railway a failure in punctuality, even for the first time, would subject the offender to rebuke if not to more unpleasant consequences. Not only is the deceased found to have been unpunctual in the arrival of his load, from circumstances which at the time he might not have been able to control, but it appears from the fireman's own testimony that he (the fireman) was absent in the middle of a journey for about twenty minutes, in order to bring the driver his dinner! Surely some one at the station where this occurred ought to have prevented or punished so gross a breach of duty on the part of the driver and his subordinate. The fireman says it was not usual for him to absent himself from his engine; but since to say anything else would have been to criminate himself, we do not feel disposed to place much reliance on the statement. What we are anxious to impress upon Railway Managements is, that there should be exercised such supervision over the conduct of the inferior servants of a Company, that it would not be necessary to inquire of *them* whether, in certain instances, they had transgressed or not. The fireman admits that on each of the three trips they were considerably behind their time—in one instance "*much* behind;"—and it is more than probable that finding in two cases that punctuality was apparently not very necessary, the man who has paid so awfully for his rashness was tempted to venture upon his third and fatal journey.

It was shown, too, by the fireman's testimony that the only breaksman with the carriages on the occasion of the collision, was "a boy or young man from seventeen or eighteen years of age." "I do not know," added the witness, "whether he had put on the break or not; *perhaps he was too frightened.*" The conjecture is natural enough; and why, except perhaps for the purpose of saving a few shillings per week in wages, the Managers of the Taff Vale, or any other Company, should commit to a raw youth a duty which above most others requires vigilance, decision, and presence of mind, we cannot imagine. If such were their motive, it has in this case proved to be a most injudicious economy. Far better would it be to have no breaks at all, than entrust their use to inefficient servants. In the one case, the driver knows that he has no one's exertions but his own upon which he can reckon; in the other, he looks for the assistance of his fellow servant, and is deceived. It is clear that upon such a railway as the Taff Vale, where but a single track of rails seems to be laid down, precautionary measures are far more essential than upon ordinary lines. We have no fault to find with the printed regulations of the Managers, as explained to the jury by Mr. Bush, the very efficient Engineer-in-Chief (but which we have not deemed it necessary to give); as far as theory goes, they are all that could be desired, but the best rules become in practice worse than useless, if means be not taken to see that they are rigidly and constantly observed. The jury in recommending in their verdict, that the regulations as to the starting of trains should be "*enforced*," appear to point at something of the kind, and we trust that on this and all similar undertakings, so salutary a piece of advice will not be without good effect.

The new Parliament will, it is generally supposed, assemble in a few days, but it is not likely that in the present state of political parties anything will be done for some time to come in the matter of the Railways' Regulation Bill, which was stopped last session by the dissolution of the House. It is fortunate that no detriment will result to railway interests, even should the scheme be indefinitely postponed. Our view of the proposed Parliamentary interference in railway affairs has always been, that the measure introduced last session, and the Act passed in the previous year, were as innoxious as could reasonably have been expected, much more so indeed than we, or we believe the great body of railway proprietors, had anticipated. It was unfortunate for the railways that so many accidents had occurred shortly before the introduction of the Bill of last session, as there can be no question that it was mainly owing to these casualties that Government were induced to meddle at all in the matter. The fears of the public were greatly, and not without reason, excited, and it would have been a dereliction of duty on the part of the authorities and of the legislature, not to attempt to find a remedy for the defects which were at that time so apparent. Whether good fortune or better management has produced the present more satisfactory state of affairs matters little to those who brought forward the Bill of Mr. Labouchere—*we* attribute it to the latter cause—for "the pressure from without" being removed, the parties now in office are not at all likely to persevere in any course that would have a tendency to bring down upon them an opposition half so powerful as that of the associated Railway Companies.

Nor is there, in our opinion, the smallest danger to be apprehended to the interests of railway proprietors from any change of administration to which the result of the late elections may lead. Sensible men of all parties are too much alive to the immense advantages of the improved means of internal communication which railways present, to desire in any way to impair their efficiency, and too grateful, we should hope, to the enlightened enterprise of those who have called them into existence, to interfere needlessly or injuriously with any pecuniary benefits which may ultimately accrue to them or their successors. There are bigots in all parties, and that some of the expectants of official power would be glad to find, or to make, a plausible pretext for dictatorial interference we are quite prepared to admit; but fortunately such persons are too few to in-

Digitized by Google

fluence in any sensible degree the course of party policy. Probably, a change of administration would in so far be of service to Railway Companies; for anything—even a course of determined hostility—is preferable to the vacillating policy which in railway legislation, as well as in matters of more general interest, has characterised the present advisers of the Crown.

We are not of those who hold that every kind and degree of external interference must of necessity be injurious to the interests of those who have invested their property in railway speculations. On the contrary, we believe that a well regulated and properly defined control, would be beneficial to all parties—beneficial to the proprietors and acting Managers of railways, in keeping them up to their duty, and beneficial to the public as a necessary consequence of Directoral vigilance, and as inspiring a confidence in railway arrangements which the seemingly irresponsible functions of Boards of Direction are not at present supposed to create. Much, too, might be done in the way of preventing, or nipping in the bud, inconveniences and more serious evils to which, under other circumstances, the public might be subjected from the practices to which uncontrolled custom gives rise; and in any case, it can be no just ground of alarm to any Railway Board, striving conscientiously to do its duty, that a vigilant eye should be kept upon their movements by parties who may reasonably be supposed to be beyond the reach of sinister influences, and who are themselves in their turn subjected to the scrutiny of the Highest Court in the kingdom.

We have on previous occasions pointed out how, in our opinion, a Railways' Regulation Bill might not only be rendered not distasteful to the Companies, but be looked upon by them as a most potent and welcome auxiliary in the conduct of their daily business. An extension, for instance, of some of the provisions of Lord SEYMOUR'S Act would contribute in no small degree to the more efficient working of the system; and with a few simple additions which recent experience has pointed out, a measure so framed would probably answer every practical purpose upon which, *at present*, railway legislation can be brought to bear. Premature arrangements, such as compulsory clauses disagreeable to the Companies would entail, are of all things to be avoided in the present position of railway affairs. Much more will be done, if the active minds now anxiously labouring for the improvement and ultimate perfection of the system are left unimpeded by formal enactments which, in attempting to render the letter of the law stringent and comprehensive, deaden and neutralize the intentions of its framers, than by seeking to find remedies for every temporary or incidental evil which, after all, may be such only in seeming. Never were Railway Managements more on the alert than now to search out and secure whatever may have even the appearance of improvement on its face, and we should greatly regret if any hasty or ill-advised interference from without should interfere to damp their praiseworthy ardour in so good a cause.

THE half-yearly meeting of the Leeds and Selby Railway proprietors held last week will be found noticed in another column. Our readers are aware that a lease of this line has been granted under Parliamentary sanction to the York and North Midland Company on terms which we have no doubt will be found mutually beneficial. The facilities which the York Company possess of working the Selby Railway in conjunction with their own, must render the traffic considerably more productive than it possibly could be to any parties carrying on the business by itself; and on the other hand the proprietors of the leased line may think themselves fortunate, all things considered, in having guaranteed by so respectable a Company as the York and North Midland, the payment of 5 per cent. on their investments for a period of thirty-one years.

We were somewhat amused at a display of *foresight* which one part of the Directors' Report puts forth. It appears that there is at present in the Company's hands a disposable balance of 13,000*l.* or 14,000*l.*, which sum the Directors proposed, and the meeting sanctioned, should be allowed to accumulate at interest during the lease, in order to form a fund for the resumption of trade at the end of that term, should the York Company decline to renew their bargain, or in the interim neglect to purchase the line which it seems they have at any time the power of doing at cost price. It is certainly very commendable to "look a-head," but we think it would have been just as well to have taken in a less extensive prospect. We would have let the proprietors of thirty years hence provide for the emergencies of the time, as it is not likely that *they* will have incurred anxiety and risk such as the present shareholders have unfortunately had to encounter, and as they will at all events have enjoyed their 5 per cent. dividend for a long term of years, whereas the returns to the present holders have hitherto been little better than nominal. One gentleman present at the meeting took this view of the matter, and recommended that the balance referred to should at once be divided as a bonus among the existing proprietors. He was met, however, by a representation that, in that case it would be difficult, if not impossible, to raise funds for the purchase of a suitable stock of engines at the end of the 31 years, *should they be required*, and that the York Company might take advantage of their then position. For our own parts we should have no dread of either of the presumed evil consequences. Long before the thirty-one years have expired, there is every probability that the Leeds and Selby Company will have become extinct—by the purchase of the line on the part of their neighbours, and even if it should not be so, it is not very likely that the successors of the present shareholders would be deprived by any Parliament of an opportunity of turning their property to account, merely because those who sacrificed so much in calling that property into existence preferred their own interest to that of their descendants, and felt disposed to make as much of it as they could. It is to be hoped, too, that railway legislation will be somewhat better understood after the lapse of a quarter of a century than it is at present. On the whole we think it much better that the funds in hand—be they large or small—should under the peculiar circumstances of the line, fructify in the pockets of individual proprietors than in the joint purse of the body corporate.

IN the London correspondence of the *Dublin Monitor*—a journal generally well informed as to political movements—we find, under date of Tuesday last, the following paragraph:—

"The Tories are very industriously circulating a report that, as a proof of their good intentions towards Ireland, they intend, as soon as possible, to take up the measures introduced last session for a system of railways, and an effective and general drainage of Ireland. They also talk of their wish to turn their attention to the Holyhead and Chester Railway, and of adopting the Report of the Commissioners who surveyed Holyhead Harbour, and recommended its enlargement, with the intention of putting first-class steamers on the Dublin station."

The *animus* of the above, so far as regards the writer, is evident enough; but we, who in this journal have nothing to do with party strife, should be glad to find that the "report" referred to were in all respects correct. It matters not to us—nor would it matter much to the people of Ireland—what the motives might be that should lead to the encouragement of Irish railways under a "Tory" administration. It might probably be an earnest desire to benefit that unfortunate country, or possibly only a wish to outstrip their predecessors in the attainment of popularity, but in either case the result would be the same—namely, a source of unmixed good to the Irish people, and indirectly to every other part of the empire. It can never be forgotten that the present administration shamefully gave up the question of Irish Railways at the period when they were most assured of victory, and if their successors should carry into practice the schemes which Lord MORPETH and his colleagues have hitherto contented themselves with advocating in theory, a change of ministry will in so far militate nothing against "justice to Ireland." The views which this paper has supported in reference to railways for Ireland are too well known to require recapitulation. The *Railway Times* was the first journal which took upon itself the advocacy of the scheme recommended by the very competent Commissioners appointed to inquire into the question, and nothing has since transpired which does not in a tenfold degree confirm and illustrate the positions which we then advanced. If circumstances have recently transpired which render it politic that the system of Irish railways should be prosecuted under somewhat different auspices, our opinion of the excellence of the original plan remains unchanged, and it is only because we are anxious to see Ireland furnished with that which would contribute so much to her prosperity, that we would give in our adhesion to *any* feasible scheme for accomplishing so desirable an object.

As regards the other matter touched upon in the paragraph above quoted, we can only say that any Government would do itself credit by supplying facilities for the prosecution of a work which would tend so immediately to the public advantage as the construction of the Chester and Holyhead Railway. Sinister influences are, we are assured, at work in this instance as in others; but for our own part, we have no misgiving in regard to the ultimate triumph of the scheme which has been sanctioned by the approval of so high an authority as that of the Government Commissioners. The decision to which these arbiters came was, we believe, founded upon incontrovertible principles, and upon facts which hitherto have not been gainsayed, and until these are disposed of, we may take it for granted that the route preferred by the judges delegated by Parliament is upon the whole the best.

THE *Worcester Journal* states, that at a meeting held on Wednesday last of the Directors of the Worcester Chamber of Commerce, it was announced that the Birmingham and Gloucester Railway Committee had appointed a deputation to confer with the Chamber upon the subject of a branch to that

Digitized by Google

city. The Directors resolved to refer the matter to the Railway Committee appointed some time since by the Chamber, requesting them to put themselves into communication with the Committee appointed by the Town Council. We are happy to find that this matter is in a fair way of being amicably arranged. The people of Worcester have to blame themselves that so much delay has already taken place in carrying into effect a scheme which promises to contribute more to the prosperity of their ancient city than any other improvement of modern times.

—o—

We print in another page a copy of Lieut. Col. Sir Frederic Smith's Report to the Board of Trade upon the works of the Blackwall Extension Railway. We extract also from a Sunday contemporay (*The Observer*) some interesting particulars relative to the line generally. The article in question is defective however in one point, inasmuch as the name of Mr. Bidder is not once mentioned, although that gentleman has been associated with the Messrs. Stephenson in the engineering department, and as acting man is justly entitled to a considerable portion of the credit due to the successful prosecution of so important an undertaking. The general meeting of the Company is fixed for the 19th instant, which is somewhat earlier than usual, the Directors being no doubt anxious to explain with as little delay as possible the circumstances connected withthe charge brought against Mr. Alderman Humphery and that gentleman's recriminations.

—o—

The Post-office authorities appear to be not unfrequently most unfortunate in their arrangements for the convenience and accommodation of the public, where the opening of a railway happens to render an alteration necessary in the old established routine. The changes consequent on the opening throughout of the Great Western line supply more than one illustration. In no fewer than three provincial journals of last Saturday do we find complaints under this head. The *Cheltenham Looker-On* states, that the morning mail has been rendered altogether useless to that town, as in consequence of changes made since the opening of the railway, the letter-box is now closed at a quarter past six in the morning, while it is open for the night mail as late as eleven o'clock, p. m.; "between which hours (our contemporary justly observes,) no correspondence can reasonably be calculated upon." The *Monmouthshire Merlin* says, that since the opening of the railway from London to Bristol, the mail from the metropolis arrives at the latter city at fifty-five minutes past twelve o'clock at night, and the Welsh mail which takes the Monmouth letters is not dispatched till six o'clock in the morning. "We do not see (adds the same journal) why the letters for Newport and South Wales should remain five hours at the Bristol Post-office, and deprive us of the advantage of transacting business, which might require more time to accomplish than the interval between the present hours of arrival and dispatch of the London mails." The *Berkshire Chronicle* says:—"The inhabitants of Newbury are about to suffer a a great inconvenience through an alteration in the time of closing the post-office—which under a new regulation is fixed to take place at a quarter before seven, and finally close at twenty-five minutes to eight. The necessity of this step is not easily accounted for, or the reason that letters should be sent to Swindon, a distance of 25 miles, when the direct road to London by Reading is so much nearer. We hope, however, that some arrangement will be made that the London bags may be forwarded *via* Reading, at a later hour."—We are aware how impossible it is to please all parties in arrangements of this sort; but surely, defects so glaring as those above pointed out might easily be remedied.

It would appear, however, that the districts embraced by the Great Western Railway, are not the only ones that are subjected to inconvenience by the Post-office arrangements. A highly respectable journal, the *Leeds Intelligencer*, in its publication of last Saturday, supplies the following facts, which certainly speak little in favour of Post-office efficiency:—

"The proprietors and readers of newspapers have great reason for dissatisfaction with the recent mail arrangements in this district. While the welkin rings with laudations about dispatch, and rapidity of conveyance, we are suffering under all the miseries of vexatious delay. Indeed, such is the inconvenience of the general arrangements at the Post-office, that we are compelled to sacrifice a large portion of our fair profits in hiring special conveyances to do the work which the law says we are entitled to have done by virtue of the payment of the stamp duty.

"The case of one newspaper is the case of all. A contemporary has sent us a copy of some remarks which he intends to publish on this subject, and with his permision we adopt them:—

"To secure the delivery of letters or newspapers in Glasgow and a great portion of Scotland, on Saturday morning, it is necessary that they should be posted in Leeds on Thursday evening before six o'clock!!! Thirty-seven hours between Leeds and Glasgow; and by railway too!!! Under the old mail coach system, if they were posted by one o'clock on Friday afternoon, they were delivered just as soon as they now are, though required to be posted nineteen hours sooner.

"To secure the delivery of letters or newspapers in Newcastle, Sunderland, and towns adjacent, on Saturday morning, it is necessary that they should be posted in Leeds on Thursday evening before six o'clock. Thirty-seven hours between Leeds and Newcastle! To secure a morning's delivery under the "old system" we had only to post at one on Friday afternoon.

"To secure a morning's delivery in York, and adjacent places, it is necessary to post at Leeds before six o'clock the previous levening; thirteen hours before delivery—though we have a railway direct to York, and the journey performed regularly many times a day in eighty minutes! Under the "old system" we could post up to two o'clock in the morning, and have the morning's delivery. Thus the "accelerated system" requires us to post letters from a place eighty minutes distant, full eight hours sooner than we did under the mail coach dynasty!

"The folly and absurdity of the arrangements we complain of will be more fully apparent when we state, that the mail bags for a great portion of the places we have above enumerated, are carried out of Leeds by a mail which leaves between six and seven in the evening; that they are deposited at the Normanton Railway Station just ten miles out of Leeds within twenty minutes after that mail starts from Leeds, *and that they are left there till six o'clock next morning*, when they are conveyed forwards to York and Newcastle by the mail which started out of London more than an hour after the said York and Newcastle letters started from Leeds!!!

"To secure a morning's delivery for letters and newspapers in Halifax, Holden-bridge, Todmorden, Rochdale, Oldham, Ashton, Manchester, Liverpool, and indeed all Lancashire, it is necessary that they are posted before six o'clock the previous evening! though we have a railway communication direct, which makes Manchester only two and a half hours distant. Under the old *regime* of "fast" mail coaches, we could post in Leeds up to twelve o'clock the previous night, and the letters were delivered in Manchester and the other places we have named, just as soon as they now are!! Dublin letters were, and are, also conveyed by the same mails; the Leeds box for letters was regularly open till ten at night; so that the merchants of Leeds and all sending letters are obliged to post them full four hours sooner under the 'accelerated' system than under the old one."

—o—

The Northern and Eastern Railway will be further opened on Monday next, as far as the Harlow Road. It is believed that when this extension takes places several of the horse coaches will come upon the line. The *Essex Mercury* in alluding to this further opening says:—"Too much praise cannot be awarded to the exertions of all those concerned in the direction and management of this Company; and such is the good result of the judgment and expedition evinced, that the public may anticipate, somewhere about next September, to have a railway communication as far as Spelbrooke; and that the whole line to Bishop's Stortford will be completed in the course of the ensuing year."

—o—

A correspondent intimates that Government, in order to make travelling between London and Dublin more expeditious, has given orders that a mail boat shall proceed to Dublin immediately on the arrival of the mail-bag from London by the Chester and Birkenhead Railway. Travellers desirous of availing themselves of this advantage, can do so by proceeding by the London and Birmingham Railway to Birmingham, booking at Birmingham per the Grand Junction Railway to Chester, thence to Birkenhead, or by the Chester and Birkenhead Railway, thus accompanying the mail-bags the whole way. The expense we are informed, is much the same as on the more circuitous route by Liverpool; and saving of 12 hours is in many instances effected in the journey by the Government arrangement occupying on the whole not more than 20 hours between London and Dublin.

—o—

It appears, from the "Thirty-sixth Report of the Commissioners on the Caledonian Canal," just published, that Government has been unable to effect a transfer of the canal to a Joint Stock Company, as suggested by a Select Committee of the House of Commons, and noticed in this journal at the time.

—o—

The following remarks appear in the *Liverpool Standard* of Tuesday, in reference to a law case reported in the *Railway Times* of last week. In the general spirit of our contemporary's observations we entirely concur:—

"On Thursday last an occurrence of an unusual nature was witnessed in the Insolvent Debtors' Court in London, viz.: an opposition to the discharge of an insolvent, on the part of a Railway Company, to whom he was indebted for calls upon shares. We do not wish to give additional publicity to the proceedings in question—ill-advised and objectionable as we believe them to be—and our only motive for alluding to them at all is to suggest to the Directors of the Company in question the extreme impolicy of thus flying in the face of public opinion, which is notoriously opposed to a stringent exercise of the great powers which Acts of Parliament confer upon such Companies.

"Of course it is quite proper that the payment of calls should be enforced from shareholders in arrear; but when the law has done its part, and its victim takes refuge in the Court of Bankruptcy or Insolvency, it is beneath a great public Company to display a vindictive spirit by opposing him there. At all events, they ought to be certain of their grounds before doing so, and not allow themselves as in the case before us, to appear in connection with a seemingly harsh proceeding, from which they reap nothing but the obloquy attached to it. We sincerely wish well to the railway in question, but we must express our conviction that the public mind must be conciliated towards it, before it will ever assume its proper position in the market, or the Directors be relieved from the painful task, which it must be, *to drive on an undertaking* by means of continued law proceedings against its shareholders."

—o—

Mr. R. Stephenson.—The *Moniteur Belge* contains a royal ordinance by which the order of Leopold is conferred on Mr. Robert Stephenson, Engineer, of London, as a testimony of his Majesty's

Digitized by Google

satisfaction with the improvements which he has made in locomotive engines—which improvements have turned to the advantage of the Belgian iron railways.

RAILWAY OFFENCES AND OFFENDERS.

We are glad to perceive that in some instances at least, a proper severity of punishment is inflicted upon railway offenders, and that a mistaken leniency is not *always* suffered to influence the conduct of those whose duty and interest it is to see the provisions of the law carried rigidly into effect —we mean the railway authorities.

Last week a man named James Smith, a miner, was charged before Mr. Gemmell, a magistrate of Ayr, with causing a disturbance on the Glasgow and Ayr Railway. It appears that Smith had refused to pay his fare, and had severely assaulted several of the Company's servants. The conclusion of the case is thus given in the *Ayr Advertiser* :—

"The evidence being closed, Mr. Reid, Agent for the Railway Company, craved that the law might be put in full force; *as under lenient sentences, hitherto, offences on the railway seemed to be on the increase.* Mr. Gemmell said, that he should be the more inclined to give weight to the representation of the Railway Company, through their Agent, that, in general, they craved clemency for offenders; but, in the present case, the outrage had been so flagrant, violent, and serious, that the maximum of punishment seemed barely sufficient for the offence. Were such conduct visited with light punishment, it would, in all probability, become less rare; and, if so, the most disastrous consequences would inevitably ensue. *Sentence of 5l. of a fine, or two months' imprisonment, was then passed.* The prisoner begged a more lenient sentence, as he had a wife and several children unprovided for; to which the Justice replied that such conduct as his, if tolerated, would soon leave hundreds of wives and families unprovided for; and he considered that sentence the most merciful, which, *by punishing one man served as an example to others, and thus proved a protection to thousands.*"

On the adjoining line, the Glasgow and Greenock, three men were recently fined in sums varying from 1*l.* 11s. to 2*l.* 5s. for trespass and obstruction of officers and it is stated in the local journal which reports the cases that "the Directors are determined to enforce obedience to the provisions of the Railway Act" for the future.

On the Manchester and Leeds line, a young scoundrel met in some measure with his deserts last week. The case is thus noticed in the *Halifax Guardian* of Saturday last:—

"On Thursday last, a lad named Philip Douse, from Ossett, was charged at the Wakefield police-office, before J. Holdsworth, Esq. M.P., with placing a piece of iron called a "chair," weighing about 28lbs., upon the rails of the Manchester and Leeds Railway, near Healey Mill. It appeared from the evidence of a lad named Joseph Holroyd, aged 14, that he, along with his younger brother, went with the defendant on the previous evening to the railway, and the defendant put the iron on the rails, and asked witness for some band to tie it; he did not give him any, but told him to come away, as he was doing wrong. Witness's brother, aged 13, corroborated this statement. They went away, leaving the iron on the rails. An engine-driver deposed that he was going on the up line, when he discovered the iron upon the down line. He immediately stopped the train, and took the iron off. It was fixed as firm as it could be, without being tied. They passed the down train at Cooper Bridge. Mr. Holdsworth, addressing defendant, said it was a most serious and awful offence, and he felt it his duty to punish him. He should fine him 5*l.* and costs, and in default of payment three months' imprisonment, and he hoped it would be a warning to him and others. The defendant was committed."

It is frightful to think of the consequences which, but for the vigilance of the engine-driver, might have resulted from the act of wanton mischief attempted by this lad. Mere imprisonment is too slight a punishment for such villainy; he ought to have a sound flogging administered every day during his term of incarceration.

A case of very inadequate punishment for trespass on the Greenwich Railway occurred at Union Hall police-court on Tuesday. A man named Ambrose was charged with walking on the line and refusing to leave it when remonstrated with, and warned of the risk he was incurring in case two trains should pass him at the same time in opposite directions. The fellow had the impudence to say, that if he were killed it would be nobody's fault but his own, and when a policeman began to remove him by force, he resisted to the great hazard of the Company's servant and himself; and yet for the double offence, Mr. Traill, the sitting magistrate, thought a fine of ten shillings sufficient! If the delinquent had met his death on the line, it would have been no more than he deserved, but how much should we have heard of the "Frightful Accident," and what effect would such an occurrence, however little it might have to do with the safe conveyance of the public, have had upon the property of the Company?

A different class of "railway offences" from any that we have hitherto had occasion to notice, has recently sprung up. It appears that some of the labourers employed in the construction of the Manchester and Birmingham Railway station at Manchester have "struck" for an increase of wages, and not content with refusing to work, have attempted by force to intimidate those of the men who may be better disposed. The conduct of these "turn-outs" is wholly unjustifiable, as they were receiving liberal wages. Of course it will, as in all such cases, do them a vast deal of present and permanent injury. One of them has been committed for trial for a violent assault on a fellow-workman, he having deliberately thrown a large stone which struck the prosecutor, and rendered him for a time senseless.

MIDLAND COUNTIES' RAILWAY.

To the Editor of the Railway Times.

Sir,—It appears by a letter in your paper of last week, signed "P. Z.," that the writer has seen certain letters in some of your former numbers, which he has understood to convey "dubious" and "ambiguous" attacks upon the management of the Midland Counties' Railway. "Dubious" and "ambiguous" indeed these attacks must have been, for though a *constant* reader of your paper, and possessing a considerable interest in the railway in question, *I* have seen nothing in the shape of attack which struck me as referring to this railway in particular. Your correspondent deals in literary quotations. I will give him one to chew the cud upon —"Qui *capit*, ille *facit*." In plain English, he that *takes* an ill-natured remark (couched in ambiguous language) as applicable to himself or another, is the person who *makes* it. In the one case he adopts it from a feeling that it is deserved, and in the other for the gratification of his spleen.

Your correspondent complains that the accusers do not speak openly. He says, that it is "more than insinuated" in some of the letters to which he alludes, that "the Midland Counties' Company is badly conducted," and that "the Directors are guilty of *venal and corrupt practices*," and he claims the performance of your duty "as Editor of a public journal professing to watch over the interests of the railway public, openly to expose and hold up to the scorn and detestation of the public *such conduct.*"

Now, Sir, though I have seen no such insinuations as these, I presume they have been made in a manner intelligible to "P. Z." It is not only unjust and discreditable, but it is dastardly in the extreme, to convey such sweeping imputations, either by inuendo as to the party charged, or by general language without stating the particulars of the charges. If the accuser knows any *facts* which can justify him in charging "bad management," "venality," or "corruption," against the Directors of this Company, let him come forward manfully and state them, either through the medium of your paper, or, if he is a shareholder of the Company, by attending the general meeting, which will now be held in a few days. But accusations so made, seldom rest upon any better foundation than the malevolence of the accuser, who appears to be "willing" enough "to wound," but marvellously "afraid to *strike*," and to have all the disposition, if he had only the courage, to be an assassin!

I am, Sir, yours, &c.

A MIDLAND COUNTIES' SHAREHOLDER.

Leicester, August 5, 1841.

RAILWAY LIABILITIES.

To the Editor of the Railway Times.

Sir,—One of the Directors of a railway in which I hold shares, has recently failed; and it is currently reported is indebted to the Railway Exchequer more than 2,000*l.* for arrears of calls, his brother Directors, or the Secretary, I know not which, having, it is said, taken the promissory notes of the party alluded to in payment of the calls as they became due. The dividend expected to arise from the estate is small, and a composition of 5s. in the pound has been offered to the creditors. Now in the event of this being accepted, a loss of some 1,500*l.* will fall either on the Secretary, the Directors, or the Railway Company generally, and the purport of this application is to know on whom the *loss will fall*; as I conceive, under the circumstances in question, the shares cannot be declared forfeited.

A CONSTANT READER.

Doncaster, 4th August, 1841.

Bristol and Exeter Railway.—An article having appeared stating, as was believed "on very good authority," that Taunton "had been resolved on by the Directors of the Bristol and Exeter Railway for its terminus," we have authority for stating that there is no foundation whatever for this, which is supposed to have originated with certain speculators in shares, and for an object that cannot be mistaken. The terms of the lease between the Directors of the Great Western and Bristol and Exeter Railways have been placed before the public, and there is no intention of making alteration in these. By this lease it may be seen that the completion of this great work to Exeter is fully provided for, and that all monetary considerations are founded upon the entire plan being carried out; indeed, so circumstantial is it, that even the periods may, with something like an approach to accuracy, be defined.—*Exeter Flying Post.*

Edinburgh and Glasgow Railway.—It is gratifying to observe the incessant exertions which are making everywhere on the line in the vicinity of this city to get this national undertaking completed. The magnificent entrance to our great tunnel is drawing to a conclusion, while the booking and other offices are all but finished. The landing and departing platforms are now getting very handsome sheds, with elegant cast iron supports set up; and the ground is clearing out for laying the permanent rails. Yesterday Mr. John Craig, the mineralogist, made a survey of the tunnel, in furtherance of the objects of the British Association, and proceeded right through it, in company with the very polite and spirited contractor, Mr. Marshall. Amongst many other geological specimens got in the journey, we saw perfect masses of the Nucula Tumida, Producta Scotia, Producta Martinii, Bellerophon Urii, and Apiocrinites, imbedded in a shale, above a two feet limestone, with many other interesting remains of a period long before the creation of man. — *Glasgow Constitutional*, Aug. 4.

THE QUESTION OF SUNDAY TRAVELLING ON RAILWAYS.

LETTER III.

To the Editor of the Railway Times.

SIR,—In my last letter, I showed, by proofs direct and interential, that the seventh day was made a Sabbath from the beginning of the world. The conclusion is so plain, that I did not deem it needful to insist on it. What was done from the beginning was done for all mankind. If the blessing and sanctifying of the seventh day were primeval acts, the Jews have no right to monopolise the one, and we have no indemnity for the violation of the other.

I know but of one evasion of this self-evident conclusion; and this I am not at liberty to pass unnoticed. It may be alleged that my argument proves too much, since it involves two other ordinances, circumcision, and abstinence from blood, for neither of which, though they were both of ante-mosaical date, can I attempt to plead the same conclusion. I reply that for both these ordinances I should plead the same conclusion, if there were not something relative to both which forbids my doing so. Could it not be shown, either that these ordinances have been formally repealed, or that there was in them some restrictive peculiarity which gave them obviously a local or temporary character, their pre-existence to the Mosaic ritual would give them to this day an unquestionable authority. What is the fact? Of one an inspired Apostle, declares, "Behold I Paul say unto you, that if ye be circumcised, Christ shall profit you nothing;" of the other it can be demonstrated, that it had a temporary aspect. Through all time preceding the coming of the Lamb of God, it was an essential part of God's dispensation of mercy to fix human hope on the great principle of the atonement, and to write, in mystic characters it may be, but in characters he enabled the devout worshipper to read, the fundamental truth which Abel acted and Paul spoke, that "without shedding of blood is no remission." Hence blood was made sacred as the emblem of the soul's life or ransom; and till the real blood of atonement was actually shed, not an animal was to be slaughtered without a recognition of the great principle that blood was life. That blood has been shed. We have clearer tokens to look to. We see therefore in the prohibition, but one of those shadows, which were confessedly to disappear when the substance was revealed. This at least cannot be said of the Sabbath. Christ was not the object at which the Sabbath pointed. That it is typical I deny not, and that it is temporary I deny not. It has its antitype, and therefore its limits, or rather its consummation. But these are not yet. When the world has ceased to work, and to be weary, and want rest—when it needs no longer a respite to breathe freely and look upward—when other ordinances, now perpetual, shall have ceased for ever—the Fifth Commandment dying a natural death because parental relationships are no more; the Sixth, because man has become immortal; the Seventh, because "they neither marry nor are given in marriage;" the Eighth, because each is the property of all; the Ninth, because all know intuitively, even as they are known; the Tenth, because the fulness of God shall leave no space for covetousness—then, when sun and moon are lost in the light of the Lamb, and the Law forgets its trumpet amidst the harmonies of love, and the eye sees no temple, and mediation has done its work, and God is "all in all," then, when times' divisions are grown obsolete, no seventh day shall be distinguishable, for eternity shall be one blissful and changeless Sabbath. Till then the Sabbatic institution shall continue—a perpetual emblem, pledge and foretaste of the rest that remaineth—distinguishable from all that is local and exclusive—made a blessing from the very day when the visible universe was complete—the key stone of a glorious arch, not to be moved or shaken, till the whole fabric is to be dissolved for "the new heavens, and a new earth."

Our second argument then for the perpetuity of the Sabbatic law is founded on its nature, and demonstrable necessity; an argument co-eval, collateral, con-sequential with the first, having the same date, the same extent and the same conclusive issue.

"The Lord blessed the seventh day and hallowed it." What do these words imply? That there was one day on which, in an especial manner, the Great Source of happiness was pleased to smile. Six days bore witness to his bounty in creation, and saw hills and valleys gladdened beneath his wonder-working hand. But the seventh day was a better day, and saw better things: and told man, even in paradise, that God's natural gifts were not his best gifts. The day was blessed and sanctified. Blessing and sanctification were, in effect, identical. God's resting was no listless recoil from labour: and man's rest was to be no mere dull cessation from toil, but a time of lofty communings, and holy pleasures, and exercises of his higher nature, unincumbered with other duties. He never lived without God. But I could almost dare to affirm, that whereas on other days the Gracious Being made his presence sensible in the cool of the evening, on the Sabbath man spent the whole day before his blissful presence, and felt his soul overflow with the "fulness of joy." Blessing and sanctification went hand in hand in paradise. Will any fallen child of that first parent say that now it is otherwise: Does man's degenerate body need it less? Does his shattered spirit need it less? Or has the Benevolent Author of both relinquished any of those claims which benevolence itself must hold most sacred? Is there less need of a Sabbath now, when the ground is cursed through man's apostacy, and he must eat his bread in the sweat of his brow, not only amidst the thorns and thistles of nature's noxious exuberancy, but the smoke and din and pollution of factories pent in populous city, ground down beneath the necessities of commercial competition, body soul and spirit taxed and absorbed, than when the six days were spent in the peaceful labours and contemplative serenity of the garden of the Lord? Or, to drop comparisons, and to appeal to plain fact and common experience, will any sober rational man who does not deny the great truths of revelation, think a moment that piety can exist without a Sabbath? Why, not to go out into what may sound too like a lecture on divinity, I may refer to evidence given before a Committee of the House of Commons; and of all the evidence lay my finger on one single line, relating, not to spiritual, but mere bodily, necessities. Dr. Farr, one of the first physicians in this or any other age or country, pledged there his professional character to the declaration, that the most extensive research he had been able to make into physical nature had brought him to the conviction, that the Sabbatic law is stamped no less imperishably in the Decalogue, than it is on the constitution of man and beast; and that though, of course, no mere physical investigation could determine the precise amount or the particular times and seasons, much less day of suspension, there was wrought into the fabric and framework of organised life a necessity for periodical suspension even of healthful toil; and that the suspension actually ordained by the Sabbatic law, or its equivalent, could never in the long run be violated, without a present retribution. Such is the substance of his testimony, as a practical man, to the permanent obligation of the law of the Sabbath; and well do I remember how he enforced it practically on myself, when I applied to him some time since for his professional advice. One of his first searching questions was, "Do you keep the Sabbath?" I do not ask you, he said, whether you rest on our Sabbath. You have good reasons for working, then; and I bid you God speed. But do you observe the essential principle of the law? The answer was not satisfactory, and I came under the Doctor's rod. I have heard a confirmation of his testimony, which is not a little curious. A postmaster, said to be the first in the sister-island, was known to have long made it a standing rule that no horse should leave his stable for work on the Sunday. Some Anti-Sunday Transitarians, delighted with the report of this man's constant practice, were desirous of his evidence as a conscientious observer of the Sabbath. Great, however, was their surprise, when they found that the Postmaster repudiated all religious feeling on the subject, and gave as his simple reason that had found it essential to his cattle that they should have one day's rest in seven, and that he knew his own interest too well to let them be cheated out of it. Such is the substance of the testimony of two very competent witnesses in both cases, as to the physical necessity of the observance of the Sabbath. I might appeal to other evidence. I might call in witnesses whose very countenances would give proof of the necessity for a Sabbath. I might call in dying confessions of wretched criminals on the scaffold, whose departure from the paths of peace has been specifically attributed by themselves to the wilful loss of the Sabbath. But I will not, because I need not, dwell long on these premises. They are admitted by millions who seem lost to the conclusion. I will content myself with one sentence from an infallible testimony, and found one very simple question upon it. The inspired Psalmist tells us, "that the wicked shall be turned into hell, and all the *nations that forget God*.—Psalm ix. 17." I put it to the common sense of any intelligent man, whether forgetfulness of God, of his awful claims, and of his gracious nature, must not be the natural and necessary consequence of the loss of the Sabbath?

I know your reply. I will quote your own words. "We regard it as being beyond all other customs fraught with benefits, both spiritual and temporal to the human race, and would do all in our power to promote an earnest observance of it among all classes of men. But it is not on the beneficial uses of the day that the Anti-Sunday Transitarians take their stand, &c." Now, Sir, it is on the beneficial uses of the day that, for the present at least, I *do* take my stand; and I rejoice that, whilst urging a conclusion from which you have expressed your dissent, I can appeal to the premises you have here recorded; yes, and appeal to every one of those authorities, to whom you attach credence. Indeed, I am exceedingly loth to treat you as an antagonist, and declare once for all, that if my language assumes the tone of controversy, it is not for want of respect for your intention. But you must give me leave to stand a moment, not only on the beneficial uses of the day, but on your own distinct and emphatic assertion of them, and to ask what you would have me think of the laws of that Great Moral Government under which I live, if, for beneficial uses, to which we all concur in attaching such importance, there is no guarantee whatsoever in the Statute Book of Inspiration. You, Sir, would have a Sabbath. I do not trouble myself about its details. You and Paley, and every impugner of the Divine Command I ever heard of, who is not a wretched infidel, you would all have a Sabbath. You all feel its necessity. Has God then overlooked it? Has he left it to your wisdom? or the caprice of the multitude? or the convenience of men of the world? or the tender mercies of trade? Has the Great Lawgiver, who once declared his benevolent will on this subject, and, under a confessedly darker and less gracious dispensation inscribed, with his own finger, that all essential ordinance,—has this Great Lawgiver omitted, forgotten, neglected this precept? Has he guarded by positive laws for every other endowment of his subjects—life, property, honor, peace—yea, protected them by a special law, not from acts of violence alone, but from the unseen thought, the unuttered wish, that might prompt to social mischief? Has he condescended in so short a code of laws to such particular, circumstantial, and delicate provision for their well being; and can he have made this great and solemn, this wide sweeping, all comprehending all essential matter of the Sabbatic rest, a mere contingent on what you must significantly call, a "*worldly sort of issue*." I put the question to moral sense and natural reason to answer.

But the inevitable conclusion is made further imperative by the fact that not only has the Great

Digitized by Google

Lawgiver, thus inscribed the Sabbath in his Statute Book, but his Divine Son, "the word" of his wisdom, has declared why he did so. Christ has told us expressly that "the Sabbath was made for man." Is it not amazing that Paley, or any other partaker of mortality, should abrogate his interest in so gracious an enactment, limit the tender mercies which are over all God's works, and ventured to assert before high heaven, and his fellows, that what Christ said was made for man, was for the Jews alone?

And what are the grounds on which the assertion is based? That the Sabbath is said to be "a sign" between Jehovah and his ancient people; and that in the reiteration of the fourth Commandment, it is urged upon the Jews that, because God had brought them out of bondage, they were to keep the Sabbath. These are the two special grounds which we are called on to accept as reasons why this blessed institution should be peculiar to the Jews. Now, I appeal again to plain good sense as to the sufficiency of the grounds.

As to the first, is it not manifest that every ordinance of God is a sign between himself and those who keep it? Is not baptism a sign? If all the world were baptised, as one day we hope it will be, will baptism cease on that account to be the sign and seal of a covenant? Or, taking the word sign, if you please, in a discriminative sense, and admitting that it was one special object of the Jewish ritual to distinguish that people from other nations, are we warranted in restricting Sabbath ordinances on this account? Is there anything more in point of fact in this or any other part of the devout recognition of God which is to be looked on as *exclusive* on this sole ground, that it was a sign? Supposing that, after patriarchal tradition had diffused the custom of a weekly division of time, and the making holy a seventh day, the growing apostacy of man, not liking, as St. Paul says, "to retain the knowledge of God's ways," made this, as well as other primeval ordinances, irregular, and uncertain, is there anything more in God's making again solemn revelation of it to the Jews, or even declaring its observance to be a discriminating sign, than is to be found in all other parts of revealed truth—anything, I mean, which is to make it exclusive, binding only on themselves, and absolutely confined to their national polity? Was not their worship of only one God an equally discriminating sign amidst idolatrous nations? And is not this virtually so put forth in the first letter of their great commandment "Hear, O Israel, the Lord *thy* God is one Lord?" Is this great truth in its nature peculiar, or intended to remain so, because then it marked one people from all the rest of the world? And is there any thing more in the Sabbath, as regards it being a sign? May it not be in all ages a sign, discriminating, whether as to nations or individuals, between those who honour God and those who honour him not? Is it not thus at this very day, a sign between our own nation and—to go no further—our infidel neighbour? And have not railway proprietors given in their several investments a hostage for their own personal observance of this sign?

And, as to the second alleged ground of exclusiveness, what right has any to plead that the Fourth Commandment was peculiar, because on its being a second time announced in the Book of Deuteronomy, a special reason was added why the Jews should observe it, when to the very next commandment, which we never dream of making peculiar, a reason equally special is annexed, "Honour thy father and thy mother, that it may go well with thee in the land which the Lord thy God giveth thee!" Any why should ingenuity be perverted in twisting the argument for the Jewish observance of the Sabbath from its plain and pathetic appeal in behalf of every subject of man's authority into a forced and inconclusive argument for the limitation of the ordinance? Can anything be more touchingly apposite as a motive for undoing heavy burdens on that day, than the allusion to their grinding bondage beneath their Egyptian taskmasters? "In it thou shalt not do any work, thou nor thy son, nor thy daughter, nor thy man servant, nor thy maid servant, nor thine ox, nor thine ass, nor the stranger that is within thy gates, that thy man servant and thy maid servant may rest as well as thou; *and remember, that thou wast a servant.*" Can anything, I say, be more conclusive as a moral motive with them? Can anything be more inconclusive as regards ourselves? Here then, Sir, I will close this second argument for the Sabbath. I have not deemed it needful to go out into particulars as to its beneficial uses, or the necessity for its observance; because I am not at present engaged with those who deny either. It *is* a most beneficial, blessed, indispensible privilege, without which man's body becomes wasted, his intellect impoverished, his soul starved of spiritual food—his best relationships, and most vital interests neglected and lost. Nor have I even so much as entered on another field of argument, the importance of the Sabbath for the maintenance of God's honour. That it is right and fitting that that honour should be maintained, that as Creator, Governor, and Lord of the Universe, solemn recognition should be made of his alienable prerogatives, that benefits, publicly conferred, should be publicly acknowledged, and allegiance, publicly due, be publicly professed, and that for this purpose there should be periodical suspension of the world's ordinary engagements, and a plain open, unequivocal demonstration of what the whole community owes in common, be thereby made by all in concert, is as plainly consonant with right reason, as it is demonstrably a principle in the Divine administration. Accordingly, the work of creation is no sooner complete than solemn pause is made before the machinery of life begins to play. Six days of work are succeeded by a day set apart, and the seventh day is hallowed by a prospective reservation. Time proceeds, man falls from righteousness and wanders into darkness. At length a special revelation is given him, and with this revelation the reserved day is marked with the emphatic word "Remember." Is not all this consistent in a Being who had so repeatedly declared, that he is jealous of his honour? Was it to be expected that he should leave his essential claim without some such reservation? Was it, to speak the language of human judgment, likely, that he should leave himself to be forgotten amidst the unbroken bustle of the world—business or frivolity? Does not the nature of things gather itself into a distinguishable necessity for the Sabbath in order that "the things that are of God" should be rendered unto God? I say, I have not pressed these premises; because, here again, I am engaged with those who admit the necessity of a Sabbath; but these premises lead to the same result. The necessity is two-fold, and both parties coincide. "Righteousness and peace embrace each other." Hallowing the Sabbath, therefore, and blessing it, are one and the same Act. I take the part taken by my Gracious Master, when he was pleased to declare that the Sabbath was made for man, and I am content to leave it to you, Sir, and to your candid readers, to pronounce whether without some positive and most unequivocal proof, we can a moment believe that such an institution, once established, has been abandoned by the law-giver? That proofs to this effect are pretended I deny not. We shall come to these in time. They may turn out on the scrutiny to be like others from the same quarter. At present, however, I give no verdict upon them. I only ask whether *till these proofs are substantiated* we can a moment believe the supposition above stated? whether the whole analogy of nature and grace is not against it? whether all we see and feel of man's present condition as a fallen, corrupt, worldly-minded creature on the one hand, and all we read of God's merciful and condescending remembrance of him on the other, do not render it the most improbable thing, and the most difficult (I had almost said impossible) for a devout mind without sinister bias, to anticipate that such a faithful Creator should leave such a creature without positive guarantee for what is so practically essential; and that not under dark mysterious parts of his dispensations, but when "the darkness is past, and the true light shineth?"

I will not trouble you further at present, but subscribe myself as before,

Sir, your obedient servant,

AN ANTI-SUNDAY TRANSITARIAN.

Bristol, July 28, 1841.

P.S. Since writing the above I have read your request that I would be as brief as the nature of the subject will admit. I can only say at this moment that, within these reasonable limits I will strive to be concise. But I must throw myself on your reasonable indulgence for what I honestly deemed necessary, in order to such a development of my views as you have publicly called on me to produce.

RAILWAY TRAVELLING ARRANGEMENTS, &c.

To the Editor of the Railway Times.

SIR,—Will you allow me a very brief space in your paper, in answer to two of your correspondents, who have commented upon remarks I have addressed to you. I have neither time or inclination for controversy, and shall only write a few lines in explanation. Allow me to say, that in what I *have* written, or *may* hereafter write, I have but one object in view; viz. the improvement of railway property as far as is compatible with the just claims of the public: and I am of opinion that this will be most certainly effected by the strictest investigation of Railway Management; and moreover, that within certain limits, the greater the advantages offered to the public, in that proportion will railways prosper: but this I say is within certain limits; and concerning the line to be marked out, I can readily conceive much difference of opinion will exist. The first letter I shall notice, is signed "P. Z." With almost all the writer's remarks, I cordially concur; that Railway Companies are public bodies; and Railway Directors public men, and amenable to public opinion; and that when such were censured or praised it was with the same principle, and with the same legitimate right, that we upheld or condemned any minister or ministers. But when your correspondent talks of "squeamishness," &c., I think he is somewhat too hasty in his conclusion. When I wrote on the "Free Ticket System," I had no distinct charge to bring forward. I had *strong reason* to believe that Directors and other officials travelled on their respective lines free of expense, when such journies were entirely unconnected with the business of the Company; and I asked you, Sir, if such was the case generally; and you manifested your opinion of the propriety of the inquiry, by calling the attention of your readers thereto, and stating your opinion, that it was a very general practice. I did not hesitate to condemn it strongly, as exceedingly unjust (if it were so); and you condemned it as much as, or more than, myself. And what has been the result? Why, that several of your correspondents have stated, that upon inquiry, they were *astonished* to find, to what an extent it is carried. I did not mean to attack one railway more than another, though I might be better acquainted with the proceedings of one more than another, but I wished to call the attention of the shareholders of *all railways* to such matters. You are well aware that what is essentially unjust, is frequently *practically* claimed as a right where a number are concerned, when not one of that number would claim it as an individual. The other correspondent who has honoured me by his notice is "Humanitas." This gentleman is evidently a wag. I wish though he had not mentioned the "double Welsh worsted hose and flannel nightcap;" for verily I have been longing for these luxuries ever since; and when he imagines me attired therewith, and seated by a "cheering fire," I might picture to myself, "Humanitas," when he commenced his letter to me, just alighted from a second class carriage, after experiencing the soothing effects of a north-easter during a long journey, his nose blue, his teeth chattering, and the whole inward man almost at zero; not having had the opportunity of "running up and down to warm himself" when the train stopped—

Digitized by Google

an advantage possessed in the blessed times of coach travelling. But, Sir, to the point: I unhesitatingly admit there is much sound reasoning and talent in the letter of "Humanitas;" but I assure him, that though I am not so short sighted as not to be able to discern the value of numbers to the success of a railway, yet even this has considerable limit; for supposing the fares reduced in each class carriage, and thereby the number of passengers increased, it may still happen that the increase is not sufficient to cover the loss occasioned by the reduction, and so with other alterations. I write for *truth*, not *victory*. I offer any opinion which strikes me as correct; but I am not wedded to that opinion, and I am ready to abandon it directly I am convinced of its being erroneous. The remarks of "Humanitas," relative to the man in trade and his employers, and the general alteration effected by railway travelling, in almost all commercial transactions, are undeniable. I have written much more at length than I purposed, and must yet leave much unsaid. I have endeavoured to explain to each of your correspondents some of the points they have referred to. I know not whether either of them will think it necessary to touch upon them again; for myself I beg to say, that my time is too much occupied, and I am withal too indolent to renew the subjects at any length. I cannot write myself a "Director," as our friend "Humanitas" does, but I hope I am quite as much a "friend to decency and civilisation" as he is.

Yours obediently,

G.

August 3, 1841.

LONDON AND SOUTH-WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Nothing has given me more surprise as to railways than the depreciation in the value of South-Western shares, and I can only account for it by the readiness with which many persons give credence to absurd reports as to a reduction in the approaching dividend. A desire to prevent loss to my fellow shareholders incites me to request a corner in your paper of next Saturday, with a view of endeavouring to allay their fears, and thus prevent that sacrifice of property which sales at the present prices produce. There is no railway, in my opinion, which offers so many prospective advantages as the one I am advocating, and I am satisfied, that in the course of a year we shall see the shares quoted at 70*l.*, and in two years they will be worth 80*l.* I admit the temporary disadvantage occasioned by the Gosport branch not having been opened, and the consequent loss of four weeks' traffic during the best part of the season; but when this branch is opened, an immense accession will be made to the receipts. At present there are no fewer than ten coaches each way plying between Portsmouth and Southampton, *besides* six coaches each way between Portsmouth and London—all of which will be obliged to be withdrawn on the opening of the Gosport branch. Again, a large addition will be made to the traffic when the Docks come into operation; already, a steam vessel is despatched every month for Malta and Alexandria, carrying not only passengers, but beginning to be the medium of conveying Lancashire goods to Egypt. On the 1st of December the fine fleet of West India steamers for the purpose of conveying the mails begin their operations, and two of these vessels will be dispatched *from*, and two will arrive every month *at*, Southampton; and it appears almost certain that, as steam-boats will naturally supersede the sailing packets which convey the mails from Falmouth to every quarter of the globe, so will the number of the former taking Southampton as the port of arrival and departure increase. That the traffic has not been commensurate this year with the expectations of the proprietors who looked for an augmentation on the receipts of last year, I admit; but this is mainly to be attributed to the depression in trade which has existed over the kingdom. Thousands have been prevented by this cause from enjoying the recreation of travelling which they otherwise would have indulged in, and what road would have benefited more by a reverse state of things than that which leads to the lovely and romantic scenery of the Isle of Wight? Another advantage in prospect is the opening of the Paris and Rouen Railway, which will be the high road from England to Paris, and present by far the most eligible means of communication between London and Paris. Four steam boats have now commenced to ply between Southampton and Havre, but will not this number be much increased when the facility given by the opening of the Paris and Rouen Railway is in operation?

I have hitherto been speaking of the advantages this railway holds out in *prospect*: let us now consider the traffic as it is, and I think we shall have little ground for disappointment. The line most in estimation with the public is the London and Birmingham, and here let me assure your readers that I wish not to say one word in disparagement of that great undertaking; but taking it as one of the most prosperous lines, I wish to compare its receipts with those of the South-Western. For this purpose I give you the receipts of both since the 30th June.

	Southampton.	London and Birmingham.
Week ending July 3	£6,467 18 0	£16,673
" " 10	6,597 5 5	17,434
" " 17	7,338 3 1	18,820
" " 25	6,802 9 3	19,169
" " 31	7,691 7 10	18,996
Receipts for five weeks	£34,607 3 7	£90,092

It will be seen that that the receipts of the South-Western line are considerably more than one-third of the sum received by the London and Birmingham Company, whilst the latter railway has been opened two years longer than the former—during which period of two years the traffic had time to develope itself—but the London and Birmingham line exceeds in *distance* the South-Western by nearly one-third, and also *costs per mile* nearly 100 per cent. more. I therefore contend that taking these things into consideration, namely, calculating the great difference in the *cost per mile*, the difference in *length*, and the longer period during which the London and Birmingham line has been opened, the traffic of the South-Western is equal to that of the London and Birmingham. But I may be told the South-Western is what is termed a summer line, and therefore it is not fair to take the estimate from the receipts in July, which are generally the largest of any month. To this I reply, that I might have taken any month since April, and have exhibited the same result, and even were I to take the month of November, which must be the most *unfavourable* one to the South-Western, the result, though not the same, will not show so great a difference as might be imagined. The receipts during that month, were as follows:—

	South-Western.	London and Birmingham.
Week ending Nov. 1	£4,552	£14,622
" " 8	4,707	14,406
" " 15	3,540	13,196
" " 22	3,097	11,798
" " 29	3,140	12,064
	£18,236	£66,086

I now come to the subject mentioned at the outset of my letter, viz., the depreciation in the price of the shares caused, in my opinion, by reports of the approaching dividend being reduced to 25*s.* Now these reports proceed from nothing but the fears of the shareholders, for the determination of the Directors cannot be known. Therefore it is merely a matter of conjecture; but why should the dividend be reduced? If you estimate the expenses at 40 per cent., then make a calculation as to the duty, interest of money, &c., and taking into account the surplus at last dividend, there remains sufficient to pay 30*s.* per share, leaving a balance in favour of the Company of about 2,500*l.* Let any one try the calculation, and judge for himself. I ought to say, that in this estimate I also make allowance for the proportion of dividend to be paid on the "*tenths*." After what I have written, I dare say your readers will be surprised at the assertion I am about to make, which is that a dividend of 30*s.* will never be declared again! Yes, I am bold enough to prophecy this. I think I hear some one exclaim, how can this be? I mean that it will never be *so small again*. The Gosport line will be open about the 1st September, and I think I can almost promise the proprietors a dividend of 2*l.* per share, or at the rate of 8 per cent. per annum in February; and I have not the least doubt that when the prospective advantages I have alluded to, are in the course of time developed, the dividends will be at the rate of 10 per cent. I have been a shareholder from the beginning, and have held firmly through *good* and *bad* report. Even when the shares were at a heavy discount, I had the same faith as I have now in the ultimate success of the line. In conclusion, I urge upon my brother shareholders to *hold*. On no account sell at the present low price, for be assured, that in the course of next summer, you will be able to realise a very large advance on the present price.

I am, Sir, your obedient servant,

AN ORIGINAL SHAREHOLDER.

August 4, 1841.

CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—I have little inclination to maintain a controversy, for its own sake, or it would be easy to say much in reply to a writer under the signature of "Equity," whose leading idea seems to be a revival of the claim, to sow and reap where his neighbour has ploughed. But my notions of equity are so widely at variance with his, that it is impossible to bring about any agreement in our views whilst that idea prevails.

Between the opinions of a "Croydon Proprietor" or "Shareholder," and mine, there appears to be little essential difference; only that he unaccountably supposes me to be an advocate for high tolls; and that he objects to the principle of a remuneration increasing in direct proportion to the number of passengers, though I believe he does not object to a remuneration increasing in proportion to the increase of the traffic receipts, which, it is true, will not always be in the same proportion as the number of passengers.

I cannot boast of any influence with the Greenwich Railway Directors, and if there is any merit in my suggestion, it must be left to make its own way by the help of such friends as may be inclined to adopt it. I did not propose that scheme as the best imaginable, but as more simple, and perhaps more practicable than the other scheme of taking toll in the form of a definite proportion of the receipts from traffic passing over a trunk line, which on principle I prefer. The chief difficulty of the rent and small toll plan would consist in fixing a just amount of rent; for the gain from additional numbers of travellers would, at the halfpenny toll, be less than twenty guineas for every 10,000 persons.

I will now endeavour to give you some notion of the method pursued in computing the rate of remunerating toll on the per centage plan, though by no means confident of its embracing all the elements necessary for a true and just result—capable of being fairly applied as a universal rule.

The Greenwich and Croydon lines, as before, are taken for an example. It is assumed as an approximation to the truth, that the Greenwich line from London Bridge to Corbet's-lane has cost (in round numbers) 400,000*l.*, and the Croydon, 600,000*l.*; then, charging the Croydon Company with only half the cost of the Greenwich line, it is found that—

£200,000 in £1,000,000 the joint cost is	20 per cent.
and 1¼ mile of Greenwich line in the entire length of 10¼ is	16.6 "
	236.6

The average of which is ..... 18.3 per cent.

Now, on roughly testing the result which this would give in comparison with the actual result of the 3d. toll in the year ending July 4, 1840, the produce will be found something less; thus, from

Digitized by Google

33,104*l.*, the total receipts, I deduct 2,832*l.*, the estimated amount of receipts from 95,696 local passengers at the supposed average fare of 7d. each, the remainder, 30,272*l.* at 18.3 per cent. will give 5,539*l.* instead of 5,932*l.* the actual toll.

The extra expense of widening the line, charged in full to the Croydon Company, will raise the rate to nearly 25 per cent., since the proportions with regard to cost of construction, will then be as 1,200,000 to 400,000.

These observations you will hardly think fit for publication; but I shall be glad if you can induce some skilful calculator to investigate the subject: for I am persuaded that it is possible to discover some formula which may be applicable as a general rule for the determination of the rate of tolls payable by one Company to another; and it will certainly be a great benefit to the railway world to have such a rule established on a sure foundation.

Yours, &c.,

MODUS.

July 29th, 1841.

RAILWAY TRAVELLING ARRANGEMENTS.

To the Editor of the Railway Times.

SIR,—There is a great grievance which I have often experienced in railway travelling, which it will be a kindness in you to notice, as it may tend to rectify the evil—I mean the deficient arrangements in regard to eating and drinking.

In April last I made a journey from London to Derby, and from Derby to Darlington. We had to wait ten minutes at the Hampton junction, but I could not get so much as a biscuit or a glass of ale, or the smallest morsel of anything whatever. If the Directors of the Birmingham and Derby line will not establish a regular refreshment room, they might at least allow some person to keep something for sale, which might refresh the weary traveller.

Next day I went on from Derby to Darlington, and will you believe it, Sir, I could not get any refreshment the whole way, although from 100 to 150 miles. It is true that they were about to fit up a refreshment room at York, but the idea of caring for the sufferings of the public meanwhile, never seems to have entered the heads of the Directors. I got a boy for sixpence to run and bring me a penny loaf from the town, or I should have been much more exhausted than I was.

Now, Sir, the same grievance does exist on the line from London through Bristol to Bridgewater, and thence by coach to Exeter. A friend of mine who travelled over it last week informs me that the journey occupied *twelve hours*, being an hour longer than the time advertised, and excepting a hurried glass of ale and a crust of bread and cheese at Bridgewater, he could get nothing the whole way.

Travelling in this way to persons in an enfeebled state of health is seriously dangerous, and a rest of ten minutes every 50 or 60 miles might easily be arranged with great comfort to the passengers, and no detriment to the Directors. The passengers would be far better pleased to be ten minutes later than to arrive faint and exhausted. At any rate I can answer for the old and sickly.

I am, Sir, your constant reader,

A TRAVELLER.

COACH ACCOMMODATION AT CIRENCESTER—GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—As a constant reader of your interesting journal, and one who fully appreciates the advantages conferred upon the public by railway communication, allow me to direct your attention to some circumstances in connection with Railway Management which I think require a little revision. I lately had occasion to visit Cheltenham, the journey from hence to that place being now accomplished as far as Cirencester by the Great Western Railway and the Swindon Junction line. Upon the arrival of the train at the latter town two coaches were in waiting to convey passengers to Cheltenham, a stage of 14 miles. For this distance the sum of 4*s*. 6d. for an outside place was demanded, this being also exclusive of a fee to the coachman. Having remarked that the charge was rather exorbitant, a fellow-passenger informed me that I should probably find *outside the gates of the yard*, a coach called the *Anti-monopolist*, the fare by which would be only 2*s*. 6d. I went in search of this conveyance, which was quite equal in its appointments to the others, and on requesting the coachman to convey my luggage from the station, I was surprised to observe that he met with considerable obstruction from the servants of the Company. In reply to my inquiries as to the cause of such extraordinary conduct, I was informed that no coaches were permitted to pass the gates excepting those belonging to Messrs. Dangerfield and Haines. Now, for anything I know to the contrary, Messrs. Dangerfield and Haines may be very exemplary men, but I am quite at a loss to conceive why the public should be fleeced to the amount of fifty per cent. to satisfy their demands. Does it not appear that the proprietor of the *Antimonopolist*, (of the two parties) has the greater claim to the support of the Company? and for this simple reason—that by his moderate charge he furnishes an inducement to the public to travel by the Great Western Railway to London, whereas it is well known at Cheltenham that many persons are in the habit of going to town *via* Birmingham, rather than be subjected to the imposition, as well as the irregularity of the coaches between Cheltenham and Cirencester. As it may possibly be supposed that the foregoing remarks have been made with a view to promote the interest of the proprietor of the *Anti-monopolist*, I beg to state that my knowledge of Mr. Fleischmann does not extend beyond the recollection of his good-humoured face and unassuming manners.

I am, Sir, your obedient servant,

VERITAS.

P.S. Perhaps I ought to add that the drivers of the coaches having the privilege of the *entrée* were *afterwards* very pressing in their entreaties to be allowed to convey persons to Cheltenham for *sixpence*, having discovered that the opposition had a good chance of its compliment of passengers. This generosity, however, only animates them at that hour at which the *Anti-monopolist* runs, viz., at 4 o'clock p.m.

London, August 2, 1841.

EDUCATION OF ENGINE-DRIVERS.

To the Editor of the Railway Times.

SIR,—I was very much surprised in reading your paper of the 31st July, at the remarks made by the engineer of the Great Western Railway (Mr. Brunel) in evidence given before the House of Commons, as to the want of necessity of engine-drivers to possess the rudiments of knowledge, reading, and writing; in fact he says, a man is the better for not being able to read his instructions, that they are only printed for the satisfaction of the public in cases of accident, and also that "he is not one to sneer at education, but would not give sixpence in hiring an engine-man because of his knowing how to read and write."

Whether the public will be satisfied, when the fact comes to be known, that printed instructions are a dead letter, only manufactured for the purpose of quieting them, and not intended to be acted upon, (for how can they if engine-men cannot read them?) when it comes to be generally known that engine-drivers who are intrusted with the lives of hundreds of individuals in the management of a highly scientific and complicated machine, are so ignorant as to be unable to write their own name, appears to me to be a question which perhaps may materially affect railway interests.

He likewise draws an analogy between them and private soldiers, affirming that the instructions must be delivered *orally* to be efficient; perhaps he would wish to assimilate railway servants still more with the army, and introduce the lash as a means of correction and punishment of derelictions of duty.

You are without doubt aware that a school has been established for the education of railway engine-drivers, at the Polytechnic Institution, at which are taught, not reading and writing, but the elements of physical science, the chemical nature of the principal bodies used or connected with steam-engines, in addition to a practical acquaintance with the construction of engines of various kinds, and locomotives in particular; also including practice on the road. I am a member of this class, and therefore feel somewhat interested in the subject.

I should be glad to be informed through your valued paper, as to whether the opinion referred to prevails generally among railway authorities, for if ignorance is a qualification for employment, there will be but little chance for us who have been attempting to acquire knowledge. I have been led to believe that the existing ignorance (which I never thought was so grose) of engine-drivers was a thing to be lamented, and that it was an evil which was likely to be remedied.

I am, Sir, your obedient servant,

ONE WHO CAN READ AND WRITE.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—I am glad to see a letter in your paper signed "Veritas," showing the amount of receipts for several weeks on the Manchester and Leeds Leeds Railway, and that they are increasing. The return of income for the week ending July 19th is 4,531*l.*, of which 1,928*l.* is for the carriage of goods, after deducting the toll to the North Midland Railway; but as the Railway Company are carriers on other lines of railway besides the North Midland, I should be glad if some of your readers can inform me whether the amount of toll paid to the York and North Midland, and the Hull and Selby, is also deducted. Of course, if it is not, it will make a material difference in the true amount received for merchandise.

I am, Sir, your obedient servant,

A CONSTANT READER.

Manchester, August 2, 1841.

MANCHESTER AND SHEFFIELD RAILWAY.

To the Editor of the Railway Times.

SIR,—Allow me, through your columns, to advise my brother shareholders to obtain, at the approaching half-yearly meeting, some definite information as to the progress of the works, and the state of the funds. It is, I believe, well understood that although three-fourths of the capital have been called up, little more than one-fourth of the road is even approaching to completion. More money, and much of it, will be required. The shares, however, are at a discount more ruinous than those of any other line, and the credit of the concern altogether at the lowest ebb. How then can loans be negociated—how can additional capital be raised? It seems to me that the works of the railway must very shortly be brought to a complete stand-still for want of money, and that the continuation of the *whole line*, is entirely out of the question. Surely it would be wise in the Directors to confine their energies to the Ashton portion, and then—unless prospects improve—to abandon the rest. The enormous cost of the three-mile tunnel never can be defrayed out of our miserable supplies, and therefore to persevere in it at all is only to throw so much money away. Let us learn wisdom by the experience of others. If the great traffic on the Manchester and Leeds road is insufficient to defray the heavy expense of carrying a railway through this difficult country, how can the smaller traffic on the Manchester and Sheffield Railway be expected to pay any interest at all—passing, as the latter does, through the worst part of the district in question, and requiring a three-mile tunnel?

I am, Sir, your obedient servant,

A SUFFERER.

Digitized by Google

LONDON AND BLACKWALL RAILWAY.

(COPY.)

To the Right Hon. Henry Labouchere, M.P. &c.

Board of Trade, Whitehall, 29th July, 1841.

SIR,—I have the honour to acquaint you that in consequence of a notice dated the 30th ultimo, having been received from the Blackwall Railway Company, of their intention to open to morrow that portion of their line which extends from the present temporary western terminus in the Minories, to the intended permanent terminus in London-street, I have this day, accompanied by Mr. Routh, the chairman of the Company and Mr. Bidder, the Engineer, made an inspection of the portion of railway in question, and I have to submit the following report.

The total length of the Blackwall Railway, measuring from its eastern terminus at Blackwall, to the intended western terminus in London-street is 3¾ miles.

In the month of July, 1840, the railway was opened to the public from Blackwall to the Minories, being a distance of 3 miles and 900 yards; the length to be opened to morrow, although only 330 yards in length will save the greater proportion of the passengers the inconvenience of travelling over about 500 yards of narrow and crowded streets, between the Minories and London-street.

The line crosses the Minories obliquely, at an elevation of 18 feet above the level of the pavement of the footpath of the street; then over Cooper's row, and Crutched Friars, terminating (at a level of about 18 feet above the street) on the site of some old buildings which formed part of the eastern side of London-street.

Here the station-house has been erected facing the west side of London-street and the back of Mark-lane.

The first work of importance on the portion of the line which is now under consideration is the crossing of the Minories.

This has been effected by means of a covered and enclosed bridge, having a span of 63 feet, and being carried by six cast iron trussed girders, the average weight of each being about 15 tons.

It will be observed by the sketch which I enclose that the girders are of a judicious form, and well calculated for the object to which they are applied.

Either end rests on bed stones of Bramley fall, one foot eight inches in thickness, supported by a brick abutment, the average bearing on the wall being 2 feet.

I should have preferred a longer bearing on the abutments, and to have had the whole of the girders at each end resting on an iron plate, to prevent unequal pressure, but the girders have been some days in their position, and the work has been tested both by carriages running over and remaining at rest upon the bridge.

Vine-street is also crossed upon a girder bridge, but here the span is only 30 feet; with the exception of these two bridges the entire length of the Railway between the Minories and London street is carried on arches, the arch across Crutched Friars having a span of 53 feet 6 inches.

The whole of the extension line is roofed and enclosed on the sides; this arrangement, I understand, has been adopted not only with a view to the comfort of the passengers, and to ensure the trains running in and out when the wind is blowing strong in the opposite direction to their course, but also to promote the comfort of the inhabitants of the neighbourhood, by deadening the noise caused by the carriages passing over the rails.

The covering of the Minories-bridge is formed of corrugated iron, and of the remainder of the line of slates on light wooden frame-work.

Light is admitted by side windows, and by a skylight in the daytime, and at night this portion of the Railway is lighted by gas.

The rails weigh 56 lbs to the lineal yard, and rest on cast-iron chairs spiked to transverse wooden sleepers having bearings of 3 feet 8 inches and 2 feet.

The first gradient proceeding westward from the Minories, rises 1 to 250 for 505 feet, and the second 1 in 100 for 487 feet.

The carriages will be successively detached from the traction rope before reaching the Minories, and will run up to the new terminus by the impetus they will previously have acquired. They will descend by the force of gravity from the new terminus, and will be attached to the rope as heretofore, a few yards to the eastward of the Minories.

There is a breaksman and a powerful break to each carriage, so that there need be no apprehension of the carriages over-running the point where the rope is to be attached.

The works are, with some very unimportant exceptions, in a complete and very satisfactory state and apparently in good working order, and the station at the terminus is arranged with due attention to the convenience and safety of the passengers.

I do not find that there has been any such departure from the Act of Parliament for the Railway, as to require the notice of the Lords of the Council, and I am not aware of any objection to the Line being opened throughout to-morrow.

To give you an idea of the extent of traffic on this line, I enclose you the return of yesterday, by which you will perceive that there were no fewer than 7915 persons carried upon it.

I should not omit to state that the police on this railway are furnished from the Metropolitan Police Office, a system which the Company find extremely advantageous, as it gives them the means, in cases of emergency, of increasing the number of constables to any extent they may require.

I have, &c. &c.

(Signed) FREDERIC SMITH,
Lieut. Col. Royal Engineers,
Inspector General of Railways.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—While I see much to commend in your well conducted and useful journal, I must own I have often regretted seeing its pages occupied by most useless speculations upon the *probable* returns from different lines of railway, for, at the best, they are mere speculations in which the most fair and honest mind cannot obtain any very accurate means of pre-judgment. Treated, however, as I have seen these matters by some correspondents in your journal, those speculations have been extremely mischievous, for they have been obviously written either in a spirit of rivalry to exalt one undertaking, or to depress another; and it is to be feared, often times with more interested and less worthy motives.

Under these impressions, I rarely read such letters, the room of which I should gladly see occupied by suggestions for the improvement, in various ways, of this new and wondrous mode of conveyance, and I had passed over a letter under the signature of "Ignotus," in your last paper, until I happened to hear its contents the subject of discussion, since which I have read it, and your note appended. From your evident desire on all occasions to convey to your readers sound and correct materials for the exercise of their judgments, I reckon upon your affording me an opportunity, not of carrying on any merely speculative discussion, but of pointing out some positions in the letter of "Ignotus" so manifestly unfair and erroneous, that it is difficult not to question the integrity of the writer.

The foundation upon which most of his calculations rests is that, substantially, the Great Western line, of which alone he is treating, is 170 miles in length, whereas it is only 118. The Great Western shareholders have no concern whatever with the additional 52 miles, which they rent temporarily, with the view of increasing the value of the traffic on their own 118 miles, beyond the question, whether or not, in addition to such increase, those 52 miles will yield the rent given for them.

The first assumption I meet with, viz., that the expenses of working the line will amount at the least to 2,500*l.* per mile, for the whole distance of 170 miles, (425,000*l.* per annum) is so extravagantly absurd as not to require any specific notice.

"Ignotus" then states, that the London and Birmingham trains travel 1,216 miles per day, to obtain 7,200*l.* per mile, gross traffic, while the Great Western are obliged to travel 1,819 miles per day to obtain 3,200*l.* In what mode the respective items of 7,200*l* and 3,200*l.* are obtained does not appear. Inasmuch as the traffic on all the principal lines has progressively increased from the first opening to the present time, it is apparent that the only mode of arriving at the comparative traffic on different railways, with any degree of accuracy, is to take the receipts of each railway at a period at which each had been opened throughout just the same time. Your report of the last week's traffic on the Great Western, up to the 25th July, being the fourth week from the opening, is 14,196*l.* It is supposed that the Exeter and the Cheltenham lines produce from 1,500*l.* to 2,000*l.* per week, say 2,000*l.*, which would leave 12,196*l.* for the 118 miles of the Great Western, this is 5,374*l.* per mile. I have no means at hand of ascertaining the weekly traffic of the London and Birmingham line in the fourth week after its entire opening, but I see it was stated by Mr. Houldsworth, at the Manchester and Leeds meeting, that for the first three months the traffic on that railway averaged 8,900*l.* weekly. I will assume it to have been 10,000*l.* for the fourth week, in the hope of being on the safe side, which would be eqval to 4,642*l.* per mile. To render this comparison quite accurate, the week's traffic on the Great Western, ending on the 15th October next, should be substituted for that before taken, but it is probable that will not materially vary the result; for though *cæteris paribus*, there is not so much traffic in October as in July, so short a period as four weeks after an opening very imperfectly developes the permanent traffic on a line.

The result is, that instead of setting down as the basis for estimating the future net income of the Great Western Railway, as compared with that on the Birmingham line, a gross receipt per mile on the latter of 7,200*l.*, and on the former 3,200*l.*, the figures to represent the Birmingham receipts should be 4,642*l.*, and those to represent the Great Western receipts should be 5,374*l.*, assuming that the week's traffic on the latter ending 15th October will equal that ending 25th July. I hope and believe I have put the matter fairly, for I rejoice equally in the success of these grand undertakings.

To prevent all cavil about estimating the traffic of the Exeter and Cheltenham lines at 2,000*l.* per week, in the absence of any actual division of it, for the purpose of getting at the Great Western traffic, I beg to observe that if those lines yield 2,000*l.* per week, the Great Western Company has made provident bargains, independently of the collateral advantages which were the inducement to enter into them, even assuming that the Great Western gets no advantage in the working so great a distance as 170 miles, but incurs an expense of 10 per cent. in working them. The bargain would stand thus:—

Gross traffic on 52 miles at 2,000*l.* per week		£104,000
Deduct 40 per cent. expenses	£41,600	
Do. rent of Exeter line	30,000	
Do. estimated mileage	7,000	
Do. Rent of Cheltenham line	17,000	
		95,600
Clear profit per annum to Great Western ..		£8,400

"Ignotus" alludes to the unsound views and opinions entertained by those who mistake crowds hurrying to Windsor and Reading on a small portion of the line at cheap fares in summer, for a traffic which will pay a good dividend. I confess I have anticipated in this a source of disappointment on the opening of the entire line; but I see, on reference to July, 1840, the Great Western traffic was 6,001*l.* on 56 miles then opened; at *the same rate*, the whole distance of 118 miles should yield 12,644*l.* per week, which is sufficiently near the actual earning to afford a well-grounded confidence in as good

Digitized by Google

a dividend at least upon the whole line, as any portion heretofore promised.

I remain, Sir, yours, &c.,
JUSTUS.

[We had intended to close this discussion, but cannot refuse insertion to the above, which is but one out of the many replies to "Ignotus" which have reached us this week.—ED. R. T.]

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I perceive the receipts on this line now amount to 15,000*l.* per week. As this has been obtained so soon after the opening, we may safely calculate on it as the very minimum of the future average. This would pay a very handsome dividend: say, yearly—

Receipt, 52 weeks at 15,000*l.*	£780,000
To Balance	£428,000
Rent of Bristol and Exeter	£30,000
Mileage ditto	8,000
Rent of Cheltenham	17,000
Expense of working whole line—38 per cent.	256,400
Balance	428,600
Total.....	£780,000
	£400,000
£3,200,000 loans at 5 per cent £160,000	
£5,000,000 shares at 8 per cent. .. £240,000	
Leaving a surplus of	28,600

I am, Sir, your obedient servant,
VERITAS.

Bristol, August 2, 1841.

FATAL COACH ACCIDENT.

ON Sunday afternoon last, the *Engineer* coach, which runs betwixt the Lancaster Railway terminus and Carlisle, when on its return from the latter place was upset on the road at a place called Cold Harbour, on the Shap-road, about four miles northward of Kendal. It appears that strong opposition now exists between the stage and mail coaches, as to which can arrive first in the various towns on the north road, in order to secure the greatest number of passengers. To effect this object, the horses are driven at a most rapid and dangerous speed. This was the case on the day in question, and the *Engineer*, having the lead of the mails, was proceeding at a tremendous rate, and on reaching the above place, the traces of the leading horse were forced from their fastenings, which caused a temporary check, when the coach, which was heavily laden with luggage on the roof, and carrying at the time four inside and nine outside passengers, began to swerve from one side to the other upon its springs. This dangerous motion was perceived by Mr. Hayward, farmer, of Hintlesham, Suffolk, who was returning from Scotland, and at that juncture was sitting behind the driver, and he immediately rose from his seat and leaped from the coach in a direction from the horses, when, his head came in contact with the ground, by which he was killed on the spot.

After this sad occurrence the coach proceeded onwards on the two right side wheels about 50 yards, when it went over with a tremendous crash, precipitating with great violence to the ground the whole of the passengers. Amongst these were two lake tourists, whose names have not yet transpired, who had the misfortune to be thrown under the coach in its fall, whilst the horses, still furious, contrived to drag the coach although upon its side, till they were arrested in their impetuous progress, when it was found that the two gentlemen, the lake tourists, were most grievously hurt. They were both afterwards removed in a conveyance to the Crown Inn, Kendal, where all surgical assistance was rendered them, but both still linger in an almost hopeless state.

The body of Mr. Hayward was removed to the Plough Inn, Selside, about five miles from Kendal. With respect to the other passengers nothing material occurred to them, with the exception of the shock from the accident.

Some years ago, a very dreadful coach accident occurred at a place called Hucks' Brow, a very steep ascent leading to Shapfell, and about four miles still further north from the place were Mr. Hayward was killed. There were three lives lost on that occasion, as the coach was descending the hill, and as many more persons very seriously injured. The proximity of the places to each other where these tragic scenes occurred, and the dreadful nature of them, are the engrossing topics of conversation about the neighbourhood at present.—*Globe*, Wednesday.

LONDON AND BRIGHTON RAILWAY. — The Brighton terminus of the London and Brighton Railway is now completed externally. All the works are on a magnificent scale, and the passengers' sheds and station vie with any works of a similar kind in the kingdom. The station is even larger than that at the London terminus of the Birmingham Railway in Euston-square; and the edifice forms a pleasing and prominent object from various parts of the town. It is in the Italian style of architecture, highly and tastefully ornamented, and has a colonnade running round it. We hear that the length of the journey between Brighton and London is to be reduced from four hours to three and a half.—*Brighton Gazette.*

LONDON AND BLACKWALL RAILWAY COMPANY.—Notice is hereby given. That the Transfer Books of this Company will be Closed from Monday, the 9th instant, until Monday, 16th instant, preparatory to the allotment of the New Shares. It is important that all outstanding transfers should be brought in on or before the 9th inst. for registration, in order that the allotment of the new shares may be made to the parties properly entitled to them.

By order of the Board,
J. WARMINGTON, Sec.

60, Fenchurch-street, Aug. 2, 1841.

LONDON AND BLACKWALL RAILWAY COMPANY.—NOTICE is hereby given, That the next Half Yearly General Meeting of the Proprietors of the Company will be held pursuant to the Act of Incorporation, on Thursday, the 12th of August Instant, at the London Tavern, Bishopsgate-street, at 11 for 12 o'clock.

W. ROUTH, Chairman.
J. WARMINGTON, Secretary.

Offices, 60, Fenchurch street,
August 4, 1841.

ANTI-DRYROT COMPANY, KYAN'S PATENT.—(From the *Inventors' Advocate*, July 3rd, 1841.)—Our attention has been directed to a statement in the Saturday Magazine, to the effect that it had been found "that the precipitate caused by Kyanization is soluble in salt water," and as such an assertion, if not contradicted is calculated to convey an impression against the use of this valuable preparation in the building of ships, we think it deserving notice. The opinions of some of the first chemists have been taken on the point in question, who, after submitting Kyanized materials to severe proofs, have found that the properties of bichloride of mercury after combination with albumen are completely altered, and that it is then insoluble in water. Professor Farady, Dr. Birkbeck, and Dr. R. Dickson, are among those who have publicly testified to the insolubility of the compound. Corrosive Sublimate, though one of the most virulent mineral poisons, becomes so innoxious when mingled with the albumen of the wood, that timber soaked in it is now safely used for trough casks, and other vessels to hold drinkable liquids.

TALACRE COAL AND IRON COMPANY.—£10 REWARD will be paid to any person who will deliver the original MINUTE BOOKS kept in London by or on behalf of this Company prior to October, 1839, and the Letter Book of the Company prior to the 3rd day of June, 1839.

W. H. ASHURST,
137, Cheapside, London, Solicitor for several of the Shareholders.

TALACRE COAL AND IRON COMPANY.—It is requested that any persons who have purchased or advanced upon shares in this Company, purporting to have had £50 paid upon account of them, and have been called "paid up shares," will communicate to Mr. W. H. Ashurst, Solicitor, 137, Cheapside, London, what shares they hold, and the circumstances and representations under which they were sold or pledged.

W. H. ASHURST,
137, Cheapside, London, Solicitor for several of the Shareholders.

NORTH MIDLAND RAILWAY.—Most expeditious and pleasant Travelling between ENGLAND and SCOTLAND.—LONDON TO EDINBURGH IN 27 HOURS, out One Night only in Railway Carriage.—The Public are respectfully informed, that on and after Monday, 2nd August, 1841, The *Chevy Chase* coach will leave Darlington at half-past Nine in the Morning, on the arrival of the London Mail Train, and arrive in Edinburgh by Twelve o'Clock the same Evening.

The London Mail Train leaves London for York and Darlington at Nine o'clock in the Evening. Time is allowed at York for Breakfast.

No change of Coach between Darlington and Edinburgh.

Passengers wishing to Sleep on the Road, may leave London by the 9 15 a.m. Down Train, and go on to Darlington, which they will reach at 11 p.m.

FARES.

London to Darlington—first class per railway	£3	10	6
Darlington to Edinburgh—inside coach	2	10	6
Total	£6	1	0
London to Darlington—first class per railway	3	10	6
Darlington to Edinburgh—outside coach....	1	11	0
Total	£5	1	6
London to Darlington—2nd class per railway	2	9	0
Darlington to Edinburgh—outside coach....	1	11	0
Total	£4	0	0

The *Chevy Chase* leaves Edinburgh at Half-past Five in the Evening, arriving in Darlington next morning, where an hour is allowed for breakfast, after which passengers may go on by railway to London, arriving there at Eleven o'Clock, p.m.

By order,
H. PATTESON, Secretary.

NORTH MIDLAND RAILWAY.—NOTICE is hereby given, That the Books which are kept in this office for the registration of Transfers of Shares in the Company will be CLOSED, in pursuance of the provisions of the Act of Incorporation, from Monday, the 16th day of August, until Thursday, the 26th day of August next, both days inclusive.

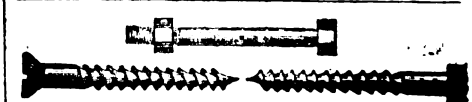
By order,
H. PATTESON, Secretary.

Offices, Warnford-court, Throgmorton-street,
London; 26th July, 1841.

NORTH MIDLAND RAILWAY.—NOTICE is hereby given, That the Tenth Half-yearly General Meeting of Proprietors of the North Midland Railway will be held in Derby, in pursuance of the provisions of the Act of Incorporation, at the Railway Station, Derby, on Thursday, the 26th day of August next.

The chair to be taken at one o'clock precisely.

GEORGE CARR GLYN, Chairman } of the Board
JAMES HUBBARD, Dep. Chairman } of Directors.
HENRY PATTESON, Secretary to the Board.



Offices, Warnford-court, Throgmorton-street,
London; 26th July, 1841.

LONDON GRAND JUNCTION RAILWAY COMPANY.—NOTICE is hereby given, That the August Half-yearly Meeting of the Proprietors of this Company will be held, pursuant to the Act of Incorporation, at the Company's offices, 68, Cheapside, on Wednesday, the 18th day of August instant.

The Chair will be taken at One o'Clock precisely.

T. EDWARDS, Deputy-Chairman.

Offices, 68, Cheapside, 3rd August, 1841.

T. H. RYLAND AND CO., OZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of
A 12-horse high-pressure engine, metallic piston, with or without boiler.
Two boilers, quite new, 18 feet by 4 feet.
Planing machine; works by hand, will plane 5 feet by 18 inches.

ON SALE.—TWO NEWLY-FINISHED SIX WHEELED LOCOMOTIVE ENGINES, with 12 inch cylinders, copper fire boxes, 5 feet driving wheels, and of the usual gauge.

The engines embody all the latest improvements in their valve-gearing and motions.

Canal Street Works, Manchester.

From Southampton—goods	8
From Weybridge—mixed	half past 8

The First Class Trains convey First Class Passengers only, excepting that accommodation will be afforded for a limited number of Servants in Livery. The fare will be 2*s.* each passenger; the fare for Servants in Livery 1*s.* each.

These Trains will not call at any Stations between London and Woking Common, but will take up and set down passengers at all the stations between Woking Common and Southampton.

The Mail Trains call at Kingston, Weybridge, Woking Common, and all Stations to the west of Woking Common. The Fares the same as the Mixed Trains for both First and Second Class Passengers.

The fare from London to Southampton by the Mixed Trains, will be 20*s.* first class; 14*s.* second class; and they will stop at Kingston only between Nine Elms and Woking, unless by signal, for passengers going to the west of Woking Common. These Trains from Southampton, will stop at Kingston only, between Woking Common and London, unless there are passengers to put down, except the first train in the morning, which will stop at all the stations as heretofore.

The short trains stop at all the stations.

ON SUNDAYS

The Trains will start as follows, and, with the exception of the Mail, stop at all the Stations.

DOWN.

	Morn.
To Woking Common—mixed	quarter-past 9
To Southampton—mixed	10
	Aftern.
To Woking Common—mixed	quarter-past 2
To Southampton—mixed	5
To Woking Common—mixed	quarter past 7

From Woking Common—mixed	quarter-past 9
From Southampton—mixed	10
	Aftern.
From Southampton—mixed	5
From Woking Common—mixed	quarter-past 6
From Woking Common—mixed	quarter-past 8

*** London time will be observed, and the doors of the Stations finally closed five minutes before the time of starting.

By order of the Directors,
A. MORGAN, Secretary.

August, 1841.

SHEFFIELD AND ROTHERHAM RAILWAY.—Annual General Meeting, 1841.—NOTICE is hereby given, That the Annual General Meeting of the Sheffield and Rotherham Railway Company will be held at the Sheffield Station, on Wednesday, the 11th day of August instant, at Twelve o'Clock at noon, pursuant to the Company's Acts of Parliament.

Dated this 2nd day of August, 1841.

THOMAS BADGER, Rotherham.
HENRY VICKERS, Sheffield.
Law Clerks.

N.B. It is proposed that the above meeting shall be held *pro forma* only, and be adjourned for transaction of business until after the North Midland Railway Company's annual meeting, advertised for the 26th August. Due notice will be given of the adjourned meeting, and in the meantime the transfer books will remain open.

LONDON AND COUNTY JOINT STOCK BANKING COMPANY.—At the Second Half-yearly Meeting of Proprietors held on Thursday, the 5th August, 1841, at the Company's premises, No. 71, Lombard-street,

EMANUEL COOPER, ESQ., in the Chair.

DIRECTORS.

Emanuel Cooper, Esq., Castle street, Southwark.
William Cory, Esq., Lambeth.
William Evans, Esq., Millbank.
Philip Frith, Esq., Thornton Heath, near Croydon.
William Hawes, Esq., Lambeth.
Swyn en Jervis, Esq., Whitehall-place.
John Cuthbert Joyner, Esq., Denmark-hill.
Philip Perring, Esq., Tavistock-square.
Alexander Rogers, Esq., Riches court, Lime street.
Richard Springett, Esq., Finchcox, Goodhurst.
Clement Tabor, Esq., Rayne, Essex.
John Wheelton, Esq., Myddleton square.

The following Report for the Half-year ending the 30th June, 1841, was read by the Secretary:—

REPORT.

The Directors have much pleasure in meeting the proprietors at this (the second) half yearly meeting of the Company.

The business of the Company continues steadily and rapidly to increase, and the profits of the half year are most satisfactory, as will be shown by the balance sheet, which has been duly audited, and will be read to the meeting by the Secretary.

The Directors have declared a dividend, at the rate of 5 per cent. per annum on the paid up capital of the Company, out of the profits of the half year, and carried forward the balance, which at the next annual meeting in February will, as usual, be at the disposal of the shareholders.

The Directors regret that the unexplained absence of Mr. Dighton has rendered it needful to declare the situation of the General Manager vacant.

It is due to Mr. Dighton to state, and will be satisfactory to the meeting to learn, that the effects of the bank are perfectly correct.

PROFIT AND LOSS ACCOUNT of the London and County Banking Company for the Half-year ending 30th June, 1841.

DEBTOR.

Current expenses, salaries, rent, &c., allowance for bad and doubtful debts, and rebate on bills not due	£8,647	4	3
Interest allowed on current and deposit accounts	4,034	17	5
Dividend, half-year, at 5 per cent.	1,829	18	1
Balance for the half-year to profit and loss new account	1,134	14	6
Total	£15,646	14	3

CREDITOR.

Gross profits	15,646	14	3

We, the undersigned, have examined the balance sheet, and compared the items it comprises with the several books and vouchers relating thereto, and have found the same to be correct.

THOMAS JAMES,
JONATHAN BARRETT,
JOSEPH HENRY WARTER.

London and County Bank, July 23, 1841.

The foregoing Report having been read by the Secretary, the following resolutions were severally proposed, and unanimously adopted:—

1. That the Report be received and adopted, and that it be printed for the use of the shareholders.

2. That the thanks of this meeting are due, and are hereby given, to the Directors, for their able management of the business of the Company during the past half year.

3. That the thanks of this meeting are due, and are hereby given, to the Auditors, for the clear and satisfactory Report they have made to this meeting.

4. That the thanks of this meeting be given to the Managers and other officers of the Company, for their zealous exertions during the past half year.

Signed, EMANUEL COOPER, Chairman.

The Chairman having left the Chair, it was unanimously resolved—

That the best thanks of this meeting be given to Emanuel Cooper, Esq., for his able and upright conduct in the Chair.

(Signed) WILLIAM HAWES.

Extracted from the minutes.

(Signed) R. P. NICHOLS, Secretary.

LONDON AND COUNTY JOINT STOCK BANKING COMPANY.—Notice is hereby given, That a dividend at the rate of 5 per cent. per annum on the paid up capital of the Company for the Half year ending the 30th of June, 1841, will be paid to the Proprietors either at the Parent establishment, 71, Lombard-street, or at any of the Company's branch Banks, on and after Thursday, the 12th day of August.

By order of the Board,
R. P. NICHOLS, Secretary.

71, Lombard-street, 4th August, 1841.

RAILWAY SLEEPERS. — Any quantity of capital Larch or Scotch Sleepers will be supplied by addressing Messrs. Scott Brothers, Exchange Buildings, Belfast, stating the number and size required.

August 6, 1841.

GREAT WESTERN RAILWAY.—LARGE SALE of RAILWAY PLANT, on CONTRACTS Nos. 5 and 6, near WOOTTON BASSETT, WILTS.—Mr. C. HUNT begs to announce that this extensive Sale (previously advertised) will take place on Monday, the 16th of August next, and following days. The Plant comprises a great variety, such as Waggons, Sleepers, Wheeling Planks, Wheelbarrows, Bridge Centerings, Leggings, Battens, Railway Bars of different descriptions, Chairs, Crossings, Blacksmith's Shop, Office, and Buildings, Blacksmith's tools, quantity of odd Timber, Pug Mills, Timber Carriage, &c. &c. &c.

N.B. Catalogues to be obtained of the Auctioneer, Wootton Bassett, a few days prior to the sale, which will commence each day at 11 o'clock.

In consequence of the great number of lots, the favour of an early attendance is requested. The first day's sale will be in Friday Street, Christian Malford.

Wootton Bassett, July 21, 1841.

GREAT WESTERN RAILWAY.—NOTICE is hereby given, That the next Half-Yearly General Meeting of the Proprietors of this Company will be held pursuant to the Act of Parliament, in Bristol, at the Bristol Station, on Thursday, the 26th August next, at 12 o'Clock, for the general purposes of business. The Chair will be taken at 1 o'Clock precisely.

CHARLES RUSSELL, Chairman.
ROBERT BRIGHT, Deputy-Chairman.

The Transfer Books will be closed on the 16th August, and will not be opened until after the said Half-Yearly General Meeting on the 26th.

Clause 125 provides that no person shall be entitled to vote as a proxy unless the instrument appointing him shall have been transmitted to one of the Secretaries of the Company at least five days before the meeting.

By order,
CHAS. A. SAUNDERS, } Secretaries.
THOMAS OSLER, }
Railway Offices, 2, Prince's-street, Bank, London.
Railway Station, Bristol.

BRITISH COLONIAL BANK AND LOAN COMPANY.—This Company was formed for the purpose of affording to capitalists a safe opportunity of availing themselves of the high rates of interest produced by the investment of money on landed securities in the Australasian Colonies; and though others plans were embraced in the original prospectus, this formed the leading, and has become the principal and almost the sole, object of the Company.

A capital of 100,000*l.* having been subscribed in this country, the Directors commenced the business of the undertaking by sending a Manager to Sydney, where he arrived last Christmas, and the Reports which the Directors have received since his arrival have satisfied them that the undertaking was founded upon a right principle, and that the advantages which they originally ventured to hold out to the shareholders may be more than realised, for the Manager has been enabled to the time of his last dispatches to advance, on mortgage of real estates, the whole of the funds which were put at his disposal, together with a considerable sum raised from shareholders in the colonies. In the selection of such securities he has secured the assistance of the Crown Surveyor and the Crown Solicitor, whose certificates of value and title upon each transaction have been transmitted to the Board.

The rate of interest obtained on these securities varies from 10 to 15 per cent., the average rate being 11 per cent.

The information transmitted to the Directors having satisfied them that much larger investments may be made with equal advantage, they propose to increase the capital of the Company by a further issue of 2,500 shares of 40*l.* each, at a premium of 2*l.* per share.

Two calls of 5*l.* each have been paid upon the present shares of £40, and another call of £5 has been made payable on the 12th of October next.

Persons taking the new shares will therefore pay £12 per share on subscribing, £5 on the 12th of October next, and the remainder in calls of £5 per share, which, by the deed of settlement can be made only at intervals of three months.

It is to be observed that the premiums which, in justice to the present shareholders, the Directors feel bound to charge on the new shares, will not be applied to the benefit of any individual, but will be added to the funds of the Company, and thereby increase the value of the shares.

Application for shares may be addressed to the Secretary, at the office of the Company, 13, St. Swithin's-lane.

By order of the Board,
HERBERT COMPTON, Chairman.

13, St. Swithin's-lane, August 4, 1841.

N.B. The half-yearly dividend of 6 per cent. on the colonial shares paid up in full may be received at the office of the Company on Thursdays, in every week, provided the particulars of such shares be left with the Secretary on the preceding Tuesday.

TO ENGINEERS OF LARGE BUSINESS.—To be LET a spacious Wharf and Large Warehouse-room, with Residence for Superintendent, and Cottages for Workmen at Rotherhithe; the Wharf has extensive privileges, or well suited to an Engineer requiring a large space of Ground, and a frontage of 235 feet next the River, with good approaches from the Land.

Apply to Mr. W. Woodward, 1, Furnival's Inn, between 12 and 2, if by letter, prepaid.

LONDON AND BRIGHTON RAILWAY.—

ALTERATION of TIME from and after JULY 25th.—This railway is now open from London to Hayward's-heath, near Cuckfield, for the conveyance of passengers, parcels, horses, and carriages. The trains will run as under:—

Down Trains will leave the station at London-bridge at half past 9 and half past 11 a.m., and at half-past 1 and 5 p.m. A Down Train at 9 p.m., for Croydon only.

Up trains will leave the station at Brighton at 7 and 9 a.m., and at half-past 12 and half-past 4 p.m.

Sunday trains, down, will leave the Station at London Bridge at 8 a.m., and at 2 and half-past 5 p.m. A Down Train for Croydon only at 8 and half-past 9 p.m.

Sunday trains up, will leave the station at Brighton at 7 a.m., and at a quarter past 5 p.m.

Passengers will be conveyed by coach between Hayward's heath and Brighton, and the fares throughout from London to Brighton, or from Brighton to London, will be—for the first class carriages, 15s., and for the second class, 11s. Children under 10 years of age half price. The whole journey will be completed in four hours. Passengers will not be conveyed from Brighton to Hayward's heath unless proceeding by the trains. Fares to Croydon, first-class carriages, 2s.; second-class, 1s. 6d.

N. B. In order to insure conveyance between Hayward's-heath and Brighton, passengers for the whole distance must book their places on the preceding day at either of the following offices:—

Griffin's, Oxford-street, Green Man and Still; Hatchett's, Piccadilly; 41, Regent-circus; Spread Eagle, Regent-circus; Golden Cross, Charing Cross; George and Blue Boar, Holborn; Old Bell, Holborn; White Horse, Fetter-lane; Cross Keys, Wood-street; Spread Eagle, Gracechurch-street; or at the station, London-bridge; at all of which places parcels may also be booked; and in Brighton at the Blue, the Red, and the Spread Eagle coach and railway offices, Castle square.

Bills containing the time of departure from and the fares between the intermediate stations, the terms for conveying horses and carriages, with every other requisite information may be obtained on application at the terminus at London-bridge and Brighton; at the respective booking offices; or at the offices of the Company, 10, Angel-court, Throgmorton-street. By Order,

THOMAS WOOD, Sec.

July 24, 1841.

LONDON AND BRIGHTON RAILWAY.—

WANTED, a GENERAL SUPERINTENDENT, whose duty will be to take the entire management of the working of the line.—A liberal Salary will be given.

It is requested that application be made by letter *only* addressed to the Board.

By order of the Directors.

Manchester, 24th July, 1841; 43, Piccadilly.

ANDREW SMITH'S PATENT WIRE ROPES,

for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, TINNING, RAILWAY, and GENERAL PURPOSES; about half the Size and Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Office, 76, Old Broad-street, City; 69, Princes-street, Leicester-square; Manufactory, Mill wall, Poplar; and also of the following Agents:—

Robertson and Co., 12, Goree Piazzas	Liverpool,
Mathias Dunn	Newcastle-upon Tyne
Joseph Bothway	Plymouth.
John Thompson and Co.	Wigan.
J. T. Tregellas	Truro.
Thomas Mooney and Son	Dublin.
Coates and Young	Belfast.
James Kibble and Co.	Glasgow.
James Gunn	Leith.
John M. Beatts, 14, Clement's-lane, High-street,	Dundee.

This rope has been in use for standing rigging in her Majesty's navy, and in a great number of merchants' ships for upwards of five years, and is giving the highest satisfaction; the rope is also employed in various mines and railways in different parts of the kingdom, but reference is especially made to the Blackwall Railway, where its capabilities have been most severely tested, for although it has been in use upwards of ten months, and has travelled a distance nearly equal to the circumference of the earth, it is to all appearance as good as when first applied.

THE ADELAIDE GALLERY FOR SALE,

in One Lot. Messrs. FOSTER and SON have the honour to announce to the scientific world, they are directed by the Managers of the Society for the Illustration and Encouragement of Practical Science, to Sell by AUCTION, at the Mart, on WEDNESDAY, August 11, at 12, in one lot, the highly interesting, rare, and valuable objects of Nature and Art, at the Adelaide Gallery. Half a million of visitors have experienced the pleasure of inspecting this celebrated exhibition; and the Managers, animated with the hope the public may still reap the benefit of their hearty endeavours to carry out the objects for which the Institution was founded, and on which the proprietary have expended more than Twenty Thousand Pounds, have resolved to submit all their property at the Gallery, and all the fittings in one lot. A few only of the more interesting objects can be here enumerated—Perkins's steam gun, the electrical eel, Sharp and Roberts's power loom, Perkins's celebrated machine for showing the compression of water, a high-pressure steam engine of three-horse power, several working models of steam and other engines, powerful air-pump, Galloway's rotary railway in operation, Pritchard's great achromatic compound microscope, a bi-scenes cope, Troughton and Sims's standard barometer, a variety of philosophical, electrical, chemical, optical, pneumatic, hydraulic, and hydrostatic machines, engines, and apparatus, cosmoramas, dissolving views, magnets, Chinese fireworks, an organ by Flight, and a vast variety of items curious and valuable; also all the fittings, fixtures, and effects belonging to the proprietary.

To be viewed ten days prior, by catalogues only, which may be had (at 6d. each) of the Secretary, at the Gallery; and of Messrs. Foster and Son, 14, Greek-street, and 54, Pall-mall. Particulars also of Messrs. J. C. and H. Freshfield, Solicitors to the Institution, Bank-buildings.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—

The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200. for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, 11 Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, 5th Feb., 1841

TO RAILWAY CONTRACTORS, BUILDERS, and Others.—

To be sold by AUCTION, by Mr. BACON, on the North Midland Railway, near Higham, in the county of Derby, on the 18th and 19th days of August, 1841, about 160 Earth Waggons, equal to carrying two yards each, with 30-inch wheels; 150 tons of flat bottomed railway bars, 40 lbs. to the yard; large quantity of planking and barrows, two stone drags, three carts, quantity of quarry utensils, cranes, sheers, bars, pully blocks, lathe, blacksmith's tools, iron, &c. &c.; six horses, 40 sets of chain and two sets of shaft gearing.

The above materials are about four miles from Buckland Hollow on the Cromford and Erewash Canal.

The earth waggons, railway bars, carriages, cranes, sheers, and quarry utensils, to be Sold on the first day's sale.

Also, to be SOLD BY PRIVATE CONTRACT,

Two LOCOMOTIVE ENGINES, with 10-inch Cylinders, 4 feet 6-inch Coupled Wheels, and 18-inch Stroke, with Tenders complete, in good working condition.

To be seen at the North Midland Railway Works, Derby. Application to be made to Mr. BACON, of Alfreton; or to Mr. RICHARD TRUBSHAW, Higham, near Alfreton, Derbyshire,

---

TO RAILWAY COMPANIES AND IRON MANUFACTURERS.—

LOSH, WILSON, and BELL beg to recommend to parties employing or manufacturing Rails their improved Machine for straightening them, in which by a simple and powerful application of the screw they are rendered perfectly even without being disfigured by hammer-marks.

For terms and description apply to the makers, Walker Iron Works, Newcastle.

26th July, 1841.

MALLEABLE IRON RAILS.—TO IRON MASTERS, RAILWAY CONTRACTORS, COLLIERY AGENTS AND OTHERS.—

The Great North of England Railway Company propose to sell by PRIVATE CONTRACT, the following quantities of Iron Rails and Chairs, viz:—

23 tons of 22lbs. Parallel Bar.
330 tons of 28lbs. of Flange Rail.
19 tons of 30lbs. of Flange Rail.

with 5870 Chairs, from 7 to 14lbs. each, suiting to the above Rails.

For further particulars apply to Henry Whitwell of Darlington, the Company's Resident Engineer.

Darlington, 14th July, 1841.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous.—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 189. Vol. IV.—No. 33.—Part I.] SATURDAY, AUGUST 14, 1841. [Price, with Part II., 1s.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—TENDERS FOR LOANS ON MORTGAGE.—The Directors of the Birmingham and Derby Junction Railway Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money, in sums of not less than £300 each, and for a term of not less than Three Years, and to grant Mortgages of the Tolls and Works of their Undertaking as security for the same, bearing Interest at the rate of 5 per cent. per annum.

The above Loans are in substitution of others heretofore advanced to the Company for a term of years, the Debentures granted for which are now expiring.

Interest Warrants, for the whole term for which the Loan is made, payable half-yearly, on the 1st January and 1st July, at the Company's bankers in London and Birmingham, will be delivered to the Lender with the Mortgages.

The Tenders are to express the sums, and the term of years for which they are proposed to be lent; and are to be addressed to the Secretary, at the Company's Office in Waterloo-street, Birmingham; to H. Patteson, Esq., at the Office of the North Midland Railway Company, No. 6, Warneford-court, Throgmorton-street, London; or to Messrs. Laurence, Cazenove and Pearce, Auction Mart, London.

By order,
THOMAS KELL, Secretary.

Dated this 21st day of July, 1841.

BIRMINGHAM AND DERBY JUNCTION RAILWAY—NEW SHARES—THIRD CALL—£5 PER SHARE.—The Directors of the Birmingham and Derby Junction Railway Company having resolved that an Instalment of £5 on each of the New Third Shares in this undertaking, created under the provisions of the Act relating thereto, passed in the session of Parliament 3 Vict. cap. 51, payable on or before the 3rd day of September next, should be called for, Proprietors of such New Shares in this Company are hereby required to pay, on or before that day, to any of the undermentioned Bankers, the sum of Five Pounds on each of their respective New Shares.

BANKERS.

London—Messrs. Glyn, Halifax, Mills, & Co., Lombard-street.
Birmingham—The Birmingham Banking Company.
Manchester—The Manchester and Salford Bank.
Derby—Messrs. W. & S. Evans.
Burton-upon-Trent—The Burton, Uttoxeter, and Staffordshire Union Banking Company.
Sheffield—Messrs. Parker, Shore, and Co.

The Bankers have been severally instructed to charge Interest at the rate of £5 per cent. per annum, according to the provisions of the Act above referred to, from the 3rd day of September next, on all sums which shall be tendered after that day.

Waterloo-street, Birmingham,
August 11, 1841.

BIRMINGHAM and DERBY JUNCTION RAILWAY.—ADJOURNED MEETING.—Notice is hereby given, That the Half-yearly General Meeting of Proprietors of the Birmingham and Derby Junction Railway Company, held in pursuance of the provisions of the Act of Incorporation, at the Waterloo Rooms, Waterloo-street, Birmingham, on Tuesday, the 10th day of August, 1841, was then adjourned, in consequence of the non-attendance of a sufficient number of Proprietors, as required by the Act, for the Election of Directors, to Thursday, the 26th day of August, 1841, at the same place, for the Election of Three Directors in the place of the same number, who will retire by rotation, and for other purposes.

The Chair to be taken at One o'Clock precisely.

(Signed) HENRY SMITH,
Chairman of the Board of Directors.
Waterloo-street, Birmingham, August 11th, 1841.

Extract from the Act of Incorporation, Section 93.

"And be it further enacted, That no Proprietor of any share, on which any call made shall be unpaid, shall at any meeting of the proprietors of the said Company be allowed to vote, either personally or by proxy, until the money called for in respect of such Share shall have been fully paid.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This Invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

This day is published,

TUCK'S MAP OF THE RAILWAYS throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

Published at the *Railway Times* Office, 122, Fleet-street, and sold by Groombridge, Panyer-alley, and R. Tyas, Paternoster row; Hyde & Co. and G. Bell, Fleet-street; Mann, Cornhill; and by all booksellers and Newsmen.

EASTERN COUNTIES' RAILWAY COMPANY—GENERAL MEETING.

THE Half-yearly General Meeting of the Proprietors of the Eastern Counties' Railway Company was held on Thursday, at the Company's Station, Shoreditch; HENRY BOSANQUET, Esq., in the chair.

The advertisement calling the meeting having been read, it was unanimously resolved, that the common seal of the Company be affixed to the Register of Proprietors, which was done accordingly in presence of the meeting.

The CHAIRMAN then said, it had frequently fallen to his lot to have the honour of addressing his fellow-proprietors in opening the proceedings at these periodical meetings. This was now the tenth time that he had had that pleasure, and he was almost afraid that his observations must, to some extent, savour of repetition. He had at first determined to refrain from any preliminary remarks; but as so many circumstances had occurred since the last meeting bearing upon the welfare of the Company, he trusted he should be pardoned if he briefly alluded to some of the more prominent of them, and to the present position of the undertaking. He would not anticipate the contents of the Report, but he was happy in being able to state, that notwithstanding the various difficulties which they had had to encounter, the contracts for the whole of the line as far as Colchester had been let, and the works were proceeding with rapidity. He had no hesitation in saying that about the date when he or his successor in the chair should have the pleasure of meeting the proprietors for the twelfth time, the 51 miles of railway from London to Colchester would be completed. (Hear, hear.) The meeting would as usual be held in August, and it was confidently expected that the line would be ready for traffic in September. Many charges had been brought against the Directors of this Company, and among other things it had been asked why they did not proceed faster with the construction of the line. The answer was obvious enough. Those companies that obtained their acts of incorporation in the years 1833, 1834, and 1835, were enabled readily to raise money by loan at an interest of 4 or 5 per cent., and thus to spare the pockets of the proprietors, and at the same time expedite their several undertakings. It was not so however with this Company, whose original act, dated from the session of 1836—a session celebrated for the passing of 40 other acts for similar undertakings, and involving the enormous capital of fourteen millions sterling, the greater part of which was expected to be supplied, and had in reality been supplied, so far as it was yet called up, by the enlightened and enterprising gentlemen of Lancashire. It was impossible that when money to so great an amount was required for other railways, the Directors of that Company should have been able to proceed so rapidly with the works as they themselves could have wished, or as those who had been placed in more favourable circumstances had been enabled to do. He need not say that another cause of the difficulties in which the Company had been placed, was the attacks to which they had been exposed out of doors—attacks, which at most inflicted only some temporary annoyance, so far as the Directors in their official capacities were concerned, but which tended to the injury, nay to the ruin, of the proprietors at large. The circulation of unfounded statements to the prejudice of the undertaking, and which must necessarily remain for a time uncontradicted, alarmed the timid and led them to sacrifice their property, while they prevented others from embarking their capital in it. The line, however, had within itself every element of success. It passed through a rich and populous district, the inhabitants of which were however, he regretted to say, but little acquainted with railways, and who instead of supporting and encouraging the Company, had thrown impediments in their path. This had been another cause of anxiety and delay; but he was happy to be able to state that a better feeling was rapidly gaining ground in the county of Essex, that the shares were getting into that quarter, and that the railway itself instead of being, as it once was, regarded with suspicion and treated with odium, was now the very thing which of all others, the inhabitants of the eastern counties were anxious to secure. (Hear, hear, hear.) He had recently been on a visit to Bristol—a journey, which, by means of railway facilities, was now accomplished in about four hours and a half—and he was delighted to find that the London morning newspapers were regularly upon the tables of the citizens of Bristol so early as half-past ten o'clock. The gentlemen of the west could thus anticipate in that as in other matters the gentlemen of the east, and accordingly they set a proper value upon railway undertakings; but he could never see any sufficient reason why the aristocracy of the east, and the inhabitants generally of a rich agricultural and commercial district, such as Essex—for it was a mistake to suppose that it was not commercial, and indeed it had long since been found that for the purposes of a railway, a good agricultural district was as valuable as any other—he could not see why these parties had so long remained blind to the benefits which such a railway as the Eastern Counties could not fail to confer upon them. He was happy, however, in stating again that this apathy was rapidly passing away. (Hear, hear.) A charge had been publicly made against the Directors of putting forth deceptive accounts of traffic. All other charges proceeding from the same quarter they had treated with contempt, but the accusation referred to was one of such a character that, as gentlemen, as men of honour, integrity, and purity of purpose, it was impossible to be silent. They had accordingly denied the charge on oath before the public, and now they had once more to deny it before the proprietors, before whom as a jury, they would place the strongest evidence, by the production of the balance sheet of traffic. He was happy to say that another balance sheet would also be laid before the meeting—he meant the balance sheet of accounts. They were all aware into what a state of almost inextricable confusion the accounts had some time ago been brought, but he had the satisfaction of informing the meeting that they had now been gone through from the commencement, and with the exception of a sum of 400*l.*, of which no traces could be found, they had been properly balanced. (Hear, hear, hear.) The Directors had stated, on oath, that the railway was producing a profit, and now they were prepared to prove it by facts and figures and by these they wished to abide. (Applause.) It had been alleged that upon the 17½ miles of railway now open, there was no traffic. The traffic was certainly not so large as they had good reason to believe it ultimately would be, and for this reason, that when small portions only of long lines were in operation, the traffic was not diverted out of its accustomed channels. When the line came to be opened 30 miles instead of 17½, they would find that in place of taking about 800*l.* or 900*l.* per week, they would take a much larger amount in proportion—*how* large he would not pretend to conjecture but leave the proprietors to go down the road and judge for themselves. At present the Company were in the position of the Lydian monarch, who was tantalized by the sight of fruits and water he could not touch; the traffic, however, was in existence, and the time would come when it *must* pass by the Eastern Counties' Railway. (Hear, hear.) Persons travelling from Ipswich, Beccles, Colchester, or any other town in the district, would not for the small saving of time which could be effected on a railway of 17½ miles, trouble themselves with the transference of luggage—for that was the main point—from the road to the railway; and so also parties travelling into the country—especially ladies—were loth to encounter a similar annoyance in passing from the railway to the road. Again, it was said that the large sum of 1,600,000*l.* had been expended on these 17½ miles, and that the line therefore could never pay, and this was the language held, not by proprietors but by the public, as on the occasion of the visit to Bristol already alluded to, he had occasion to ascertain. Now what were the facts? The estimates of Mr. Braithwaite and Mr. Locke had fixed at 2,300,000*l.*, the sum sufficient to carry the railway over the 51 miles between Colchester and the Shoreditch terminus—where, by the way, he was happy to see the proprietors assembled for the first time, upon their own soil and freehold—and as contracts had been let for the whole of that distance within the estimates, the sum there stated could not fail to be sufficient. This brought the cost of the line to 45,000*l.* per mile, including the London viaduct, an ample carrying establishment and every other item of expense. He need not remind the meeting of the enormous expense necessary to carry a railway through house property in such a locality as London. No sooner did a railway touch a neighbourhood, than everything rose in value; lawyers were on the alert, and the streets, became as if paved with gold, by gold alone to be purchased, in illustration of which he understood, that the Blackwall Railway had cost about 300,000*l.* per mile. Reckoning the cost of the Eastern Counties' line, exclusive of the London viaduct, namely, from Devonshire-street to Colchester, it amounted to only 34,000*l.* per mile, including a carrying establishment. The great drawback to an earlier completion of the line had been the want of money. If they could have secured a supply as fast as it might have been advantageously expended, they would have been much further advanced. One hundred pounds would frequently have been worth two hundred to them, for they had been compelled to purchase time, and occasionally they were unable to command even a shilling for the prosecution of the works; and where was the wonder when they were exposed to calumnies of every kind and ribaldry the most gross? (Hear, hear.) Had they been able to command an adequate supply of funds, the cost of the railway might have been less; but when they looked at the cost of the metropolitan lines, he thought they had no reason to dread a comparison, or to suppose that their railway was a preeminently expensive one. As he had already observed, it passed through a populous, fertile and wealthy district, and connected large and important towns, and he was quite sure that the day was not far distant, when this most important undertaking would rank, as it ought to do, among the most flourishing in the empire, doing credit to the enterprise which called it into existence and redounding to the private advantage of all—in a word, that as it was one of the greatest works in the kingdom, so would it prove one of the most lucrative. (Much applause.)

Mr. DUNCAN (Solicitor to the Company) then read, at the request of the Chairman, the following Reports:—

Digitized by Google

DIRECTORS' REPORT.

The Directors have great pleasure in announcing to the proprietors, that since the last half-yearly general meeting, the whole of the contracts for the remaining works to Colchester have been let, including every expense for fencing, ballasting, and completing the permanent way: and that these contracts have been taken considerably below the estimates of Mr. Braithwaite and Mr. Lock, which have been already laid before the proprietors. The rails have likewise been purchased, as well as nearly all the other heavy articles of expenditure. There remain therefore the stations only to be contracted for, and for these the estimates are considered amply sufficient, and thus all doubt as to the railway being finished to Colchester within the estimates is at length completely removed.

The annexed Report from the Engineer will inform the proprietors of the details of the progress already made in the several contracts, and that no exertions are spared to push forward and complete the heavier portions of the works as rapidly as possible: and that the contractors, being all under engagements to complete the works by the end of the summer, the entire railway will be opened early in the autumn of next year. (Hear.) The heavy cuttings at Brentwood Hill, as well as some other considerable works between that place and Chelmsford, prevent the possibility of any partial opening of the line, until the whole is completed to Colchester; and it is deeply to be regretted that funds which would have warranted the commencement of the works at an earlier period, could not sooner have been placed at the command of the Directors. Other portions of the line which are comparatively light and easy of construction, will be proceeded with at such periods as to ensure their completion simultaneously with the more important divisions; and nothing has been omitted to be done which appears necessary to accomplish these important results, by the time stated; for which purpose the Directors have not hesitated to incur very considerable personal responsibilities. (Applause.)

The Directors have entered into a contract with responsible and experienced persons for the maintenance of way, of all the finished portion of the railway; and from the unusually low rate at which this contract has been let, the advantages have already become apparent, which the Directors have always stated would result from the very excellent and substantial manner in which the railway has been constructed, and from the heavy rails, and the admirable system of upper works which have been adopted. Several of the principal Railway Companies are now paying 50 per cent. more for maintenance of way under contracts far less comprehensive.

The accounts of the general receipts and expenditure for the last half year, are annexed to this Report. The traffic accounts are also annexed; and the Directors refer with great satisfaction to these, as showing in the most detailed manner possible, the whole receipts and disbursements connected with this department from the commencement, to the 4th July last, and which afford a highly favourable result as compared with other railways that have been partially opened for a similar or even a much longer distance.

The expense of maintenance of way (included as usual until the last half year in the cost of construction, as formerly stated); the local rates and taxes, which are only gradually levied; the depreciation fund requisite for the renewal of worn out stock; and every other item of expense which can be considered fairly chargeable to this account and now capable of being ascertained with tolerable accuracy have all been brought into the traffic account of the last six months. The unfortunate accidents which occurred on the railway soon after it was opened have occasioned likewise a very considerable charge, which has of course been carried against the traffic receipts. But notwithstanding all these deductions, there remains a clear balance of profit derived from the traffic on the line to the 4th July last, amounting to 14,444*l.* 17*s.* 8*d.* This amount is, agreeably to the Act of Parliament, applicable as a dividend among the proprietors, and is equal to about 5*s.* per share. It being however absolutely necessary to have the command of considerable funds in order to proceed with the works as rapidly as possible at the present time, the Directors, being anxious to postpone the remaining calls upon the shares as long as they can, are of opinion that in now declaring the above dividend of 5*s.* per share, on the shares registered to the proprietors on the 4th July last, the payment of this dividend should be postponed for six months, and be divided with the profits accruing during the present half year in the month of February next. (Applause.)

The expense of working the portion of the railway already opened, will be found extremely small compared with other partial openings of railways under like circumstances; and much credit is due to the officers of the Company, and to the system of management for this result. (Hear, hear.)

The completion of the railway as far as Colchester being now placed beyond all doubt, several influential parties possessing ample means, are preparing to make arrangements for further extensions of the line, and for the formation of branch railways communicating with other districts of the Eastern Counties: and the Directors anticipate being enabled to communicate when they next meet their proprietors, the gratifying fact of some important undertakings of this description being in a forward state. (Applause.)

Since the last half yearly meeting, the following Directors have resigned or become disqualified; viz—James Burt, of Manchester, Esq., Lawrence Heyworth, of Liverpool, Esq., William Gunston, and Henry Luard, of London, Esquires; reducing the present number of the Directors of this Company from twenty-two to eighteen. The Act obtained by the Directors in the last session of Parliament, authorizes them, if they think fit, not to fill up vacancies in the board, provided it be not reduced to fewer than twelve members; and acting upon this power the Directors have not filled up these vacancies: and if the proprietors approve and sanction this course, the Directors may from time to time take further opportunities of gradually reducing the number whenever it can be done without prejudice to the interests of the Company. (Great applause). The proprietors will, however, be aware, that they can themselves at any general meeting reduce and thus permanently fix the number of Directors of this Company at any number not less than twelve, by means of the powers obtained for them in this new act. If they are at any time disposed to exercise this power, the board can easily select a number of Directors, most willing to retire whenever it is thought their services can be dispensed with. But the board is of opinion, that the present number of resident London Directors cannot ever be conveniently and advantageously reduced; that some Directors in the Eastern Counties are desirable. And so long as the great proportion of the stock is held in Lancashire, and the proprietors consider it needful on this account, and from the great experimental knowledge of the management of railways in that county, to have the monthly boards and committees regularly attended by some of their Lancashire Directors, a number of the Lancashire proprietors must also continue members of the board. The proprietors will therefore decide for themselves as to the exercise of the above power on the present or any future occasion; only keeping in mind that their decision as to reduction of number of Directors is absolutely irrevocable.

The proprietors were informed in the last half-yearly Report, that the Directors had been advised that it was due to the interests confided to them, and requisite on public grounds, to take legal measures for the punishment of a series of gross libels, which had been inserted by the former Secretary of the Company, in the *Railway Times* newspaper. Proceedings were accordingly commenced to obtain a criminal information to be filed against that individual, and the printers and proprietors of the paper in question; and the Directors availed themselves of the opportunity of denying upon oath in express terms, the malignant and false imputations contained in these libels.

This having been done to the entire satisfaction of the Court of Queen's Bench, the Judges stopped the further proceedings by criminal information, ordering the printers and proprietors to pay the costs of the proceedings, and leaving the Directors to proceed by civil action, if they thought fit. (Applause.)

It will be seen from the complete re-statement of the traffic accounts, published with this Report, that, in reference to the observations of the Court, as to there being some ground for raising a doubt respecting the accuracy of these accounts, they have in truth been from the first strictly accurate in every particular, and that, when carefully perused, no misapprehension regarding them can arise.

The remedy, by civil action, as pointed out by the Court, the Directors would certainly have resorted to; but the late Secretary of the Company, the avowed author of the libels in question, having ceased to be the editor of the *Railway Times*, and the conduct of that paper being changed, and its libellous character discontinued, the Directors have thought it right not further to pursue legal proceedings in respect to these libels. (Much applause.)

ENGINEER'S REPORT.

To the Chairman and Directors of the Eastern Counties' Railway Company.

GENTLEMEN,—I have the satisfaction to state that since my last Report, the whole of the contracts have been let, commencing at Brentwood and terminating at Colchester; and although much time was lost in the execution of the necessary documents, and in obtaining possession of the different properties, yet the progress of the principal works (notwithstanding several weeks of unfavourable weather) has been such as to leave no doubt in my mind as to the completion of the line to Colchester in the month of September, 1842. (Applause.)

In obedience to your instructions, the periods for the performance of the several contracts have been so regulated, that only those portions of the heavier description of works which require the greatest time in execution have been commenced: an arrangement which will enable us to proceed vigorously with the remainder in the spring of 1842. The portion alluded to are as under:—

Contract 22—Brentwood Hill, West.—Since the commencement of this work, the contractors have prosecuted the cutting with vigour; 140,000 cubic yards have been run to spoil, being nearly one-third of the amount of cutting required to complete this the heaviest work, which leaves no doubt that the upper portion, to within 30 feet of the formation, will be finished, trimmed, and drained, before the winter months set in.

Contract 12.—Brentwood and Shenfield.—The excavators are proceeding at the west end of Shenfield Common, where about 40,000 cubic yards have been carried to spoil, and on the west side of Mountneyssing Hill, where about 8,000 yards have been carried into embankment. The Hutton-road and Chain river bridges will be commenced forthwith, material being now on the ground.

Contract 12 A.—Shenfield.—The embankment is complete for a length of 47 chains, and the cutting 28 chains. 152,835 cubic yards of earth have been excavated. No. 1 culvert has long since been completed. The Hutton turnpike-road bridge was also nearly completed; but in consequence of the contractors having used improper cement, it was found necessary to remove the arch which is now re-erecting.

Contract 13.—Mountneyssing.—The delay in obtaining material has rather retarded the earth-work. The Burnt House-lane bridge is now being carried up, which when completed will enable any quantity of earth to be tipped. 12,500 cubic yards have been run into the embankment, about 12 chains in length, and the cutting 8 chains.

Contract 13 A.—Margaretting and Ingatestone.—A small culvert has been erected which has enabled the contractor to run 14,500 cubic yards into embankment, 23 chains in length, and the cutting 27 chains.

Contract 14.—Margaretting and Widford Hill.—Nearly the whole of the earth work on the western side of the Widford Hill is complete, waiting only the finishing of the river bridge, which is proceeding satisfactorily; the contractors are also in possession of the East Hill at Margaretting, with which they will proceed immediately.

Contract 11.—Widford Hill, East.—The cutting on the eastern side of the hill has advanced to the turnpike road, where the bridge pit is now being excavated, which will be immediately followed by the masonry.

Contract 15.—Chelmsford and Springfield.—Is also progressing very satisfactorily. The foundations are now about to be commenced for the Can viaduct and the viaduct and bridge over Duke-street. The embankment has approached Bishop's Hall-road, where the bridge has been erected, and ready to receive it. The Chelmer river bridge has progressed but slowly, in consequence of shortness of hands, which is now remedied. The earth work generally, particularly the Chelmer embankment, has stood remarkably well, notwithstanding the inundations and continued bad weather.

Contract 23.—Boreham.—The foundations for the Mill Head bridge have been excavated, and are of an excellent description; about 2,550 cubic yards have been removed from the west side of the Boreham Hill; the further excavation is impeded by the erection of the bridge, but other parts have been commenced.

Contract 24.—Hatfield Peverell.—Progressing very rapidly: 7,466 cubic yards have been led into the west embankment, and 15,550 into the eastern. The foundations of the Mill Head bridge are also in a very forward state, and of a very superior condition. Toppinghoe Hall bridge is nearly completed, which will enable the western embankment to be carried on with vigour.

Contract 25.—Witham.—A very satisfactory commencement has been made since possession has been

Digitized by Google

obtained; the river has been diverted, and the excavations for the foundations of the mill stream bridge are nearly out; and about 2,000 yards of earthwork have been excavated from Chipping Hill. The contractors have now possession of the eastern side of the Boreham Hill, which will proceed without delay.

Contract 27.—Kelvedon.—The quantity of earth excavated is 2,340 cubic yards, carried to the Blackwater embankment, which is now delayed by the erection of the river bridge, which will require much time, the foundations turning out but very indifferent. This is of comparatively little moment, there being more than ample time for the performance of this work.

Contract 29.—Stanway.—About 14,500 cubic yards have been excavated from the west side of the hill, of excellent material.

Contract 30 A.—Lexden.—About 14,000 yards have been carried into the Colne embankment, which has been somewhat retarded by a slip, which occurred after the heavy rains. The river Colne has been diverted, and the foundations for the viaduct are proceeding. One of the piers is carried up to the footing, another of the foundations had received the concrete, which I have had cause to remove, but which will be reinstated immediately.

Contract 30.—Lexden and Colchester.—Vince's Occupation Bridge is now building, but has not retarded the western excavation of the hill, 15,000 yards from which have been carried into the Colne embankment.

In all the above enumerated contracts, the requisite fencing and diversion roads have been made, and generally they are proceeding in a satisfactory manner.

The portion of the line opened between London and Brentwood, although the traffic has not been impeded, has been attended with several perplexities. The completion of the London terminus has been seriously impeded by the oposition of the parish authorities, which has caused great inconvenience, by compelling us to carry out the working of the travelling carriage and coaching traffic upon one side only of the station. This opposition has also entailed upon the contractor, the necessity of carrying up the terminal buildings in detached portions, which has been attended with great delay and inconvenience.

The works generally have given me no cause to doubt their stability and ultimate economy; the proof of which I may state is fully borne out by the sum at which Mr. Brown, the contractor for the permanent way, has undertaken to keep the line in repair, a sum actually lower per mile than upon any other of the leading lines in the kingdom, notwithstanding that on our line the upholding of the masonry is included. His maintenance extends over 15 miles of the line. The remaining portion commencing with the Gubbings embankment and extending to Brentwood has not been let; but although we have been troubled with repeated slips and subsidence on this portion of the line, we may now fairly consider these untoward circumstances nearly if not wholly at an end. Slips have also recently occurred in the cutting at Brook-street, and at the Nag's Head embankment, which were not apprehended, as that part of the cutting was executed by the contractor, Mr. Burge, under most favourable circumstances. These occurrences more than ever convince me of the propriety of the course taken of adopting slopes of 2 to 1; had the opposite plans frequently followed, of consulting what I consider a false economy been adopted, namely of constructing that part with slopes of 1 to 1, the consequences would in all probability have been extremely serious.

In conclusion, being fully aware that the determination of prosecuting for the present the heavier works only is regulated by the financial condition of the Company, I would not only suggest, but strongly urge that the greatest efforts be made to enable us to execute as much of the earthwork as possible during the present season, which would tend to obviate the difficulty that all lines are subject to, of being opened in a comparatively green state, so as to require continual packing, which although at the expence of the contractor for the first year creates much hindrance and interference with the daily working of the line. (Applause.) I have the honour to remain,

Gentlemen, your obedient servant,

JOHN BRAITHWAITE.

London, August 10th, 1841.

* This current expenditure of the first three half years has, as stated in the past Reports of the Directors, not exceeded 51 per cent. of the Receipts.

Mr. Lawrence Heyworth said, he felt peculiar pleasure in rising to move that the Reports now read be received, adopted, and printed for the use of the Proprietors. A Report so satisfactory in every respect had never before been laid before the Proprietors; and, although always sanguine as to the results of this line, he was never so much pleased with its prospects as now. (Hear, hear.) He could say conscientiously that the Company had never before been blessed with so good a Direction, or with officers so efficient; and in retiring from his official duties, the discharge of which had been rendered comparatively easy, from the harmony which had characterised the proceedings of the Board, it was with great pleasure that he left the undertaking in the hands of men of honour, probity, efficiency, and good feeling, who, he doubted not, would speedily bring it to a satis-

Digitized by Google

factory conclusion. (Hear, hear, hear.) Without entering into the various matters so well treated of in the Report, he begged to call the attention of the meeting to one of the items which showed that they had in hand a clear disposable balance of 19,074*l.*, against which there was set a sum of 4,000*l.* for what was called "depreciation of stock." This depreciation, however, was only imaginary, and highly culpable would the Directors be if it were otherwise. It would be a libel upon their excellent Manager to say that the stock was at all in a depreciated condition; and indeed it had been examined by competent judges, and found as effective now as it had ever been—he meant the engines and carriages. He hoped the meeting would not justify the principle of a reserve fund, which had found its way into some other Companies, and which was in reality but keeping a portion of their profits from the hands of those who were fairly entitled to them, and putting it into the pockets of posterity. If Railway Managements would keep up their stock as it always ought to be kept up, the costs could be defrayed out of the profits of the current half-year. (Hear, hear.) If there were a reserve fund to fall back upon, he feared Boards of Direction would become negligent. (Hear, hear.) He had every confidence in the present Management of this Company, but they might hereafter have others less worthy, and who might not look out with so much vigilance as they ought for new sources of traffic, if they found that the dividend of one year could be brought to the level of those that might have preceded it, by an application of the reserve fund. He looked upon the system of a reserve fund as vicious in principle, and injurious and inefficient in practice. Such a fund must of necessity be distributed some time or other as a *bonus* amongst the proprietors. He hoped therefore that the meeting would deal with the whole of the 19,000*l.* as their own money, for such it was. In conclusion, he begged to say that he retired from the Direction with regret, but was consoled by the reflection that those who were left behind were in every respect deserving of the confidence of the proprietors. (Applause.)

Mr. THEODORE W. RATHBONE, (Deputy-Chairman,) could confirm the statement of his friend Mr. Heyworth as to the excellent and highly efficient condition of the stock. He believed the engines were now in a better state than they had ever before been, and that if there were any depreciation at all, it was in the carriages. He would admit also that any Board of Management would be highly culpable who should allow their stock to become inefficient, and that they had no right to reserve any portion of the profits of present proprietors for the purpose of increasing those of their successors. He thought, however, that Mr. Heyworth's views as to a reserve fund, were somewhat erroneous. They might keep up the engines by repairing them, but a time would come when it would be false economy to keep repairing carriages, instead of supplying their place with new. Even in engines there would arise occasions for considerable outlay. Thus the tubes would become impaired, and could only be renewed at a cost of 80*l.* or 100*l.*, and it would, in his opinion, be unfair that future proprietors should be called upon to make good the deficiency which had partially arisen during previous years. The term "reserve fund," was perhaps an unhappy one. It was not a reserve properly speaking, but the setting aside of a sum from the profits of each successive half-year, sufficient to make good the wear and tear incurred during such half-year, although the money thus set aside could not then be applied to its intended purpose. It was true that at the commencement of railway proceedings there was no reserve fund established, but the plan was now adopted in almost every Company. He trusted that speedily, perhaps by next meeting, they would be able by careful investigation to ascertain the exact amount of depreciation that took place during each half-year, and then they would be able to set aside an equivalent in money and no more—not a per centage, but the exact sum required. It would be unfair to the then proprietors, and injurious to the credit of the Company, to have occasion to absorb a large proportion of the profits of any future half-year to make good the unavoidable depreciation now going on. Some of the Companies, perhaps, carried this principle too far, but he hoped that before next meeting they should be prepared with proof of what it was really necessary to set apart. (Hear, hear, hear.)

Mr. SWIFT (of Liverpool) briefly seconded the motion for the adoption of the Report.

Mr. HEYWORTH, after paying a compliment to Mr. Rathbone's experience in railway matters, contended that no large number of engines or carriages could require extensive repairs at one time, and that therefore the cost could be defrayed from the profits of any one half-year without sensibly affecting the dividend. He referred to the case of a railway where the reserve fund was 10,000*l.* to back up an amount of 20,000*l.*

Mr. PERRY complained that the Chairman had attacked the people of Essex for not supporting the railway. One great reason for their apathy was the fact that they had the means of water conveyance in great abundance. He had no doubt, however, that they would come forward at the proper time. [The honourable proprietor then referred to what he called the "great extortion" practised by a noble lord, and in a rambling address, the drift of which we could not exactly comprehend, touched upon various matters personal to himself, and totally irrelevant to the question before the meeting.]

The CHAIRMAN disclaimed all design of assailing the inhabitants of Essex. With respect to the claim of the noble lord referred to, it was included in the 2,300,000*l.* which it was believed would complete the line to Colchester.

The motion was then put, and carried unanimously.

Mr. DUNCAN explained, that by the Company's Act obtained last session they were empowered to reduce the number of Directors, as alluded to in the Report. On the 10th instant the Board had come to a resolution [which was read] declaring it inexpedient to fill up the vacancies now existing in the Direction, but it was necessary that such resolution should be confirmed by a general meeting. The learned gentleman then proposed a resolution to that effect.

Mr. HEYWORTH seconded it. His opinion was, that the executive ought to consist of a small number of individuals. The management was never in better hands than now, and he hoped the time would shortly come when the number could be reduced to the minimum of 12, allowed by the Act. (Hear, hear.)

Mr. ESDAILE called attention to the statement in the Report, that any resolution to reduce the number was irrevocable. He did not object to the reduction, but was anxious only that the matter should be duly considered.

Mr. DUNCAN said the reduction, if made at all, would be made permanently. It was for the meeting to consider whether it was desirable.

The motion was then carried unanimously.

Mr. SWIFT brought forward a motion authorising the Directors to apply the sum of 100*l.* in such way as they might think best to the religious instruction of the labourers on the line. If they had no higher motives, self-interest ought to induce the proprietors to do something for the improvement of a class of men, many of them not of the best character, whom they had collected together.

Mr. BEADEL seconded the motion.

A very lengthened discussion ensued, and was supported on both sides with great spirit, the speakers being loudly applauded by their respective partisans. We cannot, however, find room for more than the leading points.

Mr. HEYWORTH said, it was with great reluctance that he felt compelled to oppose the motion. The motives and object were most honourable and praiseworthy, but it was in direct violation of the Company's Act to vote away money for any such purpose. Let those who wished the labourers to be instructed supply the means from their own pockets. It would be unjust to absent proprietary to come to such a resolution. If this 100*l.* were granted, there would be no end to similar motions. Why not build a church at every six or seven miles, nay, why not appoint and pay a bishop? They had no money to spend, and if they had, they had no right to deviate in one iota from the Act.

Mr. SWIFT did not know in what way the money was to be applied. It might be to propagate Teetotalism, of which his friend Mr. Heyworth was so strenuous an advocate. It was not in direct violation of the Act, although it might be a fair subject for discussion whether it came strictly within its limits. As to absent proprietors, it was their own fault if they were not there. Something too, he thought, was due to the landowners, who had had a set of lawless men collected in their neighbourhood who stood much in need of moral and religious instruction.

Mr. RATHBONE in reference to absent proprietors said, he should be sorry to think that the parties from whom he held a large number of proxies, which he meant to use in favour of the motion if necessary, were hostile to a vote of 100*l.* for such a purpose. On the selfish principle of expediting the works, the money would be well applied. There were parties who, with a little assistance, would attend to the religious instruction of the men, whose character as a body was too well known. He had seen the good effects of similar efforts in other places. With regard to the legality of the vote they were compelled daily to travel beyond the strict letter of the Act. He did not know if it were strictly legal to build houses for their workmen, or at any rate to provide them with gardens, and yet who would object to such an application of the Company's funds? The hon. gentleman then referred to the late vote of the Birmingham Company for the erection of a church at Wolverton, and to the declaration of Mr. Glyn, the Chairman, that he should have regretted his re-election had the vote been refused. The Directors would not allow any sectarian bias to influence them in the appropriation of the money.

A PROPRIETOR would not apply the funds raised for secular purposes to those of a religious nature. Besides, the Directors should not build with one hand and pull down with the other. It was publicly reported that more Sabbath desecration was committed on the Eastern Counties' Railway than upon any other, as the labourers were frequently employed on that day to a late hour.

The CHAIRMAN emphatically stated that the Directors had done everything in their power to put a stop to the practice, and appealed to the Engineer-in-Chief in support of this assertion.

Mr. BRAITHWAITE confirmed it in every particular. The most strict injunctions had been laid upon the contractors, and the Directors had assisted in bringing offenders to punishment. None but works of necessity—such as pumping off water, or taking means to avoid accidents—were ever undertaken on Sunday, if the Directors could prevent it. He was sorry to say that the men themselves were too ready to fall into the practice.

Mr. J. ESDAILE having expressed an opinion that even cases of emergency ought not to be allowed to interfere with the sanctity of the Sabbath, said he wished the motion had been for a vote of 500*l.* Unless the Sabbath were respected, they could not look for a blessing on their work.

Mr. COPLAND, of Chelmsford, in a speech of considerable length, detailed the exertions which had been made by himself and other dissenters at Chelmsford, for the instruction of the men. He stated that the Church party had followed their example and appointed a Railway Chaplain, but hinted that a sort of jealous rivalry had dictated this movement, and was influencing the present proceedings of that party. Mr. Copland objected, he said, to the principle of the grant, not to its amount, and boasted that the Dissenters had undertaken the duty without hope of remuneration, which indeed they would not, he said, accept if it were offered to them. He thought the motion, if persisted in, would engender feelings of religious bitterness.

Mr. GIBBS (a Director) explained, that the 100*l.*

Digitized by Google

now applied for had been placed at the disposal of the Directors about two years ago for the same purpose, but had not then been expended in consequence of the almost total suspension of the works shortly after that date. The honourable Director earnestly disclaimed, on the part of himself and colleagues, the sanctioning of Sunday labour, and the meeting appeared perfectly to exonerate the Board. A resolution of the Board peremptorily ordering one of the contractors to discontinue the practice, was subsequently read.] Mr. Grimsshaw said, he would not hold his seat at the Board, if he thought Sunday labour were encouraged or permitted. The present application, it was not likely, would be repeated, for in another year the line would be completed, and the men would return to their respective homes.

Mr. HEYWORTH referred to the proceedings consequent on the Birmingham vote, when at a subsequent meeting, a resolution was passed allowing every person who disapproved of the application of the money, to get back his proportion of it. [Mr. RATHBONE—Which nobody *did* claim back.] He then urged strongly the superior efficacy of the voluntary principle, and paid a high compliment to the exertions of Mr. Copland and his friends.

Mr. DUNCAN, having stated that the vote was perhaps not strictly legal, compared the result which the inculcation of sober and industrious habits among the workmen would produce, to the effect of pecuniary rewards offered to the men, for the speedier completion of the line. No one would object to the expenditure of many hundred pounds in rewards, if the works could thereby be pushed forward with greater expedition, and yet this proposed vote was precisely similar in principle, and differed very little in practice.

Mr. HEYWORTH suggested that an addition should be made to the motion, enabling any proprietor to receive back within a month his quota, if so disposed.

Mr. SWIFT assented, and the motion was altered with that object.

Mr. ANDERSON (a Director,) hoped that the Board, although receiving no remuneration, would pay the 100*l.* out of their own pockets, and put a stop to a discussion like the present. [This was met by cries of "No, no," from the meeting.]

Mr. COPLAND thought it unfair to put proprietors into a position to compel them to ask for their proportion of the money. He could not see how members of the Society of Friends, or even certain other sects of Dissenters, could continue to hold shares if such a vote as this were sanctioned. He then moved an amendment, to the effect that no sum of money be voted at that meeting for religious instruction, means having been already adopted with that object.

Mr. HEYWORTH seconded the amendment.

After some further discussion, the question was put, when there appeared,

For the amendment	28
For the original motion ..	29
Majority in favour of the grant..	1

A large number of gentlemen present did not vote either way. Mr. Duncan had been counting the hands held up, and when he found that the numbers were equal, he gave his own vote in favour of the original motion. The announcement of the result was received with hisses, and a good deal of confusion ensued. The whole of the Directors, with the exception of Mr. Wells, voted for the motion; and Mr. Wells subsequently stated, that he should have voted for the amendment (which would have made the numbers equal), if he had not understood that the Directors were not to take any part in the proceedings.

Mr. RATHBONE expressed his conviction that if a ballot were taken, the preponderance of votes would be greatly in favour of the grant. This was loudly denied by the opposite side.

Mr. HAMILTON (of Liverpool) said, he objected to the principle of the vote, but as he had a deep stake in the prosperity of the railway, and believed that religious instruction would be greatly for the benefit of the men, he would contribute the whole of the 100*l.* himself, rather than that any discord should arise among the proprietors.

This offer called forth the warmest acknowledgements from Mr. Rathbone, Mr. Heyworth, and others, but nevertheless many gentlemen appeared not to be satisfied. Mr. Hodgson and Mr. Cox (Directors) thought they could not accept Mr. Hamilton's liberal offer, as the vote had been resisted so strongly and on such grounds. Others insisted that the vote should not be cancelled. Ultimately the Directors consulted together, after which

The CHAIRMAN said, it was not the intention of the Board to appropriate the money at present, as it had been carried by so small a majority.

It did not appear whether Mr. Hamilton's proposed donation would be applied in place of the sum voted, but it seemed to be the general impression that it would be accepted. A vote of thanks was passed to Mr. Hamilton for his liberality.

The CHAIRMAN in concluding the business of the day said, he was glad to see so many new faces before him, not a few of them being from Essex. He would repeat that the Company's books showed clearly that the shares were being taken up by the inhabitants of that county.

Mr. HEYWORTH passed a high eulogium on the urbanity of the Chairman, of which they had had so many opportunities of judging, and moved a vote of thanks to that gentleman for his conduct that day.

Several PROPRIETORS simultaneously seconded the motion, and having been put by Mr. Rathbone, it was carried by acclamation amid great applause.

The CHAIRMAN returned thanks, expressing his sense of the kind co-operation of his colleagues, and referring in particular to the zeal and energy of the Deputy Chairman. He had already stated that at times they had been without a shilling in their coffers, but he was happy in being able to state that they had now an abundant supply. (Applause.)

The meeting then broke up.

[We understand that at the conclusion of he public proceedings the Directors met and unanimously resolved to pay the 100*l.* out of their own pockets.—ED. R. T.]

LONDON AND BIRMINGHAM RAILWAY COMPANY—GENERAL MEETING.

THE Half-Yearly General Meeting of the Proprietors of the London and Birmingham Railway Company was held yesterday at the Euston Hotel, Euston Station; GEORGE CARR GLYN, Esq., in the Chair.

The advertisement calling the meeting having been read, it was unanimously ordered that the common seal of the Company be affixed to the register of shares, which was accordingly done in the presence of the meeting.

The minutes of the last half-yearly meeting, held in Birmingham, in February last, were next read and confirmed.

The CHAIRMAN then spoke to the following effect:—Gentlemen, it is again our pleasing duty as Directors to lay before you a Report of our proceedings during the last six months, and, I hope, and believe, that when that has been submitted to you, with the accounts which you already hold in your hands, you will agree with me in thinking that the result has fully justified the anticipations indulged in at our last meeting as to the satisfactory prospects of this great undertaking. I am happy, to say, gentlemen, that not only has there been an increase in our earnings during the past six months, but what is of no less importance, a decrease in the amount of expenditure by which these earnings have been secured. (Hear, hear, hear.) You are aware, gentlemen, that from the first it has been the anxious wish and constant aim of the Directors of this Company to keep down the amount of current expenditure, and I am happy to state that they have not been altogether unsuccessful. We may not be able to exhibit in figures so great an apparent reduction as some other companies, but you will bear in mind that the charges of working on this establishment have been from the beginning lower under many heads than in most other similar undertakings, and I venture to assert, that taking the whole of them together, they are at least as low as on any other line in the kingdom. (Hear, hear.) At the last meeting, gentlemen, you came to a resolution that the whole of the funded debt of the Company should be forthwith capitalized, and the Directors have since taken means for carrying that object into effect; so that this is the first half year in which a dividend has to be declared upon the entire capital of the Company. In making up our accounts we have pursued the plan which has already so often received your sanction, and the soundness of which I am sure it is not necessary that I should attempt to justify, namely, of setting aside a fund to meet the unavoidable depreciation of stock. I have been not a little surprised, gentlemen, when in conversation with some of my co-proprietors to hear two terms applied to this fund, which convince me that very considerable misapprehension exists as to its real character and objects. I have heard it described as a "reserved fund" and "rest." Now these words are totally inapplicable to it as it exists in this Company; the only way in which, from the mode in which it is applied, we can justly describe it, is to call it a "depreciation fund." The plan which we in this Company follow, and the plan which is virtually followed in almost every other Company, is to appropriate a portion of the profits of every half year to meet the depreciation which has taken place during that period in the value of the Company's stock—a depreciation which it is clear must be made good either from the profits of working, or defrayed from the capital of the Company. The course adopted in this Company is to set aside from the profits of every half year a certain per-centage on the capital originally invested in the purchase of stock, such as carriages and engines, and in the "capital" ledger to write off the amount of such per-centage against the locomotive capital. I may take blame to myself, gentlemen, for not having sooner given this explanation, but until I heard the term "rest" applied to the fund in question, I was not aware that its real nature was so far misunderstood. In referring to the reductions which have been effected in the current expenditure of the Company, I have the satisfaction of being able to assure the meeting, that they have not been carried out at the sacrifice of the permanent interests of the Company by impairing the efficiency of the establishment, nor at the expense of the accommodation of the public. (Hear, hear.) The convenience and comfort of the public have at all times formed the anxious study of the Directors, and it is but just to the officers of the Company to state, that during the last half-year we have not only had no complaints, but have received many pleasing proofs of the high estimation in which the arrangements of the line are held by the public at large. (Hear, hear.) Under these circumstances—after setting aside a sum for the depreciation of stock, and notwithstanding that the dividend has now, for the first time, to be declared upon the extra shares, I have much pleasure in telling you, and I am sure

Digitized by Google

you will rejoice to hear, that an increased amount can now be paid with perfect safety to the permanent interests of the undertaking. (Much applause.) I candidly confess, gentlemen, that I had not expected so favourable a result after the creation of so considerable a number of new shares. I thought that if, during the first six months of the present year, we could keep up our previous rate of dividend it would be satisfactory, and as much as, under all the circumstances we could reasonably expect, but I am happy to say that we can safely recommend a dividend of 4*l.* 5s. More the Directors cannot conscientiously and with due regard to the true interests of the undertaking, recommend; less they would not wish to bring forward, since the proprietors have a right to receive to the utmost extent of their income, the due efficiency of the establishment being always carefully preserved. (Hear, hear.) I will not detain you further, gentlemen, except to allude to a report which has got abroad, and which I am happy to be able most distinctly to contradict. It is again in reference to the alleged condition of some of the tunnels upon the line. This is the second time that I have had occasion to allude to rumours of this kind, and now, as before, I can give them a most unqualified denial. I do not speak thus from information which has been obtained solely with a view to the meeting of to-day, for at every meeting of the Board a minute and careful statement of the condition of every tunnel upon the line is laid before them; and I affirm most positively that there is not the slightest insecurity in any one of them, or the least necessity for any beyond casual repairs. (Hear, hear, hear.) I feel obliged to the parties who sent me the information that such rumours were abroad, and I trust that after what I have said, they will henceforth be set entirely at rest. The Secretary will now read the Report of the Directors, after which I shall have much pleasure in giving any further explanation that may be required. (Much applause.)

The Secretary (R. Creed, Esq.) then read the Report, as follows:—

REPORT.

The Directors, referring to the depressed state of trade in the last six months, and to the unfavourable influence which it might have been expected to exercise on the operations of the railway, may be allowed to congratulate the proprietors on the satisfactory results which are exhibited in the accounts now before the meeting. They show that the receipts for the half year ending 30th June, were 382,452*l.* or 39,258*l.* more than in the corresponding half year of 1840, (although the latter had exceeded by 72,953*l.* the receipts for the June half year of 1839); that the cost of maintaining the road and working stock in an efficient state, and for conducting the general business of the Company, was 112,936*l.*; or 6,490*l.* less than in the corresponding half year; and consequently that whilst on the receipts there is an increase equal to 11*l.* 8s. 6d. per cent., there is a decrease on the charges equal to 5*l.* 18s. 6d. per cent.

The Directors, in the statement of accounts to 31st December, referred to several sums which were to be deducted from the outlay for capital. The necessary transfers having been since made, the amount on the debtor side of this account is reduced to 5,743,049*l.* 9s. 3d., subject to further reductions by 14,545*l.* charged for depreciation of stock in the present revenue account, and by the profit which may be realized on the sale of the reserved new 32*l.* shares.

The payments which the Company have yet to make on account of capital, are for unfinished works of the road and stations; for unsettled or disputed claims of landowners and other parties on the line, and for outstanding accounts of the Company's solicitors, for transactions antecedent to the opening of the railway, but the aggregate, when adjusted, will not be considerable.

The rents of buildings in progress, whether intended for the accommodation of the public, or for the occupancy of the Company's clerks and servants, will fully cover any additional charge for interest; and the cost of new engines and carriages, which may from time to time be required to keep up the working stock, will be met by the half-yearly allowance for depreciation.

The net balance of the revenue for the two last half-years, (deducting the dividend ordered at the General Meeting of the 12th of February), is 192,148*l.* 4s. being the sum applicable to the dividend now to be declared in the following proportions on the whole capital in shares, namely,

For six months, on a capital of .	£4,125,000
For three months, subject to a deduction of interest at 5 per cent. per annum, on the unpaid portion of the new 32*l.* shares . . .	1,375,000
	£5,500,000

The Directors recommend that a dividend be declared at the rate of 4*l.* 5s. per 100*l.* of the 4,125,000*l.* capital stock, and of 2*l.* 2s. 6d. for the 1,375,000*l.* leaving 4,116*l.* to be carried to the credit of the next account.

The Directors have to announce that the Bill for a competing line between Stafford and Rugby was rejected on the second reading, by a large majority of the House of Commons.

They have to report that arrangements are made between the London and Birmingham, and the Birmingham and Gloucester Companies, which they expect will give additional facilities to the traffic on the respective lines, when the Gloucester Railway is opened on the 17th instant, to the Birmingham station of this Company, and they are equally anxious on all occasions to promote the free transit of passengers and merchandise between the London and Birmingham, and connecting lines, being satisfied that in no way are railway interests more effectually promoted than by a due regard to the accommodation of the public.

Referring to the proceedings of the Harrow inquest in November last, the Directors have the pleasure to state that so much of the verdict is quashed as awarded a deodand.

The Directors have to report the resignation of Edmond Calvert, Esq., since the last general meeting.

(A.)—*Statement showing the Capital of the London and Birmingham Railway Company under the Powers of their several Acts, and how raised to the 30th June*, 1841.

Half year ending 30th June, 1841.....	354,322	23,399,936	1,957¼	66	1,154

The Report was most favourably received.

A PROPRIETOR enquired how many new 32*l.* shares were still unissued.

The SECRETARY said, about 1600 and a fraction.

The CHAIRMAN, in answer to various questions, gave some further explanations as to the depreciation fund. He said the whole of that fund was at present applied to the cash account in the ledger, from which the carriages and engines had been paid for. To that account all new engines, carriages, and materials were charged, so that there was no balance in hand. It was a mistake to call it a reserve fund. This Company had no such fund in existence. It would be seen by looking at the accounts that the amount of the depreciation fund was written off the capital account. The capital of the Company, applied to a certain purpose, was lessened by payments made against it for that purpose.

Mr. JAMES HEYWORTH (of Liverpool) was satisfied that much misconception prevailed on this subject. He thought the plan adopted by the Liverpool and Manchester Company was preferable to that of this Company.

Mr. OMEROD had always considered that the only legitimate way in which capital could be raised was by the issue of shares or by loans, while here the Directors appeared to be applying a portion of the current profits to that purpose.

A PROPRIETOR said it appeared to him that the plan followed by the Directors was only another way of arriving at the results in which all concurred, namely, to provide, as far as possible, for the wear and tear of each succeeding period, out of the revenue of that period.

The CHAIRMAN said it was precisely so, and he could conceive a case in which serious inconvenience might arise, were a heavy expenditure for maintaining or renewing stock to fall upon the profits of a particular half-year.

Mr. THEODORE W. RATHBONE, (Director), said that although a Director of the Liverpool and Manchester Company, he did not approve of the plan which they adopted in regard to depreciation of stock; and speaking as an individual, he did not think that that plan would be long persevered in. It was a loose way of doing business. The plan was to leave to the head officer, Mr. Booth, the power of determining, from time to time, what new stock was necessary, and placing it to account of capital. Mr. Booth was a most competent and trustworthy individual; but he thought such a power ought not to be entrusted to any officer of however high standing. They should proceed upon some properly defined principle; and, in his opinion, the best plan was to make an exact valuation of stock, and a revaluation from time to time, so that they might be able to set aside just enough of their periodical profits to meet the depreciation which was discovered to exist, and no more.

Mr. HEYWORTH enquired how long the Liverpool and Manchester Company had pursued their present plan?

Mr. RATHBONE said, they had done so from the first.

Mr. HEYWORTH thought that their persisting in it for so long a period, was pretty strong proof that it had worked well. He had understood from the Chairman of that Company that it had answered well, and that it was not intended to alter it.

Mr. RATHBONE said, he had merely expressed his individual opinion.

Mr. J. B. BOOTHBY (Director) said, it had recently been found necessary, after a working of three years, to condemn 30 old carriages, and supply their places with new; and he thought it would be very unfair if the whole of the charges for these new carriages were thrown upon the present half-year, when the wear and tear had been incurred during the six previous half-years. The principle of a depreciation fund was, in his opinion, the only one which could fairly meet such a case. (Hear, hear.)

Mr. HEYWORTH said, he had recently enquired of Mr. Locke, the eminent engineer, whether supposing a stock of carriages to be put into a thoroughly efficient condition, the expense of keeping them so would not be pretty generally distributed over succeeding periods, and that gentleman had said, it would be so.

Mr. BOOTHBY said, it was precisely on the same principle that the depreciation fund of this Company rested. There were two modes by which the amount of depreciation in any given half-year could be provided for. The first was by exactly valuing the stock at the commencement and close of the period, and allowing for the loss; the other by setting aside a certain per centage upon the locomotive capital. The former method was tedious and troublesome, for their carriages were almost always in motion, now in London and then at York. The Directors of this Company had therefore presumed that an annual appropriation of 5 per cent. upon the value of the stock of engines and carriages, as standing in the Company's books, would meet the depreciation for the year. Of course it would require the experience of a few years to test whether the particular per centage fixed upon in this case was too high or too low, or just sufficient, and the Board hoped, that by the time when they had next the pleasure of meeting the proprietors, such results would be supplied as should enable them to set this point at rest. There had not been time, as this discussion was not anticipated, to prepare an exact valuation of the engines, but with respect to the carriage stock, he was able to say, that, after the most correct valuation which circumstances would admit of, the depreciation in carriages, trucks, &c., had been found to be somewhat greater than would be met by the sum set apart on that account. The amount of 50,000*l.* had been appropriated for carriage depreciation, and he was informed by the superintendant of that department that it would be barely sufficient.

Mr. HEYWORTH did not attach so much importance, as some did, to these periodical valuations. The principal point was to see that the stock was thoroughly efficient.

The CHAIRMAN perfectly concurred in that opinion. The only question was as to the means whereby that efficiency could be preserved. With respect to the opinion that stock should invariably be provided for out of capital, it was clear that a period must come when that plan could not be adopted, namely, when the whole of the capital which a Company were authorized to raise should be exhausted. Two modes only would then remain, either an annual or semi-annual appropriation of part of the profits or an application to Parliament for powers to raise a farther capital. As regarded the portion of the stock not particularly alluded to by Mr. Boothby, namely, the engines, he had learnt from the superintendent that the depreciation fund would not be too much for the wear and tear. For his own part, he could have wished that that fund had been larger at first; but considering the present efficient state of the carriages, which had always been their weak point, he trusted that the per centage set apart would be found sufficient to keep up that efficiency in the establishment which all parties had so much at heart. (Hear, hear.)

After some farther discussion,

The CHAIRMAN moved the adoption of the Report.

Mr. HEYWORTH said, he was greatly gratified, as he was sure the meeting at large was, with the general character and contents of the Report. (Hear, hear.) He was aware that in general it was exceedingly unwise in such a meeting as the present to differ from any recommendations put forth by the Directors, but there were times when such difference could not be avoided. In the present instance the difference was only one of 5*s.* He thought they could fairly divide 4*l.* 10*s.* out of their earnings, and he was satisfied that any per centage short of this would cause much disappointment to a large, he might say to the great, body of proprietors, for it had happened that before the official announcement of the net revenue of the Company, many of the shareholders had made calculations for themselves, and had arrived at almost the same results, and not only expected but claimed as a right a dividend of 4*l.* 10*s.* Nothing could be more remote from his intention, or he was sure from the intention of those

Digitized by Google

whom he represented on this occasion, than to dictate to the Directors, but he was in possession of the wishes of shareholders to a very large extent, and he should not be doing his duty if he did not make these wishes and expectations known, and press upon the Directors and the meeting a compliance with them. Although he was of opinion that no question ought to be carried wholly by proxies, yet he thought considerable weight ought to be attached to them when they represented the views of so large and influential a body of proprietors as that which he had the honour to represent. He had in his possession no fewer than 340 proxies, which had been sent to him without solicitation on his part, many of them representing a large number of shares, and all of them entrusted to him with a view, if possible, to secure a dividend somewhat larger than that recommended to the meeting. Before he left Liverpool he had communicated with one of the largest shareholders in the Company, and that individual was satisfied from the calculations which himself and others had made, and the accuracy of which it appeared was now verified by the official Report, that a dividend of 4*l.* 10*s.* could safely be declared. He would repeat that he had no objection to any other part of the Report but that relating to the amount of dividend. He would therefore move as an amendment that the dividend be 4*l.* 10*s.*

Mr. OMEROD seconded the amendment.

Some conversation ensued as to the most convenient mode of putting the question. It was ultimately agreed that the Report should be adopted, and that Mr. Heyworth's proposition should thereafter be brought forward as a substantive motion.

The adoption of the Report was accordingly put and carried unanimously.

Mr. Heyworth's motion was then again brought before the meeting.

Mr. YATES inquired whether it was competent according to the Act, for a public meeting of proprietors to declare a dividend?

The CHAIRMAN said it was competent for the proprietors to declare a dividend, but it must be out of the ascertained profits of the undertaking. Now by approving of the Report, the meeting had approved of the principle of the depreciation fund, and unless that fund were trenched upon, it would not be practicable to declare a dividend of 4*l.* 10*s.* How far therefore, the declaration of such a dividend would be legal he was not prepared to state.

Mr. L. MOZLEY said, he perfectly concurred in the principle of a depreciation fund, but he could not see why in this Company's accounts it should be mixed up with capital. If he at all understood the working of a railway, it was, that certain parties were empowered to raise money for certain purposes, namely, to make the road and obtain the means of turning such road to account. When these ends had been effected, the capital account ought to be closed. Their duty then was to keep up the machinery in an efficient state from their current revenue. If farther capital were required for the construction of branch lines, or in consequence of an unexpected increase of traffic, more money might fairly be raised, but they were bound out of their current profits from half year to half year to keep their stock in repair, and these charges formed the cost of locomotive power. There was, however, in machinery a vitality, so to speak, which was constantly decaying, and it was their duty to provide against this inevitable result. How was this cost to be met? Certainly not out of capital, but out of the profits of the working, and it was but fair, as had already been said, that the profits of every half year should be charged with the depreciation, by means of which such profits had been obtained. (Hear, hear, hear.) Here then was the depreciation fund, but he could not see what possible connection it had with the capital account. (Hear, hear.) He should be glad to see in the books of the Company an absolute account opened for depreciation. (Hear, hear, hear.) If that were done, the time might possibly arrive when by the improvements daily taking place in machinery and from other causes, the wear and tear of stock would be less than at present, and then they might be able to dispense with adding the usual allowance, or part of it, which could be divided among the proprietors, like the rest of the earnings. By following the plan adopted in this Company they could never know exactly what their capital was. Looking at the figures now before him, he thought a good deal of mystery would be obviated if the two accounts could be kept distinct. (Hear, hear.) With respect to the amount of dividend, he thought it would be impossible to consent to an increase of the per centage recommended by the Directors without anticipating their future profits—a course fraught with the most disastrous consequences. (Hear, hear, hear.) He thought that when the Directors had given a subject like this their most mature consideration it would be very undesirable to disturb their proposition. (Great applause.) The Directors must have known the great anxiety which existed in certain quarters for an increase of dividend, and if they could safely have recommended such an increase he was quite sure they would have done so. (Renewed applause.) He thought the Directors deserved credit for meeting the parties half way, and it was gratifying to find that an increase of 5*s.* could be made without detriment or danger to the Company. (Hear, hear.) He had a strong opinion as to the right of proprietors to interfere in the management of their own affairs, but when they came to direct instead of to be directed, he thought the least they ought to do was to be prepared with figures and arguments such as would remove all doubts from the minds even of those who might in the first instance be opposed to their views. (Hear, hear.) He should be exceedingly sorry if his friend Mr. Heyworth should be compelled to use the proxies in his possession. The course pursued by the Directors was slow but sure, and would in the end be found to be the best policy. (Hear, Hear.) He could readily make allowance for the position in which Mr. Heyworth was placed, but he hoped that gentleman would not persevere in his motion. (Hear, Hear.)

Mr. RATHBONE said, Mr. Mozley had very clearly unfolded the true principles of the depreciation fund. He regretted that the Directors were not at present prepared with an exact valuation of the Company's stock, for it was only by this means that they could ascertain correctly what the amount set apart ought to be. He thought, however, that by the end of the next six months it would be found that the Directors had fixed upon a per centage pretty near the mark. Mr. Boothby had alluded to the difficulty of making a valuation. He (Mr. Rathbone) did not think that such difficulty was very great. In one Company, of which he had the honour to be Chairman, a careful valuation was made periodically by competent parties, the superintendent of the Birmingham line, whose qualifications were undoubted, performing this duty in regard to the engines. He was of opinion that this mode must ultimately be adopted in all Companies.

Mr. RAMSDEN thought it a most dangerous precedent for parties to send up proxies upon such a question as the amount of dividend, when they had not had an opportunity of hearing the Report, or seeing the balance sheet. (Hear, hear, hear.) He thought that those who were dissatisfied with the amount recommended by the Directors ought to have shown that the calculations upon which that recommendation was based were incorrect. (Hear, hear.) He was sure that it would have been as pleasant to the Directors to declare, as for the meeting to receive, a larger dividend, could it have been done safely. (Hear, hear, hear.) For his own part he did not see how 4½ per cent. could be paid without injury to the credit of the Company, when it should be found that they were dividing more than they had fairly earned. (Applause.) They should all have been glad had the dividend been 5*l.*, but when they were informed by gentlemen in whom they had the utmost confidence, and who had given this matter their most serious consideration, that 4*l.* was all that could possibly be divided, he trusted that whatever expectations some might entertain, the good sense of the present meeting, and of the proprietors at large should it be necessary to appeal to them, would not suffer any increased amount to be thrust upon them. (Great applause.)

Mr. OMEROD said, that from calculations made by himself and others, it appeared that after paying a dividend of 4*l.* 10*s.* there would still remain a balance of 6,000*l.* to be carried to the next half-year's account. This was presuming that no farther addition was to be made to the depreciation fund, which, in his opinion, was already sufficiently large.

Mr. BOOTHBY said, he held in his hand a letter from a large Lancashire proprietor, which would show the system of canvassing, that had been going on to obtain proxies. The hon. Director read the letter which was in effect, that a Mr. A. [the name was not publicly given] had called upon the writer to solicit his proxy for the purpose of *compelling* the Directors to declare a larger dividend. The writer had declined to give it, and such he said was his confidence in the Board, that in order to strengthen their hands, he begged to enclose his proxy to Mr. Boothby. [The reading of the letter elicited much applause.] Mr. Boothby proceeded to say that he himself held a considerable interest in the railway, and should have been glad if a larger dividend could have been declared, but he should be sorry to obtain a temporary advantage at the expense of the continued prosperity of the undertaking. (Hear, Hear, Hear.) Whence did it arise that the shares of the Birmingham Railway stood at a higher premium than any other railway or canal stock, as compared with the amount of dividend received? Whence was it, but because the public had confidence in the prudence and discretion of the Management, and knew they would not strain their dividends. (Much applause.) With respect to depreciation of stock, it was evident that for the first two or three years, when every thing was new, fewer repairs would be required than afterwards; and would it be just, that for these two or three years every farthing of profit should be divided, leaving the others to make good the heavier repairs, that as a matter of course would thereafter arise? He thought the per centage plan more simple than any other, but experience alone could decide what that per-centage ought to be. In this instance he thought it was pretty correct. (Hear, Hear.)

Mr. RATHBONE could corroborate the statement of his colleague as to the canvas for proxies. A very large number which had remained in his (Mr. Rathbone's) hands since the first formation of the Company had been withdrawn avowedly for the purpose of being entrusted to Mr. Heyworth on this very question. (Hear, hear, hear.)

Mr. HEYWORTH disclaimed all knowledge of the fact mentioned by Mr. Rathbone. He himself had not personally solicited one proxy, and he denied that the object of himself or of those with whom he acted was to compel the Directors to augment the dividend. He thought the wishes of absent proprietors ought to be expressed as well as of those who were present, and this could only be done by the system of proxies.

Mr. CHAMBERS said, the Directors enjoyed the full confidence of the proprietors, and their recommendation ought to prevail. It was not right that the votes of the meeting should be swamped by proxies. He thought Mr. Heyworth should put his proposition to the sense of the meeting, and if that were against him withdraw the motion. If Mr. Heyworth would not consent to this course, they must adjourn the meeting that the proprietors at large might have an opportunity of rallying round the Direction. (Great applause.)

Mr. HEYWORTH did not consider himself justified, whatever might be his personal feelings, in compromising the proxies. If he thought that the energies of the Company would be at all cramped by the declaration of a dividend of £4 10*s.* he would not for a moment persist in his motion, but he was quite satisfied that such would not be the case.

Mr. HODGSON (Director) could feel for the situation of Mr. Heyworth. He knew that in Liverpool a very strong opinion prevailed in favour of a dividend of £4 10*s.*, and probably this was attributable in some measure to a certain degree of mystification in reference to the depreciation fund. He would state his entire conviction that if the owners of the proxies had been present to hear the explanations that had been given that day, they would have given their votes against the object for

(For conclusion see page 849.)

2. Toll to London and Birmingham 193*l.* 3s. 3d., to be deducted from gross receipts.

7. Receipts include the Northern and Eastern toll, &c.

9. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

10. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the Liverpool and Manchester line, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 114 (83+31.)

12. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

14. The 26*l.* 19s. 3d. from goods, &c. is for toll only.

15. Ten per cent. is the maximum dividend allowed by the Company's Act.

16. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 40 per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

18. The amount given in the table includes the receipts from the horse coaches from Hayward's Heath to Brighton. The divisor, therefore, is 46, although only 37¾ miles of the railway are open, including the Shoreham branch of 5½ miles. The toll to the Croydon Company is not included in the amount stated in the Table.

19. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

20. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

21. Capital includes that provided for the Gosport branch, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50*l.* discount.

23. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

24. The 5,060*l.* 1s. 7d. are the receipts after deducting the toll to the North Midland Company, and exclusive of receipts from carriage of mails.

25. The receipts for goods, &c. include, carriages, 30*l.* 19s. 0d.; horses, 8*l.* 2s. 6d.; dogs, 3*l.* 19s. 0d.; parcels, 211*l.* 1s. 6d.; cattle, 43*l.* 1s. 0d.; corn, 14*l.* 10s. 8½d; heavy goods, 507*l.* 15s. 7d.; coal, 102*l.* 12s. 8d.—Total, 922*l.* 1s. 6½d.

28. The receipts stated are after deduction of Liverpool and Manchester toll.

29. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway.

30. The capital of 500,000*l.* includes that provided for harbour and works as well as railway.

32. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

A Proprietor of the Birmingham and Gloucester Railway.—*The note to the Traffic Table was left out designedly. The arrangements for the conveyance of the mails are now completed.*

A Subscriber *in reference to the Great Western Railway is referred to our last week's number.*

Pro Bono Publico (*Liverpool*).—*We cannot bring charges against the engine driver upon the strength of anonymous statements. Our correspondent should communicate in his own name with the Engineer-in-Chief or Superintendent. If the man be really so unfit as our correspondent represents him to be, he ought unquestionably to be sent adrift at once.*

Uttoxeter.—*The toll is* not *included.*

A Subscriber *Bristol will perceive that we have availed ourselves of his communication. He has our best thanks.*

A Shareholder's *letter on the Manchester and Sheffield Railway we should be happy to insert at a less busy period, but probably the notice already taken of the subject will be sufficient to effect the object in view.*

Lancaster and Preston Railway.—*We have not received any report of the proceedings at the late meeting.*

P. Z.—*No good purpose could be served by inserting his letter.*

The same answer to Ignotus.

*** It is requested that in future all communications intended for the *Railway Times* be addressed, "To the *Editor*," and not to any individual by name, now or recently connected with the establishment.

*** The great pressure of the meetings compels us this week to issue an extra sheet, as we are unwilling to omit or abridge the very interesting details which these meetings supply.

THE RAILWAY TIMES.

SATURDAY, AUGUST 14, 1841.

THE half yearly meeting of the London and Birmingham Railway Company was held yesterday, and a full account of what transpired on that occasion will be found in another part of our journal. In all such cases, the grand point is the amount of dividend, and we are happy to find that in this instance there is an increase as compared with former periods, notwithstanding that in this Company, as in the Grand Junction, to which we have referred in a subsequent article, the dividend is for the first time spread over the entire capital of the Company. A divdend *nominally* at the rate of 8½*l.* per cent. per annum was yesterday declared; the *real* dividend, in respect of many of the shares, is much higher, for it will be borne in mind, that although only 90*l.* has been called for upon the original shares, and only 5*l.* upon the quarter shares, the dividend is paid as if the full amounts of 100*l.* and 25*l.* were respectively paid up. Another, and we think a better, arrangement exists with respect to the 32*l.* shares, both new and old; but to those parties who have retained their original holding, and taken up from time to time their due proportion of the subsequently created shares, the tangible result remains the same.

It will be seen from our report of yesterday's proceedings, that a strong attempt was made by certain Liverpool proprietors to induce the declaration of a larger dividend than that which the Directors had deemed it prudent to recommend. We are by no means partial to the system of keeping back large balances, for we think it has a tendency to lead Managements into temptations of various kinds; but on the other hand, it is extremely bad policy to "strain a dividend," as one of the speakers at the meeting expressed it, and we fear that the latter practice is much more common among joint-stock Boards than the former. Be this, however, as it may, we do not at all approve of the plan of collecting together a large number of proxies with a view to sway the decision of particular points, more especially as proxies are usually surrendered upon grounds far too light. They are oftentimes entrusted to an influential proprietor, more as a matter of personal compliment than any thing else, and thus the notions of one individual, however absurd or inconsistent, may come to control the good sense and enlightened views of large bodies of proprietors. We question whether the abolition of the proxy system altogether would not be beneficial. The clandestine mode in which proxies are frequently canvassed for, as well by Directors as by individual proprietors, is pregnant with mischief. If parties are not sufficiently interested in the settlement of an important question to give their personal attendance at the place of meeting, let them go unrepresented. In the particular instance referred to, it will be seen that the motion, for the support of which the proxies were intended, was ultimately, and as we think very properly, withdrawn.

We are glad to find that while the revenue of the Birmingham Company has been gradually increasing, the expenses of working have been considerably diminished. So good an example will not, we hope, be lost upon other Companies.

There are various other interesting points in the Report, and in the discussion to which it led, to which we have neither time nor space to allude at present. The arrangement with the Birmingham and Gloucester Company will, we make no doubt, prove mutually beneficial to the two Companies and advantageous to the public. It is gratifying to find that the scandalous verdict of the Harrow jury has been quashed, so far as any pecuniary infliction upon the Company is concerned. We should have been much better pleased had such an exhibition of ignorant prejudice and, we fear, personal pique as that verdict presented, never disgraced the records of one of the most ancient and most useful courts of enquiry in the realm.

THE Report of the Directors of the Grand Junction Railway Company, which with a notice of the proceedings at the late general meeting will be found elsewhere, bears very pleasing testimony to the continued prosperity of that great undertaking. A dividend for the half-year of 5*l.* 10*s.* per cent. has been declared, which although nominally less than some that have preceded it, is in reality greater, as this per centage is now for the first time divided upon the total expenditure of the company, the entire debt having been recently capitalised. This railway, in common with every other commercial speculation has, it appears, felt very sensibly the effects of the present extraordinary stagnation of trade, and yet the traffic for the past six months exceeds in the aggregate that of the corresponding period of last year. From a very valuable table laid before the meeting by the Chairman, it appears that this increase has arisen principally under the head of merchandise, there having been a slight falling off in the receipts from passengers—which is attributed in the Report mainly to the abstraction of a portion of the coach traffic by another Company, whose rivalry has now, however, ceased.

In his remarks subsequent to the reading of the Report, the Chairman adverts to the "astonishingly greater" number of passengers upon those railways where exceedingly low fares are adopted, as compared with lines where the charges are "high, or even moderate," and gives it as his individual opinion that some reduction might, under certain circumstances, be introduced with advantage upon the Grand Junction line. Few men have had better opportunities than Mr. Moss, or have profited more by them, of observing the various effects of railway arrangements, and we are glad to find him advocating the policy of low fares as a means of contributing to the augmentation of the Companies' funds. Mr. Moss, however, draws a very proper distinction between isolated lines, and lines such as the Grand Junction, which form but one link in a long chain of railway communication. No reduction of charge, even if very material, upon a line of 40 or 50 miles, would tempt passengers to a journey of four or five times that extent, the fares upon the other portions remaining as before. Nay, were the Grand Junction Company, for example, to carry passengers *for nothing*, very many of those who now travel over their line would not take one journey the more, for the fare of any *one* of the connected lines forms but an unimportant item in the travelling and town expenditure of passengers from the "far north." This, however, is no reason why a very different class of customers might not be secured to the Company, and if the suggestion of Mr. Moss as to the reduction of the *short* fares upon the Grand Junction line could be fairly carried into effect, there is little doubt that it would prove beneficial to all parties. The local traffic of many of the larger lines is still far from being developed to the extent which might reasonably have been anticipated, and indeed has, we fear, been too much overlooked in the anxiety of Boards of Management to secure an apparently more profitable trade—we say, *apparently* more profitable, for we are convinced that, with proper care, a species of intermediate traffic might be created which would gradually extend itself, and ultimately become, in proportion, more beneficial to the Companies than any other. Our sentiments in regard to fares are sufficiently well known to rescue us from any imputation of contending for what are called *high* charges, but at the same time we cannot conceal from ourselves that there is a great deal of mere *ad captandum* assertion brought forward upon this subject, in the advocacy of *low* fares upon *all* lines, under *all* circumstances. Fares may be too low as well as too high, and that which upon one line would bring the charges under the former head, might on another rank them under the latter. *Cheap* and *dear* are comparative terms, and nothing but experience in particular cases can determine what is the most beneficial limit. To generalise upon such a question will, in most cases, be found to be productive of mischief. We are glad, nevertheless, to see the results of the working, in this respect, of the several lines brought before the public, as some hints for the guidance of many Companies may be be deduced from the experience of one. We

Digitized by Google

doubt whether Mr. Moss's suggestion as to *short* fares could legally be carried out—upon some lines it certainly could *not*—and there would be practical difficulties in the way of such an arrangement, which, however, might perhaps be overcome. It was, if we are not mistaken, upon this very line that passengers proceeding throughout its entire length might at one time save something in the fare, by taking out a ticket for an intermediate station, and then booking themselves from that station for the further terminus, instead of taking out at once a ticket for the entire distance. Intimately connected with the rate of railway fares is the present mode of levying the passenger tax, and if the alteration alluded to by Mr. Moss were effected, there is reason to believe that some of the poorer districts of the country would be considerably benefitted, and the Companies relieved from the pressure of a most unequal impost.

Into the other topics touched upon by Mr. Moss we need not minutely enter. His suggestion for the payment of quarterly dividends is not new. Several months ago Mr. CRAWSHAY, the Chairman of the Northern and Eastern Company, pledged himself at a public meeting of the proprietors to carry such a scheme into effect whenever the revenues of that line should suffice for the payment of dividends, which, we trust, will be at no distant day.

We are sorry to find that from some peculiarity in the Grand Junction Acts of Parliament, the Company is for a time—we hope only for a time—to be deprived of the valuable services of Mr. Moss. There is danger certainly to be apprehended from any plan which has a tendency to convert Boards of Direction into close boroughs, but it is the fault of the proprietors themselves if the eligibility of retiring Directors for re-election, according to the practice of the Companies in general, be so far abused; and on the other hand, we can imagine the occurrence of very serious injury to an undertaking from the effect of a prohibitory regulation, such as that under which the late Chairman of the Grand Junction Company has retired from the active duties of office.

Several changes are announced in the executive department of the Company, and without the smallest disposition to detract from the qualifications or meritorious services of the gentlemen who have resigned, we see no cause to fear that the Company's affairs will in any way suffer from the new appointments.

IT will be seen from an extract which we reprint from a provincial contemporary, that the "Company" associated for the prosecution of the Stafford and Rugby Railway project has been virtually dissolved. It appears that the getters-up of that notable scheme persevere nominally in their intention of still further annoying those who have already been so much harassed by their proceedings; but after so unequivocal a confession of weakness as their official manifesto implies, we have little fear that any further steps will be taken to expose themselves again to such an ordeal as that through which they have recently passed.

We have no wish to trample upon the fallen, else might we comment with some severity upon the address of Mr. EDWARD TOOTAL to those who for the last year or two have been furnishing the supplies for his very disinterested demonstrations. Its truthfulness and good taste we leave to the appreciation of our readers. If, as Mr. TOOTAL asserts in his speech, the approbation of the meeting were "a sufficient reward for all his exertions to promote the accomplishment of the Stafford and Rugby Railway," we take it for granted that he is prepared to refund the very handsome income which he has recently been receiving from the funds of the now defunct "Company." We are certainly somewhat surprised that so profitable a speculation—profitable we mean to such disinterested gentlemen as Mr. EDWARD TOOTAL—should have been given up without one more attempt to obtain for it the sanction of the legislature. *Another* parliamentary contest would have secured certain perquisites which, if we are not greatly mistaken, those parties will find it difficult to attain in another quarter, who for many months past have been doing all they could to work injury to railway interests generally, and to one or two lines in particular, for purposes which we do not care to characterize. As for the Stafford and Rugby project, we can only say—*Requiescat in pace.*

THE proceedings at the general meeting of the London and Brighton Railway Company, held on Monday, and of which a full report will be found in another part of our number of to-day, were altogether of a very satisfactory character. The opening of the whole line at so early a date as the 14th of next month must prove a matter of unmixed gratification to those who have invested their property in this important undertaking, as it cannot fail to be highly advantageous to the public. The magnitude of the works upon several portions of the line is such as to have led many persons—usually very competent judges—to pronounce them totally impracticable, and this at no very remote date, and long after the heats occasioned by the memorable contest before Parliament had had time to subside. So much the more credit, therefore, is due to the Engineer, and to the Directors, for the energy and ability with which the works have been prosecuted; and so much the more must it be a source of satisfaction to the proprietors, that although the estimates have been exceeded, it has not been in nearly so high a ratio as on many other lines where there has been far less excuse for errors in calculation, or ground for unforeseen and unexpected disbursements. As to the mode in which the works have been executed, there seems to be but one opinion; and we are glad to find, from the explanations given by Mr. RASTRICK, in answer to the very proper inquiries of one of the proprietors, that the effect of this very careful construction is likely to be felt most favourably in the future maintenance of the road. Economy is highly desirable in all undertakings of this description, and we wish it were studied much more than it generally is; but there is a false and deceptive, as well as a true and permanent economy, and it would be no difficult matter to point to lines of railway where the former has been attained at the expense of the future welfare of the undertaking.

We are most agreeably surprised to find that the traffic upon the portion of the Brighton line recently opened has surpassed all previous expectation. We confess we had some misgiving as to the result of the present partial opening, when we reflected upon the extraordinary competition which the horse coaches present, the comparatively high fares and moderate speed of the Company, and the inconvenience and annoyance which must ever attend the transfer of passengers from railway to road. That all these difficulties have not deterred the public from patronising the line to so great an extent as the Directors' Report makes known, is, as was remarked at the meeting in reference to another matter, as strong a proof as could be presented not only of the general estimation in which the line is held, but of the excellence of the Company's arrangements, and a pleasing omen of what is to be expected hereafter, when the drawbacks to which we have alluded shall no longer exist.

We regret to find that the unfortunate differences between Mr. ISAAC LYON GOLDSMID and his late colleagues of the Direction have not yet been brought to an issue. The matter is likely, it would seem, to be adjudicated upon by a legal tribunal, and need not therefore be more particularly referred to in this place, further than to express our deep regret that what appears to have been, and indeed is acknowledged by the very able Chairman of the Company to have been, an injudicious act of kindness on the part of the Board should have led to results which on every account are so much to be lamented. We would fain hope that the dispute may after all be amicably arranged, without prejudice to the Railway Company on the one hand, or detriment to the rights of an individual on the other.

Considerable discussion, it will be seen, arose out of the arrangements made by the Directors for the festival in honour of the partial opening of the line. It is a pity that any ground should have existed to lead even one proprietor to imagine that it was the desire of the Directors to draw invidious distinctions between the guests of the two days, and we trust that should any similar celebration be decided upon when the line comes to be opened throughout, means will be taken to avoid even the appearance—we are satisfied that in the present instance there was no deliberate intention—of instituting these "odious comparisons." If all cannot be accommodated at once, let all be served alike, and those who grumble then will meet with very little sympathy. At the same time we must agree with the Chairman in thinking, that the time of a public meeting—and we all know how valuable time is to gentlemen of the City—is very unprofitably occupied in discussing these minor points, to the oversight of far weightier matters. A few questions such as were put by Mr. PARSONS (who we trust will continue his exertions for the elucidation of railway accounts) would tend more to the benefit of shareholders at large than an hour's debate upon such topics as the conduct of a complimentary *fete*, with all the altercations and feelings of personal animosity or mortified vanity in which such discussions usually originate, and in which, in nine cases out of ten, they never fail to end.

WE give in another column the Report of the Directors of the Edinburgh, Leith, and Newhaven Railway Company, laid before their constituents at the late half-yearly meeting; and (according to the printed circular sent to us from the Company's office) "unanimously approved of"! We have no means of ascertaining at this moment the names of the parties present at the meeting, nor even the number; but that any considerable body of *bona fide* shareholders could "approve of" *such* a document passes our belief. It ought to have been at once scouted from the meeting. A very few words will satisfy our readers on this point.

The only account it contains of receipts and payments consists of TWO SOLITARY ITEMS, namely,

Digitized by Google

"Received since last Report..£9,558 13 9
Expended ditto ditto..... 11,049 3 7½."

This is "cool" certainly! From what *sources* the first item has been received, or in what *manner* the second item has been expended, no particulars are given: and, for any thing that appears to the contrary, the one might have been derived *from the sale of the shareholders' own land and houses*, and the other might have been squandered *uselessly and lavishly*. At all events no information is given on these points which are of vital importance.

In their previous Report the Directors gave a pledge that this line of "one mile and a quarter" (*which has now been upwards of five years in progress*) should be completed at the latest by the 1st of May last; and yet the works are at this moment as unfinished as before!

"The Directors have *now* (!) settled the terms on which they are to obtain possession of the remaining property;" but what those terms are, or what the cost will be, they most carefully conceal, as though *that* were no business of the Proprietors.

They state that 24,000*l.* more will be required to finish their "mile and a quarter" Railway—that of this sum 10,453*l.* will be raised by calls in arrear (but which none but themselves affect to believe will ever be forthcoming)—and that the deficiency will be supplied by selling out the forfeited shares at 10*l.* *discount!* Now it is well known that the shares with *the full amount* paid up are unsaleable at any price, and that no man in his senses would take them at 10*l.* discount. In fact we are credibly informed that they have long since been hawked about without finding a purchaser, *for 5s. apiece*, with 19*s.* per share paid up!

These patterns of Directors allege that the "necessary amount of capital" to justify them in borrowing has been paid up. The Act of Parliament requires that at least 50,000*l.* shall have been paid up before they shall borrow. Now this sum has *not* been paid up, and therefore they have no right to borrow.

The Report furnishes no account of the amount of calls paid up, or of the amount of arrears, or of the number of shares outstanding or forfeited. In short, its object throughout appears to be to conceal all that should have been known: thus leaving this wretched concern involved in far greater mystery and obscurity, as to the real state of its affairs, than before. This much, however, is clear, that the shareholders will never derive one farthing of return from the capital advanced.

—o—

We have much pleasure in drawing attention to the Report made by the Directors of the Eastern Counties' Railway Company to the shareholders, showing that the undertaking is gradually progressing, and that a completion of the line as far as Colchester may be reckoned upon as a certainty by the autumn of next year. We heartily hope that the expectations of the Directors may be realised. Much as the undertaking has been depressed in public estimation, there appears every probability that it will ultimately recover its position, and rank with the best trunk lines in the kingdom. The Report announces a change to have taken place in the Editorial management of this paper; we have to confirm the fact, and to assure our readers that while we shall certainly feel it our duty to comment upon the public conduct of every Railway Board, and praise their merits or condemn their faults, we intend to avoid all language which can be considered personally offensive.

A correspondent, whom we know to be practically acquainted with the subject, has sent us the following remarks (principally extracted from a late number of the *Sunday Times*) in reference to the salaries of railway officers. We have much pleasure in giving them still further publicity:—

"The labourer is worthy of his hire."—It has been our duty often to speak of the neglect of public servants; but it has ever been a pleasure to us to bear testimony to their attention. Whilst we see the favoured few in high offices, with prodigious incomes, doing duty by deputy, we cannot refuse to sympathise with the countless many who work hard, rise early, and go to rest late, and all this for a paltry pittance. The railway servants attend for a *great length of time*, and during *every day* of the week; the duty of many involves exposure to all sorts of weather, and frequently is attended with danger to life or limb. For all this the remuneration is pitiful in the extreme.* Salaries vary from 50*l.* to 100*l.* per annum; but the mass of men employed do not progress beyond the minimum. This is too bad. Amid the clerks (better paid in amount, but not according to ordinary classification) the evil is as great. *No set of men in England, who are recipients and depositaries of such sums of money* as they are daily and hourly, are PAID SO ILL. Many are paid only about 30*s.* per week, or 78*l.* per year, or 4*s.* 4*d.* per day for seven days; whereas a joiner or blacksmith's wages are 4*s.* 6*d.* to 5*s.* 6*d.* per day!! exclusive of overtime if he work after six o'clock at night, and extra pay if he work on Sunday. Men who take money from midnight till morning, as all clerks on night trains do, should be amply remunerated. It will be answered that there are valuable secretaryships, the happy holders of which realise from 500*l.* to 1,500*l.* per annum. We are not speaking of the luxuries of the few, but the wants of the many. We could easily prove, by a little statistical research, how shamefully the overworked servants of the rails are *rewarded* (!). But we deem it only necessary at present to call the attention of the Directors to the subject. *Few work well that are not paid well*; and if any duties should be adequately rewarded, surely it is those involving broken rest and injured health,—heavy responsibility, and probable danger. It is but common justice to give the labourer his hire:—let us whisper to the worldling that it is *common sense* too. If public duty is to be adequately performed, if speculators hope to find their offices free from defaulters, and the lives of their countless passengers remain (save by mere casualties) unendangered—the railway servants, including ALL those under 300*l.* a year, must be better paid. The continually accruing changes prove the reform we suggest is called for at once, and in all quarters. We trust it will be readily responded to.

—o—

A Windsor correspondent supplies us with some additional illustrations of Post-office mismanagement, as adverted to in our last week's paper. It appears that letters dispatched from London to Windsor, before the existence of railways, used to be delivered in about 14 hours, whereas the time is now prolonged to 17 hours! Not long since the residents at Windsor had two posts in and out, which were tolerably convenient as to answering letters, however snail-like in their transit; but a recent Post-office change has deprived them even of this, and rendered the day mail from thence all but useless. The following abstract of the past and present arrangements will most clearly prove these positions.

Formerly letters received at 8 a.m. or at 1 p.m., could be answered till 3 p.m. or 9 15 p.m., now letters received at 10 a.m. or at 1 30 p.m., can only be answered at 11 0 a.m. or at 9 15 p.m—thus reducing the interval from the first delivery from 7 hours to 1 hour, and depriving parties of any reply to the second delivery till night! Well, may our correspondent exclaim that the Post-office is a century behind the age!

—o—

It appears that the paragraph to which we recently referred, respecting the alleged abolition of fees to mail coach guards was not altogether correct. The scheme of substituting a fixed salary for casual gratuities was devised some two or three years ago, but as yet has been only very partially carried into effect. "Circumstances," says the notice which has appeared in contradiction of the original statement, "have hitherto prevented its general adoption." What these circumstances may be we are utterly at a loss to conjecture; they must be very important indeed, to justify the continuance of a practice which is unjust and annoying to all the parties concerned.

—o—

The following appeared in several of the daily papers of Monday last:—

"A steam coach or, more properly speaking, a steam carriage, on an improved principle, and carrying sixteen persons, belonging to the General Steam Company, was on Saturday last tried on the road between the north eastern point of the Regent's Park and the Manor House at Tottenham. The carriage, which is an experimental one, has four transverse seats; each of which accommodates four persons; the boiler and apparatus are behind the seats; the conductor, or he who has the management of the carriage, sits on the front seat and guides it, and governs its speed by a sort of handle which rises from the footboard. The carriage left the York and Albany Tavern a little after four o'clock, and proceeded with a full load of scientific gentlemen to the Manor House, Tottenham; here it was turned round with perfect facility, by the conductor, and it returned to the York and Albany Tavern. The distance traversed is between eight and nine miles, it was traversed in rather less than half an hour The road undulates considerably, and there are some steep ascents; nevertheless, the speed up hill was good, certainly twelve miles an hour; on level ground it was fourteen; and on the descents sixteen or eighteen miles. The carriage was turned round when going at the rate of ten miles an hour. The conductor had a perfect command of the carriage, and caused it to pass between carriages drawn by horses, carts, &c., with which some portions of the road were crowded, without coming in contact with any of them, and with a facility of management that was surprising. The appearance of the carriage, and the rapidity of its motion, caused several horses to shy, but no accident ensued. There is no visible escape of steam, nor is there any annoyance of smoke. The trip was very satisfactory."

It is not a little remarkable that, though we hear so much of "satisfactory" *experiments* with these steam coaches, no progress appears to have been made in bringing them into practical and daily use. How is this? Are the "experiments" directed mainly against the pockets of the shareholders?

—o—

It is stated in the Irish papers that a majority of the Grand Jury of the county of Kerry have signed a petition in favour of the Government plan of railways in Ireland.

—o—

We beg to call attention to an important case under the head of Railway Adjudications, in which the Birmingham and Gloucester Company were concerned.

* *Rate of Wages on a Cheshire Railway.*

Intermediate station keepers, 20*s.* per week, seven days attendance, very long hours, 2*s.* 10½*d.* per day.

Switch-keepers, 20*s.* per week, seven days attendance, from 5 a.m. to 9 p.m., 2*s.* 10½*d.* per day.

Policemen, 20*s.* per week, seven days attendance, from 5 a.m. to 9 p.m., 2*s.* 10½*d.* per day.

Guards, 24*s.* per week, seven days attendance, 3*s.* 5*d.* per day.

RAILWAY OFFENCES AND OFFENDERS.

Our list this week is fortunately very light.

The first case is that of a mason, named Crowder, who was last week charged before the Leeds magistrates with an aggravated assault on Joseph Atkinson, a servant of the North Midland Railway Company. The prisoner went to the railway in a state of intoxication, when Atkinson, who was stationed at the entrance, refused to admit him. He went away for a short time and then returned, and after being again refused admittance, he struck at Atkinson,—in the first instance with his fist, and afterwards with an umbrella, the end of which he forced into his left eye. The man's conduct was excessively violent, and it was with difficulty he was secured. The facts of the case having been proved, he was fined 5*l.*, including costs, and in default of payment, sent for two months to Wakefield House of Correction. The judgment is a most righteous one.

A few days ago, before the Mayor and borough magistrates of Stockport, Henry Johnson was charged with trespassing on a part of the Manchester and Birmingham Railway at present unfinished, and in the hands of the contractors.

In stating the circumstances, Mr. W. Vaughan, as advocate for the Company, observed, that in consequence of many depredations on the Stockport Viaduct, and on the iron keys, pins, balls, and other materials unavoidably lying about; and also of the dangerous practice of young persons getting upon the battlements (a fall from which would be certain death) a fence of boards had been placed at the entrance of the viaducts on the Cheshire side. In addition to this, two constables were regularly employed by the Company in endeavouring to prevent these trespasses and thefts. On Sunday, the 1st instant, a number of boys came upon the line, pulling the pieces of timber about for their amusement, and the defendants went to the boarded fence above mentioned, and forcibly tore from it a piece of wood nailed as a mark for the plate layers. This he was carrying off when the constable, who was stationed near, pursued him, and took him into custody. The boy's mother hearing of this, raised a hue and cry, and followed the constables with a mob of 300 and 400 people, who commenced a violent attack upon him and rescued the prisoner. Luckily for the constable his fellow officer, Stewart, came to his aid, and saved him with great difficulty from the mob. Witnesses were then called, who proved these facts, and on the magistrates appealing to Mr. Murnane, the Superintendent of the station, he observed that the Company had been at a very great expense in fences, notice boards, and policemen, for the protection of this part of their property, and he expressed a hope that the bench would afford them due protection, as fromthe reports made to him, nearly all the depredations and trespasses were committed by mischievous boys of this description. The defendant was ordered to pay the amount of damages proved, together with costs amounting to 13s. 6d.

William Beech, the most active of the mob, was then brought up on a warrant for forcible rescue of the prisoner from the constable. The constable proved that in his peril he called upon the defendant to assist him, instead of which Beech struck him a violent blow on the face, which caused him to bleed very profusely, and snatched his prisoner from him, and enabled him to escape. Beech was ordered to find bail and keep the peace, and pay all costs.

NORTH MIDLAND RAILWAY.—RAILWAY COMMUNICATION WITH SCOTLAND.

To the Editor of the Railway Times.

Sir,—Can I obtain a small space in your journal, to address a body of gentlemen, the Directors of the North Midland Railway, in whose official acts I am interested? It gave me pleasure to see that they are bestirring themselves to obtain a portion, a very large one as I hope it will turn out, of the Scotch traffic—and that they have established a route partly by rail and partly by coach, which makes it "easy and pleasant to travel between London and Edinburgh in 27 hours, with one night only in railway carriage."

I am not going to trouble you with my opinion on the relative merits of the east or west railway communication to Scotland, beyond this, that it *will be a considerable time before any railway is made in either direction.* In the mean time, as a correspondent of yours observes, so much nearer Scotland are the railway lines completed on the east coast, that the stream of traffic is leaving the western parts of the kingdom, and passing by the North Midland and Great North of England lines to Darlington and Newcastle.

I have no means of ascertaining the entire correctness of this statement, further indeed than that the traffic on the North Midland is very much increased, but it certainly seems to be highly probable, that the result he speaks of might be brought about to a far greater extent than has yet been the case, and that, whatever may be decided upon as to the east or west coast line of railway, *in the mean time*, that is to say *for several* years, the Scotch traffic might, by the combined efforts of all parties interested judiciously applied, be secured to the existing east coast railways, extending as they now do, in one uninterrupted link to Darlington, There should be a grand effort made to complete this line to Newcastle without loss of a day. But, in the interim, a well arranged system of coach accommodation begining at the terminus of the present lines of Northern railways, might do much. I am gratified to find that this must be the view taken by the North Midland Directors of the existing state of railway communication towards Scotland, and that, forming as their line does, such an important portion of that route which ought, in the present state of things, to obtain and secure the stream of traffic in that direction, they have addressed themselves to bring about such a desirable accession of business to their line. The public, I feel persuaded, only require due encouragement to adopt that route which is obviously the most direct and expeditious, and the parties interested in obtaining the traffic, should not be diverted from this their present object, by any discussion as to what may or may not be decided upon regarding the highly important but more distant undertakings—the east and west coast lines of railway to Scotland. Whichsoever line is fixed upon, it will require years to complete. This must be the case under the most favourable circumstances. *At present*, however, there is an uninterrupted line of railway *very far on the way* to Edinburgh, and the completion of the Great North of England would carry the east main lines of railway 60 or 70 miles further north than the west, which would put an end to all competition.

But *now*, let us secure to our lines all the business we can—"A bird in the hand is worth two in the bush."

I am happy to think the North Midland Directors are alive to the truth of this adage, and that they are preparing to profit by the disposition on the part of the public to travel between the two countries by that line of railway communication which, as *railways now exist*, affords the greatest facilities for convenience and despatch.

What may be the state of railway affairs four or five years hence, we can none of us say; but the intervening period is to be provided for, and for that space of time is the Scotch stream of traffic to take the East course or the West? It ought, if the North Midland Directors understand their duty, to fall into their line, and they must not fail to make the most of their present favourable position.

C. R.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

Sir,—I quite agree with your correspondent, "A Sufferer," whose letter appears in last week's *Railway Times*, that the Directors, or whoever have the management of this Railway, are proceeding in the most injudicious and unwarrantable manner, in attempting to carry on the works simultaneously on the whole length of the line. If they would be contented to make and open the portion from Manchester to Glossop *first*, there might be some chance of retrieving the concern from total failure. I make this remark in no ill-natured spirit, having every motive for wishing prosperity to the undertaking. I was first entrapped to become a *nominal*, and then compelled by law to become a *real* shareholder, to a considerable amount; and I should like to see my money not entirely thrown away, which I am sure it will be if the Company persist in their mad scheme of making the line throughout, without first trying the portion from Manchester to Glossop; for if that does not pay, we may be sure the whole line will not, and in the mean time all our money is lost instead of a part.

I perceive you have extracted from the *Liverpool Standard* some very proper remarks on a case in the Insolvent Debtors' Court, in which this Company have distinguished themselves by *opposing* the discharge of a shareholder who had been ruined by their law proceedings. Though the writer is evidently under the impression that this man was wittingly, and *bonâ fide*, a shareholder, he expresses a just indignation that he should be persecuted even beyond mere *ruin* by the Company; but what would he have said, if he had known that the poor fellow, like myself and many others, never intended to become a shareholder at all, and never supposed he was one, till the Company's *writ* made him aware of it!

I am, Sir, yours, &c.

A VICTIM.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—As a proprietor in this well-organized railway, I could not fail to notice the strong demonstration made by the constituency at this day's half-yearly meeting, against a contemplated departure from the well-understood range the Northern and Eastern was to be restricted to, in opposition to an adverse opinion entertained by a member or two in the Direction, who were strongly prejudiced against stopping at Bishop's Stortford, and so leaving to an auxiliary the extension of the line to Cambridge.

The Director who advocated most strongly this extension, by the Company disregarded entirely, the fact of *a weakened proprietary* and the *heavy drain* the calls of the current year on the purse-strings have proved; he might *possibly* have originated the notion of a surplus call in December or January to carry out a useless point during the Winter season, *at greater consequent costs.* The proprietary might at least, if any should be disposed to second the intention, have been permitted the option of volunteering such superfluous liberality.

It is ungenerous, seeing that they had in the exigence borne the heat and burden of the day as original subscribers, owing to the enormous number of shares forfeited, and which said Director would further harrass, by deluging the money market with said forfeitures, to create deficient funds, and *proportionately* diminish the nominal value of the shares extant.

It will be wise in the staff to reconsider this injudicious idea; prudent shareholders would be better satisfied with a moderate course than to see 3,000 shares forced into circulation to carry out a wild conception, to the principal of which they are totally opposed. Sir, your humble servant,

SCRUTATOR.

LONDON AND BIRMINGHAM RAILWAY COMPANY—GENERAL MEETING.

(*Continued from page 843*).

which the proxies were obtained. (Hear, hear.) He (Mr. Hodgson), even as a Director, had at first thought that a dividend of £4 10s. could have been made, but on more minute investigation he was sensible of his error. The Directors were wholly in the hands of the proprietors.

Mr. OMEROD enquired, what was the number of Directors?

The CHAIRMAN replied 17.

Mr. OMEROD wished to know whether the Directors themselves considered *that* the best number for conducting the affairs of the London and Birmingham Railway.

The CHAIRMAN said he was scarcely prepared to speak to that point. It might occur that a gentleman presented himself of very great eligibility, if he might use the expression, but he had no hesitation in saying that he thought the principle adopted by the proprietors of limiting the number of Directors to 19 was a sound one. (Hear, hear.)

A PROPRIETOR enquired how the depreciation fund was invested.

The CHAIRMAN said it had been applied to replace capital. Had it not been so, the Directors would have had to issue so many more loan notes.

After some farther conversation,

The CHAIRMAN said, he should fail in his duty if he did not acknowledge the value of the remarks made by Mr. Mozely. He perfectly acknowledged the right, nay the duty, of proprietors to look into their affairs, and thought every deference ought to be paid to them by Boards of Management; but if proxies were to be used to force a certain course upon the Directors, they must be relieved from the responsibility. He was somewhat surprised at hearing the word "mystification" applied by his friend, Mr. Hodgson, to any part of the Company's accounts. He trusted that such a term would never be truly applicable, but if any means could be pointed out whereby they could remove the appearance of mystification, he would would pledge himself that before the next meeting such means should be adopted. (Hear, hear, hear.) They had shown the principle of the depreciation fund, and should be extremely obliged for any information as to the smallest possible improvement in carrying it into effect. (Hear, hear.) With respect to the dividend, the matter had certainly received the most anxious attention of the Board, and his friends and colleagues, Mr. Hodgson and Mr. Rathbone, had at first been in favour of a larger amount, but further examination had convinced them that it could not be accomplished with due regard to the best interests of the Company. (Hear, hear.) He trusted that Mr. Heyworth would not press his motion. (Hear, hear, hear.) Hitherto they had had united Directors and an united Proprietary, and he should be sorry if that harmony were now disturbed. (Hear, hear, hear.) The opinions upon which the proxies had been granted must have been formed before the full accounts were accessible, and he thought it scarcely just that under such circumstances these proxies should be used. (Hear, hear.) He himself was in possession of proxies which had been spontaneously forwarded from Lancashire, when it was known that an attempt was to be made to force an increase of dividend beyond that which the Directors believed to be right. (Hear, hear.) He completely exonerated Mr. Heyworth from the charge of having canvassed personally for proxies; but that a canvass had taken place was beyond question. The Lancashire gentlemen should recollect that they had received a very considerable *bonus* by the creation of new stock. (Hear, hear.) He would repeat that he certainly had not expected, and at Birmingham on the occasion of their last meeting no anticipations had been indulged in, that there would be *any* increase of dividend this half-year. He trusted the meeting would give the Directors credit for being anxious to secure a larger dividend for themselves as well as for their co-proprietors; but in fixing it at the sum recommended, they were satisfied that they were not foregoing, but only postponing its realization. (Great applause.)

Mr. HEYWORTH wished to know if the Directors were disposed to limit the depreciation fund.

THE CHAIRMAN could not answer that question without consulting his colleagues and the officers of the Company. They had too deep an interest in the dividend to wish to increase the depreciation fund unnecessarily. He did not think that the present per centage was too large.

[Mr. Heyworth was pressed by several proprietors to withdraw his motion, and he thereupon consulted with some of his Liverpool friends who were around him.]

Mr. MOZLEY was quite satisfied that the altered facts of the case as now explained would have led the proxies to concur in the Directors' recommendation. The honourable gentleman then strongly pressed upon Mr. Heyworth the propriety of consulting his own excellent judgment.

Mr. HEYWORTH said, he had no desire to embarrass the Direction, and as the dividend was so near what he and his friends desired, and no great principle was compromised, he would take upon himself the respensibility of withdrawing the motion.

[Loud cheers followed this announcement.]

Capt. PORTER begged to call the attention of the meeting to the schools recently erected at the Company's central station, at Wolverton. These schools were intended for the reception of 100 boys and 100 girls, but at present contained only 75 children, the whole of whom were supplied with books, &c., by the private munificence of the Directors. A fund was open for that purpose, and he hoped the proprietors would individually contribute liberally towards it. The care shown by the Directors for the comfort of the humblest of their servants, was most praiseworthy, and entitled them to the best thanks of the proprietors. (Hear, hear.) With the able assistance of the worthy Secretary, a Friendly Society had been established, which was carried on by a committee of the men themselves, under the patronage and guidance of the Chairman of the Company, and two of his colleagues. From this society the men received relief in cases of accident, and when he mentioned that out of 410 such cases, only 6 deaths had taken place, and that the whole sum expended was only 700*l*., or about 2*l*. per man, he thought it afforded clear evidence of the sobriety and good health of the men; for it was well known that wounds to which these men were particularly exposed, were difficult if not impossible of cure, when the sufferer's constitution had been previously impaired by dissipation and intemperance. (Hear, hear.) The smallest donation in aid of so excellent an object, would be thankfully received by Mr. Saville, at the Euston Station. The servants of the Company were greatly indebted to the Directors for the care they had extended towards them. In infancy they were admitted to school, in youth they would, if properly conducted, in all probability, receive employment, and in old age or sickness they would find support, if this fund were aided, as he hoped it would be, by the enlightened liberality of the proprietors. (Hear, hear, hear.)

The CHAIRMAN expressed his thanks, and those of his colleagues, to the gallant officer who had spoken so flatteringly of their exertions to promote the welfare of the Company's servants. In thus exerting themselves, the Directors considered they were only performing their common duties to the proprietors; for with the boon offered to the men, the interests of the undertaking were indissolubly bound up. The Company were now reaping the reward of their attention to the comfort of their servants, for notwithstanding the opening of so many new lines, and the competition which existed among the Companies to secure experienced men, this Company had contrived to retain almost all their efficient servants. (Hear, hear.) The schools, he begged to say, were scarcely yet open, and as to the Society, its establishment had proved a direct benefit to the Company, in relieving to a great extent the sick fund. (Hear, hear.)

Mr. HEYWORTH spoke at some length in favour of private liberality, as preferable to votes of money by Companies, and expressed a hope that henceforth in no railway Company would any grant be made for the building of schools or churches, or for any other object not strictly within the terms of their several Acts.

Capt. PORTER moved a vote of thanks to the Chairman and Directors, which was carried by acclamation.

The CHAIRMAN made an appropriate reply, expressing his acknowledgments for this continued mark of kindness and confidence.

The meeting then separated.

It was understood that the dividend would be payable at the expiration of ten days.

BIRMINGHAM AND DERBY JUNCTION RAILWAY COMPANY—GENERAL MEETING.

THE General Meeting of this Company took place on Tuesday last, at the Waterloo Rooms, Birmingham, for the election of Directors and other purposes, when the Report of the Directors for the last half year was read, and a statement of the accounts was laid before the meeting; but in consequence of the non-attendance of a sufficient number of proprietors to constitute a meeting for the purpose of electing Directors, an adjournment took place, as required by the Act of Incorporation, to Thursday, the 26th instant, at the same place.

On reading the Report, the CHAIRMAN of the Directors stated that, although they were of opinion that the results of the last half year were satisfactory as regarded the permanent prospects of the undertaking, and the receipts were greater than those of the corresponding half of last year, yet, as they were somewhat less than the receipts of the last half of that year, and the expenses were somewhat greater, and as the shareholders might feel disappointed on that account, the Directors proposed that the shareholders should appoint a committee from among themselves to investigate the state of the undertaking, and report to the adjournment of that meeting thereon. The Chairman stated also that the Directors were further induced to make this suggestion by the circumstance of a discrepancy between the amounts stated in the weekly returns of traffic which had appeared in some of the public papers, and the amount of the half year's receipts in the statement of accounts laid before the meeting, arising from an error in the office from which the returns were made out, by which the weekly amounts of traffic had been estimated, and that although this mistake did not in any way involve the accuracy of the books of the Company, nor affect the actual receipts, or the real state of the concern as shown upon the official half yearly statement of accounts laid before the meeting, yet the Directors had thought it right to call the attention of the meeting to the subject, and were anxious that the proprietors should, by an investigation of their own, be satisfied that it was merely an accidental circumstance.

After a conversation of some length, most of the proprietors present (including the largest of the shareholders) expressed themselves satisfied with the explanations then given as to the nature of the mistake alluded to, and did not require any further investigation; but the Directors continuing to press the adoption of their suggestion, for their own satisfaction, it was finally acted upon by the meeting, and five of the principal proprietors—Messrs. Crawshay, Routh, and Bordier, of London; Josiah Lewis, of Derby; and John Yate Lee, of Stivichall; all of whom except Mr. Bordier were present—were named by the meeting for the purpose.

The consideration of the appointment of Directors, and of the appropriation of the balance in hand to the purposes of a dividend, was then adjourned to Thursday, the 26th instant, at 12 o'clock, at the same place.—*Midland Counties Herald.*

NORTHERN AND EASTERN RAILWAY COMPANY—GENERAL MEETING.

The Half-yearly General Meeting of the Proprietors of the Northern and Eastern Railway Company took place on Thursday, at the London Tavern, Bishopsgate-street; William Crawshay, Esq., in the chair.

The Chairman said, the first business before the Meeting would be to hear the Report, which he would now read. He then proceeded to read the following Report:—

REPORT.

Your Directors have the pleasure to advert to the further opening of the Northern and Eastern Railway to the Harlow road, being seven miles beyond the late terminus at Broxbourne, and although but a few days have elapsed since this extension has been available for public use, the traffic is already highly encouraging and cannot fail to confirm the confidence always expressed by your Directors that, as the Northern and Eastern Railway progresses towards its ultimate destination, its prospects will continue to brighten and the hopes of its proprietors be realised in proportion to the extent of their enterprise being completed.

There are now open and in use 22½ miles of railway, with sufficient means for the conveyance and accommodation of its passenger traffic, and it is confidently expected that in October next a further opening to Spelbrook will have been effected, and at this point though only two miles from the towns of Hockerill and Bishop's Stortford, the works must on account of the limited finances at the disposal of your Directors, be supsended until the spring, unless the confidence inspired by the increasing prosperity of that part of the railway already opened, will induce the proprietors to make some effort in aid of those which your Directors have made, for the furtherance and immediate progress of the works to the extent of the present Parliamentary limit, namely to Hockerill; and when it is borne in mind that such heavy responsibility has been incurred by the greater portion of your Directors, they trust that the appeal which they now make to you to aid them in putting the finishing stroke to the exertions under your present Parliamentary powers, will not be made in vain; and that there will be voted by the shareholders at this meeting assembled one further call in the present year, or very early in the next, beyond those which your Directors are warranted by the letter of the Act of Parliament in demanding from you; and this one additional call, if conceded and paid, will enable your Directors to make such engagements for the final completion of the present extent of the Northern and Eastern Railway, as will ensure it the enjoyment of the increasing traffic of the first spring months of the coming year of 1842.

In the last Report made to the shareholders, it was held out that the opening to the Harlow road would have taken place in last month, and though the exact letter of this hope has not been realised, owing to circumstances which your Directors can only regret, they are happy that under such disappointment as they experienced from their original contractors for this portion of the line, they have been enabled to redeem within a very few days the hope which they expressed.

The progress of the works beyond the Harlow road is so satisfactory, that little doubt remains as to the completion to Spelbrook being effected early in the month of October next, and as the land is paid for, and the contracts for the works are made up to that point, the actual cost of the railway and material of all kinds for its use and occupation is so far satisfactorily ascertained that no doubt can reasonably exist, that the Northern and Eastern Railway will be completed, as far as the present Acts of Parliament warrant its progress, for the cost before named of not exceeding 22,000*l.* per mile in the whole.

The gross traffic which has been enjoyed during the half year last past, has for the 26 weeks ending on the 27th June, amounted to 14,036*l.* or an average of 539*l.* 17*s.* per week, and this under circumstances of peculiarly disadvantageous occurrence, and other disadvantages against the repetition of which provision has been made, leaving nevertheless, as will be perceived by reference to the accounts, a balance in favour of the traffic account of 4,410*l.* 18*s.* 9*d.* and since that period the six weeks which have passed up to the week before the opening to Harlow, have shown a considerably increased average, amounting to 866*l.* per week, and there is every reason to hope that the increase after the opening to Harlow will be in proportion to the usual extensions of railways and highly gratifying to the proprietors.

The calling the attention of a proprietary of a railway to the traffic of a few days, or weeks, may lead to the entertainment of hopes which may not be realised, but on the contrary it is just that such party be possessed of the earliest information which can be had of any matter however trivial relating to their property; and with this view your Directors add, that the three days' receipts in this week since the opening to Harlow, exhibit an increase over the three corresponding days of the preceding week, of 114*l.*, or 266*l.* per week without the accession of one single coach at this point, which however, are expected to commence running to this station on Monday next.

Your Directors in calling your attention to the balance in favour of the traffic account, will be guided by your own decision in its disposal, and in your hands they now leave it.

The total payments of the Company, as will be perceived up to the present period, are 468,359*l.* 9*s.*, less 2,293*l.* 13*s.* 7*d.* in the bankers' hands, and the number of miles of railway completed and furnished, 22½ miles.

There is another point which your Directors as a body, leave also to your own decision and judgment; but they recommend now that the prospects of the railway are developing, and that the exertions of the gentlemen who so wholly devote themselves to its charge, are called upon so largely, that a sum of 600*l.* per annum be set aside as a complimentary consideration for their services, and as the conduct of the traffic and the working of the railway is a point whereon the best judgment of your Directors should be exercised and tendered to you, they beg leave to state, that after the last twelve months' experience, they are led to believe that the best interests of the railway and its proprietors have been studied by the appointment of three gentlemen of the general body of directors as a permanent and active committee attending constantly to the affairs of the Company, as though they were a private concern; and to this Committee do your Directors resign the complimentary acknowledgment of their services, and which has been recommended for your sanction; and it is proposed that you should authorize it to take date from the commencement of the half year now before your notice, and ending June 30th past.

Your Directors are not aware of any point of importance in regard to the present railway, which has not been noticed; but it is of the utmost importance to this Company to keep in view, and to move at the earliest possible period for powers for the extension of the line from Hertford to Cambridge, with the view of obtaining over their line the traffic of the Northern and Eastern part of the country generally, and they earnestly recommend to this meeting the adoption of such measures as will warrant the Directors in applying to Parliament at the earliest possible period; and it may not be irrelevant here to state, that although not any further communication of a decisive character has taken place as to the communication with the county of Norfolk, your Directors are alive to that subject, and will be prepared to avail themselves of every means which may be presented of advancing the interests of their shareholders in the Northern and Eastern Railway; and they conclude this Report with their repeated assurance of their desire to make every shareholder as fully acquainted with the present state and future prospects of the property entrusted to their care, as they themselves are; and with this object in view, they court every inquiry which their shareholders may be pleased to make, and tender all such information as they possess of the present state of their affairs, and the probable future prospects of the Northern and Eastern Railway, both of which they trust will be found to be more gratifying to those interested therein, in proportion to the investigation made.

Captain Ford moved that the Report now read be adopted, and printed and circulated amongst the shareholders.

Mr. Mercer seconded the motion.

Mr. Parker wished to know what was intended to be done about going to Ware, as he heard nothing about it in the Report.

The Chairman said that they had not the means in hand to go to Ware and Cambridge at one and the same time.

Mr. Shuter said he believed that it would put the shareholders to an additional expense to go to Ware and Hertford.

Mr. Roskell (a Director) said that was not the case; they had the Act, but they could not call the money up to go on with the line to Ware and Cambridge at one and the same time.

The Report was put, and adopted.

The Chairman said it was in the hands of the meeting to decide if they should go on to Cambridge or not: at present their powers under the Act of Parliament only extended to Bishop's Stortford.

Mr. Maynard (Solicitor to the Company) believed it would be to the interest of the Company to get to Cambridge as soon as they could.

Mr. Shuter said the cost already of the line had been to Bishop's Stortford no less than 600,000*l.*, and he thought it quite time enough for them to think of going further when their traffic receipts amounted to something like 1,500*l.* per week.

The Chairman would put it to the Proprietors what condition they would be in if they allowed the Eastern Counties' or any other Company to get on before them. The result would be that they would entirely lose the Norfolk circuit.

Mr. R. Wedgwood said the Directors appeared to be adopting a course which could have no other end than to feed the lawyers. It was first of all intended that the line should have gone on to Cambridge, and an act at the expense of 2,000*l.* was obtained for that purpose. Subsequently it was decided that it should stop at Bishop's Stortford, and now again they were to go on, and another Act was to be procured to enable them to go to Cambridge. He believed it was asserted on all hands, that for the line to stop at Stortford would be more profitable than if they went on to Cambridge, and therefore he saw no necessity for expending the money of the proprietors in further law expenses.

The Chairman—The original line to Cambridge was so bad we could not carry it out.

Mr. J. Bagshaw (a Director) said, this was a matter which required some explanation. It was true that an Act of Parliament was obtained, not merely for the purpose of going to Cambridge, but also for going on to York and to Yarmouth—but the funds of the Company were stopped, and the fact of others having taken upon themselves a rival line, made them stop short at Cambridge. Some persons for one cause and some for another, did not pay up the calls upon their shares, which became forfeited, and in such a state of things, they found themselves unable to go further than Bishop's Stortford. Since that period however prospects had greatly brightened, and the delay had resulted in their finding out a far better line for going on to Cambridge, than that originally contemplated. If therefore the Company were to expend an additional 1,500*l.* in going to Parliament for a new act, the line now selected would soon pay them ten times that amount. In his opinion, good had sprung out of evil, and the proprietors of the Northern and Eastern Railway were now with 7,200 shares of 100*l.* each, enabled to see their way clear, and by the re-issuing of the forfeited shares, they would be enabled to make their way on to Cambridge. The Chairman had told the Shareholders that the question was entirely in their own hands, as to whether they should go on or stop. He had no doubt that even if they were to stop at Bishop's Stortford, the railway would be a good paying concern, but he for one was anxious that they should secure the advantage of going further northward and eastward, as he was conceived it would pay still better.

Mr. Shuter inquired what the cost would be per mile between Bishop's Stortford and Cambridge.

Mr. Bidder (Engineer)—About 20,000*l.* per mile, or 500,000*l.* the whole distance.

Mr. Wedgwood said, even the last Report asserted that it would be more profitable to stop at Bishop's Stortford than to go on to Cambridge.

Mr. Kennard (a Director)—So it was under the old plan, but now we have ascertained that it will cost much less to go by the new line.

Mr. Masterman said, the former estimate was 700,000*l.* and now it was 200,000*l.* less.

The Solicitor to the Company said, to obtain a renewal of the Act to go from Bishop's Stortford to Cambridge, would not, in his opinion, cost more than 300*l.*

The Chairman denied the assertion of Mr. Wedgwood, that the last half-year's Report expres-

Digitized by Google

ed that there would be more profit in stopping at Stortford than in going on to Cambridge, and read the Report in support of his statement. He hoped that law expenses incurred by previous Boards of Directors would not be heaped as a blameable offence upon the present. He would ask Mr. Wedgwood if he saw another rival Company come in and cut off the very traffic they anticipated upon their line, whether it would not be a great mortification to him. He would ask were they quietly to allow another Company to take their traffic along the Eastern Counties' Railway to points where they themselves ought to go. He did not mean to say, that they were at once to carry out the line, but at least they ought to make some demonstration.

Mr. MARTIN presumed that they must have a new Act altogether to go to Cambridge, as the old one had completely expired.

The CHAIRMAN said, the shareholders abandoned the shares themselves under the old Act, as they had no confidence in that line, and therefore, a new Act was indispensible.

Mr. SHUTER had good faith in the line paying well to Bishop's Stortford, and he did not see the necessity of going further with it until the returns were much greater than at present.

The SOLICITOR said, that there need be no fear about going on precipitately, inasmuch as the draft of the Bill must be laid before a special grand meeting of the proprietors, and be agreed to by them before it could go into the House of Commons.

Mr. SMALE said, he agreed with the Chairman that if there was likely to be a rival line, it was proper some demonstration be made, and he thought that might be effected by giving the necessary notices.

The CHAIRMAN observed, that in another part of the Report there was a reference to the balance on the traffic account of 4,110*l.* 18s. 9d., leaving it in the hands of the shareholders to deal with it as they thought proper.

Mr. MERCER said, he would move that it be added to the general account. Whilst the Company were in debt, he thought it highly improper that they should declare a dividend. He believed there was a rent of upwards of 2,500*l.* due for the last half year to the Eastern Counties' Railway for the use of their line, and when they got to Bishop Stortford, they must remember, it would be increased to 7,000*l.* per annum. He thought that to declare a dividend under such circumstances, would be a species of puffing which the Company did not want.

Mr. MAUBERT seconded the motion. He thought the debts of the Company, and the interest on the bonds, ought to be paid before they declared any dividend.

The CHAIRMAN could view this balance in no other light than profit, and he thought every shareholder had a right to claim it as such. If it went forth to the world that a body of proprietors should say, don't pay us a dividend upon our shares, it would look as if they could not pay. It might be out of order for him, as Chairman, to go thus far, but he claimed his right to give an opinion as a proprietor.

Mr. MARTIN said, he would move that the balance be divided.

Several shareholders seconded the amendment.

The CHAIRMAN said, it had been suggested by some of his brother Directors, that they should declare a dividend of 15s. per share, which would leave about 1,200*l.* in hand.

The question was put, and the amendment carried by a large majority.

It was then agreed that the day appointed for the receipt of the dividend should be the 1st day of September next.

Mr. MAUBERT said, he would now move, "that the Directors be authorised to take such steps as they may deem expedient to obtain the necessary Acts of Parliament, to enable them to continue the line to Cambridge." If the application to Parliament was put off for another year, there might be different regulations with regard to railways than at present existed, and they might not so easily obtain their Bill.

Mr. MERCER seconded the motion. He believed they would have much less difficulty in securing the line this year than if they were to put it off to the Session of 1842.

The CHAIRMAN thought it was most desirable that the Company should obtain the ground even if they sold it afterwards to another Company. So confident was he of the propriety of their doing so, that if the shareholders refused, he would be one of any six to go on and do so themselves.

The motion having been put and carried,

Some bye-laws suggested by the Board of Trade for the management of the Railway were read by the Secretary and agreed to by the meeting.

J. Bagshaw, Esq., R. W. Kennard, Esq., and W. Routh, Esq. the Directors who went out by rotation, were then unanimously re-elected as was also Capt. Dolphin in the room of Robert Crawshay, Esq., resigned.

Mr. JOHN WILLIAMS wished the attention of the shareholders to be called to a letter he had sent the Directors, asking for them to grant him their indulgence till the end of the year, to take up and pay the calls on the entire of his shares, together with 5 per cent. interest thereon. He should then be enabled to do so, as he was about to come into the possession of a large amount of money.

Mr. LAWRENCE said he would move that the indulgence be granted, which having been seconded,

The CHAIRMAN said he disclaimed the power of the meeting to do that which Mr. WILLIAMS asked. He had embarked in more shares than his means would allow him to take up and pay the calls upon, and if they allowed him the indulgence asked, every one of the persons whose shares were forfeited, would have a right to demand the same. All he had paid on 562 shares was 2,772*l.*, namely 3*l.* per share on 200 shares which was 600*l.*, and 6*l.* per share on 36 shares, 2,172*l.* He thought it was a deep injury to the other Shareholders that Mr. Williams should be allowed at any distant period, to take up 562 shares at par, with a set off also of 2,772*l.* upon shares, which were absolutely forfeited.

Mr. WILLIAMS said it was well known that he was a dealer in railway shares to a very large extent, and other things which were straight forward, honest, and useful, and thus he had sacrificed his capital. Amongst other speculations, the Northern and Eastern Railway Company had had from 14,000*l.* to 15,000*l* of his money to keep the concern afloat. He had done so upon the faith of Mr. Rowcroft the then Secretary, who was the organ of the Directors, that no more new shares should be issued, but which faith had not been kept. He had said to him "oh! the Company will take care of you."

Mr. BAGSHAW said, as one of the old Board of Directors, he must reply to the remarks of Mr. Williams tending to show that the Directors of the Company had broken faith with him. He had taken the private advice of an officer of the Board as the act and deed of the Directors themselves. It was true he heard the name of Mr. Williams spoken of very highly in the share-market, and the advantage that was likely to accrue from his taking up the cause of the Northern and Eastern Company; but he denied that the Directors pledged the Company to anything. It was true that the Secretary bore the authority of the Company in a measure, and under that circumstance he was willing to afford Mr. Williams every latitude that could be reasonably given to him; but he must deny that the Directors had broken faith with him.

Mr. WILLIAMS—I hold in my hand a receipt for 1333 Scrip shares, signed by Mr. Rowcroft, which I took upon the terms I have stated.

The CHAIRMAN—Were you then in a situation to make good the amount of such a large number of shares?

Mr. WILLIAMS—Yes, I was. I was then worth 100,000*l.*

The CHAIRMAN—And I believe you were also a large Proprietor in the Croydon Railway?

Mr. WILLIAMS—Yes; and I defy any one to say that I acted otherwise than in an upright and honourable manner. I maintain that, through Mr. Rowcroft, this Company has had upwards of 14,000*l.* of my money.

The CHAIRMAN said he must deny that; all the Company had had was 2,772*l.*

Mr. LAWRENCE thought that, from the indefatigable exertions and zeal of Mr. Williams in the cause of the undertaking, he was entitled to the kindness of the shareholders.

Mr. ROSKELL said, it was in reality a question of whether Mr. Williams should have 562 shares, deducting the 2,772*l.* or not; and he thought it was quite premature to agitate it until Mr. Williams was prepared to take them up.

The CHAIRMAN said, indulgences of a similar description had been granted twice before to Mr. Williams. The first was on the 2nd April, 1840, and the second in February, 1841.

Mr. LAWRENCE thought the Company could not do much harm in allowing the indulgence till the end of the present year.

The CHAIRMAN—If carried, I see no reason why all the other persons whose shares were forfeited, should not claim the same indulgence.

Mr. KINNARD said, as an old Director he must deny any participation of the Board in the arrangements made between Mr. Williams and Mr. Rowcroft.

Mr. MASTERMAN said, as Mr. Williams had been misled by an officer then in power, he thought he was fully entitled to be protected.

The motion was about being put, when

Mr. SHUTER said he should move as an amendment that the indulgence be not granted. He thought it unfair to the shareholders who paid up their calls if the motion should be carried. When he came into the concern he was under the impression that he should share its profits with about 4,200 shares, but it had now come to 7,200 shares, and this claim of Mr. Williams would tend to increase the number of shares, and decrease the respective profits on each.

Mr. WILLIAMS said, the Company would not now have been in existence but for his exertions, and the money he had advanced.

The amendment having been seconded by Mr. Collier,

Mr. MARTIN contended that no disadvantage could accrue to the Company by allowing Mr. Williams to take the shares at par. Indeed they ought to be glad to do it.

The question was here put, and the original proposition, granting the indulgence to Mr. Williams, carried.

Mr. WILLIAMS thanked the meeting for their kindness, and said, if not enabled to take up and pay his calls on the whole of the 562 shares he would not apply to them again. (Hear, hear.)

Mr. Maubert then moved, and Mr. Wedgwood seconded, a vote of thanks to the Chairman and the Board of Directors, which having been carried and duly acknowledged, the meeting separated.

BIRMINGHAM AND GLOUCESTER RAILWAY.—The *Cheltenham Journal* says, it is rumoured that this Railway is about to be transferred to the London and Birmingham Railway Company, who will engage to take passengers from Cheltenham to London at lower rates than those demanded by the Great Western Company from Cirencester. "The *Cheltenham Chronicle* affirms that in consequence of the high scale of charges on the Great Western Railway, the London and Birmingham Directors are likely to contract with the Directors of the Birminham and Gloucester Railway, for the purpose of conveying passengers to and from London to Cheltenham."—This seems most likely to be the correct version.

RAILWAY TRAVELLING.—A professional gentleman left Banwell on Saturday morning, after breakfast, passed by St. Paul's, in London, whilst the clock was striking twelve, dined and transacted business of importance in town, and returned in time to the Banwell station to reach home by the omnibus at tea-time!—*Bath Journal.*

YORK AND NORTH MIDLAND RAILWAY COMPANY—GENERAL MEETING.

THE following is the Report submitted and approved of at the General Meeting held on Tuesday last. We must postpone a notice of the proceedings till next week.

REPORT OF THE DIRECTORS.

The Directors have the satisfaction to report that the gross receipts for passengers and merchandize traffic on the York and North Midland Railway during the first six months of the present year, amount to the sum of 31,656*l.* 10s. 6d. During the same period, the amount paid on account of the expenses of working and maintaining the line is, 12,014*l.* 12s. 6d.; and for the interest of debentures and notes 3,682*l.* 10s. 8d. leaving a balance of 15,959*l.* 7s. 4d. to the credit of the Company. The Directors recommend that a dividend be declared of 2*l.* 5s. per share, to be payable on and after the 20th instant; and that interest be paid after the same rate on the capital advanced in respect of the newly created half-shares. This will leave a surplus fund of 2,409*l.* 12s. 4d. to the credit of the traffic account to meet depreciation of stock.

It will be observed that the disbursements during the last half-year, on account of working the line, show a higher rate of per centage upon the amount of receipts than on former occasions; but the Directors believe that in this department the future expenditure will not materially exceed its present amount; for the proprietors need scarcely be reminded that the cost of working a line of railway does not vary in the same proportion, as the quantity of traffic may increase or diminish. That the traffic on the York and North Midland Railway has not yet reached its maximum, does not admit of a doubt; and consequently the proprietors may with great confidence anticipate a proportionate advance of future dividends.

The following detailed statements of the traffic during the half-year cannot fail to be interesting to the proprietors, as shewing the extent to which the various sources of profit have been developed by the opening of other lines since the last Report:—

	No.
Passengers—First Class	36,900
,, Second Class	51,925
,, Third Class	72,078
Total	160,903
Carriages	231
Horses	807
Cattle	1,773
Sheep	37,628
Pigs	2,084
Calves	944
	Tons.
Coal	16,530
Lime	2,337
Wool, rags, &c.	454
Fish	571
Grain	1,599
Iron, wood, and stone	899
Game, poultry, butter, and eggs	202
General merchandise	16,676
Total	39,268

With reference to the Leeds and Selby Railway, of which the York and North Midland Company are now the lessees, it affords the Directors peculiar pleasure to be able to report, that since the 9th of November last, when they entered into possession of that line, the receipts for traffic have fully equalled their expectations. After paying the rent and all expenses of working and management up to the 30th of June last, a surplus of 155*l.* 17s. 9d. remains to the credit of the Company on that account. When it is considered that the benefit of the Manchester traffic has been enjoyed only during the last three months, it is obvious that a very considerable profit will henceforward be realised by this undertaking, in addition to the important collateral advantages which it has secured to the lessees, as proprietors of the York and North Midland line.

The Directors subjoin the usual account of receipts and payments to the 30th of June last.

(Signed) GEORGE HUDSON, Chairman.

A General Statement of the Revenue Account from the 1st of January to the 30th of June, 1841.

RAILWAYS IN GERMANY.

LETTER IV.

To the Editor of the Railway Times.

SIR,—Your insertion of my former letters on the above subject, and the influence they thereby exercised in Germany and [illegible], induce me to address you again at the present time. In my last notice of the Altona and Kiel Railway, I bade good night to the ill-digested scheme; the effect of what I stated in my letter of January the 27th, has been, according to what is said in Altona, "to prevent English capitalists from speculating in the undertaking." This I was glad to hear, for I am sure that what is not well supported at home, cannot be worth attention from abroad. The position of the Company is this;—less than 4000 shares out of 18,500, have been disposed of to private capitalists, and an attempt has been made to induce the corporation of Altona to take 4000 shares, and that of Kiel 2000, on a mortgage of part of their estates; but the king has refused permission to the former to dispose of its property in this manner, as it would be illegal; he has however allowed the latter to do so. Therefore, though it is said that 10,000 shares are taken, the fact is only 6000 are subscribed for; and this includes 200 shares which have been subscribed for out of a fund which exists solely for the relief of the poor; thus the railway is already numbered amongst the objects deserving of support from a poor-rate. I hear now that the two committees are about to send over a commission to England to try and induce our ironmasters and locomotive engine builders to invest capital in their undertaking. Let them be on their guard. Hamburg and Lubec still refuse support to it, as they would be quite shut out from any advantages from it. An excellent road has been recently opened between these two towns, and a great improvement in travelling has taken place, by the establishment of a good coach which makes the journey with regularity and dispatch. In point of charges, this road would successfully compete with an Altona and Kiel Railway.

Now a word on the Hamburgh and Berlin Railway. The self-appointed committee have succeeded, I believe, in collecting between 4000*l.* and 5000*l.*, and have consequently sent forth a large body of engineers to examine the country. These are not making a detailed survey, but are merely taking "flying levels," or a primary examination. They say already, that the country for the first 20 miles from Hamburg is very unfavourable, and that it will hardly be possible to pass it without gradients of 1 in 200, and quite impossible to do so with anything flatter than 1 in 300. Now it is evident to any one who has traversed the great sand plain, which extends from the base of the Saxon and Silesian hills, northwards, and which once formed the bed of a vast sea, of which the prevent Baltic is the only rapidly disappearing remains, that the entire country is eminently favourable for the construction of railways, and though gradients of 1 in 300 or even of 1 in 200 are certainly, as is said, "very practical," yet no one will assert that they are favourable for the full developement of locomotive power. That the strictest economy must be used, not only in the original construction of this railway, but also in the whole establishment and appliances, is quite certain; for the number of travellers of all sorts on the present most excellent road is but small, and though it would as usual be immensely increased, yet the proprietors may be assured that no probable extent of that increase will justify them in permitting the least extravagance. If, therefore, light works may be obtained with very easy gradients, they are bound to take care that the smallest possible consumption of locomotive power has been provided for, before they sanction any particular line, and that this may be done to a much greater extent than is asserted by these Berlin engineers, I have no hesitation in affirming. The Duke of Mecklenburg has given up his notion of having the railway carried by Schwerin, but insists positively that it shall be taken by Hagenow and Grabow. This is a considerable circuit, though not so great as in the former case. I have reason to believe, however, that the Hamburghers will refuse their support to any but the directest and cheapest line.

My impression is, that if the shortest and best line from Hamburg to Berlin were made, it would pay fair dividends; but I feel confident, that any departure from it would ruin the undertaking as a profitable speculation.

Before closing I must again caution capitalists against trusting themselves in the hands of this Berlin Committee. Though it is so much the interest of this Committee to procure hearty support from Hamburg, yet they are so very tenacious of any managerial interference, that they have hitherto refused the Hamburgers any advantages in this respect; and the latter have consequently declined to assist them to any extent. If this is their behaviour towards those whose interests are so closely united with their own, what would it be towards foreigners—and especially Englishmen, towards whom they entertain peculiar jealousy, for the good reason that they constantly feel their own inferiority whenever they come in contact with English talent? More will probably transpire in the course of the autumn, and if so I will report progress to you.

I remain, Sir, your obedient servant,

W. N.

London, August 7th, 1841.

LONDON AND SOUTH-WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Having already made a calculation as to what the approaching dividend will be, I fully agree with the opinion expressed by "An Original Shareholder," in your last week's paper, that there is no reason why it should not amount to 30*s.* a share, and leave a balance of upwards of 2,000*l.* to be carried to the next account. And having also watched the progress of other railways as well as this, and looking to the numerous advantages so well pointed out by an "Original Shareholder," which this line has over many others, I cannot but feel with him the greatest surprise, that the shares in this undertaking should be so far below even their immediate value, leaving out of view all its future prospects. But there is one part of an "Original Shareholder's" letter which will bear an inference contrary to the fact, and may perhaps give a little uneasiness to timid shareholders, or make others doubt the propriety of purchasing shares in this railway. The part of his letter I allude to is the following:—"That the traffic has not been commensurate this year with the expectations of the proprietors, who looked for an augmentation on the receipts of last year, I admit." What the expectation of the proprietor referred to may be, I do not know, but that the receipts have very considerably increased, will be seen by a comparison of those of this year with the last from the time of opening. That they have not increased more, may be attributed not only to the depression in trade alluded to by "An Original Shareholder," and so generally felt, but also to the unsettled state of the weather, which is well known to have a great effect upon pleasure travellers.

RECEIPTS.

1840.				1841.			
May 17*	£4,806	7	4	May 15	£5,500	8	2
24	4,068	0	4	22	5,814	19	0
31	5,188	14	9	29	7,005	1	8
June 7	6,278	8	6	June 5	6,506	14	9
14	6,226	10	5	12	6,175	12	11
21	6,159	17	1	19	6,805	9	11
28	6,432	13	0	26	6,563	0	9
July 5	6,054	6	8	July.. 3	6,467	18	0
12	6,279	17	3	10	6,307	5	5
19	7,628	14	10	17	7,308	3	1
26	7,283	1	6	24	6,802	9	3
Aug. 2	7,626	5	4	31	7,691	7	10
	£74,632	17	0		£79,070	10	9

The above shows an average weekly increase of nearly 400*l.*; and shows also that out of the 12 corresponding weeks there are only three of them in which the receipts of this year are less than those of last. With the increase that may be immediately expected in the traffic on the opening of the Gosport branch, I think, instead of despondency the shareholders have every cause for congratulation.

I am Sir, your very obedient Servant,

Also AN ORIGINAL SHAREHOLDER.

August 9th, 1841.

* The first week after opening the whole distance.

EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—In a recent number of your journal, a Liverpool shareholder, in commenting on the letter of an Edinburgh shareholder, inquires whether we ought not to apply to Parliament for a fresh Act, if the present powers are not sufficient to carry out the wishes of the shareholders, as expressed in February last by their votes and proxies. I conceive there would be a much more desirable and less expensive course to be pursued if the Edinburgh party still remain fractious, either by gradually supplying their places with shareholders resident in Edinburgh whose less extravagant views will not allow them to run counter to the declared intentions of a vast majority of the proprietors, or the Board might remit to the Edinburgh Committee such powers only as would not interfere with the general working of the line. The very idea of two Boards sitting, each having equal powers of management and controul, seems on the outset so preposterous, that any body of sane men could entertain the thought of their existence appears to me impossible; a divided house must fall, and what is there in our railway that should require two Boards, two Secretaries, two Managers—a division of workshops;—in fact, a duplicate of all the most expensive and least exceptionable attendants of a finished railway? What shareholders want is economy and efficiency—not a multiplication of offices, and consequent mismanagement. It is apparent, that the real object and end of all these squabbles are the loaves and fishes, the

Digitized by Google

patronage it will afford, and not the benefit of the railway. The shareholders have decided by a vast majority (4 to 1) that the patronage shall be vested in the Glasgow Board, and the Edinburgh minority are bound, both by duty and interest, to give way. Who are the proper parties to dictate in a joint stock body?—Surely not the minority. Then, why all this litigation and opposition? At the half yearly meeting about to be held, the Directors must explain to the shareholders the position in which they now stand. I am sure that the statements and correspondence published by the east-end Directors showed they were acting on a most unstable foundation. Their arguments only furnished reasons for supporting the west-end Board, and at the present meeting Mr. Leadbetter might have his hands as fully strengthened as before, (with the same objects in contemplation,) and I have every reason to believe that the non-resident shareholders, who are not biassed with any local prejudices, and best able to form a dispassionate judgment, will still (if called upon) give their cordial assent to the centralization principle.

Yours, &c.,
A MANCHESTER SHAREHOLDER.

August 11, 1841.

Do you not think we should have had less quarrelling if the number of Directors were reduced from 24 to 12?

BIRMINGHAM AND GLOUCESTER RAILWAY.

THE Board of Directors of the Birmingham and Gloucester Railway Company have forwarded the following resolution to the Directors of the Chamber of Commerce, at Worcester:—

"that this Committee regret that any misunderstanding should have arisen between the city of Worcester and the Birmingham and Gloucester Railway Company upon the subject of a branch line to the city; and being of opinion that a branch would prove advantageous both to the inhabitants of Worcester, and to the Company, they propose that a deputation from this Committee should confer with a deputation from the Chamber of Commerce on the most convenient line for both parties, and on the means of obtaining an Act also. That the Chairman, Mr. Sturge, and Mr. Tymbs, be the deputation from this Committee,"

At a meeting of the Town Council of Worcester, on Friday, it was explained that the Directors of the Chamber of Commerce had resolved to refer the matter to the Railway Committee appointed some time since by the Chamber, requesting them to put themselves into communication with the Committee appointed by the Town Council to watch the proceedings of the Company.

Mr. Alderman Edward Evans called the attention of the Council to the above proceedings of the the Chamber of Commerce; and having shortly detailed them, and read the resolution from the Board of Directors of the Company, remarked that he should feel the utmost confidence in any communication made with Captain Moorsom, the present Chairman of the Railway Directors, and, therefore, he should move—

"That a communication having been made by the Directors of the Chamber of Commerce containing a copy of minute of the Birmingham and Gloucester Railway Company proposing a conference on the subject of a line to this city—

"Resolved,—That the same be referred to the Committee of the Council appointed to watch the proceedings of the Birmingham and Gloucester Railway Company, and that they be requested to act therein as far as may be in concert with the Railway Committee of the Chamber of Commerce, and that the Town Clerk and Mr. Bedford be added to the Committee of the Council."

In the Chamber of Commerce it was the general feeling that nothing more should be done on the part of the deputation of the Chamber beyond listening to what the Directors might propose, and the Chamber gave them no authority for even offering an opinion; and for his own part he would agree to no proposition which should not first have the sanction of the citizens at large.

The resolution was agreed to unanimously.

PARIS AND ROUEN RAILWAY.—This great work is proceeding rapidly, under the superintendence of Mr. Locke; and we understand that 35 miles of the Paris end of the line will be opened early in the spring of next year.

PROCEEDINGS OF THE INSTITUTION OF CIVIL ENGINEERS.

(*Continued from page* 813).

Description of the Arched Timber Viaducts on the Newcastle and North Shields Railway, erected from the designs of Messrs. John and Benjamin Green; and on the application of the same system of construction to oblique and other Bridges, to the Roofs of Railway Stations, and to other large Buildings. By BENJAMIN GREEN.

The construction of viaducts and bridges forms so important an item in the cost of a railway, that the engineer is induced to devise new methods of completing his works with due regard to stability and durability, and at the same time with the least possible expense. Stone and brick have been the materials most generally used for bridges; cast-iron has been introduced where the heights were too low for the spans, in large arches, or in trussed beams where a certain clear space beneath was required, with only a limited height to the level of the rail. Timber, from its lightness, strength and cheapness, has been extensively used, but only in spans of limited extent, owing to the sole mode of its application being by framed trusses, upon the same principles as those usually employed for roofing.

These considerations induced Mr. John Green, as far back as the year 1827, to make a design and model for a bridge, with timber arches resting upon stone piers. In 1833 the plan was adopted, and in 1837 it was put into execution at the Ouse Burn Viaduct, where the construction was of great extent, and the cost was an important consideration.

The Viaduct is 918 feet in length, and 108 feet in height from the bed of the river. There are five arches, the versed sine 33 feet, and the radius 68 feet; three of them are 116 feet span each, and two are 114 feet each: two stone arches of 40 feet span each have been introduced at each end to give length to the abutments, and to prevent the embankments from being brought too near to the steep sides of the ravine. The piers are of stone: the springing stones for the three ribs, of which each arch is composed, are on offsets, within 40 feet of the top of the piers; cast-iron sockets are there bedded in the masonry, and secured so as to receive the feet of the ribs. Two of the piers are placed upon piles; the others are founded upon the rock: immediately beneath the centre of one of them an old coal-pit shaft was discovered, and close adjoining it the remains of the working of a coal seam; both were rendered secure by being filled up with grouted rubble masonry.

The ribs for the arches are composed of planks of Dantzic deal (Kyanized): the lengths vary from 46 feet to 20 feet, by 11 inches wide and 3 inches thick: they are so disposed, as that the first course of the rib is two whole deals in width, the next is one whole and two half deals, crossing the joints longitudinally as well as in the depth. Each rib consists of fourteen deals in thickness, bent over a centre to the required form, and secured together by oak treenails 1¼ inch diameter at intervals of 4 feet apart, each treenail traversing three of the deals. A layer of strong brown paper dipped in boiling tar is placed between the joints, to bed them and exclude the wet. Trussed framings and beams are secured upon the arched ribs; the platform composed of planks, each 11 inches wide by 3 inches thick, is spiked down and covered with a composition of boiling tar and lime mixed with gravel in laying on, forming a coating impervious to the wet; upon this platform the two lines of railway are laid, leaving a foot-path between them.

The centreing for turning the ribs was very light and simple, and as every convenience was afforded by having a railway with travelling cranes along the sides of the piers, a whole centre could be moved by twenty men from one arch, and fixed in another in one day.

The author then describes the construction of the Willington Viaduct, and that which has been erected by him at Dalkeith for the Duke of Buccleuch; giving the relative costs of the three structures which have been mentioned, and stone buildings of the same dimensions: whence it appears that in the Ouse Burn Viaduct there was an economy of 9000*l.* resulting from the adoption of this system.

He then shows the application of this system to the structure of oblique bridges, particularly where a certain clear space is required beneath, and the total height is limited: this is illustrated by a description of a bridge of 71 feet span, on the Newcastle and North Shields Railway, which crosses the turnpike road at Walker, and by one erected over the River Wear on the West Durham Railway.

He describes also the application of the same system to the extensive buildings and sheds of the Shields Railway Station; to churches and to private houses; in the latter the arched form is very advantageous in gaining space for the upper rooms, showing at the same time the economy resulting from the adoption.

The paper is illustrated by a series of nine elaborate detailed drawings, showing the application to every kind of construction.

NORTH KENT RAILWAY.—The projected railway from Gravesend to Rochester, *via* the Thames and Medway Canal, appears to be in considerable favour with the public, as we hear a large portion of the capital is applied for. The journey from London to Rochester and Chatham will be reduced to one hour and a-half, viz., from London to Blackwall by railway, 10 minutes; from Blackwall to Gravesend, one hour; and from Gravesend to Rochester, by new railway, 20 minutes. The survey from Rochester to Maidstone is proceeding through the valley of the Medway, crossing at Cuxton.—*Canterbury Journal.*

LONDON AND SOUTH WESTERN RAILWAY.—NOTICE is hereby given, that the next Half-yearly General Meeting of the Proprietors of this Company, will be held at the offices of the Company, at Nine Elms, Vauxhall, on Saturday the 28th day of August next, at one o'Clock in the afternoon precisely, and notice is also hereby given, that the books of the Company for the transfer of shares will be closed on Monday the 23rd of August, and remain closed until Saturday the 28th of August, both days inclusive, and such script tenths as shall not have been exchanged for certificates of registration on or before Saturday the 21st of August, will entitle the holders to no right to vote or share in any dividend which may be declared at such meeting.

By order of the Court of Directors,
ALFRED MORGAN, Secretary.

Nine Elms, Vauxhall, 6th August, 1841.

SOUTH-EASTERN RAILWAY COMPANY.—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven, or Ten Years, at the option of the Lender, and to grant mortgages of the rates and tolls of their undertaking, as security for the same, bearing Interest at the rate of 5 per cent. per annum, payable, half yearly, at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and the term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary, at the Company's Office, 10, Coleman-street, London.

By order of the Board of Directors,
J. S. YEATS, Secretary.

TO RAILWAY CARRIERS AND OTHERS.—As a General Receiving and Forwarding Agent.—A respectable person well acquainted with the merchants and trade of Leeds and neighbourhood, would be glad to do business for any carrier or private party who may honour him with their commands. To parties residing along the different lines of railway, an excellent opportunity is afforded them of doing their business at little expense, by addressing a line to Mr. C., care of Mr. T. W. Smith, Bank-street, Leeds.

AT A MEETING OF LANDOWNERS on the Proposed Line of Railway by the West Coast to Scotland, held at Liverpool, on Wednesday, the 21st July, and which Meeting was attended by Deputations from the Liverpool and Manchester, the Grand Junction, the North Union, and the Lancaster and Preston Railways;

JOHN MOSS, Esq., Chairman of the Grand Junction Railway, was unanimously called to the Chair:—

It was Resolved—

1. That it is desirable to continue a Line of Railway by Lancaster to Edinburgh and Glasgow, *viâ* Carlisle and Beatock, so as to have one continuous Railway between the Capitals of England and Scotland.

2. That the present Meeting will use their best exertion to promote the formation of the said Railway.

3. That these Resolutions, having been signed by Col. GRAHAM, of Mosskhow, on behalf of the Landowners, and by the Chairman of the respective Railways here represented, be forthwith submitted to the Landowners interested in the Line, for their approval and signatures, and that Committees in the different Districts be organised, with the view of forwarding the project.

The Chairman having left the Chair, the thanks of the Meeting were voted to him.

CHAS. LAWRENCE, Chairman Liver. and Manches.
JOHN MOSS, Chairman Grand Junction.
THEODORE RATHBONE, Chairman North Union.
JOHN BURROWS, Chairman Lancaster and Preston.
W. GRAHAM.

At a MEETING OF GENTLEMEN in favour of the Projected Railroad from Lancaster to Edinburgh and Glasgow, *viâ* Carlisle and Beatock, held in the Town Hall, Carlisle.

JOHN DIXON, Esq., Mayor, was unanimously called to the Chair.

Resolved—

1. That this Meeting approve of, and Sign the Resolutions passed at Liverpool on the 21st of July last.

2. That a Committee be now formed for the purpose of laying before the Public the merits of the said Projected Railroad, of collecting and furnishing information thereon, and of obtaining the Assent and Signature of Landowners and others interested in the undertaking, to the Resolutions passed at Liverpool, on the 21st of July last.

3. That the Committee shall consist of a Chairman, Three Vice-Chairmen, and the following Members with leave to add to their number, and any Three a Quorum:—

Atkinson, Joseph, Esq., Carlisle.
Barnes, Thomas, Esq., M.D., Carlisle.
Brown, John, Esq., Carlisle.
Dobinson, William, Esq., Carlisle,
Dixon, John, Esq., of Kirklis, Mayor of Carlisle.
Dixon, Peter, Esq., Warwick Bridge.
Dixon, Thomas, Esq., Cuthwaite.
Featherstonhaugh, T., Esq., Kirkoswald.
Ferguson, Richard, Esq., Harker Lodge.
Ferguson, Joseph, Esq., Lowther-street, Carlisle.
Graham, Right Hon. Sir James, Bart., M.P. Netherby,
Graham, Fergus, Esq., Carlisle.
Goodenough, Rev. S., Prebendary of Carlisle.
Grant, Sir James, K.H. & K., St. A., the Hill.
Gilbanks, Joseph, Esq., Whiteield House.
Howard, Hon., Charles, M.P., Naworth Castle.
Howard, Philip H., Esq., M.P., Corby Castle.
Howard, Henry, Esq., Greystoke.
Hasell, E. W., Esq., Chairman of Quarter Sessions.
Hodgson, T. H., Esq., Clerk of the Peace, Carlisle.
Hodgson, W. N., Esq., Carlisle.
Hewit, George H., Esq., Burgh.
Huntley, Rev. James, Thursby.
Johnstone, Pepys, Esq., M.P., Moffat House.
Jardine, Sir William, Bart.
Irwin, Thomas, Esq., Calder Abbey.
Larmer, George, Esq., Carlisle.
Musgrave, Sir George, Bart., Eden Hall.
Marshall, William, Esq., M.P., Patterdale Hall.
Maclean, Major, Carlisle.
Mounsey, Robert, Esq., Castletown.
Mounsey, G. G., Esq., Carlisle.
Mounsey, Thomas, Esq., Carlisle.
Nanson, William, Esq., Carlisle.
Saikeld, Thomas, Esq., Holme Hill.
Stonholme, John, Esq., Morton Head.
Saul, George, Esq., Brunstock.
Scott, Thomas, Esq., Brent House.
Thomlinson, Joseph, Esq., Caraew.
Wilde, Major, Carlisle.
Wilson, Major, Evening Hill.
Wilson, Thomas, Esq., Nent Hall.

4. That Lord Lowther be requested to accept of the appointment of Chairman of the Committee.

5. That Colonel Graham be requested to act as Vice-Chairman, and that the other Two be hereafter elected by the Committee.

6. That this Committee be named "The Central Committee," and do now elect James Robert Grant, Esq., their late im Secretary.

7. That the Committee shall hold its Meetings in the Town Hall, Carlisle, every Saturday, at 3 p.m., and at such other time and place as shall be fixed by the Committee.

8. That in order to obtain Signatures to the Liverpool Resolutions, the Committee do urge Gentlemen in the different Towns and Districts, interested in the project, to form Local Committees, the Chairman of which shall be virtually Members of this, "The Central Committee."

9. That the Secretary be requested to make these Resolutions public, and upon his receiving intelligence of any Local Committee being formed, he shall transmit forthwith to their Chairman, copies of all papers containing information on the subject,

The Chairman having left the Chair, the thanks of the Meeting were unanimously voted to him.

JAMES R. GRANT,
INTERIM SECRETARY.

Railway Committee Room, Carlisle,
August 7th, 1841.

NORTHERN and EASTERN RAILWAY.—NOTICE is hereby given, That the Directors have this day made a Call of £5 on each Share of £50, payable on the 1st day of September next, and the shareholders are requested to pay the same to either of the following Bankers:—

London—Messrs. Masterman and Co.
Manchester—Sir B. Heywood, Bart., and Co.
Liverpool—Messrs. Heywood and Sons.
Cambridge—Messrs. Fisher and Sons.

Interest at the rate of £5 per cent. per annum will be charged on all sums which remain unpaid after the day above appointed.

Shareholders are requested to take notice, that each original share of £100 has been by the late Act of Parliament converted into two shares of £50 each, so that the call hereby made is equal to £10 per share on each of their original shares

Two certificates of £50 each will be ready for delivery in exchange for each former certificate on the 1st day of September next.

WILLIAM CRAWSHAY, Chairman.
WILLIAM BOURNE, Sec.

Shoreditch, London, Aug. 5.

NORTHERN AND EASTERN RAILWAY.—Opening of the line to Harlow.—The Public are informed, that this Railway will be Opened to the Turnpike Road, near Harlow, on Monday, the 9th of August, and for the first fortnight the Trains will run as follows:—

DOWN TRAINS from London to Harlow.	UP TRAINS from Harlow.
Eight Morning.	Half-past Eight, Morning.
Half-past One, Afternoon.	Half-past Eleven, Morning.
Half-past Four, Afternoon.	Half-past Four, Afternoon.
Half-past Seven, Afternoon.	Half-past Six, Afternoon.
And on SUNDAYS.	
Half-past Nine, Morning.	Half-past Eight, Morning.
Half-past Five, Afternoon.	Half-past Three, Afternoon.
Half-past Eight, Afternoon.	Half-past Seven, Afternoon.

The fares to Harlow will be 2s., 1s. 6d., and 1s.; and to Roydon, 1s., 9d., and 6d.; in addition to the Fares now charged to or from Broxbourne, for First, Second, and Third Class Passengers respectively, making the whole Fares to or from London as follows:—

	1st Class.	2nd Class.	3rd Class.
London to Harlow	5s. 6d.	4s. 0d.	2s. 6d.
London to Roydon	4s. 6d.	3s. 3d.	2s. 0d.

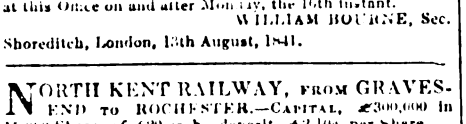
Third Class Carriages will be run with the First and Last Trains only in each direction on Week-days, and with all the Trains on Sundays.

The Trains will continue to run between London and Broxbourne as usual.

WILLIAM BOURNE, Secretary.

Shoreditch, London, July 21, 1841.

NORTHERN and EASTERN RAILWAY.—TO CONTRACTORS.—The Directors of this Company will meet at One o'Clock on Thursday, the 19th August, to receive tenders for the construction of a length of Timber Piling and Gearing, in Walthamstow Marsh. Plan and specification, with statement of quantities, to be seen at this Office on and after Monday, the 16th Instant.



WILLIAM BOURNE, Sec.

Shoreditch, London, 13th August, 1841.

NORTH KENT RAILWAY, FROM GRAVESEND TO ROCHESTER.—CAPITAL, £300,000 in 15,000 Shares of £20 each; deposit, £2 10s. per Share.

Prospectuses may be obtained and applications for Shares made at the Company's Office, 44, Lombard street.

GEORGE WALTER, Chief Superintendent.

T. H. RYLAND AND CO., OZELL'S STREET, BROAD STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of

A 12-horse high-pressure engine, metallic piston, with or without boiler.
Two boilers, quite new, 18 feet by 4 feet.
Planing machine; works by hand, will plane 5 feet by 18 inches.

NEWCASTLE-UPON-TYNE & CARLISLE RAILWAY.—After Saturday, the 14th of August, the Trains will be arranged as follows:—

Leave Newcastle and Redheugh.	Arrive at Carlisle.
Mail Train,* Half-past 5 Morning	Quarter past 9.
Train,* 9 o'clock	Half-past 12.
Train,* Half past 11 o'clock	3 o'clock.
Mail Train, Half-past 2 Afternoon	Half-past 5.
Train,* 5 o'clock	Half-past 8.
Train, 7 o'clock for Haydon B.	

SUNDAYS.

Mail Train, 9 o'clock Morning	Quarter-past 12.
Mail Train, 5 o'clock Afternoon	Quarter-past 8.

Leave Carlisle.	Arrive at Newcastle and Redheugh.
Mail Train,* Half past 5 Morning	Quarter-past 9.
Mail Train, 10 o'clock	1 o'clock.
Train,* 12 o'clock	Half-past 3.
Train,* Half-past 2 Afternoon	Half-past 6.
Train, 5 o'clock	8 o'clock.

SUNDAYS.

Mail Train,* 9 o'clock Morning	Quarter-past 12.
Mail Train,* 5 o'clock Afternoon	Quarter-past 8.

N.B. The Trains distinguished by an * will stop at all the Stations, the others being Quick Trains will stop at the Stations only which are enumerated below.

The Fares by all the Trains will then be charged as follows:—

Newcastle or Redheugh to	Close Car. s. d.	Open Car. s. d.
Blaydon	1 0	0 6
Wylam	1 6	1 2
Stocksfield	2 6	1 10
Corbridge	3 3	2 3
Hexham	3 10	2 6
Haydon Bridge	5 3	4 0
Haltwhistle	6 10	5 4
Rosehill	8 0	6 0
Milton	9 0	7 0
Wetherel	10 6	8 0
Carlisle	11 0	8 6

Carlisle to	Close Car. s. d.	Open Car. s. d.
Wetherel	1 0	0 6
Milton	2 0	1 6
Rosehill	3 3	2 6
Haltwhistle	4 3	3 3
Haydon Bridge	5 10	4 6
Hexham	7 3	5 8
Corbridge	7 9	6 0

And to the Intermediate Stations in proportion.

☞ The doors will be closed Five Minutes before the time of Starting.

Seven Coaches run daily between Carlisle and Lancaster, passing through Penrith which is the direct route for the Lakes, for Preston, Liverpool, Manchester, Birmingham, and London. Steam Boats ply regularly between Carlisle and Liverpool; also between Carlisle and Belfast. Coaches depart for Maryport and Whitehaven, and for Annan, Dumfries, Ayr, Portpatrick, &c. Four Coaches run daily between Carlisle and Edinburgh, and also Four Coaches between Carlisle and Glasgow. Passengers leaving Newcastle by the half-past Eleven o'clock Train, will reach Carlisle in time for the Edinburgh, Glasgow, Dumfries and Portpatrick Mails and Coaches, arriving at Edinburgh or Glasgow the same night. Passengers leaving Carlisle by the Mail at night for Carlisle will arrive there in time for the Ten o'clock Train, and reach Newcastle at One o'clock in the day. Places may be secured at the Railway Station, Newcastle, by the Morning and Evening Mails and Post Coaches, for Lancaster, Edinburgh, Glasgow, and Places on these Lines of Road; also by the Mail and Post Coach for Annan, Dumfries, Portpatrick, &c.

By Order.

THE CANTERBURY AND WHITSTABLE RAILWAY AND WHITSTABLE HARBOUR.

TO BE LET, for a Term of Seven Years, by Tender.—This undertaking has been finished upwards of Ten Years, and it is now in full work, and in a state of thorough repair and efficiency.

Whitstable is the port of the city of Canterbury; and the importance and value of the undertaking may be, in some measure, estimated by the fact that previously to the opening of the Harbour the shipping interest at Whitstable had been long in a dull state, but that from so late a date as the year 1835, the tonnage of vessels belonging to Whitstable has increased very nearly double. The quantities both of merchandize and passengers conveyed upon the railway connecting the harbour with Canterbury, is also notoriously upon the increase. But, in addition to the Harbour and Railway dues, there is a wide field for further profits, by means of the command and facilities which the possession of the Harbour and Railway affords for carrying on other trades and operations. It gives, for instance, the command of the coal trade of Canterbury and its vicinity; and it offers an opportunity of establishing an extensive timber trade. The want of a sawing machine has been long very much felt by builders and others in Canterbury and the neighbourhood, and machinery for that or other purposes might be connected with the stationary engines upon the railway line at a moderate expense, and the surplus steam power thus turned to a profitable account. Any erections for such purposes the lessee would be authorized to remove at the end of the term, subject to the option of the Company to take them at a valuation. There is also an early prospect of an immense increase in the importation of coals to Whitstable for conveyance upon the railway, in consequence of the junction of the South Eastern Railway with this, by means of a branch line from Ashford, which (according to the statement made on the part of that Company at a public meeting, lately held in Canterbury) will be completed before the expiration of the year 1843, and will open the shortest and most expeditious line of communication with the coal districts in the North, for the supply of the wide extent of South Kent.

Upon the whole, in addition to a steady and improving business in the ordinary routine of railway traffic, there is full scope for a person of spirit and enterprise, of active habits and with sufficient capital, to open an extraordinary source of profit, by the establishment of a commanding and extensive mercantile concern.

The terms of letting may be had upon application to Mr. CURTEIS, the Secretary to the Company, No. 10, Burgate-street, Canterbury, on or after the 24th of August instant, to whom tenders must be sent on or before the 17th of September next, sealed up and endorsed "Tender for the Canterbury and Whitstable Railway and Whitstable Harbour."

LONDON GRAND JUNCTION RAILWAY COMPANY.

—NOTICE is hereby given, That the August Half-yearly Meeting of the Proprietors of this Company will be held, pursuant to the Act of Incorporation, at the Company's offices, 68, Cheapside, on Wednesday, the 18th day of August instant.

The Chair will be taken at One o'Clock precisely.

T. EDWARDS, Deputy Chairman.

Offices, 68, Cheapside, 3rd August, 1841.

STAFFORD AND RUGBY RAILWAY COMPANY.

—At a General Meeting of the Subscribers to the Company, held at the Company's Offices, 23, Bond-street, Manchester, on Tuesday, the 10th day of August, 1841, pursuant to a Public Notice in that behalf from the provisional Directors of the said Company;

ROBERT GARDNER, Esq., Chairman of the Provisional Directors in the Chair.

The Directors' Report having been read, the following resolutions were unanimously adopted:—

On the motion of James Burt, Esq; seconded by Dr. Ashton:—

That the Report now read be received and printed for distribution, under the sanction of the Provisional Directors.

On the motion of George R. Chappell, Esq.; seconded by Richard Birley, Esq.:—

That it is not expedient to abandon the undertaking; but that, in pursuance of the recommendation of the Directors, the unexpended funds be distributed amongst the shareholders, and the further prosecution of the undertaking postponed.

On the motion of the Rev. Mr. Molyneux, seconded by P. F. Willert, Esq.:—

That the accounts of the Company be audited by John Hyde, Esq. and Edward Langworthy, Esq., who are hereby appointed auditors.

(Signed) ROBERT GARDNER, Chairman.

Thomas Ashton, Esq. having been called to the chair, the thanks of the meeting were unanimously given to Robert Gardner, Esq., for his conduct as Chairman.

THE REPORT.

The present meeting has been called by the Directory, under that clause of the subscribers' agreement which authorises the Board to call a general meeting of the subscribers, and provides, that the majority of the persons present at such general meeting (to consist of not less than 40 persons, holding in the aggregate 3,000 shares in the Company) should have full power to determine whether and upon what terms and conditions the undertakings should be abandoned, and the Company dissolved, and the affairs thereof wound up, and to make such provisions for those purposes as to such meeting should appear expedient.

It is not the intention of the Directors to advert to the circumstances attending the defeat of the Bill submitted to Parliament in the last session.

Looking at the present condition of railway property in general, and the unexampled depression under which the trade of this district is now labouring, they are of opinion, that it is not desirable immediately to renew the application to Parliament for power to construct the line. But, retaining their conviction of the value of a railway through the Trent Valley, and wishing, at the same time, to consult the convenience of the shareholders, they recommend that the unexpended funds of the Company be distributed, and that all further proceedings be postponed until a more favourable state of circumstances shall warrant the shareholders in authorising the prosecution of the undertaking. In the meantime, it will be satisfactory to the shareholders to be apprised, that no new expenses will be incurred, and that their liability will be determined, upon the receipt of their proportions of the balance of the Company's funds.

EDINBURGH AND GLASGOW RAILWAY.

—NOTICE is hereby given, That the Seventh Half-Yearly General Meeting of the Shareholders in the Company will be held, pursuant to the Act of Incorporation, in the Company's Office here, on Tuesday the 24th instant, at One o'clock.

Certain Shares, in consequence of the non-payment of several Calls due thereon, having been declared forfeited, under Minute of the Board of Directors of 1st Feb. and 8th and 22d June, 1841, the Declarations of Forfeiture will be submitted to the Meeting for Confirmation, in terms of the Act.

The Transfer Books will be closed on and after the 17th instant, till after the Meeting.

Proxies must be transmitted to, and received by, the Secretary, two days at least before the holding of the Meeting (Section 134), otherwise they will not give a right to vote at the Meeting. Blank Forms of Proxy may be had on application at this Office.

In terms of Section 137, the Proprietor of any Share, on which any Call shall be due, will not be entitled to vote in respect of such Share.

By Order of the Directors,

JOHN LEADBETTER, Chairman.

Edinburgh & Glasgow Railway Office, 7, North Queen-street, Glasgow, 9th August, 1841.

LONDON AND BRIGHTON RAILWAY.—ALTERATION of TIME from and after JULY 25th.

—This railway is now open from London to Hayward's-heath, near Cuckfield, for the conveyance of passengers, parcels, horses, and carriages. The trains will run as under:—

Down Trains will leave the station at London-bridge at half past 9 and half past 11 a.m., and at half-past 1 and 5 p.m. A Down Train at 9 p.m., for Croydon only.

Up trains will leave the station at Brighton at 7 and 9 a.m., and at half-past 12 and half-past 4 p.m.

Sunday trains, down, will leave the Station at London Bridge at 8 a.m., and at 2 and half-past 5 p.m. A Down Train for Croydon only at 8 and half-past 9 p.m.

Sunday trains up, will leave the station at Brighton at 7 a.m., and at a quarter past 5 p.m.

Passengers will be conveyed by coach between Hayward's heath and Brighton, and the fares throughout from London to Brighton, or from Brighton to London, will be—for the first class carriages, 15s., and for the second class, 11s. Children under 10 years of age half price. The whole journey will be completed in four hours. Passengers will not be conveyed from Brighton to Hayward's heath unless proceeding by the trains. Fares to Croydon, first-class carriages, 2s.; second-class, 1s. 6d.

N.B. In order to insure conveyance between Hayward's-heath and Brighton, passengers for the whole distance must book their places on the preceding day at either of the following offices:—

Griffin's, Oxford-street, Green Man and Still; Hatchett's, Piccadilly; 41, Regent-circus; Spread Eagle, Regent-circus; Golden Cross, Charing Cross; George and Blue Boar, Holborn; Old Bell, Holborn; White Horse, Fetter-lane; Cross Keys, Wood-street; Spread Eagle, Gracechurch-street; or at the station, London-bridge; at all of which places parcels may also be booked; and in Brighton at the Blue, the Red, and the Spread Eagle coach and railway offices, Castle square.

Bills containing the time of departure from and the fares between the intermediate stations, the terms for conveying horses and carriages, with every other requisite information may be obtained on application at the termini at London-bridge and Brighton; at the respective booking offices; or at the offices of the Company, 10, Angel-court, Throgmorton-street. By Order,

THOMAS WOOD, Sec.

July 24, 1841.

LONDON AND BLACKWALL RAILWAY COMPANY.

—Notice is hereby given. That the Transfer Books of this Company will be Closed from Monday, the 9th instant, until Monday, 16th instant, preparatory to the allotment of the New Shares. It is important that all outstanding transfers should be brought in on or before the 9th inst. for registration, in order that the allotment of the new shares may be made to the parties properly entitled to them.

By order of the Board,

J. WARMINGTON, Sec.

SUPPLEMENT TO

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 189. Vol. IV.—No. 33.—Part II.] SATURDAY, AUGUST 14, 1841. [Price, with Part I., 1s.

LONDON AND BRIGHTON RAILWAY COMPANY—GENERAL MEETING.

The Half-yearly General Meeting of the proprietors of the London and Brighton Railway Company was held on Monday, at the London Tavern, Bishopsgate-street; John Harman, Esq., in the Chair. The attendance was very numerous.

The advertisement convening the meeting having been read, it was unanimously resolved, that the common seal of the Company be affixed to the register of proprietors which was accordingly done in presence of the meeting.

The Chairman then said, it afforded him the highest gratification to see on this occasion so large an assemblage of proprietors, for he was fully convinced that when the present position of the great undertaking in which they were all so deeply interested was explained, every gentleman would depart perfectly satisfied with its future prospects. A most important event had occurred since they had last the pleasure of meeting in that room, namely, the partial opening of the railway—he would say emphatically, a most important event, because the result of that opening must satisfy every one that when the line should be completed throughout its entire length, the traffic would be immense. (Hear, hear.) Not less gratified was he in being able to announce that such opening throughout would take place at no distant period, namely, as now proposed, on the 14th of next month. (Hear, hear, hear.) But to enable the Directors to accomplish what had been already done, he regretted to say, that they had been compelled to incur a somewhat larger expenditure than had been anticipated at the date of the last meeting. On that occasion he had stated upon data the most full and explicit which could then be obtained, that the line would be completed for about 2,070,000*l.*, but from a variety of circumstances, then unforeseen, a further amount would be required. Since the last meeting, as many of the proprietors were aware, there had occurred some exceedingly heavy slips upon more than one of the largest embankments on the line, and which he need scarcely say, had been a source of great anxiety to the Directors; and if they had not set about remedying the defects at the time, and with the vigour they did, even although some further expenditure had thereby been incurred, they would not have had it in their power that day to congratulate the proprietors and themselves upon the successful opening of so large a portion of the line. (Hear, hear, hear.) When they considered the gigantic character of many of the works upon the line—works which not long ago some had confidently pronounced to be wholly impracticable, and when they looked at the manner in which these and all the other works upon the railway had been executed—and upon this point he need only refer to the Report of Sir Frederic Smith, the Government Inspector, who had expressed an opinion that they were equal, if not superior, to any similar undertaking which he had inspected—when they considered these things, they would not feel surprised that some excess of estimates had arisen. Notwithstanding, however, all the difficulties that had interposed, and the unexpected sources of expenditure that had presented themselves, the Directors had the pleasure of stating that the railway would be entirely completed without the necessity of calling for further assistance from the shareholders. (Hear, hear, hear.) He had frequently been applied to by parties anxious to know if a further loan of something like half a million would not be required to finish the works, and he occasionally had no small difficulty in convincing such persons of what he would now repeat, namely, that no further capital whatever beyond the amount which the Company were already authorised to raise would be wanted. All the Parliamentary capital had been applied for, and nearly the whole of it had been received, for the arrears upon the shares amounted to little more than 12,000*l.* (Hear, hear.) When they looked at the magnitude of the works, the large number of shares, and the depressed condition of the money-market during almost the whole of the period in which the undertaking had been in progress, he thought no better evidence was required of the estimation in which the Brighton Railway stood with the public than the fact that the amount of instalments in arrear was so exceedingly inconsiderable. (Hear, hear, hear.) He would not anticipate the details contained in the Reports now to be laid before the meeting, but when these documents had been read, he should feel great pleasure in giving any further information or explanation that might be required, and he hoped and believed that such explanations would be considered satisfactory. (Much applause.)

The Secretary (Thomas Wood, Esq.) then read the following Reports:—

REPORT OF THE DIRECTORS.

Gentlemen,—On former occasions the Directors have only been able to meet the proprietors, with statements of what they believed would be accomplished in the construction of the works on this railway, but now they have the pleasure of reporting the fulfilment of the most important promise held out to them, by having opened the line as far as Hayward's Heath on the 12th of July last, between which place and Brighton the passengers are conveyed by coaches provided by the Company. The Directors refer with the utmost gratification to the Report of Sir Frederic Smith to the Board of Trade previous to the opening, in which he characterises the works on this portion of the line as highly satisfactory, and which Report, whilst it is calculated to give the fullest confidence to the public, reflects great credit on the perseverance and ability of Mr. Rastrick, the Engineer.

In partially opening the railway so shortly before the entire completion of it, the Directors were guided, not so much by the expectation of any pecuniary profit, as by the great advantage that would arise from initiating their officers and servants in the working of the line previous to the great influx of traffic that must pass upon it when it is opened throughout.

The traffic, however, has been considerably more than was anticipated. During the first week after opening the line 2,483 passengers were conveyed upon it, and the receipts amounted to 925*l.*, 5s. 9d. In the second week 3,219 passengers, and the receipts 1,220*l.* 17s. 3d. In the third week 4,367 passengers, and the receipts 1,590*l.* 2d., and in the fourth and last week, 5,297 passengers, and the receipts 2,140*l.* 15s. 10d., thus showing a gradual and satisfactory increase.

To this return the Directors look with pleasure, as it must strengthen the confidence of the proprietors in the ultimate success of the undertaking.

Every possible precaution has been taken to insure the comfort and safety of the public, and the Directors have deemed it prudent for the present, not to travel over the line at any great speed, but when the railway is finished, there will be no difficulty in performing the journey between London and Brighton within two hours. The arrangements for the conveyance of heavy goods and merchandise have been postponed till the final opening.

The remainder of the line from Hayward's Heath to Brighton is fast approaching completion, as will appear by the annexed Report of the Engineer, and will be opened to the public by the 14th of September next.

The traffic on the Shoreham branch has been gradually increasing during the last year, and as the arrangements for the carriage of coal are complete, a considerable revenue will be derived from this source, and more particularly when the main line is entirely opened, as great quantities will then be conveyed to the interior of the country.

The Directors must again, as in their last Report, call the attention of the Proprietors to the proposed railway from Worthing to join this branch, in the hope that it will meet with their support and co-operation as a most valuable auxiliary to the London and Brighton Railway.

Since the last general meeting, the widening of the Greenwich Railway for the reception of the Brighton traffic, from Corbett's lane to London Bridge, has been rapidly proceeding, and land has been bought for the enlargement of the station, the substructure of which is to be made by the Greenwich Company, and there appears every disposition on the part of the Directors of that Company to fall into, and adopt such arrangements, as will be mutually beneficial to all the Companies. The traffic of the Brighton and Croydon lines is conducted at the joint station, under the superintendence and direction of managers, in pursuance of the agreement which was submitted to the last general meeting. This arrangement has hitherto worked to the satisfaction of your Directors.

There are 35,201 shares registered in the books of the Company, upon which the sum of 12,455*l.* remains due in respect of the calls.

By a minute of the 6th of May last, the Directors declared 3,883 shares to be forfeited, since which the calls have been paid upon 2,830 of such shares, thus leaving 1,053 shares unpaid upon.

The following is a statement of the Receipts and Payments to the 31st June, 1841:—

At the last general meeting the Directors stated that they expected to be able to complete the works with a suitable establishment for opening the line throughout, at a cost of about 2,070,000*l.*

By the accounts made up to the 30th June last, the gross expenditure of the Company was 1,951,906*l.* 17s. 4d., since which time a further sum of 92,935*l.* has been paid. The liabilities are 180,240*l.* and the amount now requisite to complete the line is estimated at 64,000*l.*, making a total of 2,289,081*l.* Of this sum the Directors have paid 2 044 841*l.*; they have at their bankers and lent out at interest, and unpaid on mortgage bonds tendered, 143,743*l.* 0s. 2d., they have due on calls 12,155*l.*; they have shares, which if sold at par, will amount to 39,950*l.*; they have land to be resold 80 000*l.*, making in the whole 2,320,989*l.*; thus showing sufficient means without the payment expectant from the South Eastern Company, or having recourse to the proprietors for further aid.

Having thus fully laid before the meeting the present position of the Company, the Directors must, in conclusion again congratulate the proprietors upon the result of the partial opening of the line, as an earnest of their anticipations as to the ultimate success of the undertaking.

JOHN HARMAN, Chairman.

REPORT OF MR. RASTRICK

To the Directors of the London and Brighton Railway Company.

Gentlemen,—On the present occasion of reporting to you the state and condition of the works of the railway, it will be unnecessary for me to enter into the detail of the works on each of the contracts, as heretofore, in consequence of the railway having been opened to the public, on the 12th of last month, from the junction with the Croydon Railway to Hayward's Heath, and it gives me great satisfaction to be enabled to report to you that the whole of the works on this portion of the line are in a very complete and satisfactory state of repair, and good working order, and have been so maintained with very little trouble. There are, however, still a few things to be done to finally complete the works between these limits, and these are as follow:—

On the Croydon station there are a few buildings that will require about three weeks to finish.

From Croydon up to the deep cutting at the north end of Merstham Tunnel, there is nothing worth mentioning, except the dressing-off the top slopes above the Star Inn; and as this is mostly clearly away at night, in order that the traffic on the line may not be interrupted, it probably will require a month to get the whole of this work finished.

The next work to which I wish to draw your attention, is the great embankment at Earl's-Wood Common on which a slip took place a short time previous to the opening of the railway. This slip is now quite firm and secure, and the trains pass over it.

Both the Merstham and Balcombe Tunnels are complete, except the northern entrances, and enclosing the shafts

Digitized by Google

with fence-walls, all of which will be finished in about a fortnight. They are lighted by gas, and have a good and perfect ventilation.

At some of the stations on the line the booking offices are not quite finished, but a few weeks will complete them, as well as the palisading of the platforms. Certainly.

The stations where the conveniences for loading of horses and carriages are ready for use, are—London Bridge, Croydon, Red Hill, and Haywards Heath; and, in the course of a month, the same conveniences will be finished for Horley and the Three Bridges stations.

The only remaining work on that part of the line which is now opened to the public, of importance, is the Ouse Valley Viaduct.

The two lines of rails are now laid over this viaduct, and the workmen are employed in setting the coping and parapet in a manner not to interfere with the traffic.

It gives me great satisfaction, although it is hardly necessary for me to assure you that the whole of the works upon the portion of the railway now open to the public are in a good and complete state of repair, and that they have stood to their work without showing the least defect, as you must have had sufficient opportunities to satisfy yourselves.

I now come to speak of the works on that portion of the line from Haywards Heath to Brighton.

The cutting to the south of the station at Haywards Heath is rapidly approaching to completion. The tunnel is completed all through the hill, except the brickwork to the entrances.

The contract at the south end of this tunnel, on Contract No. 12, is not quite got out, but the contractor is employing a great force to finish it, as well as the deep cutting at Ford Hill, which are the only two works of any consequence remaining on this contract.

The whole of the excavations on Contract No. 13 are completed, and the great embankment is now finished, except the dressing off of the slopes. It is all battered, and one line of permanent rails is laid all through, and the other line is now being laid.

The Clayton tunnel and the culvert are completed all through, there remains only the finishing the entrances, which are now on hand. The greatest portion of the road, through the tunnel, is ballasted, and here we have been disappointed in receiving the rails from the manufacturer, a great portion of it would have been laid.

On Contract No. 14 the whole of the excavations are out, and it only remains to dress off some portion of the slopes near the Clayton tunnel. The tunnel in this contract is complete, and a double line of rails is laid all through it. One line of rails is laid up to Clayton tunnel, and there only wants about 1200 yards laid to complete the second line.

The works on Contract No. 16 are complete except the dressing and soiling of some of the slopes, a double line of rails is laid all through, and the line is now ready for use.

The booking offices and train roofs, with the approaches to the station, are finished, the turning tables are fixed, and it only remains to lay the rails in the approach to the station, and under the sheds, and put down the platforms for the passengers.

From what I have stated, it will appear that the completing of the excavations on Contract No. 12, and the laying of the rails on various parts of the line between Haywards Heath and Brighton, are the principal works remaining to be completed, so as to open the line to the public; and, as I hope we shall have an immediate supply of rails from the manufacturer, I anticipate much facility in opening the line all through to Brighton by the 12th day of September next.

The lower, or Coal station at Brighton, is now complete, with every accommodation for the coal and other traffic; and as the long dispute with the Trustees of the Shoreham Turnpike Road is now settled, the coal trade which has now commenced, will add very considerably to the revenue of the Company.

The bridge is now building at Shoreham Road to raise the Turnpike Road, and to form a free and uninterrupted passage between the railway and the wharfs at Kingston, and the Drawings and Specifications are preparing for the extension of the wharfs there, which are very much wanted for the accommodation of the traffic that must come upon the railway.

The Shoreham Branch Railway and all the works connected therewith, as well as the engines and carriages, are in good working order.

The men are steady, sober, and attentive, and not one man has been discharged from the Company's service in this department since the opening of the branch line in May, 1840, nor has any accident happened.

I have the honour to be, Gentlemen,
Your obedient servant,
(Signed) J. U. RASTRICK.

London, August 5, 1841.

The Reports were received with repeated marks of approbation.

The CHAIRMAN begged to state, that on Saturday last he had gone over the portion of the works from Hayward's Heath to Brighton, in company with Mr. Rastrick and other gentlemen, and he was fully satisfied that nothing but extremely bad weather could delay the opening of the whole line beyond the day mentioned in the Reports. A sufficient supply of rails had been received since the Report of Mr. Rastrick was drawn up, so that no inconvenience was likely to result on that score. He should now be happy to hear any comments that might be offered on the documents before the meeting.

After a pause,

Mr. PARSONS inquired whether the Directors were prepared with any detailed statement of estimates for the completion of the line. Last year something like a detailed statement of the various items then deemed necessary had been put into their hands, but on the present occasion the proprietors had nothing before them whereby they could judge of the reasonableness of the further sum required.

The CHAIRMAN thought if the honourable proprietor would compare the accounts now submitted with those which were presented at the last meeting, the items on which excess had arisen would easily be discovered. He might state that the greatest excess had been occasioned in finishing the contracts, and on account of extra works.

Mr. PARSONS said, he had compared the accounts, but did not clearly see where the excess had arisen, and he should have been glad had a more detailed statement been supplied.

The CHAIRMAN said, the accounts were made up to the 30th of June, in compliance with the Act of Parliament, but the Directors were always glad to give any more recent information that might be deemed desirable. They had stated in their Report the amount expended, and the further sum which would be required—and on this point he thought the excess was easily to be accounted for from the magnitude and nature of the works. Some of their embankments were, he believed, the largest that had ever yet been constructed, and unfortunately the materials had not always been of the best description. Then, they had constructed four lines of rails at each station, for the purpose of preventing accidents by enabling trains to stand out of the main line. Altogether, looking at the nature and prospects of the line, the Directors had thought it desirable not to hesitate incurring any reasonable outlay. (Hear, hear, hear.) They had no doubt that the current expenditure on repairs would thereby be rendered very small, and were of opinion that the first expense was the best. (Hear, hear, hear.)

Mr. PARSONS said, his object was to obtain the means of comparing one periodical statement with another.

Some desultory conversation ensued, arising, as far as we could understand it, from a misapprehension of some of the amounts stated in the Report, which was cleared up apparently to Mr. Parsons's satisfaction.

Mr. PARSONS inquired whether any contract was absolutely completed, as frequently heavy liabilities were found to exist when the contractors' accounts came to be settled.

Mr. RASTRICK said, the only contract absolutely brought to a close was the Shoreham branch. It was impossible finally to balance the accounts till everything was finished on the line. It could not be done satisfactorily till a railway had been opened 2 or 3 months.

Mr PARSONS was only desirous of knowing whether the Directors could tell within a few thousand pounds what the line would cost.

Mr. RASTRICK said, the quantity of work done by the contractors was measured every month; and although not very minutely, sufficiently so to enable an approximation to be made to the amount due to them.

Mr. PARSONS inquired whether any great excess was apprehended on the contracts.

Mr. RASTRICK replied, that at present no great excess was apprehended. They were now able, from the near approach of the works to completion, to judge pretty accurately of the final cost. On the occasion of the last meeting, it was almost impossible to arrive at so satisfactory a result. He might mention, that the nature of the works upon several parts of the line was such as almost to defy previous calculation. There was, for example, the embankment at Earlswood Common. They had worked upon it incessantly for two months, without advancing scarcely a yard; as fast as materials were put in they came out at the sides, so that nearly double the quantity of materials and amount of labour had been expended upon that part of the line than had previously been judged necessary. There was another difficult embankment on the north side of the Clayton tunnel. Originally a slope of 2 or 2½ to 1 had been thought sufficient, but ultimately it had been necessary to make it 9 or 10 to 1. There was a third embankment at Kemp's farm, which had occasioned no small difficulty and extra work; but he was happy to say that the heaviest works were now satisfactorily completed—that all the precarious parts had been got over, and that what remained to be done could be made a matter of very minute calculation.

Mr. PARSONS remarked, that upon many lines it turned out that a large expenditure was incurred after the works were nominally completed and the line itself open to the public.

Mr. RASTRICK said, there would be nothing of the kind on the Brighton line. In fact, it was because they were pursuing a contrary course that they had now to announce an excess on the previous estimates. Instead of leaving the extra works to be executed and paid for after the line was open, they had proceeded with them during the progress of the ordinary works. (Hear, hear.) The circumstance of having four lines of rails at every station had already been alluded to by the Chairman. Such an arrangement would afford great facilities and be the means of averting considerable danger in the daily working of the line. Thus, an express train could stop in perfect safety at a station, whereas on other lines all trains had usually to remain upon the main line. This arrangement had been effected while the other works were going on. At other places they had constructed platforms for the reception of horses and carriages—had made numerous sidings for the conduct of the coal traffic—had inclosed the stations, and done various other things which in general were not commenced until after the railway was opened. He was satisfied it would be found that when the Brighton line was opened on the 14th of next month, there would be very little more to do. (Hear, hear.) Then, they had a large stock of materials on hand. They had chairs in stock, and rails in stock, more than would be required for the main line, but which would be applicable to the further accommodation in sidings, &c., that might be required for the coal traffic that was expected. He would repeat, that 12 months after the line had been fully opened, it would be seen that there was extremely little to be accomplished, and that the cost of keeping it in repair would be unusually small. (Hear, hear.)

Mr. PARSONS thought the explanations of Mr. Rastrick very satisfactory, and he was glad that he had put the questions to that gentleman. (Hear, hear.) On some lines he found that an excess of 20 per cent. on the estimates was incurred, after they were open for public traffic, but he was happy to learn that it would not be so in the present instance. (Hear, hear.) As Mr. Rastrick had alluded to the stock of rails, he should be glad to know if they had rails enough paid for, or drawn for, to complete the line to Brighton.

Mr. RASTRICK said, they had a sufficient supply.

The CHAIRMAN said, they had put down 150,000*l.* under this head, which they thought would be more than enough to cover the expense. They had not laid very minute details before the meeting. No other Company did so under similar circumstances, and although the Directors had nothing to conceal, and were most anxious to afford every information in their power, they thought it might be dangerous to go minutely into items, while respecting these very items there were accounts to be settled. For example, reference had been made to the contracts, and it might be productive of serious consequences if the contractors were put in possession of all that the Directors might know or think in reference to them. In fact the Directors often knew more than they deemed it prudent to disclose, and this entirely because it might be turned to the prejudice of the Company. In corroboration of what had been said by Mr. Rastrick, he might state, that as the extra expenses

Digitized by Google

arose they had been regularly discharged every month, so that they were now able to form a tolerably accurate judgment as to what further amount of expenditure would be required.

Mr. LEVY wished to know under what head in the accounts the grand entertainment which the Directors had given on the opening of the line was included. (Laughter).

The CHAIRMAN was glad this matter had been alluded to. The cost was put down under the head of General Expenditure. He had received several letters upon this subject, some of them anonymous, and others bearing the names of the writers, in which it was complained that the Directors and their friends had gone down the line and regaled themselves in a sumptuous manner, while the proprietors had been compelled to content themselves with bread and cheese. He could only say, that on many occasions when he had walked down the line—no later for example than last Saturday—he should have been glad to get even so humble a refreshment. He thought the man must be very narrow-minded indeed who could object to what the Directors had done on the occasion referred to. (Hear, hear). They had been anxious that the parties invited should have an opportunity of inspecting the works on the line, some of which were of a very interesting character, as for instance, the stupendous viaduct over the Ouse valley, which was not only a credit to the Company, but an ornament to the county. (Hear, hear).

Mr. LEVY did not complain of the amount expended, and would not have complained even had it been twice as large. Nor was he an anonymous letter-writer, for what he had to state he would at all times state boldly and openly. He complained that the money of the Company should have been expended upon parties who had not half so good a right to it as the shareholders. He thought it a great insult to the proprietors that strangers should have been preferred to them on such an occasion. (Hear, hear). For his own part, he cared nothing whatever about it, for when he travelled on such business as inspecting railway works, he always did so at his own expense. The Chairman's remarks were very evasive, and he thought a vote of censure ought to be passed upon the Directors for what they had done. (Laughter). It was very well for gentlemen to laugh, but the matter deserved to be gone into. Proprietors seemed to think that they should come to such meetings as these only to cry "hear, hear," but for his own part he thought they ought to look somewhat more into their affairs than shareholders were in the habit of doing. While on that subject, he would say that the mode in which Directors' reports were submitted was far from satisfactory. As they were now read, it was impossible to understand them. Items comprising thousands of pounds were hurried over, whereas Directors ought to be compelled to lay on the table a detailed statement of receipts and expenditure, so that proprietors might have an opportunity of examining it carefully and minutely.

The CHAIRMAN would repeat that he was not sorry that this short discussion had arisen, as some misapprehensions which had gone abroad, would now, he hoped, be removed. On the occasion of the first trip, very many of the shareholders went down the line, and very few on the second day. Had any great proportion of the second day's visitors been proprietors, he was satisfied that they would not have expressed any dissatisfaction with the arrangements made by the Directors. So far from the first company being composed exclusively of friends of the Directors or of strangers, many gentlemen now present knew that a great number of them were shareholders.

Mr. LEVY thought that circumstances only rendered the insult more pointed to the proprietors who were excluded.

The CHAIRMAN said they were compelled to confine the invitation to the largest shareholders on the Company's books.

Mr. GEORGE RENNIE, Jun., M.P. observed, that although honoured with an invitation for the first trip, he had not been able to go down the line until the second day, and for his own part he had nothing to complain of. (Hear, hear.) He had gone not for the purpose of partaking in the entertainment which had been alluded to, but to inspect the works, and he was glad that the Directors had managed the opening in so economical a manner. There was one matter of considerable importance which had not yet been alluded to at the meeting. Had any arrangement been come to with Mr. I. L. Goldsmid?

The CHAIRMAN replied in the negative. Mr. Goldsmid had commenced a Chancery suit against the Company, and since the last meeting had retired from the Direction. (Hear, hear.) The Directors had put in an answer to Mr. Goldsmid's Bill, and it was now for that gentleman to consider whether he would persist in his suit or not.

Mr. RENNIE presumed therefore that the Court of Chancery must settle the point in dispute?

The CHAIRMAN regretted that there was no alternative.

Mr. RENNIE enquired whether there was no medium measure. He was not sufficiently acquainted with the question to be able to offer an opinion on its merits, but he had heard from Mr. Goldsmid, that he was anxious to have the business arranged, and as he took it for granted that the Directors entertained similar feelings, he wished to know if some plan could not be devised for avoiding an expensive suit in Chancery. He was strongly opposed to going to law. (Hear, hear.) The most they could hope for from the Court of Chancery was an equitable decision, and he thought *that* could be obtained by less expensive means.

The CHAIRMAN said, the Directors would have felt extremely happy if the matter could have been settled by arbitration, but they were convinced that any arrangement of the kind was, under the circumstances, impracticable and impossible. The Directors did not feel themselves justified in consenting to a clause in a deed of conveyance which, whatever might be Mr. Goldsmid's friendly feelings personally towards the Company, might hereafter be put in force and turned to their prejudice. The circumstances out of which this difference had arisen were briefly these:—He (the Chairman) was one of the deputation of Directors who had conferred with Mr. Goldsmid, respecting the road which was now the matter at issue. They had agreed as to the price of the road, and every other preliminary, and (as fortunately was usual in that Company, where everything was committed to writing) the minutes of the Board bore testimony to these facts. It was not until three months afterwards that anything was said as to the passage of coal carts along the road in question. About that time the Directors visited Brighton, and took up their quarters at the Brunswick Hotel. One morning the Secretary was somewhat late in his attendance, and by way probably of excuse, stated that he had not been able to get any sleep till two o'clock in the morning, in consequence of the noise of the coal carts. Mr. Goldsmid, who was present, immediately took the alarm, and begged that a resolution might be passed prohibiting the passage of the carts along the road referred to, which was contiguous to his residence. The Solicitor of the Company, who was with the Directors at the time, informed Mr. Goldsmid most distinctly that such resolution would be of no avail, as it would be at variance with the Act of Parliament. The Directors, however—being anxious to oblige Mr. Goldsmid—passed such a resolution, with the full determination of carrying it out in spirit, honourably, as became honest men, but they could not consent to embody it in any formal contract, which might hereafter operate most injuriously to the undertaking. (Hear, hear.) This was the whole truth of the matter. The circumstances had frequently put him and his brother Directors into a most painful position, but now that Mr. Goldsmid had retired from the Board, they could treat with him as with any other landowner. If any other landowner had at the time come to them, and asked them to pass such a resolution as he had alluded to they would unquestionably have refused, but as they wished to be on good terms with Mr. Goldsmid, they consented, and now that gentleman turned round upon them, and wished to punish them for what was an injudicious act of courtesy and kindness.

Mr. RENNIE thought that an arbiter might nevertheless arrange the matter without much expense.

The CHAIRMAN said, that as the resolution adverted to was in the teeth of the Act of Parliament, the Court of Chancery could alone decide the point at issue. As to the expense, the greater part of it had already been incurred. The Directors had with much trouble put in an answer to the numerous questions of Mr. Goldsmid, and he thought that when that gentleman duly considered their answer, he would be glad to refrain from further proceedings. For his own part he had no dread of the result as affecting the Company. (Hear, hear.)

Mr. MAUBERT thought the matter should be left to the discretion of the Directors, who, he doubted not, would act in the way which they considered most conducive to the best interests of the undertaking. (Hear, hear.)

Mr. MAHON was sorry that one subject which had been brought forward that day had been touched upon so lightly—he meant the conduct of the Directors in reference to the entertainment on the opening of the line. On the 12th of July he (Mr. Mahon) wrote to the Secretary requesting to know the expense of the two days' entertainments separately, and intimating that he intended to found a motion upon such information at the next general meeting. The Secretary, in reply, stated that the letter had been laid before the Board, and that the writer might obtain every information "at the proper time." [The honourable proprietor here read the letters.] Now, he must object to such vague replies. He thought every proprietor had a right to have all questions as to the affairs of the Company fully answered, the more especially as at the half-yearly meetings there was no time to gain so much information as was desirable, and as many proprietors felt too timid to bring forward any motion that might appear to be an attack on the Directors. Without pleading to the charge of narrow-mindedness, alluded to by the Chairman, he must say that, in his opinion, the course pursued by the Directors furnished a very bad precedent. They had gone down the line with 250 friends, nay, had invited the whole of the officers of a regiment stationed in Brighton, and these parties they had regaled with champagne, whereas next day the shareholders were taken no further on than Hayward's Heath, and there had to put up with bread and cheese and ale. He thought such a proceeding was most invidious. The Directors of this Company did not stand alone in this contemptuous mode of treating their constituents, for from whatever cause it proceeded, it seemed to be ingrained in all Joint-stock Boards. Without dwelling further upon this point, he would move a resolution which he had purposely drawn up in a guarded manner so as not to give offence, and he trusted the gentleman who had introduced the subject would favour him by seconding it. The motion was as follows:—

"That the Reports and accounts now submitted be received, adopted, and printed, for the use of the shareholders; but this meeting cannot separate without deprecating the introduction of any practice into the management of the affairs of the Brighton Railway Company which may be construed to sanction entertainments given by the Directors, and particularly entertainments in which marked distinction may be drawn between the Directors, their friends and supporters, and the shareholders generally."

Mr. LEVY seconded the motion.

The CHAIRMAN said, with respect to the letter of the honourable proprietor, if the Directors were to answer in writing every question put to them, they would be compelled to keep half a dozen extra clerks on purpose, and then it could not be accomplished.

Mr. MAHON (interrupting)—Will you now state the cost of the entertainment?

CHAIRMAN—Certainly; it was 260*l*.

Mr. MAHON—A most exorbitant charge!

The CHAIRMAN did not think so. (Hear, hear.) The Directors had only invited two friends each, and of these very many were shareholders. The rest of the company consisted of shareholders, or

Digitized by Google

of parties to whom the shareholders were under great obligations. (Hear, hear.) If after three years of labour cheerfully undergone for the sake of the proprietors, the Directors were to be blamed for so trifling a matter as the getting up of a little festivity, it would be to them the subject of much surprise and regret. For himself personally, he would gladly have avoided, if he could have done so with propriety, the labour inseparable from entertaining so large a company, and the anxiety consequent on conducting them safely over a line, then for the first time thrown open for the passage of trains. (Hear, hear.) So far from wishing to cast a slight upon any of the shareholders, the Directors would have felt the greatest pleasure in having the company of every one of them, but such an arrangement was, as they must be aware, totally impracticable. If the meeting entertained any degree of confidence in the Directors, they would not pass such a motion as that now before them. (Hear, hear, hear.) If they did *not* entertain such confidence, they ought to say so openly at once, and the Directors would retire. It was not, however, in reference to such petty things as these, that the confidence of the proprietors ought to be shaken. (Hear, hear, hear.) He regretted to be obliged to say, that at these periodical meetings, the time of the proprietors was too frequently occupied with such questions, to the exclusion of discussion upon matters of far higher moment. (Much applause.)

Mr. WALEY, after expressing his regret that the motion which he was now to bring forward had not been brought forward earlier, so as to be a substantive motion, moved as an amendment that the Reports be received, adopted, and printed.

Mr. PEARSON seconded the amendment, and said he was extremely sorry that the valuable time of the meeting should have been consumed upon so frivolous a subject. (Hear, hear, hear.) He himself was not one of those who made the first day's trip, and therefore had no particular personal reason to approve of it. At the same time, he thought these little privileges were justly due and ought cheerfully to be conceded to Directors, especially to Directors who had exerted themselves so zealously and successfully as the gentlemen now before the meeting. (Hear, hear, hear). It was not usual, and he hoped it never would become so, that every shareholder should be invited on such occasions, for the expense would be very great. Such a practice was not adopted in the Docks, or any other public companies, and he trusted that the motion now submitted would not merely be rejected, but by an overwhelming majority (Applause).

Mr. MAHON rose, but the meeting evinced unequivocal signs of impatience, and amid cries of "spoke, spoke," the honourable gentleman resumed his seat.

The CHAIRMAN then put the amendment, and subsequently the original motion. Only six hands were held up for the latter in one of the largest railway meetings at which we were ever present.

Mr. MAUBERT suggested that if the journey to Brighton were performed in three hours instead of four hours as at present, the traffic would be greatly increased. He thought this might be effected by stopping for a less time at the various stations. He had no doubt that if the speed were greater, instead of 2,000*l.* per week as at present, the receipts would be 3,000*l.* or 4,000*l.* The honourable proprietor also offered some suggestions as to the carriage of passengers' luggage.

The CHAIRMAN, after expressing the satisfaction which he and his colleagues at all times felt in receiving hints from the honourable proprietor, and stating that the suggestions now made would receive the best consideration of the Board, observed, that in his opinion a good deal of the traffic which they now had was to be attributed to the great care which was taken not to keep up a high rate of speed upon a line so newly formed. Many of the passengers consisted of families who would be afraid to venture on the line, were the speed, under present circumstances, very great. He had ascertained this, personally, from many of the frequenters of the line. Besides, as the line would be opened throughout in little more than a month, it would be a pity, he thought, to disturb the existing arrangements. (Hear, hear.) It would be recollected, too, that Sir Frederic Smith, in his Report to the Board of Trade, had stated that he had endeavoured to impress upon the Directors the propriety of travelling at a comparatively slow pace until the line was finally completed. He (the Chairman) had no doubt that within a very short period they would be able to accomplish the whole distance between London and Brighton in two hours. (Hear, hear.) If they were now travelling with empty or half-filled carriages, they could easily go at a greater speed, but fortunately this was not the case, as would be known to any gentleman present who, like him, had made the journey from Brighton that morning. On arriving at Croydon there was not a single vacant seat in the train, and as several persons were waiting for places they were obliged to hook on two additional carriages, so that the great length and weight of the train caused them to be 10 minutes beyond their time in arriving at London-bridge. With respect to any inconvenience that might have at first existed in the transference of luggage at Hayward's Heath, this had within the last few days been removed. As their arrangements got matured and the line fully opened and properly consolidated, he had no doubt that the public would have every reason to feel satisfied not only with the speed but with all the accommodations supplied. (Hear, hear, hear.)

Mr. WALEY begged to revert to the matter which had been mooted by his friend Mr. Rennie, namely, the dispute with their late Director, Mr. Goldsmid. He was satisfied (and he was sure the meeting were of the same opinion,) that no body of Directors could surpass those of the Brighton Railway Company in firmness and integrity of purpose, and for his own part he had the fullest confidence in their decisions. (Hear, hear, hear.) At the same time he thought they would be not a little assisted by an expression of opinion on the part of the proprietors relative to this unfortunate difference—a difference which had given rise to much unpleasant feeling, and which within his personal knowledge had deterred several intending speculators from embarking their property in the purchase of shares. He thought that if a certain number of persons were appointed to the legal position of the Lord Chancellor, who should be empowered to hear and decide upon the matter at issue, without any concession or comprise on either side, a great deal of needless litigation might be spared. Of course he did not mean that the Directors should have this invidious duty thrust upon them, but still he thought some such arrangement might be advantageously carried into effect.

The CHAIRMAN was sure that no person could be more anxious than the Directors were, that the matter should be settled by arbitration if it were at all practicable, but as Mr. Goldsmid insisted upon their doing that which by their Act of Incorporation they were not authorised to do, no private tribunal could interpose with effect.

Mr. PARSONS expressed his great aversion to an expensive suit, which could only benefit the lawyers. The time of the meeting ought not to be consumed in the discussion of legal questions. This was now taking place for the second time.

The CHAIRMAN said, the proprietors would have had just cause to complain if the Directors had yielded a point which, when the line was open, might have deprived them of this portion of their property altogether. The Directors took blame to themselves that they had ever placed themselves in such a position out of kindness to an individual. If, at the time when the resolution of the Board was passed, it had ever been imagined that such resolution was sought to be incorporated in the formal conveyance of the property purchased from Mr. Goldsmid, it never would have been passed. The Company's Solicitor had, as already stated, expressly and explicitly informed Mr. Goldsmid that the resolution would not be legally binding, and yet Mr. Goldsmid now sought to compel them to carry it into effect. He begged to add, that it was not the Directors but Mr. Goldsmid, who had resorted to the Court of Chancery; the Directors had merely acted on the defensive.

Mr. CASH thought it would be much better that this discussion should not proceed further. (Hear, hear, hear, hear.) The Directors were perfectly well acquainted with the sentiments of the proprietors on the subject, and it might safely be left to their discretion. (Hear, hear, hear.)

A PROPRIETOR inquired what arrangements had been entered into with the Greenwich and Croydon Companies in respect of toll.

The CHAIRMAN said, they had only to consider the Croydon Company in this matter, to whom they paid a toll of 1½d. per passenger per mile.

A PROPRIETOR wished to know if it was the intention of the Directors to retain the present rate of fares.

The CHAIRMAN said it was extremely probable that the fares would be lowered when the line came to be opened throughout. At present they had a very expensive piece of machinery to work between Hayward's Heath and Brighton. They thought it better to have it in their power hereafter to reduce the fares than to be compelled to raise them. (Hear, hear, hear.) Last week they had carried 6,000 passengers, which showed pretty clearly that even with the present fares, the public were disposed to patronise the line.

Mr. PARSONS hoped that the Directors would not reduce the fares very considerably, as the line was an expensive one. A comparatively high rate had been adopted on the London and Birmingham Railway, and answered well.

A PROPRIETOR inquired whether the Directors intended to open any station between London and Croydon.

The CHAIRMAN answered in the negative. That part of the line belonged to, and was under the management of, the Croydon Company.

Mr. PEARSON thought an amalgamation of the Croydon Company with the Brighton would be very desirable.

The CHAIRMAN said, they were not in a situation at present to entertain that question, but he should not feel surprised if on the occasion of the next meeting, or at some meeting convened specially for the purpose, such a suggestion should be brought forward. At present he had no doubt that from the good feeling subsisting between the Companies, arrangements which would contribute to the accommodation of the public would continue to be made. In all their proceedings they were sincerely anxious that the benefits to the two Companies should be mutual. (Hear, hear.) There was no doubt that the Brighton trains would abstract a portion of the Croydon traffic, but he did not see how that could under existing arrangements be avoided.

Mr. MAUBERT in rising to move a vote of thanks to the Chairman and Directors, expressed his opinion that even with the present rate of traffic upon the entire line, a dividend of 5 per cent. would be secured. (Hear, hear.) The proprietors were greatly indebted to the exertions of the Directors, particularly to the Chairman, who had made the affairs of the Company his especial business. (Hear, hear, hear.) He was satisfied that more work had been performed by the Directors of this line in the time than upon any other line in the kingdom. (Hear, hear.)

Mr. MAHON hoped it would not be considered inconsistent in him to second, which he did with great pleasure, the vote of thanks to the Directors. (Hear, hear, hear.)

The motion was put by Mr. Maubert, and carried by acclamation amid loud applause.

The CHAIRMAN expressed his great gratification at this mark of continued confidence on the part of the proprietors. Without the full confidence of their constituents, it would have been impossible to carry on such an undertaking, and as they knew each other better, he hoped and believed that himself and colleagues would continue to deserve, and then he was sure they would receive, so satisfactory an acknowledgment of their services. He had no

Digitized by Google

doubt that it would be found at the next meeting, that all the statements made by the Directors that day had been realised. (Hear, hear, hear.)

Mr. Thompson, in a brief but highly eulogistic address, which was warmly responded to by the meeting, proposed a vote of thanks to Mr. Rastrick, the Company's Engineer-in-Chief.

The Chairman trusted he was not out of order in seconding the motion. No man had had more frequent opportunities than himself of witnessing the indefatigable zeal and splendid talents of Mr. Rastrick. Many difficulties had occurred in the prosecution of the undertaking, of which the proprietors at large could not be aware, and he had no hesitation in saying, that but for the skill and perseverance of their Engineer, properly supported as he trusted that gentleman had been by the Directors, these difficulties could not have been overcome. (Hear, hear, hear.) He had very great pleasure in seconding the motion, as a just tribute to one who, at no distant day, was destined to occupy a very prominent place in the very foremost rank of his profession. (Hear, hear, hear.)

The resolution was carried unanimously.

Mr. Rastrick, who was received with great cordiality, made an appropriate acknowledgement and the meeting separated.

GRAND JUNCTION RAILWAY COMPANY —GENERAL MEETING.

The half-yearly meeting of the proprietors of the Grand Junction Railway was held in the Cotton Sales Room, Liverpool, on Friday, August 6, for the purpose of declaring a dividend out of the clear profits of the undertaking, for the half-year ending the 30th of June, and the election of three Directors in the place of that number, who retire; John Moss, Esq., Chairman of the Directors, presided.

Captain Huish, general Manager and Secretary, read the Report as follows:—

REPORT.

The receipts on this line for the half year ending 30th June, 1841, the accounts of which will be laid before the proprietors, have been for

Coaching, conveyance of carriages, horses, mails, and parcels	£161,771	2	0
Conveyance of merchandise and live stock	46,738	2	0
Total	£208,509	4	0

exhibiting, as heretofore, an increase as compared with the receipt in the corresponding part of last year, notwithstanding the almost unparalleled stagnation of trade since the commencement of the present.

The revenue of the coaching department was kept down during a portion of the half year just ending, by an unnatural, and therefore only temporary, competition for Lancashire and London passengers on the part of another Company, but which is no longer felt; whilst the revenue for the merchandise department, (though still, but as the Directors believe only temporarily, affected to some extend by the same competition) is greater than in any previous half year.

The statement of the expenses will be found equally satisfactory, as they amount altogether only to £49 5s. per cent. on the receipts; though the proportion of goods to passengers producing those receipts is much greater than at any previous time.

The total expenditure including the toll to the Liverpool and Manchester Company has been 93,920*l.* 1s. 1d.

Upon the whole, therefore, the Directors feel, that they may justly congratulate the proprietors on the continued prosperity of the undertaking.

The net receipts of the half year, with the balance of 689*l.* 11s. 4d., carried over from the preceding half year, and the addition of 1,766*l.* 9s. 1d. from the fund reserved in January, 1840, to "meet times like the present) of commercial depression, which might reduce the income of any single half year," will afford a dividend of 5*l.* 10s. per cent. upon the total expenditure of the Company.

The dividend might have been 6*l.* per cent. if the balance of 8,804*l.* 7s. 4d., which a dividend of 5*l.* 10s will leave of the reserved fund, had also been appropriated, and if the Directors had adhered to the practice heretofore adopted of debiting or crediting (as the case might be) the half-year's receipts with the balance of a comparative valuation, by competent persons of the Company's moveable stock; since that balance for the past half-year is 2,396*l.* 17s. 7d. in favour of the account.

Stated in this the usual way, the account for the purpose of dividend, now, would have stood thus:—

Net receipt of the half-year, including balance from last	119	14	10	11
Balance of stock account	2	366	17	7
Reserved fund	10	570	16	5
	132	292	4	11
Dividend of 6 per cent.	132	198	0	0
Balance to current half-year	£94	4	11	

If the Directors had decided on recommending a dividend of 6*l.* per cent it would have been under the certain expectation, which they entertain, of a similar dividend for the current half year, besides reserving at the end of it a fund at least equal in amount to the 10,570*l.* 16s. 5d. now at the disposal of the proprietors.

The Directors, however, do not feel assured of the expediency of acting upon a comparative valuation of stock on all occasions when it may happen to show an improvement in value, although they would have considered it right so to do, as they have heretofore always done, if there had appeared any depreciation in value; on the present occasion they deem it more prudent (with reference to the increase of business which they hope they may safely reckon upon, and especially in the goods department), to carry over the present balance of profit on stock account for the service of the current half year, and the further improvement of the condition of the stock, leaving also the 8,804*l.* 7s. 4d. of the reserved fund for future appropriation.

The dividend, therefore, which the Directors recommend now to be made is 5*l.* 10s. per cent.

The net receipt from Sunday travelling is equal to 10s. 8d. per 100*l.* share.

The proprietors will not fail to bear in mind, that they are on the present occasion, for the first time, making a dividend on the Total Expenditure of the Company, and *that* out of the receipts of the first, which is always the least productive, of the two half-years, and that first half, moreover, happening to have been one during which the consequences of the extraordinary stagnation of trade have certainly been more seriously felt than could have been anticipated when they came to the resolution of capitalizing the entire debt of the Company, thereby creating a very large additional amount in respect of which dividends have now to be provided.

The Directors may mention as a circumstance bearing in a very important manner, as they think, upon the prospects of the undertaking (so far as the past is ever any guide with regard to the future), as well as justifying to a great extent their own former expressions of confidence in it, that whilst the amount of dividends actually paid to the proprietors for the first year after the opening of the line, June 1837 to 1838, was only 109,180*l.*; for the second, June 1838 to 1839, 150,667*l.*; for the third, June 1839 to 1840, 209,552*l.*; the amount for the year just ended, June 1840 to 1841, will be, less interest, 255,269*l.* This fact is very satisfactory, also, as showing clearly that although the nominal amount of dividend, namely per share, is not so great as on former occasions when the capital on which dividends were calculated was so much less, yet the actual divisible profits of the concern are greater than ever.

As connected with the subject of Traffic, the Directors may state further, that the receipts of the current half-year, so far as it has gone, exceed those of the corresponding period of last year, exclusive of the increase caused by the meeting of the Agricultural Society held in Liverpool last month.

It is gratifying to the Directors to be able to say, with regard to that event, that though the business of the week was so much extended as to add about 50 per cent. to the usual receipts, not a single accident occurred, nor (with the exception of some inevitable delay with a few of the trains on account of their being unusually heavy) did anything happen to cause inconvenience to the public, from whom the Board have not a single complaint; a circumstance which shows the immense advantages and facilities which railways are capable of affording upon any emergency. The Directors have not failed to acknowledge and reward the exertions of the different servants of the Company, to which these successful results may in a great measure be ascribed.

Upon the state of the line and works, (which the Directors have inspected throughout within the last few days,) no remark is called for, all being in perfect order.

Since the last general meeting the Directors have, pursuant to the power vested in them by Act of Parliament, filled up the vacancy caused by Mr. Unwin's retirement from the Board by the election in his place of Mr. Joseph Need Walker, of Liverpool.

At the present meeting three other Directors go out of office by rotation; and, as they are not now re-eligible, other gentlemen must be elected in their stead.

The three retiring Directors are Messrs. Moss, Sanders, and Heyworth.

The Board have to report, with regret, the recent resignations of Mr. Chorley the Treasurer, of Captain Cleather, the outdoor Manager and Assistant Secretary, and of Mr. Baddeley, the Superintendent of the locomotive engine department. The Directors have supplied these vacancies by the appointment of Mr. Goalen to the office of Treasurer, of Captain Huish to the office of Secretary and General Manager, and of Mr. Trevithick to the office of the Superintendent of the Engine Department. Efficiently as the duties of these several offices have certainly been heretofore performed, the Directors entertain a confident hope that they have succeeded in their anxious endeavours to provide for the future discharge of them with equal efficiency and as satisfactorily as heretofore. Mr. Goalen the Directors had only power, under the Act of Parliament, to appoint temporarily, submitting the appointment to the proprietors at the present meeting for confirmation or rejection; they cannot but express their opinion, however, that it will be judicious to confirm the appointment; since Mr. Goalen's long connexion with the Company, and especially the intimate acquaintance with their financial affairs which he must necessarily have acquired from his position as the late Treasurer's chief assistant, appear to them to point him out as the fittest successor of that gentleman. In Captain Huish, the Directors have every reason to believe that they have secured for the Company a valuable officer, and one who from his previous connexion with railway concerns will be found prepared at once for the able discharge of the varied and important duties now committed to his care. Of Mr. Trevithick, who has been in the Company's employ as Resident Engineer at Birmingham for some time, the Directors need only observe, that his appointment was suggested by Mr. Locke, upon whose responsibility (as the Company's principal Engineer) the conduct of this department of the undertaking has especially rested.

Before concluding their Report, the Directors would desire to bring under the consideration of the proprietors at large a subject which they regard as of great importance to the increased prosperity of the Grand Junction line, namely, the completion of the communication by railway with Scotland. That Scotland must, sooner or later, have the advantage of being connected with England by railway, appears to admit of no doubt; and it seems equally clear that a western route (as recommended by the Government Commissioners, after being favourably reported of by this Company's Engineer, Mr. Locke), is the proper one. Considering, then, that the Grand Junction line would form a not unimportant link of this national chain of improved communication, the Directors have felt it to be their duty on various occasions, and in various ways, to promote the great object in view. Very recently, they, with deputations from various other Railway Companies similarly interested, met a number of gentlemen from Scotland, and arrangements were then made for ascertaining the opinions of the influential landed proprietors along the proposed line, with a view to such ulterior measures as may be most expedient and practicable.

The Directors trust, they may feel justified on some future early occasion, in bringing this project more distinctly before the proprietors of the Grand Junction Railway for their support; at present their object is only to convey their own very strong opinion that it is of great importance indeed for Grand Junction interests that the Scotch traffic should be secured in a western route.

If it meet with the approval of the proprietors, the Directors will continue to pursue this object, in concurrence with other parties, as far as lies in their power.

JOHN MOSS, Chairman.

The accounts were examined and approved, July 28th, 1841.

LEWIS POTTER,
N. D. BOND, } Auditors.

The CHAIRMAN then addressed the meeting as follows:—Having heard the Directors' Report read, I trust you are satisfied with it, though the dividend is not so large as I should have liked to see it, and indeed fully expected to see it. In the present state of the times, however, we have no reason to complain; one fact alone which has come under my observation leads me to this conclusion, namely, that there was a falling off in the revenue of this port of upwards of 500*l.* during the last half-year. We railway proprietors therefore must not wonder though we may regret) that we have not to congratulate ourselves on any large increase of revenue within the same period. After the explanation given in the Report I need not say more on this point. The period having arrived, when by the Act of Parliament I am no longer eligible to remain a Director of this Company, I will beg to lay before you a statement which I have felt much interest in looking at from year to year, and which I think you will feel equal interest in considering, and perhaps keeping up in future for yourselves. The paper which I hold in my hand gives an account of the cost of the railway (including the purchase of the Warrington and Newton, and Chester and Crewe lines), and of the stock, and also of the receipts and expenditure in each department, for each half year from the opening of the line, with some other particulars; it will enable you at a glance to form an idea of the progressive improvements which have at length resulted satisfactorily, I trust, to every proprietor. I have obtained the permission of my colleagues to give a copy of this paper to any proprietor who wishes it, and I will therefore now only mention one or two of the more striking facts which it exhibits. By it you will see that our concern opened the 4th July, 1837; since when, each half-year's gross receipts are greater than for the corresponding one of the previous year. In the year ending the 30th June, 1838, the coke used cost us 19,855*l.* on a receipt of 215,147*l.*, whilst the year ending 30th June, 1841, we earned 449,682*l.* with an expenditure of 18,311*l.* in coke, being a reduction of 50 per cent. when compared with the work done; nor do I feel ashamed to mention the fact that the Directors have never received in any one year the sum of 1,200*l.* voted to them, and during the last two years 820*l.* a-year is the whole sum paid to the fifteen Directors for their services. Now these are facts which my colleagues and I have great pride and pleasure in referring to on leaving the Direction; each proprietor will of course judge for himself, but for my part I doubt whether any Railway Director could show a more favourable statement of the affairs of his Company than this, and I have personally so much confidence in the Grand Junction Railway as an investment for capital, and such entire reliance also upon the gentlemen whom I leave behind me in the Direction, that I believe we may now, or at any future time, challenge comparison with the best of the other railways of the country, without apprehension as to the result of the comparison. As I have personally nothing to boast of when leaving the concern, except the actual, and I trust still progressively improving, condition to which our united exertions have brought it; and as that is explained in the paper I hold in my hand, I will not trouble you with any further observations as to the past; but I trust I may be allowed to call the attention of those who may form the Board, after the elections which are to take place at this meeting, and especially of my successor in the chair, to two points which have had the consideration of my colleagues and myself, but which I think are deserving of future mature consideration on some early occasion.—The first is, the rate of the passenger fares. By the returns which I have procured from authentic sources, it appears that on those lines where exceedingly low fares are charged, the number of passengers is not only, as might be reasonably expected, greater, but astonishingly greater, than on lines where high or even moderate fares are charged. On the Dublin and Kingstown Railway, for instance, and on the recently opened Glasgow and Greenock Railway, where the average charge is about 1d. per passenger per mile, the number of passengers is four times greater than on our line. I am quite aware that it would be impossible for us alone, by *any* reduction in rates, to increase the number of those passengers who use our line only as a link in a long chain of communication; there is no inducement to us to lower our *through fares*, unless our neighbours north and south will reduce theirs; and we have no claim upon them to do so, and indeed are bound to believe that they have fixed their fares at only a remunerating rate to themselves; but what I think we might advantageously do is, to reduce the *short* fares on our own line, so as to offer to the public the accommodation of it, as a means of transit from station to station, at a price which might induce them oftener to use it. The plan at present adopted upon our line and others, of charging one and the same uniform mileage rate upon long and short passengers, in my opinion, prevents very many of the latter class from using our line at all. With reference to this point, I may mention that there is good reason to hope that Government will alter the present mode of taxing railway traffic, by charging a per centage on the gross receipt, instead of, as at present, a fixed sum per passenger per mile; this will be a very great advantage to the public and to almost all the Companies. The other subject which I would desire to recommend to the further consideration of the Board, is the propriety of making our dividends more frequently than twice a year. With the exception of the goods' traffic, the business of a railway may be considered as an entirely ready money business, and therefore I do not see why we might not make dividends four times a year instead of twice; it would not be necessary to make up the accounts *to a point* oftener than we now do; we might divide 2*l.* 10*s.* or 3*l.* in the middle of November and May, reserving the residue of the net receipts for dividends at the usual half-yearly periods in February and August, on a full statement then of all the Company's accounts. I wish it, however, to be understood, that although I have personally a strong opinion upon both the points which I have mentioned, yet I am not prepared to press them by means of any resolution of the proprietors. I do venture, however, to recommend them to the serious and early consideration of the gentlemen into whose hands the conduct of the Company's affairs may fall after the present meeting. I will not detain you longer; but I cannot close my official connexion with the Grand Junction Railway Company, without expressing to you, individually and collectively, my most grateful thanks for the confidence you have placed in me from the commencement of the undertaking, and the personal kindness which upon every occasion you have shown to me; I retain a very considerable pecuniary stake in the concern, and, independently of that circumstance, can never cease to feel the deepest interest in its prosperity. There are some important matters, in the negociation of which I have taken perhaps, I may say, the leading part, and which I should certainly have been glad if I could have seen the final and satisfactory arrangement of, before quitting the service of the Company, although I have the most entire and implicit reliance in the gentlemen whom I leave at the Board; and as I can make the remark without subjecting myself to the imputation of any personal motives, since it cannot be made to bear upon myself, I do not hesitate to say that I think the proprietors would do well to avail themselves of any opportunity of modifying in the Company's Act of Parliament the clause which prohibits them from re-electing a retiring Director.

These remarks were received with loud cheers.

The following are the documents alluded to:—

5,000 C. & C. "	125,000				
				£2,203,300	0 0
Land unsold, and sundries to be received for the rails by supposed value				30,000	0 0
Total				£2,233,300	0 0

Mr. Lawrence Heyworth said, the subject most interesting to the meeting would most likely be the dividend. He observed, that the sum of 5*l.* 10*s.* was suggested by the Directors. It should be recollected, however, that though the Directors might recommend a dividend, it rested with the proprietors to fix what that dividend should be, and it was for them to consider whether they would not be justified in calling for a dividend of 6*l.* per share. He thought they would be justified. There was a reserved fund in the hands of the Directors which had been accumulating till it amounted, he believed, to about 8,000*l.* The only thing that could now hinder him from entertaining the opinion that this sum ought to be divided would be a statement that the stock was in a depreciated condition. They were told that every thing was in excellent order. Was every thing in good order? [The Chairman—Every thing is in excellent condition]. If every thing were in order, there was no cause for retaining a reserved fund. If there were any reason at all for a reserved fund, it was to meet a contingency like the present. It seemed, that the cause of the present depreciation was the state of trade, in which case it was likely the evil would be but temporary. Something was also to be attributed to competition, by which it appeared they were no longer affected. The next half year would, therefore, probably be better, and enable them to make up a dividend of 6*l.*, even if they divided that sum now. He did not see the advantage of a reserved fund, for it was plain that the money retained would, if divided formerly, have gone into the pockets of those to whom the railway then belonged, many of whom had sold out shares. The money that was earned in one half year belonged, at its termination, to those who then held shares, and they ought to be put in possession of it. He moved, that instead of 5*l.* 10*s.* per share, as recommended by the Directors, the dividend be 6*l.* per share; and, with that alteration, he moved the adoption of the report.

Mr. Crosthwaite asked the Chairman whether, supposing they divided 6*l.* now, they would be enabled to realize 6*l.* for the next half year?

The Chairman said, yes; but he did not think, when the stock was valued as it had been valued, that it was prudent to divide within 9*4l.* When they considered that they divided 6*l.* 10*s.* last half year and 5*l.* 10*s.* this half year, they would see that they had 12*l.* for the year.

Mr. L. Heyworth thought it would be proper, if possible, to divide to a farthing, for it would ensure complete accuracy, and compel the Directors to attend closely to the machinery and keep it in perfect repair.

Mr. Maxwell seconded Mr. Heyworth's motion.

Mr. Lewin Mozley said, as one of the Board, he could have no objection to the dividend being 6*l.* per share, if the proprietors determined it should be so; but the Directors had a duty to perform to themselves and the proprietors, and, after having given a recommendation for a dividend as near as possible to what they thought was best for the present and permanent good of the Company, if any evil arose from what might be determined at that meeting, they would not have themselves to blame. It was easy to conceive, that, by taking the reserved fund, they could make up a dividend of 6*l.* per share. They might take the whole of the reserve fund for that purpose, under the impression that they could go on next year. Granted that the stock had been kept up in a state of perfect efficiency, would any gentleman tell them that there was not a continual decay going on, a continual wear and tear which was gradually affecting the whole? No valuation of stock could possibly give a valuation which they ought to divide. In every well-regulated concern, the machinery should be kept up to the work, but, at the same time, such a per centage should be deducted from the profits as would secure a sum sufficient to meet any possible contingency, or they should continually add so much to the stock in new work as would keep it up in a perfect state. If new work were not continually

added, there would be a gradual decay, which nothing but a fund would meet. There was shown this year an addition to the value of the stock which the outlay, since the preceding valuation, did not justify, and to divide that would be absurd. The Directors thought it most prudent to divide the clear gains of the Company. He recommended them to pause. They were a great company, and their concerns had exhibited a state of productiveness that was unparalleled, and he trusted they would proceed with that wise caution that would ensure a continuance of their prosperity.

Mr. LAWRENCE HEYWORTH recapitulated his reasons for desiring a dividend of 6l., and for wishing to do away with the reserved fund.

Mr. JOSEPH HORNBY said, the principal argument of Mr. Mozley had been the wear and tear of stock. He would ask the engineer if sufficient allowance were made for this in the valuation in his department?

Mr. LOCKE said, he had looked over the stock, and he did not believe that it had been improved to any such amount as that stated. He did not wish to have the stock valued at all. His object was to keep it in an efficient state. He had represented to the Directors his ideas on the last valuation of the stock, and he believed they had been in some measure influenced by his statements.

The CHAIRMAN said, the valuers were totally unknown to the Directors in all cases.

Mr. ELIAS MOZLEY said the proprietors ought to be satisfied with the dividend proposed, rather than draw the last shilling, and leave the Directors to be annoyed by sudden difficulty. If they divided six per cent., they would be dividing that which was not earned, and, in some measure, drawing upon posterity.

The CHAIRMAN would observe, that this was the first half year in which the stock had been valued beyond the preceding half year.

Mr. TURNER, seconded by Mr. JOSEPH HORNBY, moved the confirmation of the report as it originally stood. It was agreed that this should stand as the original motion, and that Mr. Lawrence Heyworth's motion shou'd be taken as the amendment.

The amendment was put, and after it the original motion. The original motion was declared carried, and the report was adopted.

Mr. TURNER, seconded by Mr. EDWARDS, moved that a dividend of 5l. 10s. be declared on each share, payable on and after the 18th August next. —Carried.

Mr. SWIFT moved that the seal of the Company be put to the book containing the names of the shareholders.—Agreed to.

The election of Mr. Goalen to the office of Treasurer was approved of and confirmed.

Mr. JOSEPH SANDERS said, he should be sorry if the observations he was about to make should create any discussion. He had always endeavoured to make peace, and had frequently made it his business to allay differences. The feeling which he had on that subject should not deter him, however, from an independent course of action. He had a duty to perform towards his friend Mr. Earle and himself. It would be recollected, that two years ago a discussion had arisen in that room respecting Mr. Earle, and that when the differences were at length adjusted, he (Mr. Sanders) had remarked that it would prove but a hollow truce. He was glad of the opportunity of saying that he was mistaken. Mr. Earle had vindicated himself, and his subsequent course had been such as to entitle him to the highest respect, for from Mr. Earle's resumption of his duties at the board, he had never met a man who had conducted himself with more nice and gentlemanly propriety. He hoped he now stood right with his friend—(Mr. Earle bowed assent)—and with the court of proprietors. (Cheers.) They were now called upon to nominate three Directors, and he had risen to fulfil the promise which he made that day twelve months, which was, that at the present meeting he would put Mr. Earle in nomination to fill one of the vacancies at the board. Mr. Sanders proceeded to speak in warm and strong terms of Mr. Earle's high qualifications for the office; of his great talents, untiring assiduity, and extensive knowledge of all relating to railways, which, Mr. Sanders said, he never knew equalled by any individual. He might say, that Mr. Earle had been self-willed and a little untractable; but of late he had mastered himself, and had been just the contrary. He had great pleasure in nominating Mr. Earle for one of the vacancies at the Board of Directors.

Mr. LEWIN MOZLEY seconded the motion. He said Mr. Earle possessed talents which would render his services of the highest value.

Mr. RIPLEY, seconded by Mr. JOSEPH HORNBY, proposed Mr. John Cropper.

Mr. JAMES HEYWORTH, seconded by Mr. E. ARNAUD, proposed Mr. Thomas Moss. Mr. Heyworth spoke at some length in favour of the gentleman whom he nominated, and said, to place him on the board would be, in some degree, like retaining the services of their esteemed Chairman.

A PROPRIETOR, seconded by Mr. TURNER, proposed Mr. Dudgeon.

The CHAIRMAN said, as respected their present proceeding, he hoped they would not allow anything which had passed on a former occasion to have any influence with them. There were arrangements pending which caused him the only regret upon leaving the board, but Mr. Earle would do his utmost to carry them out, and he felt the greatest confidence in him. Since the meeting to which allusion had been made, Mr. Earle and himself had worked together most amicably.

Mr. JAMES HEYWORTH spoke in strong terms of the great ability, zeal, and efficiency of Mr. Earle.

Mr. HARDMAN EARLE said he knew it was not customary for those who were nominated to the Board of Directors to address the shareholders previously to going to the poll, but he would with the permission of the meeting, take the liberty of saying a few words. Twelve months since he had had the gratification of replying to a vote of thanks, in which he was included with two other gentlemen. He remembered that his friend Mr. Mozley then singled him out, not for his merits, but he might say, for his demerits, and the observations of his friend were responded to in a manner which showed that his general conduct did not meet with disapprobation; and he was impressed with the feeling that the demonstration on that occasion might be considered a vote of oblivion. (Hear, and cheers.) A wish had been expressed by his friend Mr. Sanders and others that he should again take his seat at the board. The proposal of a fourth candidate, he could not but think, showed an objection to himself. He inquired the reason of that objection; he wished to know what it was, that he might at once meet it. He was told that there were reasons existing now which would not exist next year. He wished the reasons to be stated, that he might meet them publicly. He was told that there were some among the Directors who had objections. He knew, with certainty, that at least seven out of the fifteen were favourable to his return, amongst which seven he was gratified to reckon their esteemed Chairman. He might have given offence, for he discussed, he knew, with considerable energy of manner; but he never intended to give offence, and if he did so, the person whose feelings he unwittingly injured could not possibly feel more pain than he did himself when he became conscious of what he had done. (Hear, hear.) However, this could make no difference, for he should not be more agreeable twelve months hence than he was now. The Board of Directors was not a club or a dining-room; it was an assembly of men of business, and men did not always check their ardour when discussing points of business, and differences of opinion would necessarily arise. He promised, however, that he would, if elected, perform his duty zealously and faithfully. (Cheers.)

Mr. LAWRENCE HEYWORTH spoke briefly of the zeal and abilities of Mr. Earle, and said he was entitled to the utmost confidence of the shareholders.

It was recommended by several gentlemen,

Digitized by Google

amongst whom was the Rev. Rector Brooks, that the votes should be taken by a show of hands, when, if the sense of the meeting appeared decidedly against any one candidate, the gentlemen who had proposed him should withdraw their motion. It appeared to be understood that this recommendation should be acted upon.

The show of hands was taken, first for Mr. Earle, in whose favour the display was very numerous. Mr. Dudgeon came next, but very few hands were held up in his favour. The show was very strong in favour of Mr. Cropper and Mr. Moss.

Several gentlemen now expressed a hope, that the mover and the seconder of Mr. Dudgeon would withdraw their motion.

Mr. TURNER refused to accede to this, and demanded a poll.

Mr. WILLIAM WALES said, as the feeling of the shareholders had been so strongly displayed, he thought it was excessively inconvenient that parties should persevere in calling for a poll. Many shareholders had come from a distance who would be thereby detained in Liverpool.

Mr. TURNER expressed his determination to try the result of a poll.

Mr. CHARLES LAWRENCE moved that the statement of the progress and condition of the railway alluded to by the Chairman should be printed and circulated amongst the shareholders.—Carried.

Mr. LEWIN MOZLEY moved, that the Chairman should quit the chair, and that Mr. Charles Lawrence should take his place. Mr. Moss having vacated the chair, and Mr. Lawrence having taken it, Mr. Mozley passed a high eulogium on the zeal and ability of Mr. Moss, and dwelt with great force and emphasis on his valuable services to the Company. He concluded by moving a vote of thanks to Mr. Moss.

Mr. JAS. HEYWORTH seconded the motion, which was carried by acclamation.

Mr. MOSS replied, and said, he was amply repaid by the testimony of approbation which he had just heard for his exertions of the last nine years, He had got to a time of life when he might retire from active duties, which, with their permission he would do.

Several gentlemen exclaimed, "No; we will have you in again next year."

The meeting broke up shortly after three o'clock, and the shareholders proceeded to give their votes for the respective candidates for the directorship.

Mr. Daniel Neilson and Mr. Highfield were appointed scrutineers, and it was decided that the poll should be kept open that day till four o'clock, and on Saturday till the same hour. The polling continued till four o'clock on Friday. It was resumed on Saturday morning, and continued throughout the day. At half-past three o'clock in the afternoon, it being evident that Mr. Dudgeon had no chance, the poll was closed. The numbers stood as follow:—For Mr. Moss 3,513, Mr. Cropper 3,136, Mr. Earle 2,914, Mr. Dudgeon 1,565.

EDINBURGH, LEITH, AND NEWHAVEN RAILWAY COMPANY—GENERAL MEETING.

THE Half-yearly General Meeting of the Edinburgh, Leith, and Newhaven Railway Company was held at the Company's office, 11, South St. Andrew-street, Edinburgh, on the 29th ult., ERSKINE DOUGLAS SANDFORD, Esq., Advocate, in the Chair.

The SECRETARY laid on the table the London, Liverpool, Bristol, and Edinburgh newspapers, containing the advertisements calling the meeting conformably to the Act of Parliament, also the form of the circular sent to the shareholders.

The minute and Report of the last half-yearly general meeting was then read, after which the Directors submitted the following

REPORT.

The Directors herewith submit to the meeting an Abstract Balance Sheet, showing the Receipts and Disbursements for the six months ending the 30th day of June last.

In reporting the proceedings for the six months previous to the above date, the Directors expected to have been able to state, that the line from Scotland-street to Trinity had been completed. The whole of the land has been used, and the works are in a state of great forwardness; but circumstances, over which they could exercise no control, have occurred to prevent the final completion. First—The very severe frost at the commencement of the year superseded the whole of the mason work, and nearly the whole of the excavations, for two months. Second—A vexatious demand was made by the Company's Contractor, on Contract T. No. 1, which the Directors were compelled to resist; and as the contractor would not proceed with the works, they were under the necessity of taking them out of his hands. The most necessary measures were immediately adopted for re-letting this part of the work, but it was only within the present month that the Directors were enabled to do so.

The Directors have now settled the terms on which they are to obtain possession of the remaining property referred to in the last Report, and do not anticipate any further delay.

The quantity of work done since the last Report is—

Of earthwork cutting ..... 47,676½ cubic yards.
And of masonry ..... 19,804¾ do.
And the viaduct over the Water of Leith has been completed in a most substantial and satisfactory manner.

The work remaining to be done from Scotland-street to the sea is small; but from the nature of the soil, and the proximity of houses, will require more than usual care, to prevent damage; still there is no apparent reason why the whole of this part of the line should not be completed within the next two months, provided the necessary funds are obtained.

The Directors now beg leave to call the special attention of this meeting, and of the shareholders at large, to the following abstract, taken from the balance sheet of the Company's affairs:—

Received since last Report..	£9,538 13 9		
Expended ditto	11,049 3 7½		
The amount required to finish the line from Scotland-street to Trinity, and render it immediately available.....		£21,000 0 0	
To meet this, the Company have due, upon calls that may be relied upon....	£7,953 0 0		
And a security, which the Company hold, for	2,500 0 0		
		£10,453 0 0	
The amount of shares in the Company's hands which they propose to issue at 10l. discount.....		16,150 0 0	
			26,603 0 0

If these shares are either taken up by the shareholders or the public, the Engineers of the Company have reported without hesitation, that the line would be finished within the time specified, and recent calculations made by these gentlemen, show that a productive revenue, not inferior to what was anticipated, would at once be obtained.

The Directors intend to commence the tunnel between Scotland and Market-streets, as soon as the Edinburgh and Glasgow line is completed, which, it is expected, will be in about two months, anticipating that they will then be enabled to let the contract with advantage to the Company.

The above Report having been unanimously approved of, the Secretary read the circular calling the special meeting, and sent to the Shareholders.

The CHAIRMAN then stated, that the necessary amount of capital, required by the Act, before the Company could borrow, had been paid up, and the Directors in consequence proposed to take powers from this meeting to borrow in terms of the Act of Parliament, whereupon—

Alexander Robertson, Esq., moved, and was seconded by Alexander Munro, Esq.,—"That the Directors be authorised to borrow money in terms of the Act of Parliament, the requisite amount of capital having been paid up,"—which motion was carried unanimously.

The CHAIRMAN then stated, the Directors proposed to sell the shares now in the hands of the Company, which the meeting authorised them to do, upon the most favourable terms.

The thanks of the meeting were then cordially voted to the Chairman and Directors of the Company.

[Some remarks on this meeting will be found in our leading columns. The above account reached us from the Company's offices.—ED. R. T.]

ROBBERY AT A RAILWAY STATION.—On Sunday last, the office of the Leeds and Selby Railway, at Selby, was entered and robbed of 65*l.*, which was in bank notes and cash. The money was placed in the collecting clerk's drawer which was broken open. The keys of the office had been left in a coal house near the entrance of the office; and it is supposed that the robbery has been committed by some one acquainted with the premises.—*Leeds Mercury.*

NORTH UNION RAILWAY COMPANY—GENERAL MEETING.

(From the *Preston Pilot.*)

THE Half-Yearly Meeting of the North Union Railway Company was held on Thursday, August 5, in one of the large rooms used in the carriage building department, at the station in Preston. From the circumstance of the present being the first meeting held in Preston, during the time of the railway being worked, it was expected that there would have been a rather numerous attendance of shareholders resident in this district; such, however, was not the case, and we doubt not it is readily accounted for, by the fact of the report having been previously distributed among the proprietary, and its contents being so satisfactory as to permit the fullest confidence being placed in the gentlemen appointed to discharge the duties of the Directory. The meeting was advertised to commence at half-past 11 o'clock, but business was not proceeded with until 12, when Theodore Woolman Rathbone, Esq., was moved to the Chair. Among other gentlemen present, we observed, Charles Swainson, Esq., W. Calrow, Esq., W. Taylor, Esq., J. Winstanley, Esq., W. Garnett, Esq., Hardman Earle, Esq., Richard Earle, Esq., J. Ormerod, Esq., T. B. Addison, Esq., J. Addison, Esq., Rev. J. Clay, Rev. W. M. Farish, T. Higgin, Esq., S. Gorst, Esq., P. H. Fleetwood, Esq., Mr. Brown, Mr. Moore (surgeon), Mr. E. Harris, &c. &c.

The SECRETARY read the advertisement convening the meeting.

The CHAIRMAN then proceeded to say that he had great pleasure in congratulating the subscribers on meeting them for the first time on their own freehold. The Act of Parliament required that two half-yearly meetings should be held in each year; and it also gave power for calling general meetings. By one of its provisions it directed that a statement of the accounts should be sent to the shareholders, fourteen days previous to the holding of the half-yearly meeting, which, they were aware, had been complied with. This he deemed a very salutary provision, as it enabled shareholders to inspect the statements, and so come prepared to express their opinions on all matters relating to the management of the Company's affairs. He might next observe, a resolution had been agreed to, that the half-yearly meetings should be held alternately at Preston and Liverpool: why such an arrangement had not been earlier adopted, he had no doubt arose from the circumstance of the great bulk of the subscribers residing in and near Liverpool; the change however that he had named would be observed hereafter, and he felt sure that its adoption would give general satisfaction. The Chairman then made some few observations on the power given by the Act to declare dividends, after which he directed the attention of the meeting to the item of 1,263*l.*, set apart to meet the calculated amount of depreciation which will be incurred in the value of the Company's stock, before the next half-yearly meeting. Mr. Kennedy was the gentleman who had made the calculation, and of his great competency no one could entertain the slightest doubt. The London and Birmingham Company set aside as much as 10 per cent., to provide for a depreciation fund; that scale, however, was deemed too high by the Directors of the North Union, and they had accordingly preferred the plan they had adopted—that of being governed by the opinion of an experienced valuer like Mr. Kennedy He next adverted to that portion of the Report in which allusion is made to the serious responsibility and great amount of trouble incurred to the Company's servants by the agreement made with the Lancaster and Preston Railway Company, for supplying locomotive power, the remuneration for which was no more profitable than that of obtaining an old shilling for a new one, the consequence of which had been, that the Directors had felt themselves well justified in requesting that a fresh arrangement should be entered into at the termination of the present agreement; and as this had not met the approbation of the Lancaster Directors, it only remained for those of the North Union Company to say they must decline continuing the agreement beyond the expiration of the present year. This had been the determination come to; but he felt sure that he expressed with his own the desire of his fellow Directors, and the shareholders of the North Union Company, when he said they were yet prepared to enter into the consideration of a fresh agreement with the Lancaster Company, not only on fair, but the most liberal terms, and he trusted that Mr. Higgin, whom he saw present, would make the same known at Lancaster. The shareholders would perceive that an agreement had been made with the Preston and Wyre Company, for a further period of three years, on terms quite satisfactory to both parties, and he might then observe how

very desirable it was that the most amicable feelings should be cultivated with that Company, through whose railway so great an amount of passenger traffic to the north was conveyed by the North Union line. He would only allude to one other matter—that of the meeting held a short time ago in Liverpool, at which a number of landowners most interested in the formation of a West Coast line of railways assembled, who, he was happy to say, gave every promise of warm support to such an undertaking, and made the most liberal offers of supplying land for the purpose; altogether, the meeting was of the most satisfactory character, and he hoped it would lead to no less satisfactory results.

The SECRETARY then read the following

REPORT.

In submitting to the proprietors the Report for the half year ending the 30th of June, the Directors congratulate them on the continued prosperity of the Company's affairs, and on the favourable comparison which the traffic of the present half year will bear with that of the corresponding period of last year, notwithstanding the great depression of trade by which all railway property has been for some time affected. The causes which have produced this depression, and the steady character of the traffic of the Company, are matters with which the proprietors are already familiar from several former reports.

A considerable increase will of course be found in some of the items of expenditure, as a result of the larger charges for maintenance and renewals, which always accompany increased traffic; and also in the cost of the expenses which, although they bear a fair proportion to that of former periods, do not absolutely exhibit the state of the affairs, the principal of which at the end of the year are 17,268/. 16s. Out of this amount the Directors propose to declare a dividend of 2/. 10s. each on the 6,250 shares, to be paid on and after August by warrants, which the Secretary will forward to the proprietors. The remaining 1,843/. 6s. is the carried to profit and loss account for the present half year, to form the sum at the credit of the reserve fund to meet depreciation of stock, which the proprietors were aware an amount of 1,000/. [illegible]

It is gratifying to the Directors to be enabled to state that the Directors of the Manchester and Leeds Railway Company, [illegible] other companies, have [illegible] and Lancaster and Preston Junction Railway Company, and thus establish [illegible] become three junctions, and thus establish [illegible] the great expenses attendant on the possession of this item by a Railway Company of [illegible] extent of traffic, will, it is hoped, [illegible] a prospect of [illegible] With the Lancaster Company the Preston and Wyre Railway contract had just been renewed, with [illegible] terms, for a further period of three years, on such terms, and it will, there can be no question, prove [illegible] benefit and arrangement [illegible] years. The Directors would [illegible] have been glad to [illegible] the Lancaster Company, but [illegible] prepared for such an [illegible] and carefully examined [illegible] of the present arrangement, and [illegible] satisfactory [illegible] of [illegible] year, at the end of [illegible] Company can [illegible] the experiment of [illegible] their own line.

The proprietors will be glad to learn that a strong desire [illegible] Lancaster Company [illegible] the Lancaster and Preston Junction Railway [illegible] the Lancaster Company [illegible] the Lancaster and Preston Junction Railway [illegible] the Lancaster Company [illegible] the extension of the Preston and Lancaster Railway [illegible] a Company [illegible]

The Directors [illegible] with the [illegible] entering the [illegible] [illegible] [illegible]

Directors. Mr. H. then wished to know whether any and what kind of proposition had been made to the Lancaster Company, and if so, by whom it had been declined?

The CHAIRMAN said, in reply, that the answer received from the Lancaster Directors on the subject of renewing the arrangement with the North Union Company, for the supply of locomotive power, was to the effect that they were not disposed to enter into any other arrangement that the one now made.

Mr. HIGGIN resumed his observations by saying that the answer returned evidently showed that no dissatisfaction had been experienced by the Lancaster Company. He might however just observe, that there had been no particulars furnished to the Lancaster Directors until Saturday last, whereas the Report was dated a week previous. He would add in conclusion his full conviction that the Lancaster Company were disposed to enter into an arrangement in the most liberal manner. After a few more observations the matter was dropped, on the understanding that both Companies would consult upon the subject of a fresh arrangement, and that little doubt might be felt of their coming to an agreement satisfactory to both parties.

The Chairman then put Mr. Addison's motion, which was carried.

Mr. WILCOCKSON briefly reminded the meeting, that the three retiring Directors were Mr. Joseph Hornby, Mr. Richard Earle, and Mr. W. Taylor, and as those gentlemen were all eligible to be re-appointed, he would move that they be severally re-elected Directors of the Company. Mr. W. then added a few observations in urging the necessity of effecting an amicable arrangement with the Lancaster Company.

Mr. HIGGIN seconded the motion, which was carried unanimously.

Mr. RICHARD EARLE returned thanks on his own behalf. His experience as a Director had not been great, but if the shareholders would kindly allow him to get through his apprenticeship, he would promise them the exercise of his best services in promoting their interests.

Mr. HARMAN EARLE acknowledged thanks on behalf of Mr. Joseph Hornby, who he said had been unavoidably kept from the meeting, by having to attend a municipal election held that day in Liverpool.

Mr. TAYLOR very cordially thanked the meeting for the renewed expression of confidence in his services, and he assured all present, that as he had done from the first opening of the railway, so he would continue to use his best exertions to increase its prosperity.

Mr. Garnett then proposed, and Mr. Hodgson seconded, a vote of thanks to the Chairman for his services, which Mr. Ruthbone acknowledged, and the meeting then separated.

STAFFORD AND RUGBY RAILWAY COMPANY—GENERAL MEETING.

ON Tuesday a general meeting of the subscribers and shareholders of this Company was held at their offices, Bond-street, Manchester, "for the purpose of considering and determining, in pursuance of the provisions of the agreement constituting the said Company, whether, and upon what terms, the same Company shall be dissolved, and the affairs thereof wound up; and to adopt such resolutions in the premises as to such meeting may appear expedient."

The meeting was fixed for twelve o'clock, but it was nearly half-past before the proceedings commenced. On the motion of a shareholder, whose name we did not learn, R. GARDNER, Esq., was called to the chair.

The CHAIRMAN said Mr. Wheeler would read the advertisement by which the meeting was convened.

Mr. WHEELER read the advertisement, as follows:—

"Notice is hereby given, that a general meeting of the subscribers will be held on Tuesday the 10th day of August next, at twelve o'clock at noon, at the Company's offices, for the purpose of considering and determining, in pursuance of the provisions of the agreement constituting the said Company, whether, and upon what terms, the same Company shall be dissolved, and the affairs thereof wound up; and to adopt such resolutions in the premises as to such meeting may appear expedient.

By order of the provisional Directors,
RICHARD FOSS, Secretary.
